PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, FIRST SESSION

HOUSE OF REPRESENTATIVES—*Monday, July 28, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Let us hold fast the profession of our faith without wavering.—Hebrews 10: 23.

Most merciful God, who hast made us for Thyself so that our hearts are restless until they find rest in Thee, in this moment of prayer we renew our faith, we reaffirm the fact that Thou art with us, and we reenforce our desire to be of real service to our country and to our fellow man.

May the splendor of Thy spirit and the strength of Thy presence be revealed in us and through us, particularly when we are assailed by the moods of frustration and futility and feel that all our endeavors are in vain.

Bless the leaders of our land, these men and women of Congress and all who labor with them to creatively meet the demands of this distracting day. May their faith in Thee hold them up, keep them strong, and help them guide our Nation on the way to peace, justice, and good will. In the spirit of Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, July 24, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment concurrent resolutions of the House of the following titles:

H. Con. Res. 208. Concurrent resolution authorizing the printing of additional copies of parts 1, 2, and 3 of the publication entitled "Subversive Influences in Riots, Looting, and Burning";

H. Con. Res. 209. Concurrent resolution authorizing the printing of additional copies of the committee print "The Analysis and Evaluation of Public Expenditures: The PPB System"; and

H. Con. Res. 291. Concurrent resolution to provide for the printing of inaugural addresses from President George Washington to President Richard M. Nixon.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 10946. An act to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

HEAVY LOSS FOR TEXAS

(Mr. ROBERTS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROBERTS. Mr. Speaker, on July 14, 1969, I was given permission to address the House for the purpose of stating reasons why the oil depletion allowances should be retained. Since that time I have received a copy of an editorial which appeared in the July 20, 1969, edition of the Kilgore News Herald, Kilgore, Tex., on the effect a reduction in the depletion allowances would have on Texas and I want to share it with my colleagues:

HEAVY LOSS FOR TEXAS

Texas could take a heavy economic beating if current tax proposals in Congress are passed. Proposed changes in the tax structure concerning the oil and gas industry would have widespread impact throughout the state.

Two proposals: changes in percentage depletion and the option to charge off intangible drilling costs—such as labor, contract services, drilling mud, supplies and other items which have no salvage value—strike at the heart of the petroleum industry.

Without these incentives to hunt for oil and gas, there would be a serious curtailment of activity, meaning less drilling, less oil and gas reserves, less production, less royalty payments, less employment, less investment, lower property values and less gasoline for the consumer's dollars—in short, a heavy loss for Texas.

HEALTH, EDUCATION, AND WELFARE

(Mr. MICHEL asked and was given permission to address the House for 1 minute.)

Mr. MICHEL. Mr. Speaker, it is my understanding that the gentleman from New Jersey (Mr. JOELSON) will be proposing tomorrow an amendment to increase our HEW appropriation bill by some $900 million or more.

I think it should be noted that the author and most of those who will be sponsoring that amendment to increase expenditures by $900 million were not around to vote for extension of the tax surcharge just a week or two ago. As a matter of fact they voted against the tax bill.

I think it is unconscionable that those who would vote against extending the surtax would now join in an amendment to increase our appropriation bill by $900 million. This will more than wipe out all the cuts we have been able to make thus far in appropriation bills this year. We cannot curb inflation with this kind of performance.

PERMISSION FOR COMMITTEE ON THE JUDICIARY TO FILE REPORT ON H.R. 4249

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary may have until midnight tonight to file a report on the bill, H.R. 4249, extending the voting rights act of 1965 with respect to the discriminatory use of tests and devices.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PERMISSION FOR COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce may sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DIRECTIVES AFFECTING SALARIES OF RESTAURANT EMPLOYEES

(Mr. ALBERT asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. ALBERT. Mr. Speaker, under the Federal Salary Act of 1967, the Speaker of the House and the Architect of the Capitol are authorized and directed to issue certain directives in implementation of the salary comparability policy set forth in that law. Since these directives affect the salary of House restaurant employees and officers and employees of the Office of the Architect, I ask unanimous consent that both directives, dated June 26, 1969, and certain related correspondence, be inserted in the CONGRESSIONAL RECORD at this point.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The material referred to is as follows:

ARCHITECT OF THE CAPITOL,
Washington, D.C., July 25, 1969.

Hon. JOHN W. MCCORMACK,
Speaker of the House of Representatives,
U.S. Capitol,
Washington, D.C.

MY DEAR MR. SPEAKER: I am enclosing herewith the following documents:

(1) Order dated June 26, 1969, issued by the Architect of the Capitol, implementing the salary comparability policy in 1969 for officers and employees of the Office of the Architect of the Capitol required by Section 212 of the Federal Salary Act of 1967;

(2) Your directive of June 26, 1969, implementing the salary comparability policy in 1969 for management—office employees of the House Restaurants required by Section 212 of the Federal Salary Act of 1967.

I would appreciate your having these documents inserted in the Congressional Record in order that they might be a matter of record.

Sincerely yours,

J. GEORGE STEWART,
Architect of the Capitol.

ORDER OF THE ARCHITECT OF THE CAPITOL IMPLEMENTING THE SALARY COMPARABILITY POLICY IN 1969 FOR OFFICERS AND EMPLOYEES OF THE OFFICE OF THE ARCHITECT OF THE CAPITOL REQUIRED BY SECTION 212 OF THE FEDERAL SALARY ACT OF 1967

Pursuant to the authority and duty vested in the Architect of the Capitol by section 212 of the Federal Salary Act of 1967 (81 Stat. 634; Public Law 90–206) to implement the salary comparability policy set forth in section 5301 of Title 5, United States Code, in the year 1969 for personnel of the Office of the Architect of the Capitol whose rate of compensation is increased by section 5 of the Federal Employees Pay Act of 1946, the rates of pay of such personnel are adjusted as follows:

IMPLEMENTATION OF SALARY COMPARABILITY POLICY IN 1969 FOR PERSONNEL OF THE OFFICE OF THE ARCHITECT OF THE CAPITOL WHOSE RATE OF COMPENSATION IS INCREASED BY SECTION 5 OF THE FEDERAL EMPLOYEES PAY ACT OF 1946

SECTION 1. Subject to section 216 and 225 of the Federal Salary Act of 1967 (81 Stat. 638, 642; Public Law 90–206), the per annum gross rate of compensation (basic compensation plus additional compensation authorized by law) of each employee whose compensation is increased by section 5 of the Federal Employees Pay Act of 1946 is hereby increased by 10.05 per centum.

SEC. 2. The provisions of this Order shall become effective on July 13, 1969 with respect to employees paid on a bi-weekly basis, and on July 1, 1969 for all other employees covered by this Order.

J. GEORGE STEWART,
Architect of the Capitol.

JUNE 26, 1969.

DIRECTIVE OF THE SPEAKER OF THE U.S. HOUSE OF REPRESENTATIVES, IMPLEMENTING THE SALARY COMPARABILITY POLICY IN 1969 FOR MANAGEMENT—OFFICE EMPLOYEES OF THE HOUSE RESTAURANTS REQUIRED BY SECTION 212 OF THE FEDERAL SALARY ACT OF 1967

Pursuant to the authority and duty vested in the Speaker of the United States House of Representatives by section 212 of the Federal Salary Act of 1967 (81 Stat. 634; Public Law 90–206) to implement the salary comparability policy set forth in Section 5301 of title 5, United States Code, in the year 1969 for personnel of the House of Representatives, the annual gross rate of compensation of management—office personnel of the House Restaurants (such employees having been defined by the Comptroller General of the United States to be employees of the House of Representatives), whose compensation is increased by section 214(a) of the Federal Salary Act of 1967 (81 Stat. 634, Public Law 90–206) and the Directive of the Speaker of the United States House of Representatives of July 1, 1968, is hereby increased by 10.05 per centum, effective July 13, 1969.

For the purpose of arriving at the percentage increases granted by this directive (these employees being compensated on a weekly, rather than an annual, basis), the weekly basic and weekly gross rates of these employees shall be converted for the purpose of this directive, to appropriate annual basic and annual gross rates.

The provisions of this directive shall become effective on July 13, 1969.

JOHN W. MCCORMACK,
Speaker, U.S. House of Representatives.

JUNE 26, 1969.

DISTRICT OF COLUMBIA BUSINESS

The SPEAKER. This is District of Columbia day. The Chair recognizes the gentleman from South Carolina (Mr. MCMILLAN), chairman of the Committee on the District of Columbia.

METROPOLITAN POLICE DEPARTMENT BAND

Mr. McMILLAN. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 9551) to amend the act of July 11, 1947, to authorize members of the District of Columbia Fire Department, the U.S. Park Police force, and the White House Police force to participate in the Metropolitan Police Department Band, and for other purposes and ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina (Mr. MCMILLAN)?

There was no objection.

The Clerk read the bill, as follows:

H.R. 9551

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to authorize the establishment of a band in the Metropolitan Police force", approved July 11, 1947, is amended as follows:

(1) The second sentence of the first section of such Act (D.C. Code, sec. 4–182) is amended to read as follows: "The Commissioners are authorized in their discretion to detail officers and members of the Metropolitan Police force and the District of Columbia Fire Department to participate in the activities of such band."

(2) Such Act is amended by inserting immediately after the first section the following new section:

"SEC. 2. The Secretary of the Interior is authorized in his discretion to detail officers and members of the United States Park Police force to participate in the activities of the band established by this Act, and the Secretary of the Treasury is authorized in his discretion to detail officers and members of the White House Police force to participate in the activities of such band."

(3) Section 5 of such Act is repealed and section 4 of such Act (D.C. Code, sec. 4–184) (relating to an authorization of appropriations) is redesignated as section 5.

With the following committee amendments:

On page 1, strike out line 8 and insert in lieu thereof the following: "follows: 'The Commissioner is authorized in his' ".

On page 2, line 3, insert after the quotation mark the following: "The first sentence of such section is amended by striking out 'Commissioners' and inserting in lieu thereof 'Commissioner'. The third sentence of such section is amended by striking out 'Commissioners are' and inserting in lieu thereof 'Commissioner is' ".

The committee amendments were agreed to.

Mr. McMILLAN. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, the purpose of H.R. 9551 is to permit members of the District of Columbia Fire Department, the White House Police force, and the U.S. Park Police force to be detailed by the District of Columbia Commissioner, the Secretary of the Treasury, and the Secretary of the Interior, respectively, to particiate in the activities of the Metropolitan Police Department Band.

This bill is identical to H.R. 8205 of the 89th Congress, as passed by the House on August 22, 1966—House Report 1818—and H.R. 831 of the 90th Congress, as passed by the House on March 13, 1967—House Report 93.

NEED FOR LEGISLATION

Actually, some members of these other forces do participate as members of the Police Department Band. However, since present law does not permit them to be officially detailed to this duty, they must do so without any coverage as to disability compensation which applies when such members are performing their official duties. In short, therefore, while members of all these forces may and do participate as members of the Police Department Band, only members of the Metropolitan Police Department are presently protected against injury or disability incurred while engaged in the band's activities.

It is the opinion of your committee that all members of this band should be adequately protected against injury incurred while engaged in the band's activities. This bill will accomplish this by providing that members of all these forces, when assigned to the Police Band, will be engaged in official duty and hence will be eligible during such activity for the same disability benefits to which they are entitled when performing their regular duties.

Another present difficulty in connection with members of the Fire Department, White House Police, and the U.S. Park Police participating as members of the Police Department Band is that they must do so on their own time, whereas the time spent by Police Department members of the band in rehearsals and performances counts as part of their regular workweek. Further, if such time is spent outside their regular duty hours, then the Police Department members are entitled to an equal amount of compensatory time off. The provisions of this bill will extend this arrangement also to members of these other forces who participate in the band's activities, so that the time so spent by all members of the band will be considered as part of their duty hours.

It is the view of the committee that these provisions will have the desirable effect of materially increasing the size of this fine Police Department Band.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. McMILLAN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I note that identical bills were passed by the House in 1966 and again in 1967.

I am wondering if this is an exercise in futility here today?

Mr. McMILLAN. I appreciate the gentleman's asking this question, because we are becoming a little exercised over here in the House District Committee. Last year we passed approximately 30 bills that the other body did not take time to consider. We hope they will have time this year to consider the bills we send over there.

Mr. GROSS. Let me ask the gentleman how many members will this bill take off the police force of the District of Columbia for musical purposes?

Mr. McMILLAN. I do not think it would change the number. My understanding is that it would not change the number at all.

Mr. GROSS. We need all the police officers on the streets to combat the crime here in the District of Columbia rather than playing instruments in a band.

Mr. McMILLAN. This band very seldom plays for functions and the people who would be concerned are already playing in the band. So we would not take any additional policemen and firemen off the streets.

Mr. GROSS. The gentleman does not think that the bill would in any way impair law enforcement in the District of Columbia?

Mr. McMILLAN. No; if I thought that it would, I would be the last Member in the House to be asking for this legislation, this bill or any other, if it would impair our attempts to solve the crime problem in the Nation's Capital.

Mr. GROSS. I thank the gentleman.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. McMILLAN. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

AMEND GRANDFATHER CLAUSE REGARDING LOCATIONS OF CHANCERIES

Mr. DOWDY. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 6947) to amend the act of October 13, 1964, to regulate the location of chanceries and other business offices of foreign governments in the District of Columbia, and ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the bill, as follows:

H.R. 6947

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 2 of the Act of October 13, 1964 (D.C. Code, sec. 5–418a), is amended by striking out the period at the end of paragraph (2) of that section and inserting in lieu thereon ", or" and by adding after that paragraph the following new paragraph:

"(3) the future or continued use of a building as a chancery or the making of ordinary repairs to such building if such building was used as a chancery contrary to any zoning law, rule, or regulation at any time during the period beginning May 12, 1958, and ending October 13, 1964, without any written notice by the District or United States Government prior to October 13, 1964, to the owner or occupant of such building of the fact that such use was in violation of such law, rule, or regulation."

(b) Section 4 of such Act (D.C. Code, sec. 5–418c) is amended by inserting immediately after "(D.C. Code, sec. 5–418)" the following: "or paragraph (3) of section 2 of this Act".

With the following committee amendment:

Page 2, strike out lines 7 through 10 and insert in lieu thereof the following:

"(b) Section 4 of such Act (D.C. Code, sec. 5–418c) is amended by inserting 'or (3)' immediately after 'paragraph (1).'"

The committee amendment was agreed to.

Mr. DOWDY. Mr. Speaker, the purpose of the bill H.R. 6947 is to amend the act of October 13, 1964—78 Stat. 1091; D.C. Code, sec. 5–418a—hereafter referred to as the Chancery Act of 1964, approved by the 88th Congress to regulate the location of chanceries and other business offices of foreign governments in the District of Columbia. In House Report 1727—88th Congress—which accompanied that legislation your committee recognized the complexity of the problem of providing for the location of chanceries and that the bill, later enacted as Public Law 88–659—78 Stat. 1091—might require amendments pending some final solution to this problem in the District of Columbia.

Since the enactment of the above-mentioned law, additional problems have been brought to the attention of your committee in connection with the administration of that law under its terms and concerning unique, or at least unusual situations which have resulted in substantial hardship to property owners. This bill is an effort to supplement and clarify the previous enactment and meet some of the difficulties which have been presented to your committee.

BACKGROUND

For many years, foreign governments were without any restriction as to the purchase or rental of property to be used for chancery purposes. The great majority of foreign chanceries were located within single-family detached residential areas. Because of the substantial, and sometimes intense, business usage of such properties, they were not compatible, in many instances, with the character of the neighborhoods in which they existed. With the development of zoning laws and establishment of zoning categories, the admissibility of chanceries in residentially zoned areas became an increasingly controversial matter. Although zoning regulations were developed to require at least some parking facilities to avoid traffic congestion, and to preserve the residential character where chanceries were located, existing laws and regulations did not provide a suitable basis to the District of Columbia for providing for chancery locations, nor did they provide a suitable basis for harmonious relations between foreign governments and the State Department. The latter agency is the only agency which might exercise any sanctions to bring about the enforcement of District of Columbia regulations regarding the location of chanceries. The situation led to action taken during the 88th Congress, and the enactment of Public Law 88–659, approved October 13, 1964—78 Stat. 1091.

INTENT OF CONGRESS

Aside from specifying the zoning categories within which chanceries of foreign governments might be located, the intent of Congress was clearly expressed concerning the preservation of existing rights established by previous use under law. Existing uses of buildings as chanceries, where such use had been established under the benefit of statute or by use preceding applicable zoning laws and regulations, were to be continued. Although that act appears to have had the effect of extinguishing the right of use of some properties as chanceries where such use did in fact exist and the owner or occupant was without notice that the use was not based upon any law, rule, or regulation, some instances of hardship have been demonstrated. These represent borderline cases where, under the normal operation of law and regulation prior to the act of the 88th Congress, chancery uses would have been permitted and approved, the owners of such property now find that they are precluded under the strict language of the act from continued use of their property for chancery purposes.

APPLICATION OF THE TERMS OF THE BILL

Under the terms of H.R. 6947, the Chancery Act of 1964 is amended by the addition of a new clause 3 to section 2 of the Act. The future use or the continued use of a building as a chancery would not be prohibited even though such use was contrary to the provisions of law if such use existed between the date of May 12, 1958, the date of the revision of zoning rules and regulations of the District of Columbia under the Lewis plan, and the date of October 13, 1964, the effective date of the Chancery Act of 1964, if such use was without written notice, from the Federal or District government, of noncompliance with existing zoning provisions. Thus, any use of a building as a chancery which qualifies under the provisions of this bill, becomes a lawful use as specified in the first clause of section 2 of the Chancery Act of 1964.

Section 2 of the Chancery Act of 1964, which the pending bill H.R. 6947 amends, was the subject of a clear expression of intent in House Report 1727 of the 88th Congress. That report stated as follows:

It is the specific intent that no existing lawful rights of use shall be affected by any provision of the bill. Where the lawful use of the building as a chancery has been established and exists on the date of enactment, whether the property be vacant, whether the use as a chancery be interrupted at some future date, or whether the use of the building be transferred from one foreign government

to another, nothing in the act shall affect such right of use.

In the pending bill, H.R. 6947, your committee amends section 4 of the Chancery Act of 1964 by including reference in section 4 of the act—D.C. Code, sec. 5–418c—to the amendment made by section 1(a) of the bill. The effect of this amendment is to make it clear that if a building used as a chancery was lawfully used, is being used or is to be used, such use may be transferred from one foreign government to another. Thus, whenever real property which has been lawfully used for chancery purposes, pursuant to the Chancery Act of 1964, as amended by this bill, was or becomes vacant, the fact of vacancy alone has no effect upon the right of continued or future use of the property for chancery purposes. The amendment is intended to preserve the right of such use, and transfers of use, even though such use may have been or is interrupted, the property vacant, or used for other purposes so long as the use of the property as a chancery is not abandoned.

It is believed that the enactment of the amendment as favorably reported by your committee will aid in resolving inequities and hardship situations, and relieve any area of doubt as to the committee's intent in preserving a right, once established, for the future and continued use of a building as a chancery and the right of transfer of the use from one foreign government to another.

The bill, H.R. 6947, amends the act of October 13, 1964—78 Stat. 1091; D.C. Code, sec. 5–418a—regulating the location of chanceries of foreign governments in the District of Columbia. The first of two amendments in the bill adds a new paragraph at the end of section 2 of the act which provides that the limitations and restrictions of the act shall not prohibit the future or continued use, or the making of ordinary repairs, to a building which was used as a chancery contrary to any zoning rule or regulations between May 12, 1958, and October 13, 1964, if the owner or occupant of such building received no written notice from the District or Federal Government that the use of the property as a chancery was in violation of any law, rule, or regulation.

The second amendment inserts language in section 4 of the act—D.C. Code, section 5–418c—referring back to the language added by the first amendment of the bill to provide that buildings qualifying under this bill for use as chanceries may be transferred from one foreign government to another under the terms of the act as amended.

Mr. BROYHILL of Virginia. Mr. Speaker, Public Law 88–659, approved October 13, 1964—78 Stat. 1091—was enacted to settle the increasingly controversial issue of the admissibility of chanceries in areas zoned residential.

Prior to that time, the District of Columbia had adopted zoning rules and regulations regarding chanceries, and had revised them as of May 12, 1958.

Under this Chancery Act of 1964, some instances of hardship have arisen, despite the fact that the act includes provisions for the continued use of buildings as chanceries where such use had been established under, or prior to the enactment of, previously existing zoning laws and regulations. These are cases where chancery use would have been permitted under laws and regulations prior to the act of 1964, but now are held to be precluded under the strict language of the act.

In 1958, a residential property in an area where many chanceries were located was rented by a representative of a foreign government. Although the owner thought the property was to be uesd as a chancery, this was not the case. Instead, the foreign government used the property as some sort of mission.

In 1960, a second foreign government rented this same property, and actually used it as a chancery. Under zoning regulations existing at that time, a zoning variance should have been obtained to authorize such use. And as a matter of fact, an application for such a variance would undoubtedly have been granted, because two other residential structures in the area were approved for chancery use at that time. However, the owner, or his rental agent, failed to apply for such a zoning variance, presumably through ignorance of the regulation. Actually, therefore, the use of the property as a chancery at that time was not in accordance with existing regulations. However, neither the owner nor the occupant was notified of this fact.

Subsequently, and after the enactment of the act of 1964, this foreign government moved its chancery to another location. At this time, the owner of the property became aware of the error he had made as to chancery use of his building, and made application to the zoning board for the proper variance for such use. This application was denied, however, under the terms of the 1964 Chancery Act.

As a result of this situation, this property is now the only building in its block which is not used either as a chancery or for comparable use authorized by Congress for the Washington Institute of International Law. Thus, the R–3 zoning classification of this district no longer remotely reflects the actual existing character of this block, and this one property owner now finds himself with the one property in the block which is incompatible with the existing use of all the other properties. Under these conditions, of course, he is in the ridiculous situation of being unable to dispose of the property at its normal value for residential use, nor to lease or sell it for chancery use.

In this case, therefore, the Chancery Act of 1964 simply has produced a "white elephant" situation, in contradiction to the intent of Congress and to the normal function of zoning laws to maintain uniformity and compatibility of property uses in a given area.

Although this is the only such instance which has come to the attention of the House District Committee, it is entirely possible that other such cases may exist.

This bill will resolve this situation by providing authorization for the future or continued use of a building as a chancery even though its former use for this purpose had been contrary to the regulations of law in existence prior to October 13, 1964, if there had been no written notice to the owner or occupant of the property from the Federal or District of Columbia government of such noncompliance with existing zoning provisions.

The committee reported this bill, with the conviction that its provisions will be consistent with the intent of Congress in the District of Columbia Chancery Act of 1964, and hence in the public interest.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. DOWDY. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks on the bills H.R. 6947 and H.R. 9553.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDING DISTRICT OF COLUMBIA MINIMUM WAGE ACT

Mr. DOWDY. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 9553) to amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for the hospital employees on the basis of a 14-day work period, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. ADAMS. Mr. Speaker, reserving the right to object, as I understand, if we take up this bill, to which I am opposed—and I know other Members are—under the procedure that has been requested, would it be that every Member would be entitled only to 5 minutes, or is the rule that we would stay in the House, and the 5-minutes period would be in order only as the Members are recognized?

The SPEAKER. The Chair will state that if the request is granted, debate will be under the 5-minute rule.

Mr. ADAMS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. ADAMS. If the gentleman from Washington should object to the request and we should go into the Committee of the Whole for the consideration of this bill, then what would be the time requirements? Would there be 1 hour of debate to be divided between the opposition and the proponents?

The SPEAKER. The Chair will state that if the unanimous-consent request is objected to, under the rules a motion will be in order to go into the Committee of the Whole House on the State of the Union and the gentleman from Texas would control 1 hour, unless the time is fixed by unanimous consent prior to going into the Committee of the Whole.

Mr. ADAMS. Mr. Speaker, then I object to the request of the gentleman from Texas so the House will go into the Committee of the Whole House on the State of the Union for consideration of this bill, because the 5-minute rule will not give those of us in opposition an opportunity to present our case.

The SPEAKER. It is the understanding of the Chair that if consent is granted, then the 5-minute rule would apply.

Mr. ADAMS. Mr. Speaker, I would withdraw my opposition to this if we could just get some agreement on time for 10 or 15 minutes, so the opposition can present its case. We have no desire to delay the matter.

The SPEAKER. The Chair will state that if the consent is granted, then the bill comes up for reading, and the 5-minute rule would apply, and then any Member seeking additional time would ask unanimous consent.

Mr. ADAMS. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. The gentleman withdraws his reservation of objection.

Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the bill, as follows:

H.R. 9553

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That section 3(b) of the District of Columbia Minimum Wage Act (D.C. Code, sec. 36-403(b)) is amended by adding at the end thereof the following paragraph:

"(4) No employer engaged in the operation of a hospital shall be deemed to have violated subsection (b)(1) if, pursuant to an agreement or understanding arrived at between the employer and the employee before performance of the work, a work period of fourteen consecutive days is accepted in lieu of the workweek of seven consecutive days for purposes of overtime computation and if for his employment in excess of eight hours in any workday and in excess of eighty hours in such fourteen-day period, the employee receives compensation at a rate not less than one and one-half times the regular rate at which he is employed."

Mr. ADAMS. Mr. Speaker, I rise in opposition to this bill, and will speak in opposition to it. I move to strike the last word.

The SPEAKER. The gentleman from Washington is recognized for 5 minutes.

Mr. ADAMS. Mr. Speaker, this bill came to the House on the District Calendar 2 weeks ago, and at that time a number of us requested that the chairman withdraw it from the calendar so the House could have the opportunity of having its District of Columbia Committee consider this again. The chairman was kind enough to do this, for which I express my appreciation.

It is a very bad thing that we debate this bill today, because there were no hearings on it this year before the committee. Instead, it was presented to the District of Columbia Committee as one of those bills that come up, that have been passed in a prior House session and since they were passed once before, why do we not just go through and pass them again—which may be an orderly way of doing things that have no controversy.

But in this case this bill deals with the minimum wages of the hospital employees and does a very bad thing to them. It says they can be worked for 80 hours over a 2-week period without receiving any overtime until they have exceeded 80 hours in 2 weeks.

But in my opinion what makes it worse and the reason the House should vote down this bill is the committee report and the committee discussion were based upon a letter signed by Walter Tobriner. If Members will look in the committee report on pages 6 and 7, they will see there a report from the District of Columbia government, saying they support the bill, and that is signed by Walter Tobriner, who has been out of office for nearly 2 years.

This is compounded by the fact that after we had the matter removed from the calendar the last time so we could have a chance to hear it, we received a letter from the District of Columbia government, signed by the present Commissioner, saying they are in opposition to this bill.

So the position on which the committee based its action is now 180° out of phase.

Mr. Speaker, I ask unanimous consent to insert in the RECORD at his point, so that Members can see it—and, in the hope that we will vote down this bill, can consider it—a letter to the chairman of the Committee on the District of Columbia signed by the Mayor, which would supersede the letter from Mr. Tobriner, indicating that the District of Columbia government is against the bill.

Mr. SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

The letter is as follows:

GOVERNMENT OF THE
DISTRICT OF COLUMBIA,
Washington, D.C., July 15, 1969.

Hon. JOHN L. MCMILLAN,
Chairman, Committee on the District of Columbia, U.S. House of Representatives, Washington, D.C.

DEAR MR. MCMILLAN: The Government of the District of Columbia has for report H.R. 9553, 91st Congress, a bill "To amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for hospital employees on the basis of a fourteen-day work period."

The bill amends section 3(b) of title I of the District of Columbia Minimum Wage Act, as amended by section 1 of the District of Columbia Minimum Wage Amendments Act of 1966 (80 Stat. 961; Public Law 89-684), by adding a paragraph (4) thereto. The new paragraph (4) authorizes, for purposes of computing overtime compensation, a work period of fourteen consecutive days in lieu of the standard work week of seven consecutive days. This exception is applicable only to hospitals operating in the District and their employees, and is authorized only when an agreement or understanding regarding such work period is reached between employer and employee prior to performance of the work involved. The bill further provides for the payment of overtime compensation at a rate not less than one and one-half times the regular rate for hours worked by the employee in excess of eight hours a day and in excess of eighty hours in the fourteen-day period.

The Government of the District of Columbia is of the view that the enactment of the bill would be detrimental to those employees affected by it. Using as an example an employee who is paid the minimum wage of $1.60 per hour and who works 32 hours one week and 48 hours the next, the District has determined that under H.R. 9553 the employee would receive $6.40 less for the two-week period than he would receive under the present minimum wage law. On an annual basis, this would result in the employee's receiving $166.00 less income—a sizable sum to an employee whose yearly income is less than $3,300.

In the belief, therefore, that H.R. 9553 would have the effect of reducing the income of a large number of low-paid employees, and does not appear to offer any advantage to them, the Government of the District of Columbia recommends against the enactment of the bill.

THOMAS W. FLETCHER,
Assistant to the Comissioner.
(For Walter E. Washington, Commissioner).

STATE MINIMUM WAGE AND HOUR LAWS APPLICABLE TO HOSPITALS—OVERTIME STANDARDS

Alaska: over 8 a day, 40 a week.
California: over 8 a day, 48 a week.
Connecticut: over 40 a week.
District of Columbia: over 40 a week.
Kentucky: over 44 a week.
Hawaii: over 40 a week.
Nevada: over 8, up to 12 a day (in a 13 hour day); over 48, up to 56 a week (in emergency as specified).
New Jersey: over 40 a week.
New York: over 40 a week.
Oregon: over 8 a day, 40 a week (in emergencies).
Puerto Rico: Over 8 a day, over 48 a week, one-day of rest.
Pennsylvania: over 40 a day.
Rhode Island: over 48 a week.
Vermont: over 48 a week.
Wyoming: over 8 a day, over 48 a week.
West Virginia: over 48 a week.

In the State of Vermont overtime may be paid after 80 hours in a 14-day period only if employees are covered by a collective bargaining agreement. With this exception—no state law provides for overtime payment after 80 hours in the 14-day period for hospital employees.

Mr. MCMILLAN. Mr. Speaker, will the gentleman yield?

Mr. ADAMS. I yield to the chairman of the committee.

Mr. MCMILLAN. I introduced this bill by request from the hospital officials and the hospital employees on a joint request. That is where the bill came from. I do not know why the present Commissioner decided to be against this bill, because the employees and the hospital officials requested me to introduce this proposed legislation as chairman of the District of Columbia Committee.

Mr. ADAMS. I appreciate the statement of the chairman. I am glad he brought up that point, because I have been contacted by the local labor council in Washington, D.C., and they have indicated to me their opposition to this bill being passed.

I do not know about the position of the hospitals themselves, but the District of Columbia employee organization has indicated its opposition.

Therefore, I believe it would be a very bad thing for the House to pass this bill now. If it is to be passed, then what we should do is go back to the committee and let these people come in and make their statements, and then make a judg-

ment as to whether or not it should be done.

Mr. DOWDY. Mr. Speaker, will the gentleman yield?

Mr. ADAMS. I yield to the gentleman from Texas.

Mr. DOWDY. I assume the gentleman knows the union which objects to this bill does not represent the hospital employees who are asking for this bill.

Mr. ADAMS. I do know that that union does, but I have never received information about it to this date.

I would say to the gentleman from Texas, as to what the present position of either the hospital board or the people who are working in the hospital is on this bill, I have to accept the fact that the Mayor's letter indicates, on the second page, this:

> Using as an example an employee who is paid the minimum wage of $1.60 per hour and who works 32 hours one week and 48 hours the next, the District has determined that under H.R. 9553 the employee would receive $6.40 less for the two-week period than he would receive under the present minimum wage law. On an annual basis, this would result in the employee's receiving $166.00 less income—a sizable sum to an employee whose yearly income is less than $3,300.

I do not know what the union which represents these people says, but I just cannot believe that they are going to come in and say they think that this is a good bill.

The SPEAKER. The time of the gentleman from Washington has expired.

(By unanimous consent, Mr. ADAMS was allowed to proceed for 5 additional minutes.)

Mr. ADAMS. I cannot believe that they would support such a proposition. I believe it is not proper for this House to pass this bill under these circumstances. If further hearings are demanded and nobody objects I would not object to this bill, but I believe we have not prepared a proper report prior to acting on this legislation.

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield?

Mr. ADAMS. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I thank the gentleman.

I am sure the gentleman is aware, but I believe the record deserves to note, that the language in the bill is permissive in nature, in that it is dependent upon prior agreement between the employees and their organization and the employer. I am sure the gentleman is aware of that.

Mr. ADAMS. I am aware of that. What bothers the gentleman in the well is that my assumption—it may be incorrect, because we have not had the hearings so that I could ask somebody—that there is probably more than one union involved in the hospitals here, and those who are very well paid and are working more hours than they want, would like to have the advantage of saying, "We can take off every other weekend."

As to the poor people, though, the people who are paid the minimum wage or close to it, the money is desperately important to them. Therefore, although there may be an agreement with some organized groups of higher paid people, the ones on the bottom of the economic scale are in very bad condition. Maybe they should have more than one union and bargain on a different basis with regard to the application of 80 or 40 hours, but we should find this out before we pass this bill.

Mr. STEIGER of Arizona. If the gentleman will yield further, apropos of his remarks at this moment in his dialog, do I understand the gentleman really basically objects to the lack of hearings rather than the specific language in this bill? Is that a fair assumption?

Mr. ADAMS. I would say to the gentleman a qualified "Yes," because until I know from some hearings the position of these people I do not know whether the language needs to be corrected.

For example, the section you mentioned. It may well be that a statement should be made that this shall only apply if 75 percent of the employees working in a particular hospital are for it.

So that is my problem with regard to the answer to your question in saying that the language is all right. I think it can be improved upon.

Mr. STEIGER of Arizona. I would like to make note, while the gentleman is being generous with his time, if he will yield further——

Mr. ADAMS. I yield to the gentleman.

Mr. STEIGER of Arizona. This language does comply and conforms exactly to the language in the 1966 amendments to the Fair Labor Standards Act, which apply directly to the same type of institution we are now dealing with in the District of Columbia. It occurs to me that at that point in time—and this is speculation, I recognize—had there been any serious objections, as there is in your mind now, this language could not have been included in the 1966 amendments to the Fair Labor Standards Act. I would like to ask my colleague, in his very proper zeal, to hear the entire story to his satisfaction, that he not delay legislation which really, in the minds of many people or, at least, in my mind, is designed for the benefit of the employees to a far greater extent than to the benefit of management, because under this particular bill the employee is able to accumulate more consecutive leisure time, and that is of significance to those employees who talked to me about this bill.

Mr. ADAMS. I can understand that there would be a group of employees who would be in that position. I am very pleased you raised this point, because it points out the development which is occurring in America, which I think this House should be aware of the problem and deal with it. A number of the very poorly paid employees in hospitals—and the gentleman knows, I am sure, there are places in this country where objection to working conditions are occurring—organizations for the poor people either have not been organized or have been submerged in other organizations, who would rather have leisure time than money. They are now beginning to say, "We want to be heard." When the Fair Labor Standards Act went in, their case was not handled. Now they are making their demands known both through their own union representatives and, where they do not have union representatives, then by trying to form other organizations and saying that "We are making less than $3,600 a year and an alternate weekend off to us is not a very big thing. The extra $5 or $6 or $8 we can receive in overtime pay in addition to the 40-hour week is important. So help us." That is what the gentleman in the well is trying to do, and that is why I believe the Fair Labor Standards Act provision and its application to the District should be reexamined.

Mr. DENT. Mr. Speaker, will the gentleman yield?

Mr. ADAMS. I yield to the gentleman from Pennsylvania.

Mr. DENT. The Fair Labor Standards Act does not affect the District of Columbia situation, as you well know.

Mr. ADAMS. I know that.

Mr. DENT. When we tried to write them under the Fair Labor Standards Act, then we took a position, at that time in the Senate, under a former Senator who is no longer there, that they wanted to carry those District of Columbia labor standards in separate legislation. That is why we have never covered them. We would have covered it exactly the way you want to if we had had the opportunity.

Mr. ADAMS. I thank the gentleman and I hope he will join us in opposing this bill so that we can really look at it carefully and do the right thing about it.

Mr. Speaker, I am in opposition to this bill; the District government is opposed to this bill, and I hope we will have the opportunity to hold full hearings thereon. Therefore, Mr. Speaker, I hope the committee will vote down the bill so that we can have a fresh start and do the things which are necessary to give a fair hearing to the people who are involved and who are at the poverty level working in our hospitals.

CALL OF THE HOUSE

Mr. DERWINSKI. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. FUQUA. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 123]

Abbitt	Clausen, Don H.	Green, Pa.
Addabbo	Clay	Halpern
Anderson, Tenn.	Conyers	Hastings
Andrews, N. Dak.	Culver	Helstoski
Ashbrook	Davis, Ga.	Holifield
Berry	Davis, Wis.	Hosmer
Bingham	Dawson	Howard
Blatnik	Delaney	Johnson, Pa.
Boggs	Dickinson	Kirwan
Brock	Eckhardt	Landgrebe
Broomfield	Esch	Lipscomb
Brown, Mich.	Eshleman	Lloyd
Burton, Utah	Evins, Tenn.	Long, La.
Byrne, Pa.	Foley	Long, Md.
Carey	Ford, Gerald R.	Lowenstein
Celler	Ford, William D.	Lujan
Chisholm	Frelinghuysen	MacGregor
Clark	Gallagher	Marsh
		Mathias
		Minish

Minshall	Price, Ill.	Stratton
Morton	Reuss	Stuckey
Nelsen	Rodino	Teague, Tex.
Nix	Rooney, Pa.	Udall
Ottinger	Rosenthal	Watkins
Patten	Ruppe	Whalley
Pettis	St Germain	Whitten
Philbin	St. Onge	Wold
Pirnie	Sandman	Yates
Podell	Scheuer	Yatron
Powell	Stanton	

The SPEAKER. On this rollcall 343 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

AMENDING DISTRICT OF COLUMBIA MINIMUM WAGE ACT

Mr. BURTON of California. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, this proposal before us today is literally one of the most outrageous proposals that have been presented to this body since it was last proposed to us more than a year ago.

Mr. DOWDY. Mr. Speaker, will the gentleman yield?

Mr. BURTON of California. As soon as I complete my statement I will be delighted to yield.

The last hearing on this bill was held in September of 1967. That was about 20 or 21 months ago. I stated on the floor the last time this matter was before us that we are going to spend more of the taxpayers' dollars recording the debate on this matter than may well be involved in terms of the savings we are going to give to a few hospitals. The Senate had this matter before it all of last year and gave it precisely the treatment that it deserved. They did not waste one second of their time or any of their colleagues' time on it and did not deal with the bill at all, which is exactly the treatment it deserves.

The legislation provides that those who work in the hospitals and work a full workweek are going to have reduced some part of the small pittance that they get if they work overtime.

I have heard a lot of words about self-reliance in this body. These are working people who receive among the lowest of the wages paid to any man or woman who works in this country. This bill proposes to chisel $2 or $3 every 2-week pay period from them. For what purpose? They work. They work beyond the normal workweek and they get time and a half after 40 hours. Apparently the District Committee, which has not heard this matter this session, believes that is a little bit too much. They stated that apparently the workers want this bill. To put it charitably, that is a base canard. I stated on the record the last time this matter was before us that the Service Employees International Union, which represents almost every organized worker in the hospital field, is against this bill. It was denied in the debate last year before I made the statement. I restate it again today. I intend to get a rollcall on this outrageous suggestion. I would like to have my colleagues defend in front of us this proposal which I will restate and then conclude: It robs working people—receiving less money than most groups of workers—of a pittance if they manage to work more than 40 hours a week, by substituting a 14-day overtime period for the present 40-hour per week overtime period which prevails in virtually every industry under the District of Columbia minimum wage law.

Mr. ADAMS. Mr. Speaker, will the gentleman yield?

Mr. BURTON of California. I yield to the gentleman from Washington.

Mr. ADAMS. To those who arrived after we completed the debate on it, I want to further state that the District government which previously supported this legislation in 1967 now opposes it. As the gentleman from California has pointed out there have been no hearings since the last session of Congress and the District government has now come out in opposition to it. I have placed in the RECORD their statement indicating their position to it. This bill should be voted down.

Mr. HARSHA. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, this legislation, contrary to the statement of the gentleman from California, does not take one dime away from a single employee, but rather permits him some additional leisure time if he so desires. This bill meets with the approval of at least some of the employees and is designed to be of assistance to them.

This legislation provides that by mutual agreement between the employees and the employers, an employee may work either a 7-day period or a 14-day work period, if he so desires.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. HARSHA. Not until I finish my statement.

Now, this legislation is an effort to merely place the employees of the hospitals in the District of Columbia on the same basis as other employees engaged in similar employment on a national basis as a result of the Fair Labor Standards Act of 1966. This is the same basis they are on all over the United States. We are merely trying to update the conditions which exist in the District of Columbia because of the difficulty in obtaining people to work in hospitals due to the fact that they are required to work 24 hours a day, 7 days a week, and there has to be a differential in scheduling these employees. I say this because when people are in the hospital they do not always get well after a period of 5 days but must have attention to be given to them 24 hours a day, 7 days a week.

Mr. Speaker, in my opinion this is merely an effort to bring this legislation into line with national legislation.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. HARSHA. I yield to the gentleman from California.

Mr. BURTON of California. As I understand the gentleman's statement, the gentleman has expressed his tender loving care and concern for the hospital workers here in the District; that this little bill is just an effort on the part of the gentleman and presumably some of his colleagues on the committee to give some of these employees some help; is that correct?

Mr. HARSHA. I am sorry but I did not understand the last part of the gentleman's question. Give them what?

Mr. BURTON of California. Give the workers in the hospitals a little help.

As we see it, that is not and cannot be believed to be the case.

I will make the flat assertion that there is not any combination of circumstances where a hospital worker working in excess of 80 hours during a 14-day period can possibly be helped by the enactment of this bill, and in a number of instances will receive less in his pay check. It is precisely for this latter reason that this bill has been introduced and it is precisely for this latter reason that the District government is now opposed to it. It is for that reason that the other body failed to consider this matter a year ago.

Mr. HARSHA. What the gentleman is overlooking is this: This is by mutual agreement between the employee and the employer. It does not have to be done. If the employee does not desire to work a 14-day period he does not have to, he may work a 7-day period, but under this bill he has the option. It is his choice not yours or mine.

Mr. BURTON of California. These employees, by and large, are unorganized as I understand the facts, and I do not think——

Mr. HARSHA. Why did the employees appear before the committee and ask for the legislation?

Mr. BURTON of California. The Service Employees International Union is opposed to this bill, and, as for me, sir, I believe the hospital workers in the District can do without the tender loving care and assistance from the Members of the House.

The SPEAKER. The time of the gentleman has expired.

Mr. DOWDY. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I would like to call the attention of the House that when this bill was before the House in January last year on a rollcall vote, that there were nine Members who voted against the bill.

Mr. Speaker, the bill we have here will amend the District of Columbia laws to bring them in conformity with the nationwide Fair Labor Standards Act of 1966. That is one of the reasons that it should be enacted, so as to conform the law of the District to that of the Nation as a whole.

The statement has been made that there were no hearings. The president of the service employees' union, Mr. Sheehan, did testify when we had this bill for hearings in September of 1967—and I was chairman of the subcommittee holding the hearings. Mr. Sheehan testified before the committee. I asked the gentleman if this bill did not follow identically the terms of the national Fair Labor Standards Act, and he testified that it did.

I asked the gentleman at another place whether his union represented the hospital employees who were asking for this bill, and he said it did not. He further understood that this bill was per-

missive, and not mandatory. He testified further that if he did represent the people that wanted to work 32 hours one week and 48 hours the next, so that they could have longer weekends, that he would abide by what the members that he represented asked for.

Mr. Speaker, we had both employees and nurses who testified on this bill, and who asked for it, and they said it was for two reasons, one that the hospitals could schedule their work better by staggering the weeks, and the employees desired it so that they could have alternate long weekends.

There have been some inferences here that the employees work longer than 8 hours in any one given day, but under this bill if they work longer than 8 hours in a given day, then the overtime provisions would apply for that day.

This simply permits the hospital employees to work 4 days one week and 6 days the next week, so that they could have longer weekends every other week.

I sometimes wish we would schedule our hours in that same way.

Mr. HUNGATE. Mr. Speaker, will the gentleman yield?

Mr. DOWDY. I yield to the gentleman from Missouri.

Mr. HUNGATE. Mr. Speaker, I thank the gentleman for yielding, and I would ask the gentleman from Texas—and I thought I understood the gentleman from Ohio (Mr. HARSHA) made the same statement—that the passage of this bill would make it identical with the Fair Labor Standards Act in this field. Is that correct?

Mr. DOWDY. The gentleman is correct in his understanding.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. DOWDY. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Speaker, the fact of the matter is that if this bill passes, then the hospital workers will be the only workers covered by the minimum wage bill in the District of Columbia not to receive time and one-half after 40 hours in a week. Is that correct?

Mr. DOWDY. It is not correct. They will work a total of 80 hours in any 2 weeks, and if they work more than that in any 2 weeks they will receive time and a half.

Mr. BURTON of California. Let me restate my question so that the record will disclose which one of us understands the effect of this legislation:

The statement that I made was that if this bill passes, then the hospital workers will be the only workers covered by the District of Columbia minimum wage bill that do not get time and a half after 40 hours.

Mr. HARSHA. It is permissive, and not mandatory.

Mr. DOWDY. It is permissive. As I understand the minimum wage law in the District of Columbia, the hospital employees would be the only employees who would receive overtime for work in excess of 8 hours in any day. Any hospital employee covered by an agreement under section 3(b)(4) of the District of Columbia Minimum Wage Act must receive, in addition to overtime compensation for employment in excess of 80 hours, overtime compensation in excess of 8 hours in any workday. The District of Columbia Minimum Wage Act does not require the payment of overtime compensation to any other employees for work in excess of 8 hours in 1 day.

Mr. STEIGER of Arizona. I would just like to suggest that the zeal of the gentleman from California certainly is noteworthy. Obviously, he is genuinely concerned. But I must liken it to picking daisies off the lawn while the barn is burning down.

The simple facts of the matter are that you have some people here who through computations of their own have figured out a way to accumulate some leisure time. This was their story. There has been nothing that has been produced that would repudiate this.

The gentleman's efforts to either condemn it or to delay it would seem not to be worthy of the energies that he is displaying here. But I commend him on his display of energy and sincerity.

But I would only point out that the facts of the situation are statistical in nature. Compliance with the Federal law is a matter of record. Here the invective that the gentleman engages in—and I must admit it is engaging and interesting—but I submit it does not serve any particular purpose.

Mr. BURTON of California. Mr. Speaker, will the gentleman yield?

Mr. DOWDY. I yield to the gentleman.

Mr. BURTON of California. Did the gentleman attend any of the hearings on this matter?

Mr. STEIGER of Arizona. I attended the hearings on the matter 2 years ago.

Mr. BURTON of California. Why do you think the House bill was not even heard in the other body even though they had a year to do so on a matter of such purported noble and great merit and assistance to the hospital workers.

Mr. DOWDY. We had a great number of bills from the District Committee—about 30—in the Senate that the Senate did not consider. They were running out of time—I do not know—that is their business.

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield?

Mr. DOWDY. I yield to the gentleman.

Mr. STEIGER of Arizona. I would just like to add, that if we are to use the indifference of the Senate as the basis of our judgment here, then we really are in trouble. I would hope the gentleman would not use that standard.

Mr. BURTON of California. The gentleman from California is not making that point.

Mr. DOWDY. Mr. Speaker, the purpose of H.R. 9553 is to amend the District of Columbia Minimum Wage Act Amendments of 1966—Public Law 89-684, approved October 15, 1966, 80 Stat. 961, D.C. Code, title 36, section 401, and others—with respect to employees of private hospitals in the District, to provide that pursuant to prior agreement or understanding between the parties involved, overtime pay for such employees may be computed upon a work period of 14 consecutive days rather than on the standard workweek of 7 consecutive days as presently provided. If this 14-day period is agreed upon, then time and one-half wages will apply for hours worked in excess of 8 hours per day and in excess of 80 hours within such 14-day period.

This proposed amendment will allow hospitals and their employees in the District of Columbia the same option in computing overtime as is presently provided for such institutions on a nationwide basis by the 1966 Amendments to the Fair Labor Standards Act—Public Law 89-601, approved September 23, 1966; 80 Stat. 830.

PROVISIONS IN FEDERAL LAW

The Congress recognized this problem arising from the peculiar nature of hospital operations, when it enacted the 1966 Amendments to the Fair Labor Standards Act—Public Law 89-601, approved September 23, 1966. Whereas hospital employees had been excluded from all provisions of the Fair Labor Standards Act prior to that time, the 1966 amendments repealed that exclusion. At the same time, however, it was provided that hospitals and their employees, by their mutual agreement, shall have the option of electing either a 7-day or a 14-day work period as the basis for computing overtime. This is exactly the same provision which H.R. 9553 seeks to insert into the District of Columbia Minimum Wage Act. Thus, this proposed legislation would merely harmonize the District of Columbia act with existing Federal law.

The Fair Labor Standards Act does not apply to the District of Columbia in this matter, of course, because the District of Columbia Minimum Wage Act as amended imposes a shorter workweek as the basis for overtime pay.

SUPPORT FOR LEGISLATION

At a public hearing conducted on September 13, 1967, support for legislation identical to this bill was expressed by spokesmen for the former Board of Commissioners of the District of Columbia, and by the Hospital Council of the National Capital Area, Inc.

Also at this time, a background statement approving this approach to overtime pay in private hospitals was submitted on behalf of the American Hospital Association. This document cited a survey of hospitals in the Washington metropolitan area, which revealed that the employees in 10 of the 11 hospitals, surveyed in suburban Virginia and Maryland had elected the 80-hour, 14-day work period option available to them under the Fair Labor Standards Act. Further, the survey indicated that most of the hospitals in the District of Columbia have indicated that their employees also desire to continue their 80-hour, 14-day option if it becomes available to them.

This latter statement is supported by testimony from the director of nursing service at the Washington Hospital Center, who advised your committee that 285 employees in the nursing service at that institution signed a petition requesting the 80-hour, 2-week period, and that many others sought to sign it after it had been submitted to the Hospital Council.

There is strong evidence also that the

employees of these District of Columbia hospitals still favor the system for work schedules which the enactment of H.R. 9553 would permit them to choose. For example, our committee is reliably informed that the nonprofessional employees at the Washington Hospital Center, the largest private hospital in the District, would vote overwhelmingly for the adoption of the 14-day period for determination of overtime pay at this time, if they were permitted to do so.

BACKGROUND

Prior to the enactment of the District of Columbia Minimum Wage Act Amendments of 1966, there was no law providing for minimum wages or overtime pay for adult male employees in the District. However, many female and minor employees in private hospitals in the city were included under wage orders covering practical nurses, nurses' aides, employees in food preparation and service, laundryworkers and those employed in clerical, semitechnical, and building service occupations. However, the 1966 amendments to the act, which became effective as of April 15, 1967, provided minimum wage and overtime coverage for male as well as female employees in the District, and stipulated that as of April 15, 1967, all employees covered under the act were entitled to pay at 1½ their regular rate for work in excess of 42 hours in any workweek. And as of October 15, 1967, this overtime compensation was authorized for employment in excess of 40 hours per workweek.

Inasmuch as these amendments to the District of Columbia Minimum Wage Act did not contain any exclusion of hospital employees from the provisions of the act, this overtime coverage now includes all employees of private hospitals in the District of Columbia except those in executive, administrative, or professional positions. As a matter of fact, the House bill—H.R. 8126—to amend the District of Columbia Minimum Wage Act in 1966—80 Stat. 961—excluded private hospital employees from minimum wage and overtime coverage, but this exclusion was deleted in conference with the Senate.

THE HOSPITAL'S DILEMMA

Your committee is informed that this overtime requirement poses a serious problem for private hospitals in the District of Columbia. The peculiar nature of a hospital's operation, which requires it to be open and staffed 24 hours per day every day in the week, creates problems in the scheduling of personnel which makes it extremely difficult for hospitals to operate on a standard 40-hour workweek, with overtime compensation computed on the basis of such a 7-day period.

Such personnel includes those in nonexecutive, nonadministrative, and nonprofessional positions who are essential in providing 24 hours a day patient care and service. They are the admitting clerks, medical record clerks, dietary aides, housekeeping aides, laundry workers, nursing aides, and orderlies, X-ray technicians, laboratory technicians, operating room technicians, and others who must work evenings, nights, and weekends to provide assistance essential in caring for the illnesses of patients whose needs do not follow a 9 to 5, Monday through Friday schedule.

Because many such hospital employees must work during weekends to provide coverage necessary to protect the patients, it is desirable to schedule their working hours so that they work on alternate weekends. For this reason, it has been a common practice for hospital employees to serve 6 days in 1 week and 4 days in the next, with overtime compensation for work in excess of 80 hours during each such 2-week period. This system makes it possible for such employees to have every other weekend off, as well as an occasional free day during the week. Our committee is advised that this system had been followed in nine of the 11 private hospitals in the District of Columbia prior to the effective date of the 1966 amendments to the District of Columbia Minimum Wage Act, and that it proved very satisfactory both to the hospital and to their employees.

Mr. DOWDY. Mr. Speaker, I move the previous question.

The SPEAKER. The question is on ordering the previous question.

PARLIAMENTARY INQUIRY

Mr. BURTON of California. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state the parliamentary inquiry.

Mr. BURTON of California, Mr. Speaker, is the motion before us to close debate or will there be a vote subsequent to the pending motion so that those of us who want a rollcall on this matter can obtain a rollcall vote.

The SPEAKER. The pending question is on ordering the previous question.

Mr. BURTON of California. This is to close debate and not on the passage of the matter? Will this be our last opportunity to receive a rollcall on this matter?

The SPEAKER. The Chair will state that the question on the passage of the bill will come later, if the previous question is ordered.

The question is on ordering the previous question.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. BURTON of California. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 220, nays 141, not voting 71, as follows:

[Roll No. 124]

Mr. Hosmer for, with Mr. Rosenthal against.

Mr. Davis of Georgia for, with Mr. Rooney of Pennsylvania against.

Mr. Ashbrook for, with Mr. Price of Illinois against.

Mr. Eshleman for, with Mr. Kirwan against.

Mr. Brock for, with Mr. Gallagher against.

Mr. Pettis for, with Mr. Udall against.

Mr. Lloyd for, with Mr. Conyers against.

Mr. Nelsen for, with Mr. Stokes against.

Mr. Lujan for, with Mr. William D. Ford against.

Until further notice:

Mr. Albert with Mr. Gerald R. Ford.

Mr. Evins of Tennessee with Mr. Mailliard.

Mr. Boggs with Mr. Morton.

Mr. Anderson of Tennessee with Mr. Brown of Michigan.

Mr. Culver with Mr. Don H. Clausen.

Mr. Stratton with Mr. Derwinski.

Mr. Lipscomb with Mr. Esch.

Mr. Pirnie with Mr. Landgrebe.

Mr. MacGregor with Mr. Ruppe.

Mr. Watkins with Mr. Hastings.

Mr. Powell with Mr. Whalley.

Mr. Saylor with Mr. Minshall.

Mr. MOLLOHAN and Mr. ROBERTS changed their votes from "nay" to "yea."

Mr. FULTON of Tennessee, Mr. STAGGERS, and Mr. MOLLOHAN changed their votes from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

ADOPTION OF THE INTERSTATE COMPACT ON JUVENILES BY THE DISTRICT OF COLUMBIA

Mr. McMILLAN. Mr. Speaker, at this time I yield to the gentleman from Michigan (Mr. DIGGS) to call up the bill reported by his subcommittee.

Mr. DIGGS. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 8868) to authorize the District of Columbia to enter into the interstate compact on juveniles, and ask unanimous consent that the bill be considered in the House as in Committee on the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Clerk read the bill, as follows:

H.R. 8868

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Congress finds that (1) juveniles who are not under proper supervision and control, or who have absconded, escaped, or run away, are likely to endanger their own health, morals, and welfare, and the health, morals, and welfare of others, and (2) the cooperation of the District of Columbia with the States is necessary to provide for the welfare and protection of juveniles and other persons in the District of Columbia.

(b) The Congress intends, in authorizing the District of Columbia to adopt the Interstate Compact on Juveniles, to have the District of Columbia cooperate fully with the States (1) in returning juveniles to those States requesting their return, and (2) in accepting and providing for the return of juveniles who are residents in the District of Columbia and who are found or apprehended in a State.

SEC. 2. (a) The Commissioner of the District of Columbia (hereafter in this Act referred to as the "Commissioner") is authorized to enter into and execute on behalf of the District of Columbia a compact with any State or States legally joining therein in the form substantially as follows:

"THE INTERSTATE COMPACT ON JUVENILES

"The contracting states solemnly agree:

"ARTICLE I—*Findings and Purposes*

"That juveniles who are not under proper supervision and control, or who have absconded, escaped, or run away, are likely to endanger their own health, morals and welfare, and the health, morals and welfare of others. The cooperation of the states party to this compact is therefore necessary to provide for the welfare and protection of juveniles and of the public with respect to (1) cooperative supervision of delinquent juveniles on probation or parole; (2) the return, from one state to another, of delinquent juveniles who have escaped or absconded; (3) the return, from one state to another, of non-delinquent juveniles who have run away from home; and (4) additional measures for the protection of juveniles and of the public, which any two or more of the party states may find desirable to undertake cooperatively. In carrying out the provisions of this compact the party states shall be guided by the non-criminal, reformative and protective policies which guide their laws concerning delinquent, neglected or dependent juveniles generally. It shall be the policy of the states party to this compact to cooperate and observe their respective responsibilities for the prompt return and acceptance of juveniles and delinquent juveniles who become subject to the provisions of this compact. The provisions of this compact shall be reasonably and liberally construed to accomplish the foregoing purposes.

"ARTICLE II—*Existing Rights and Remedies*

"That all remedies and procedures provided by this compact shall be in addition to and not in substitution for other rights, remedies and procedures, and shall not be in derogation of parental rights and responsibilities.

"ARTICLE III—*Definitions*

"That, for the purposes of this compact, 'delinquent juvenile' means any juvenile who has been adjudged delinquent and who, at the time the provisions of this compact are invoked, is still subject to the jurisdiction of the court that has made such adjudication or to the jurisdiction or supervision of an agency or institution pursuant to an order of such court; 'probation or parole' means any kind of conditional release of juveniles authorized under the laws of the states party hereto; 'court' means any court having jurisdiction over delinquent, neglected or dependent children; 'state' means any state, territory or possessions of the United States, the District of Columbia, and the Commonwealth of Puerto Rico; and 'residence' or any variant thereof means a place at which a home or regular place of abode is maintained.

"ARTICLE IV—*Return of Runaways*

"(a) That the parent, guardian, person or agency entitled to legal custody of a juvenile who has not been adjudged delinquent but who has run away without the consent of such parent, guardian, person or agency may petition the appropriate court in the demanding state for the issuance of a requisition for his return. The petition shall state the name and age of the juvenile, the name of the petitioner and the basis of entitlement to the juvenile's custody, the circumstances of his running away, his location if known at the time application is made, and such other facts as may tend to show that the juvenile who has run away is endangering his own welfare or the welfare of others and is not an emancipated minor. The petition shall be verified by affidavit, shall be executed in duplicate, and shall be accompanied by two certified copies of the document or documents on which the petitioner's entitlement to the juvenile's custody is based, such as birth certificates, letters of guardianship, or custody decrees. Such further affidavits and other documents as may be deemed proper may be submitted with such petition. The judge of the court to which this application is made may hold a hearing thereon to determine whether for the purposes of this compact the petitioner is entitled to the legal custody of the juvenile, whether or not it appears that the juvenile has in fact run away without consent, whether or not he is an emancipated minor, and whether or not it is in the best interest of the juvenile to compel his return to the state. If the judge determines, either with or without a hearing, that the juvenile should be returned, he shall present the appropriate court or to the executive authority of the state where the juvenile is alleged to

be located a written requisition for the return of such juvenile. Such requisition shall set forth the name and age of the juvenile. The determination of the court that the juvenile has run away without the consent of a parent, guardian, person or agency entitled to his legal custody, and that it is in the best interest and for the protection of such juvenile that he be returned. In the event that a proceeding for the adjudication of the juvenile as a delinquent, neglected or dependent juvenile is pending in the court at the time when such juvenile runs away, the court may issue a requisition for the return of such juvenile upon its own motion, regardless of the consent of the parent, guardian, person or agency entitled to legal custody, reciting therein the nature and circumstances of the pending proceeding. The requisition shall in every case be executed in duplicate and shall be signed by the judge. One copy of the requisition shall be filed with the compact administrator of the demanding state, there to remain on file subject to the provisions of law governing records of such court. Upon the receipt of a requisition demanding the return of a juvenile who has run away, the court or the executive authority to whom the requisition is addressed shall issue an order to any peace officer or other appropriate person directing him to take into custody and detain such juvenile. Such detention order must substantially recite the facts necessary to the validity of its issuance hereunder. No juvenile detained upon such order shall be delivered over to the officer whom the court demanding him shall have appointed to receive him, unless he shall first be taken forthwith before a judge of a court in the state, who shall inform him of the demand made for his return, and who may appoint counsel or guardian ad litem for him. If the judge of such court shall find that the requisition is in order, he shall deliver such juvenile over to the officer whom the court demanding him shall have appointed to receive him.

The judge, however, may fix a reasonable time to be allowed for the purpose of testing the legality of the proceeding.

"Upon reasonable information that a person is a juvenile who has run away from another state party to this compact without the consent of a parent, guardian, person or agency entitled to his legal custody, such juvenile may be taken into custody without a requisition and brought forthwith before a judge of the appropriate court who may appoint counsel or guardian ad litem for such juvenile and who shall determine after a hearing whether sufficient cause exists to hold the person, subject to the order of the court, for his own protection and welfare, for such a time not exceeding 90 days as will enable his return to another state party to this compact pursuant to a requisition for his return from a court of that state. If, at the time when a state seeks the return of a juvenile who has run away, there is pending in the state wherein he is found any criminal charge, or any proceeding to have him adjudicated a delinquent juvenile for an act committed in such state, or if he is suspected of having committed within such state a criminal offense or an act of juvenile delinquency, he shall not be returned without the consent of such state until discharged from prosecution or other form of proceeding, imprisonment, detention or supervision for such offense or juvenile delinquency. The duly accredited officers of any state party to this compact, upon the establishment of their authority and the identity of the juvenile being returned, shall be permitted to transport such juvenile through any and all states party to this compact, without interference. Upon his return to the state from which he ran away, the juvenile shall be subject to such further proceedings as may be appropriate under the laws of that state.

"(b) That the state to which a juvenile is returned under this Article shall be responsible for payment of the transportation costs of such return.

"(c) That 'juvenile' as used in this Article means any person who is a minor under the law of the state of residence of the parent, guardian, person or agency entitled to the legal custody of such minor.

"ARTICLE V—*Return of Escapees and Absconders*

"(a) That the appropriate person or authority from whose probation or parole supervision a delinquent juvenile has absconded or from whose institutional custody he has escaped shall present to the appropriate court or to the executive authority of the state where the delinquent juvenile is alleged to be located a written requisition for the return of such delinquent juvenile. Such requisition shall state the name and age of the delinquent juvenile, the particulars of his adjudication as a delinquent juvenile, the circumstances of the breach of the terms of his probation or parole or of his escape from an institution or agency vested with his legal custody or supervision, and the location of such delinquent juvenile, if known, at the time the requisition is made. The requisition shall be verified by affidavit, shall be executed in duplicate, and shall be accompanied by two certified copies of the judgment, formal adjudication, or order of commitment which subjects such delinquent juvenile to probation or parole or to the legal custody of the institution or agency concerned. Such further affidavits and other documents as may be deemed proper may be submitted with such requisition. One copy of the requisition shall be filed with the compact administrator of the demanding state, there to remain on file subject to the provisions of law governing records of the appropriate court. Upon the receipt of a requisition demanding the return of a delinquent juvenile who has absconded or escaped, the court or the executive authority to whom the requisition is addressed shall issue an order to any peace officer or other appropriate person directing him to take into custody and detain such delinquent juvenile. Such detention order must substantially recite the facts necessary to the validity of its issuance hereunder. No delinquent juvenile detained upon such order shall be delivered over to the officer whom the appropriate person or authority demanding him shall have appointed to receive him, unless he shall first be taken forthwith before a judge of an appropriate court in the state, who shall inform him of the demand made for his return and who may appoint counsel or guardian ad litem for him. If the judge of such court shall find that the requisition is in order, he shall deliver such delinquent juvenile over to the officer whom the appropriate person or authority demanding him shall have appointed to receive him. The judge, however, may fix a reasonable time to be allowed for the purpose of testing the legality of the proceeding.

"Upon reasonable information that a person is a delinquent juvenile who has absconded while on probation or parole, or escaped from an institution or agency vested with his legal custody or supervision in any state party to this compact, such person may be taken into custody in any other State party to this compact without a requisition. But in such event, he must be taken forthwith before a judge of the appropriate court, who may appoint counsel or guardian ad litem for such person and who shall determine, after a hearing, whether sufficient cause exists to hold the persor subject to the order of the court for such a time, not exceeding 90 days, as will enable his detention under a detention order issued on a requisition pursuant to this article. If, at the time when a State seeks the return of a delinquent juvenile who has either absconded while on probation or parole or escaped from an institution or agency vested with his legal custody or supervision, there is pending in the State wherein he is detained any criminal charge or any proceeding to have him adjudicated a delinquent juvenile for an act committed in such State, or if he is suspected of having committed within such State a criminal offense or an act of juvenile delinquency, he shall not be returned without the consent of such State until discharged from prosecution or other form of proceeding, imprisonment, detention or supervision for such offense or juvenile delinquency. The duly accredited officers of any state party to this compact, upon the establishment of their authority and the identity of the delinquent juvenile being returned, shall be permitted to transport such delinquent juvenile through any and all States party to this compact, without interference. Upon his return to the State from which he escaped or absconded, the delinquent juvenile shall be subject to such further proceedings as may be appropriate under the laws of that State.

"(b) That the State to which a delinquent juvenile is returned under this article shall be responsible for the payment of the transportation costs of such return.

"ARTICLE VI—*Voluntary Return Procedure*

"That any delinquent juvenile who has absconded while on probation or parole, or escaped from an institution or agency vested with his legal custody or supervision in any state party to this compact, and any juvenile who has run away from any state party to this compact, who is taken into custody without a requisition in another state party to this compact under the provisions of Article IV(a) or of Article V(a), may consent to his immediate return to the state from which he absconded, escaped or ran away. Such consent shall be given by the juvenile or delinquent juvenile and his counsel or guardian ad litem if any, by executing or subscribing a writing, in the presence of a judge of the appropriate court, which states that the juvenile or delinquent juvenile and his counsel or guardian ad litem, if any, consent to his return to the demanding state. Before such consent shall be executed or subscribed, however, the judge, in the presence of counsel or guardian ad litem, if any, shall inform the juvenile or delinquent juvenile of his rights under this compact. When the consent has been duly executed, it shall be forwarded to and filed with the compact administrator of the state in which the court is located and the judge shall direct the officer having the juvenile or delinquent juvenile in custody to deliver him to the duly, accredited officer or officers of the state demanding his returning, and shall cause to be delivered to such officer or officers a copy of the consent. The court may, however, upon the request of the state to which the juvenile or delinquent juvenile is being returned, order him to return unaccompanied to such state and shall provide him with a copy of such court order; in such event a copy of the consent shall be forwarded to the compact administrator of the state to which said juvenile or delinquent juvenile is ordered to return.

"ARTICLE VII—*Cooperative Supervision of Probationers and Parolees*

"(a) That the duly constituted judicial and administrative authorities of a state party to this compact (herein called 'sending state') may permit any delinquent juvenile within such state, placed on probation or parole, to reside in any other state party to this compact (herein called "receiving state") while on probation or parole, and the receiving state shall accept such delinquent juvenile, if the parent, guardian or person entitled to the legal custody of such delinquent juvenile is residing or undertakes to reside within the receiving state. Before granting such permission, opportunity shall be given to the receiving state to make such

investigations as it deems necessary. The authorities of the sending state shall send to the authorities of the receiving state copies of pertinent court orders, social case studies and all other available information which may be of value to and assist the receiving state in supervising a probationer or parolee under this compact. A receiving state, in its discretion, may agree to accept supervision of a probationer or parolee in cases where the parent, guardian or person entitled to the legal custody of the delinquent juvenile is not a resident of the receiving state, and if so accepting the sending state may transfer supervision accordingly.

"(b) That each receiving state will assume the duties of visitation and of supervision over any such delinquent juvenile and in the exercise of those duties will be governed by the same standards of visitation and supervision that prevail for its own delinquent juveniles released on probation or parole.

"(c) That, after consultation between the appropriate authorities of the sending state and of the receiving state as to the desirability and necessity of returning such a delinquent juvenile, the duly accredited officers of a sending state may enter a receiving state and there apprehend and retake any such delinquent juvenile on probation or parole. For that purpose, no formalities will be required, other than establishing the authority of the officer and the identity of the delinquent juvenile to be retaken and returned. The decision of the sending state to retake a delinquent juvenile on probation or parole shall be conclusive upon and not reviewable within the receiving state, but if, at the time the sending state seeks to retake a delinquent juvenile on probation or parole, there is pending against him within the receiving state any criminal charge or any proceeding to have him adjudicated a delinquent juvenile for any act committed in such state or if he is suspected of having committed within such state a criminal offense or an act of juvenile delinquency, he shall not be returned without the consent of the receiving state until discharged from prosecution or other form of proceeding, imprisonment, detention or supervision for such offense or juvenile delinquency. The duly accredited officers of the sending state shall be permitted to transport delinquent juveniles being so returned through any and all states party to this compact, without interference.

"(d) That the sending state shall be responsible under this Article for paying the costs of transporting any delinquent juvenile to the receiving state or of returning any delinquent juvenile to the sending state.

"ARTICLE VIII—*Responsibility for Costs*

"(a) That the provisions of Articles IV(b), V(b) and VII(d) of this compact shall not be construed to alter or affect any internal relationship among the departments, agencies and officers of and in the government of a party state, or between a party state and its subdivisions, as to the payment of costs, or responsibilities therefor.

"(b) That nothing in this compact shall be construed to prevent any party state or subdivision thereof from asserting any right against any person, agency or other entity in regard to costs for which such party state or subdivision thereof may be responsible pursuant to Articles IV(b), V(b) or VII(d) of this compact.

"ARTICLE IX—*Detention Practices*

"That, to every extent possible, it shall be the policy of states party to this compact that no juvenile or delinquent juvenile shall be placed or detained in any prison, jail or lockup nor be detained or transported in association with criminal, vicious or dissolute persons.

"ARTICLE X—*Supplementary Agreements*

"That the duly constituted administrative authorities of a state party to this compact may enter into supplementary agreements with other state or states party hereto for the cooperative care, treatment and rehabilitation of delinquent juveniles whenever they shall find that such agreements will improve the facilities or programs available for such care, treatment, and rehabilitation. Such care, treatment and rehabilitation may be provided in an institution located within any state entering into such supplementary agreement. Such supplementary agreements shall (1) provide the rates to be paid for the care, treatment and custody of such delinquent juveniles, taking into consideration the character of facilities, services and subsistence furnished (2) provide that the delinquent juvenile shall be given a court hearing prior to his being sent to another state for care, treatment and custody; (3) provide that the state receiving such a delinquent juvenile in one of its institutions shall act solely as agent for the state sending such delinquent juvenile; (4) provide jurisdiction over delinquent juveniles sent to an institution in another state; (5) provide that the sending state shall at all times retain for reasonable inspection of such institutions by the sending state; (6) provide that the consent of the parent, guardian, person or agency entitled to the legal custody of said delinquent juvenile shall be secured prior to his being sent to another state and (7) make provision for such other matters and details as shall be necessary to protect the rights and equities of such delinquent juveniles and of the cooperating states.

"ARTICLE XI—*Acceptance of Federal and Other Aid*

"That any state party to this compact may accept any and all donations, gifts and grants of money, equipment and services from the federal or any local government, or any agency thereof and from any person, firm or corporation, for any of the purposes and functions of this compact, and may receive and utilize, the same subject to the terms, conditions and regulations governing such donations, gifts and grants.

"ARTICLE XII—*Compact Administrators*

"That the governor of each state party to this compact shall designate an officer who, acting jointly with like officers of other party states, shall promulgate rules and regulations to carry out more effectively the terms and provisions of this compact.

"ARTICLE XIII—*Execution of Compact*

"That this compact shall become operative immediately upon its execution by any state as between it and any other state or states so executing. When executed it shall have the full force and effect of law within such state, the form or execution to be in accordance with the laws of the executing state.

"ARTICLE XIV—*Renunciation*

"That this compact shall continue in force and remain binding upon each executing state until renounced by it. Renunciation of this compact shall be by the same authority which executed it, by sending six months' notice in writing of its intention to withdraw from the compact to the other states party hereto. The duties and obligations of a renouncing state under Article VII hereof shall continue as to parolees and probationers residing therein at the time of withdrawal until retaken or finally discharged. Supplementary agreements entered into under Article X hereof shall be subject to renunciation as provided by such supplementary agreements, and shall not be subject to the six months' renunciation notice of the present Article.

"ARTICLE XV—*Severability*

"That the provisions of this compact shall be severable and if any phase, clause, sentence or provision of this compact is declared to be contrary to the constitution of any participating state or of the United States or the applicability thereof to any government, agency, person or circumstance is held invalid, the validity of the remainder of this compact and the applicability thereof to any government, agency, person or circumstances shall not be affected thereby. If this compact shall be held contrary to the constitution of any state participating therein, the compact shall remain in full force and effect as to the remaining states and in full force and effect as to the state affected as to all severable matters."

(b) The Commissioner may enter into and execute on behalf of the District of Columbia the following additional articles to the Interstate Compact on Juveniles:

"ARTICLE XVI—*Additional Provision Relating to Return of Minor Children*

"This article shall provide additional remedies, and shall be binding only as among and between those party states which specifically execute the same.

"For the purposes of this article, 'child', as used herein, means any minor within the jurisdictional age limits of any court in the home state.

"When any child is brought before a court of a state of which such child is not a resident, and such state is willing to permit such child's return to the home state of such child, such home state, upon being so advised by the state in which such proceeding is pending, shall immediately institute proceedings to determine the residence and jurisdictional facts as to such child in such home state, and upon finding that such child is in fact a resident of said state and subject to the jurisdiction of the court thereof, shall within five days authorize the return of such child to the home state, and to the parent or custodial agency legally authorized to accept such custody in such home state, and at the expense of such home state, to be paid from such funds as such home state may procure, designate, or provide, prompt action being of the essence.

"ARTICLE XVII—*Additional Provision Concerning Interstate Rendition of Juveniles Alleged To Be Delinquent*

"This article shall provide additional remedies, and shall be binding only as among and between those party states which specifically execute the same.

"All provisions and procedures of articles V and VI of the Interstate Compact on Juveniles shall be construed to apply to any juvenile charged with being a delinquent by reason of a violation of any criminal law. Any juvenile, charged with being a delinquent by reason of violating any criminal law shall be returned to the requesting State upon a requisition to the State where the juvenile may be found. A petition in such case shall be filed in a court of competent jurisdiction in the requesting State where the violation of criminal law is alleged to have been committed. The petition may be filed regardless of whether the juvenile has left the State before or after the filing of the petition. The requisition described in article V of the compact shall be forwarded by the judge of the court in which the petition has been filed."

SEC. 3. (a) The Commissioner shall appoint or designate an officer of the government of the District of Columbia (hereafter in this Act referred to as the "compact administrator") to administer the compact. The compact administrator shall serve at the pleasure of the Commissioner.

(b) The compact administrator, acting jointly with like officers of party States, shall promulgate rules and regulations to carry out more effectively the terms of the compact. The compact administrator shall cooperate with all departments, agencies, and officers of the government of the District of Columbia in facilitating the proper administration of the compact or of any supplementary agreement entered into by the compact

administrator under subsection (c) of this section.

(c) Subject to the approval of the Commissioner, the compact administrator may enter into supplementary agreements with appropriate State officials for the purposes of administering the compact.

(d) Subject to the approval of the Commissioner, the compact administrator may make or arrange for any payments necessary to discharge any financial obligations imposed upon the District of Columbia by the compact or by any supplementary agreement entered into under subsection (c) of this section.

SEC. 4. The courts, departments, agencies, and officers of the District of Columbia shall enforce the compact and shall take such action as may be necessary to carry out the purposes and intent of the compact which may be within their respective jurisdictions.

SEC. 5. The compact shall not be construed to prohibit the adoption of any other plan or procedure for the District of Columbia for the return of any runaway juvenile.

Mr. DIGGS. Mr. Speaker, the purpose of H.R. 8868 is to authorize the Commissioners of the District of Columbia to cooperate fully with the various States in two ways; namely, first, in returning juveniles from the District to those States requesting their return; and second, in accepting and providing for the return of juveniles who are residents of the District of Columbia and who are found or apprehended in other States.

The bill provides further that the compact will be administered in the District by an official designated by the Commissioner. This will assure the advantages of localizing responsibility and centralizing information.

HISTORY OF THE INTERSTATE COMPACT ON JUVENILES

In the early 1950's, financial and legal problems involving the transportation, supervision, and control of juvenile delinquents between State jurisdictions reached the stage where a need for some form of interstate agreement on the handling of juveniles was apparent.

Virtually all leading spokesmen in the field of juvenile delinquency concurred in the belief that the States should adopt legislation similar to that which already had proved successful for the supervision of adult parolees and probationers; namely, uniform procedures to expedite the return of delinquent and runaway juveniles from other States and to assure proper supervision of a juvenile whose offense was committed and adjudicated in one State but who subsequently was authorized to reside in another State.

In 1954, the National Council of Juvenile Court Judges drafted a preliminary interstate compact on juveniles. Later that same year, the Council of State Governments, assisted by such organizations as the National Probation and Parole Association, the American Public Welfare Association, and the Special Committee on Juvenile Delinquency of the U.S. Senate, drafted the present interstate compact on juveniles.

Final action on this interstate compact was taken by these and other groups in January of 1955. That same year, 10 State legislatures adopted this compact, and today the compact is law in all but three States. These are New Mexico, Georgia, and South Carolina.

HEARINGS

A public hearing on this proposed legislation was conducted on July 1, 1969, by Subcommittee No. 2. At that time, testimony in favor of its enactment was offered by spokesmen for the U.S. Department of Justice, the Federal Bureau of Prisons, the Association of Juvenile Compact Administrators of the Council of State Governments, the Maryland State Department of Juvenile Services, the Virginia Department of Welfare and Institutions, and the government of the District of Columbia. No opposition to the bill was expressed.

NEED FOR LEGISLATION

Your committee is informed that the FBI uniform crime reports continue to indicate an increase in crime throughout the country especially among juveniles. Serious crime increased by 10 percent nationally during the first 3 months of 1969, as compared to the same period in 1968. Any effort to reduce the incidence of crime must include in the opinion of your committee, programs to provide effective control and correction of juvenile offenders.

This view is adequately supported by the ugly facts concerning juvenile crime in the Nation's Capital. Statistics released last April by the District of Columbia juvenile court reveal an increase during the first 3 months of this year in juveniles charged with serious crimes. These included 12 juveniles, three of whom were less than 16 years of age, who were charged with homicide. Seventy-nine were charged with armed robbery during this period. Further, a national report indicates that youths today are committing about one-half of all the serious crimes in the United States.

This situation emphasizes the need for speedy apprehension and swift justice in dealing with these youthful offenders, since the certainty of apprehension is probably the most effective deterrent to crime. During the first 3 months of this year, for example, a total of 305 repeater juveniles were arrested in the District of Columbia while awaiting final disposition of their previous offenses.

Certainly one important step in achieving more effective treatment of juvenile delinquents in the District would be to equip the city's law enforcement officials with the tools to pursue and arrest juveniles who seek refuge behind jurisdictional boundaries to escape apprehension. This vitally important authority will be provided by the enactment of H.R. 8868, which will result in the District's entering into the interstate compact on juveniles.

Your committee is informed that at the present time, the District of Columbia juvenile authorities have little difficulty in having delinquents and runaway juveniles returned from the neighboring States of Virginia and Maryland, because of an informal pact existing among these jurisdictions. However, the District of Columbia does have a serious problem in regard to runaway juveniles. Your committee is advised that this city is presently a haven for such runaways, and there is great need for authority to return these juveniles to their homes in New York, New Jersey, North Carolina, and many other States. It is estimated that this use of the compact would involve approximately 50 to 100 juveniles per year in the District of Columbia. This committee was advised also that the compact administrators in other States are highly in favor of the enactment of H.R. 8868, as it will enable them for the first time to deal effectively with the District of Columbia with respect to juvenile refugees, as they can presently do with the other 46 member States.

Mr. GUDE. Mr. Speaker, as sponsor of H.R. 8868, I rise to urge the passage of this legislation which would authorize the District of Columbia to enter into the interstate compact on juveniles.

As we continue our struggle against crime at all levels of government, it is imperative we give particular attention to the role of juveniles. This is dramatically revealed in the statistics that out of every 10 adult crime offenders 7 have had some type of juvenile record. We must upgrade all elements of our legal machinery in dealing with juveniles from the time of arrest to probation, parole, and final release.

The bill we are considering today is an important step in assisting the District of Columbia officials and officials of many other States of the Union who must work with juvenile offenders or runaways who cross jurisdictional boundaries. It will assist in guaranteeing that juveniles receive justice with deliberate speed which is an important element of any effective crime-fighting effort.

The legislation would assist in returning juvenile offenders or runaways from the District of Columbia to States requesting their return and also make it possible to accept and provide for the return from other jurisdictions of juvenile offenders or runaways who are residents of the District of Columbia. It would not, however, in any way relieve parents of their responsibilities.

Because of the growing amount of travel throughout the country juvenile authorities in the early 1950's developed the idea of an Interstate Compact Authority to better deal with the movement of juvenile offenders and runaways across jurisdictional boundaries. Today all but three States: New Mexico, Georgia, and South Carolina, are signators to the interstate compact.

Maryland, the District of Columbia and Virginia juvenile authorities testified in support of this bill as did the Department of Justice. A statement of support was also submitted in behalf of the Association of Juvenile Compact Administrators of the Council of State Governments.

I hope that the House will give its full support to this—an important measure in dealing with juvenile crime specifically and the care of juveniles in general.

Mr. HOGAN. Mr. Speaker, I rise in support of H.R. 8868, which authorizes the District of Columbia to enter into the interstate compact on juveniles.

As a cosponsor of this bill, I would like to point out to my colleagues some features of this measure for their consideration.

All are agreed that a problem exists with runaway juveniles, both delinquent

and nondelinquent. Thousands of youngsters every day leave parental control. Some of these juveniles, lured to the large cities, cross State lines, and travel great distances. Today's transportation systems offer a mobility which compounds the problem. Years ago, a juvenile was not likely to get too far from home. But today this is not so. This means that whoever has control, parental or otherwise, spends a considerable amount of time trying to find these runaways, and, then even after they are discovered, spends a great deal more time to effect their return.

This bill would assist in securing a speedy return of these runaways who cross State boundaries by providing for simplified legal procedures to expedite the return of delinquents and nondelinquents. Further, it permits an intelligent solution to the problem of control over juvenile probationers or parolees when they reside with their parents or guardians in a State other than that in which they were sentenced.

I think that, with the greater mobility of our present day society, this bill is very necessary, and reasonable. The juvenile remains under the control of the parent or guardian and is not separated. In these cases, the receiving State exercises the duties of supervision.

For the juvenile runaway, there are safeguards in this bill as to the manner of detention. Any State party to this compact must see to it that these minors are not detained in any prison or jail, and are not transported in association with hardened criminals.

I believe that the District of Columbia, by becoming a party to this compact, will make a progressive step forward to an enlightened solution of this ever-increasing problem. Therefore, I urge my distinguished colleagues to vote in favor of this bill.

Mr. BROYHILL of Virginia. Mr. Speaker, I wish to commend to my colleagues for favorable action the bill H.R. 8868, of which I am pleased to be a cosponsor. The purpose of this legislation is to authorize the District of Columbia to enter into the interstate compact on juveniles.

This compact was ratified by the first State in December of 1955, and today it has been adopted by every State in the Union with the exception of New Mexico, Georgia, and South Carolina.

The interstate compact on juveniles has provided a uniform agreement virtually national in scope, providing a legal procedure and means for the proper handling of delinquent juveniles who seek to avoid apprehension by fleeing to another State, and also runaway juveniles who have not been adjudged as delinquent. The compact actually has a twofold purpose. It protects the rights and the best interests of the juveniles themselves, and at the same time it provides the courts a legal structure and procedure by which the interests of the member States and of the general public also are served. Also, it is important to note that this compact does not limit other existing legislation relating to juveniles, nor does it abrogate parental authority.

In essence, the compact provides for the following:

First, the return to their home State of runaways who have not as yet been adjudged delinquent;

Second, the return of absconders and escapees to the State from which they absconded or escaped;

Third, investigation, placement, and supervision of a delinquent juvenile who is to be placed in a State other than the one in which he committed an offense; and

Fourth, additional measures for the protection of juveniles and the public that any two or more of the member States may find advisable to undertake cooperatively.

These provisions in the compact thus provide the member States a maximum of opportunity for the proper handling of refugee juveniles, both as to their return to their home States when this is deemed advisable, and also in the matter of helping the delinquent youngsters in many instances by providing them the most effective programs of rehabilitation.

All these benefits, however, are presently denied the District of Columbia, which thus exists as an island of isolation in which this highly effective program cannot operate. The neighboring States of Maryland and Virginia, for example, enjoy this legal structure by which they can have children returned to them who have run away to other States, and also can return to other States children who have run away and come within their borders. However, the juvenile authorities in both these States complain that they cannot exercise either of these legal prerogatives in the case of juveniles who abscond from Maryland or Virginia into the District of Columbia or vice versa. And worst of all, of course, is the plight of the District of Columbia itself, which lacks the advantages of the compact in its relationship to all the States.

As a consequence, since juvenile delinquents and runaways are not subject to the extradition process which may be applied in the case of an adult criminal, the transfer of juvenile refugees to or from the District at present can legally be accomplished only through arrangements between the welfare departments of the District of Columbia and of the other State involved. This is highly unsatisfactory for many reasons. First, there is no opportunity for a judicial proceeding to determine the status of the youth in question. Also, the cooperative process between welfare departments is lengthy and time consuming. And further, the simple fact is that most welfare departments are not equipped to supervise delinquent boys 16 to 18 years of age.

This isolated position of the District of Columbia, by reason of which it is most difficult for the District either to secure the return of its juvenile offenders who flee to other jurisdictions or to rid the city of the undesirable juveniles from other States who seek refuge here in the Nation's Capital, has made this city a veritable haven for juvenile runaways and a leader among cities in the incidence of juvenile crime. During the first 3 months of this year, for example, no less than 12 juveniles in the District were charged with homicide—and three of these offenders were less than 16 years of age. During the same brief period, 79 juveniles were charged with armed robbery. And we will never know, of course, how many such crimes were committed by the District's youth who have never been apprehended.

Mr. Speaker, I do not believe there is a city in the United States where crime is more rampant than right here in the District of Columbia, much of it by youngsters less than 18 years of age. I contend, therefore, that we in the Congress must take every possible means to curb this pestilence that pervades our Nation's Capital.

The bill H.R. 8868, which will authorize the District of Columbia for the first time to adopt the interstate compact on juveniles and thus assure a far better and more effective handling of juveniles fleeing into or out of the city, will afford the District far greater flexibility in the vital area of control of juveniles. Further, this proposed legislation will obviously benefit the entire metropolitan area as a result. There is no question in my mind that the District's entrance into this compact is long overdue.

For these reasons, Mr. Speaker, I urge the support of my colleagues in the House for this vitally important bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

VACATION WORK PERMITS FOR MINORS IN THE DISTRICT OF COLUMBIA

Mr. DIGGS. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 12671) to amend the act of May 29, 1928, to facilitate and encourage the employment of minors in the District of Columbia between the ages of 14 and 16 during the summer and other school vacation periods, and for other purposes, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Clerk read the bill, as follows:

H.R. 12671

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. The first sentence of section 2 of the Act entitled "An Act to regulate the employment of minors within the District of Columbia", approved May 29, 1926 (D.C. Code, sec. 36–202), is amended by striking out "seven o'clock in the evening" and inserting in lieu thereof "ten o'clock in the evening".

SEC. 2. (a) The first sentence of section 12 of such Act of May 29, 1928 (D.C. Code, sec. 36–212), is amended by striking out "if the age" and all that follows down through and including the period at the end of such sentence and inserting in lieu thereof the following: "if the application of such minor for such permit is accompanied by (1) a

written certification of the parent, guardian, or custodian of the minor that the minor is at least fourteen years of age and is physically fit, and (2) the statement relating to his employment required by paragraph (a) of section 10 of this Act. Such minor may be required to file the certificate of physical fitness required by paragraph (c) of section 10 of this Act. A permit issued under this section to any minor who is found to be physically unqualified for the employment in which he is engaged may be canceled."

(b) Section 10 of such Act (D.C. Code, sec. 36–210) is amended by striking out "SEC. 10. The officer" and inserting in lieu thereof "SEC. 10. Except as provided in section 12 of this Act, the officer".

Mr. DIGGS. Mr. Speaker, the purpose of H.R. 12671, which was requested by the Commissioner of the District of Columbia, is to amend the present District of Columbia law with respect to the issuance of vacation work permits to minors between the ages of 14 and 16 years, in order to expedite and encourage the issuance of such permits.

PRESENT LAW

Under existing District of Columbia law—D.C. Code, sec. 36–212—a minor between the ages of 14 and 16 years who wishes to work during the regular summer vacation period of the District of Columbia public schools, or at any other times when the schools are not in session, must obtain a vacation work permit from the Department of School Attendance and Work Permits of the District of Columbia public school administration. This permit is actually not issued to the minor himself, but is furnished to his prospective employer, who is required to notify the department in writing of its receipt an dreturn the permit to the department upon the termination of the minor's employment. Hence, this vacation work permit is issued to authorize the employment of the minor in one specific job. This permit system is essential not only for the protection of the minors themselves against exploitation and unsuitable employment, but also as a protection for the employers in connection with the child labor laws and also in obtaining adequate employee insurance.

PROVISIONS OF THE BILL

H.R. 12671 will amend the present law with respect to the issuance of vacation work permits as follows:

First. The minor will not be required to be accompanied by his parent, guardian, or custodian when applying for the permit.

Second. The application for a permit must be accompanied by a written certification of the parent, guardian, or custodian of the minor that the child is at least 14 years of age and is physically fit. This written statement will replace the former requirement of a birth certificate or other evidence of the minor's age, and also the requirement of a physical examination and certificate of physical fitness signed by the school medical officer. However, the bill provides that such physical examination may be required, thus leaving this matter to the discretion of the director of the Department of School Attendance and Work Permits. And further, the bill provides that in the event that a minor is found to be physically unqualified for the work in which he is employed, the permit may be canceled.

The bill also amends the existing law by providing that such minors may be employed as late as 10 o'clock in the evening, rather than the present 7 o'clock limitation.

In the matter of extending the hour to which minors 14 and 15 years of age may work, from 7 o'clock in the evening to 10 p.m., your committee believes this to be realistic in view of the fact that many commercial establishments in the city remain open at least until this later hour, together with the consideration that in too many instances, these youngsters would spend these 3 extra hours roaming the streets rather than returning earlier to their homes. Hence, the bill provides for the same later hour which is presently permitted for minors 16 and 17 years of age.

CONCLUSIONS

For the reasons set forth above, your committee is of the opinion that the provisions of this bill, which will amend the present procedure required in connection with issuing vacation work permits to minors from 14 to 16 years of age, so that the youngster will only have to go to the Permit Section Office and submit a written statement from his parent or guardian certifying his age and physical fitness, together with the proper written statement signed by his prospective employer, will provide a great improvement in this process over the present cumbersome, time-consuming procedure with its frustrating array of redtape.

We feel that this legislation will thus serve a very important purpose, by simplifying and expediting the issuance of these permits, thus encouraging the youngsters of the District of Columbia in their efforts to spend their summer vacation periods in gainful employment.

COMMITTEE HEARINGS

A public hearing on this proposed legislation was conducted on June 10, 1969, by Subcommittee No. 2. At this time, testimony in favor of the bill was presented by spokesmen for the District of Columbia Health and Welfare Council, the Economic Development Committee of the District of Columbia Government, Pride, Inc., the Shaw Neighborhood Council for Children and Youth, the District of Columbia Department of Recreation, the Neighborhood Council No. 14, and the Office of the Commissioner of the District of Columbia.

AMENDMENT OFFERED BY MR. BROYHILL OF VIRGINIA

Mr. BROYHILL of Virginia. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BROYHILL of Virginia: Strike out section 2(a) and insert in lieu thereof the following:

"SEC. 2. (a) The first sentence of section 12 of such Act of May 29, 1928 (D.C. Code, sec. 36–212), is amended by striking out 'if the age' and all that follows down through and including the period at the end of such sentence and inserting in lieu thereof the following: 'if the application of such minor for such permit is accompanied by (1) evidence of the minor's age as provided in section 11 of this Act, (2) a written certification of the parent, guardian, or custodian of the minor that the minor is physically fit, and (3) the statement relating to his employment required by paragraph (a) of section 10 of this Act. Such minor may be required to file the certificate of physical fitness required by paragraph (c) of section 10 of this Act. A permit issued under this section to any minor who is found to be physically unqualified for the employment in which he is engaged may be cancelled.' "

Mr. BROYHILL of Virginia. Mr. Speaker, the objectionable feature of this bill, as reported, is the provision that evidence of a minor's age will no longer be required in connection with an application for a vacation work permit—issued to minors between the ages of 14 and 16 years for work during school vacation periods.

At present, all minors between the ages 14 and 18 who wish to work in the District of Columbia must obtain a work permit. One requirement for such a permit is the submission of a birth certificate or other evidence of the age of the minor as provided by present law—D.C. Code, sec. 36–211. The reason for this is to prevent the employment of children under 14 years of age, which is deemed to be in the best interests of the child himself.

In lieu of this requirement, the bill H.R. 12671 provides that the minor must present a written certification of his age, signed by his parent or guardian. The school attendance and work permit office, which issues these vacation work permits, objects strongly to this provision, on the grounds that the acceptance of the written statement as to the minor's age will largely destroy the significance of the permit, because there will be no assurance whatever that the statement has actually been signed by the parent or guardian, nor that the statement is true in any event.

It is quite obvious that this objection is well founded, and that if this bill is enacted in its present form, this matter of minimum age will be violated in a great many instances. In some instances, these vacation work permits will undoubtedly be issued and the child employed without his parents' knowledge, which is an abrogation of parental authority and responsibility. Marion Barry, head of Pride, Inc., when testifying in favor of this bill, blandly admitted that he knew many minors put to work through his organization were younger than the legal minimum of 14 years; but Pride, Inc., accepts the parents' word on this matter, so no objections are raised. This same system will undoubtedly prevail under the terms of H.R. 12671, and there will be wholesale employment of children under the age of 14 years in this city.

The proponents of this bill defend this provision on the grounds that a great many children in the District of Columbia were born eleswhere, and that in many such cases the obtaining of a birth certificate is difficult if not impossible.

This argument is specious, however, in view of the facts. The personnel in the work permit office inform me that no child is ever denied his vacation work permit, nor is the issuance of such a permit seriously delayed in any case, by reason of this difficulty. In order to avoid

such delays, the office cooperates in every way with the applicants, as follows:

First. In the case of minors who were born outside the District and who have attended a District of Columbia public school, the permit office will accept the school record as evidence of age, on a temporary basis, but do require the birth certificate as soon as it becomes available. Further, they furnish the child with the form for applying for the birth certificate by mail, from the State of birth. In this connection, every State in the Union has for many years required the registration of all births, for which reason these birth certificates are available in nearly all cases. And in the rare cases where no birth certificate is available, then the present law provides a number of alternative evidences of age which are legally acceptable.

Second. A minor who was born in the District must obtain and present his birth certificate. In the very unusual case where there exists no record of the birth, the permit section first verifies this fact, and then accepts one of the other evidences of age as prescribed in the District of Columbia Code.

In view of these procedures, there is no reason to believe that any child is deprived of the prompt issuance of a vacation work permit by reason of the present requirement of evidence of his age.

The dangers inherent in the prospect of widespread employment of minors younger than 14 years of age are as follows:

First. The concept in law that children less than 14 years of age shall not be employed is nationwide, and is based on the precept that the protection of the child himself requires such a limitation.

Second. These vacation work permits for the younger children are necessary for the protection of the employers themselves, in view of existing child labor laws and also in connection with the employer's insurance coverage on his employees. If these permits in the District of Columbia are henceforth not going to furnish legal evidence to the employer that he is not employing children younger than 14 years, then he is going to become liable in these two important respects.

Third. This provision in H.R. 12671 also creates the ridiculous anomaly of the older minors, those from 16 to 18 years of age, having to present birth certificates to obtain work permits for any time—since the vacation work permit, subject of H.R. 12671, is issued only to minors between 14 and 16 years—and the youngsters between 14 and 16 will no longer have to present such a birth certificate.

The statement of the District of Columbia Corporation Counsel that if it is found that the statement as to a minor's age as required by H.R. 12671 is false, and the minor is actually less than 14 years of age, authority exists in present statutes to revoke the vacation work permit, is no assurance at all in this situation, for quite obvious reasons. The proving that a child who is employed is in fact less than 14 years of age, although he certified to the contrary in obtaining his permit, is not going to happen in enough cases to be of any significance whatever.

The attached amendment will serve to correct this situation in the bill.

Mr. DIGGS. Mr. Speaker, I move to strike the last word.

Mr. Speaker, I am opposed to the amendment offered by the gentleman from Virginia. The whole purpose of the changes that have been proposed by the District of Columbia is the elimination of the cumbersome and frustrating array of redtape that has restricted employment of those youngsters who fall within the age category under discussion this afternoon. Surely, there may be some cases where there may be some misinformation about the age. But I think that this will be minimal. Is the gentleman suggesting that the employers of the District of Columbia, who have to be a party to obtain this permit, would enter into some kind of conspiracy with the juveniles in an effort to exploit this kind of labor market? I do not believe that.

As one who has had a great deal of experience in obtaining birth certificates from various States, I have found the process fraught with many difficulties, particularly in the Southern States from which most of these youngsters come. By the time they would go through the process of proving their age by presenting a birth certificate, half the summer would be over.

I am not one to suggest that there may not be one or two occasions where some parent would lie about an age that may be a borderline case, but I think this would be very minimal. No one suggested in the rather extensive hearings we had before the subcommittee that this would present any particular problem.

Mr. BROYHILL of Virginia. Mr. Speaker, will the gentleman yield?

Mr. DIGGS. I yield to the gentleman from Virginia.

Mr. BROYHILL of Virginia. Mr. Speaker, it is my understanding that witnesses from the school attendance and work permit office did support this particular language. I am in accord with the objectives of the bill as outlined by the gentleman from Michigan, and agree that we should encourage employment of juveniles, particularly during the summertime. This is one way of keeping them off the streets. But I submit that my amendment will not make it more difficult to obtain these work permits. There are several legal alternatives that would permit the granting of a work permit if a birth certificate were not available. This is permissible under existing law.

With this amendment, the bill would still help ease the situation regarding the granting of the work permits, in that it would waive the necessity of the physical exam and of having parents in attendance when the permit was applied for. Also, the bill would extend the hours that a youngster may be employed from 7 p.m. until 10 p.m. All those provisions remain in the bill.

If my amendment is not adopted, however, the juveniles from 16 to 18 years of age will continue to be required to present a birth certificate to obtain a work permit, while the juveniles 14 to 16 years of age will not. This obviously is a somewhat ridiculous situation.

Mr. DIGGS. Mr. Speaker, I am in support of the gentleman's suggestion to change the situation as it applies to 16- to 18-year-olds, but I am in support of taking care of the 14- to 16-year-olds now. The difficulty of obtaining birth certificates perhaps in Virginia might not be too much of a burden but in many of the Southern States from which these children come the difficulty would negate one of the basic objectives of this bill.

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield?

Mr. DIGGS. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. Mr. Speaker, I join with the gentleman from Michigan in opposition to the amendment proposed by the gentleman from Virginia recognizing that the objections of the workers in the licensing permit bureau might possibly be motivated by a zeal that stems from a desire to retain bureaucratic control of the situation. I think the gentleman refers to that when he says we are faced with the judgment here as to what great harm would come with a few discrepancies under the more liberal language of the bill offered by the gentleman from Michigan.

I think we must come to the conclusion that the worst that could happen would be somebody would be employed who would not be employed under the amendment offered by the gentleman from Virginia. I cannot see that it prevents particularly the recurring of this situation.

Mr. DIGGS. Mr Speaker, I thank the gentleman from Arizona.

Mr. Speaker, I hope the amendment is voted down.

The SPEAKER pro tempore (Mr. SISK). The question is on the amendment offered by the gentleman from Virginia (Mr. BROYHILL).

The question was taken; and on a division (demanded by Mr. DIGGS) there were—ayes 22, noes 34.

So the amendment was rejected.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

INTEREST ON CERTAIN INSTALLMENT LOANS IN THE DISTRICT OF COLUMBIA

Mr. FUQUA. Mr. Speaker, I call up the bill (H.R. 255) to authorize banks, savings and loan associations, and other regulated lenders in the District of Columbia to charge or deduct interest in advance on loans to be repaid in installments, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

H.R. 255

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 33

of subtitle II, "Other Commercial Transactions", of title 28, "Commercial Instruments and Transactions", of the District of Columbia Code, is amended by adding the following section:

"§ 28–3307. Charging or deduction of interest in advance

"The charging or deduction of the legal rate of interest in advance, by a bank, savings and loan association, or other regulated lender, on loans (other than loans directly secured on real estate) to be repaid in installments, shall not be deemed to be in contravention of any of the provisions of this chapter. This section shall not affect the provisions of the 'Act to provide for the regulation of finance charges for retail installment sales of motor vehicles in the District of Columbia, approved April 22, 1960' (D.C. Code, secs. 40–901 through 40–910), or of the 'Act to regulate the business of loaning money on security of any kind by persons, firms, and corporations other than national banks, licensed bankers, trust companies, savings banks, building and loan associations, and real estate brokers in the District of Columbia, approved February 4, 1913, as amended' (D.C. Code, secs. 26–601 through 26–611)."

With the following committee amendment:

Strike all after the enacting clause and insert:

"SECTION 1. Section 28–3301 of the District of Columbia Code is amended by changing 'The' to read 'Except as otherwise authorized by law, the'.

"SEC. 2. Section 28–3303 of the District of Columbia Code is amended—

"(1) by striking out paragraph (2) and inserting in lieu thereof the following:

"'(2) in writing to pay a greater rate than is authorized by law for the transaction in question,

the creditor shall forfeit the whole of the interest so contracted to be received.' and

"(2) by striking out the last sentence thereof.

"SEC. 3. (a) Chapter 33 of title 28, District of Columbia Code, is amended by adding at the end thereof the following new sections:

"'§ 28–3307. Certain loans by banks and savings and loan associations

"'(a) This section applies to any loan which is both—

"'(1) made by a bank whose deposits are insured by the Federal Deposit Insurance Corporation or by an institution whose accounts or deposits are insured by the Federal Savings and Loan Insurance Corporation, and

"'(2) repayable at weekly, monthly, or other regular intervals in substantially equal installments.

"'(b) The interest on any loan to which this section applies may not exceed the total of—

"'(1) 16 percent per year on that part of the unpaid balances of the principal which is $1,200 or less;

"'(2) 14 percent per year on that part of the unpaid balances of the principal which is more than $1,200 but does not exceed $2,500; and

"'(3) 12 percent per year on that part of the unpaid balances of the principal which is more than $2,500.

"'(c) Neither this section nor section 28–3308 limits or restricts the manner of contracting for the interest, whether by way of add-on, discount, or otherwise, so long as the rate of interest does not exceed that permitted by this section.

"'§ 28–3308. United States rule prescribed

"'The United States rule shall be used in determining whether the interest on any loan is at a rate permitted by law. The United States rule is the actuarial method of allocating payments made on a debt between principal and interest, pursuant to which any payment is applied first to the accumulated interest and the balance is applied to the unpaid principal.'

"(b) The table of sections at the beginning of chapter 33 of title 28 of the District of Columbia Code is amended by adding at the end thereof the following:

"'§ 28–3307. Certain loans by banks and savings and loan associations.

"'§ 28–3308. United States rule prescribed.'

"SEC. 4. The amendments made by this Act shall apply with respect to any loan described in section 28–3307(a) of the District of Columbia Code (added by section 3 of this Act) final repayment of which is due after July 1, 1968."

Mr. FUQUA (during the reading). Mr. Speaker, I ask unanimous consent that the committee amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENTS OFFERED BY MR. FUQUA TO THE COMMITTEE AMENDMENT

Mr. FUQUA. Mr. Speaker, there are a couple of technical amendments I should like to have considered.

The SPEAKER pro tempore. The Clerk will report the amendment offered by the gentleman from Florida to the committee amendment.

The Clerk read as follows:

Amendment offered by Mr. FUQUA to the committee amendment: On page 4, strike lines 16 through 19 and insert:

"SEC. 4. Section 28–3307 of the District of Columbia Code (added by section 3 of this Act) applies with respect to any loan described therein final repayment of which is due after July 1, 1968."

The SPEAKER pro tempore. Does the gentleman seek to have the two amendments considered en bloc?

Mr. FUQUA. Yes, Mr. Speaker, I should like to have them considered en bloc, and I ask unanimous consent to do so.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

Mr. HARSHA. Mr. Speaker, reserving the right to object, is the gentleman going to explain what these amendments are? We do not have copies of them. We do not know what is intended or what they propose to do.

Mr. FUQUA. The amendment just read is a technical clarification of section 4, which is already in the bill.

Mr. HARSHA. I heard the amendment read. First it would strike out lines 16 through 19.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida that the amendments be considered en bloc?

Mr. HARSHA. Mr. Speaker, reserving the right to object, is there going to be an effort to explain these amendments?

The SPEAKER pro tempore. The debate will be under the 5-minute rule, the Chair might say.

Mr. FUQUA. It affects section 4, the effective date of the bill. That is all it does. It is technical in nature.

Mr. HARSHA. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the second amendment to the committee amendment.

The Clerk read as follows:

Amendment offered by Mr. FUQUA to the committee amendment: On page 3, line 9, strike out "any loan" and insert "any loan (other than a loan which is secured by a first lien against a dwelling and which is made to finance the acquisition of that dwelling)".

The SPEAKER pro tempore. The gentleman from Florida (Mr. FUQUA) is recognized for 5 minutes in support of his amendments.

Mr. FUQUA. Mr. Speaker, the bill H.R. 255 was introduced in this session of Congress and open and public hearings were held before Subcommittee No. 4, of which I have the honor to be the chairman, on April 29, 1969. The general notice was extended to everyone to appear before the committee to present their views. We received a statement from the gentlewoman from Missouri (Mrs. SULLIVAN) expressing her thoughts on the bill. Also I received a letter from the chairman of the Committee on Banking and Currency, the gentleman from Texas (Mr. PATMAN), relating to his feelings on the bill. They were made a part of the record. At the conclusion of the hearings I repeatedly asked if anyone else had comments to make on the bill, and no one appeared to offer either support or opposition to this measure.

Mr. Speaker, in the Committee on the District of Columbia we have considerably improved the bill in committee from what it was when it was originally introduced. At the present time we have on installment loans unsecured and generally of small amounts of less than $5,000 a charge of 8 percent interest discounted, which comes out to a little over 15 percent interest. Contrary to what has been said, this does not raise the interest rate in the District of Columbia but merely clarifies what has been going on here for some 50-odd years. There are numerous States that have similar laws. In fact, I think there are some 39 States, including my State of Florida, the State of the gentleman from Texas, and many others, that have similar laws to those we have here in the District of Columbia. There are about 50,000 or 60,000 small loans like this that are outstanding in the District of Columbia. This is the only legitimate source of credit of this kind available in the District of Columbia.

Mr. Speaker, there are those people who would prefer that people purchase items under revolving credit. This amounts to 1½ percent per month, which comes out to 18 percent a year. If they do not do that, we force them to go across State lines of the neighboring States where they can pay up to 36 percent on small loans of this type. In fact, we are here doing the people of the District of Columbia a service and not a disservice by the passage of this legislation.

I might point out that even under the Housing and Urban Development Act of 1968 the minimum finance charge on guaranteed home improvement loans up to $2,500 was set at 5.5 percent discounted per $100. So this is not an unprecedented thing even for the Committee on Banking and Currency. This discounting of notes and deducting of interest in advance has been going on since 1934 under title I of the National Housing Act. I think we have had proper hearings on the bill. Everyone who requested an opportunity to be heard was given such opportunity. I hope that the House, contrary to some of the statements made about the bill, will pass this bill.

We are not legalizing a higher interest rate than that which prevailed before. I repeatedly asked witnesses, bankers, people of the District of Columbia government, the Corporation Counsel, and the Counsel for the Comptroller of the Currency, if there was a departure from the normal accepted procedure of banking here. They all stated to the contrary, no.

Mr. Speaker, I hope that the House will support this bill, because it is in the best interests of the people of the District of Columbia who have reason to have to borrow this type of funds.

Mrs. SULLIVAN. Mr. Speaker, will the gentleman yield?

Mr. FUQUA. I am happy to yield to the gentlewoman.

Mrs. SULLIVAN. I would like to ask several questions of the chairman of the subcommittee.

Regarding this amendment you just offered on page 4, I believe, lines 16 to 19, the amendment apparently does not apply to purchase money first mortgage. Is that correct?

Mr. FUQUA. Yes. This is on page 3.

Mrs. SULLIVAN. I stand corrected. I do not have a copy. Does it apply, then, to refinancing of a first mortgage, or to second mortgages and permit the rates to go up on mortgages other than purchase money first mortgages to 16, 14, and 12 percent? Is that true?

Mr. FUQUA. No, it is not. I would assume someone who would hold a second mortgage would be able to obtain credit at a much lower rate than this would be if it were secured.

The SPEAKER pro tempore (Mr. SISK). The time of the gentleman from Florida has expired.

(By unanimous consent (at the request of Mrs. SULLIVAN) Mr. FUQUA was allowed to proceed for 5 additional minutes.)

Mr. FUQUA. I have been advised by counsel that this does only apply to first mortgages or first liens that would be on property.

Mrs. SULLIVAN. Yes, I thought so. So, on any refinancing of first mortgages, or on second mortgages, they would be permitted to charge up to 12 percent on loans over $2,500; 14 percent on loans between $1,200 and $2,500; or 16 percent on loans up to $1,200?

Mr. FUQUA. This is correct.

Mrs. SULLIVAN. Is there any bank or mortgage company today charging 12 percent or more on home mortgages?

Mr. FUQUA. Not that I am aware of. They are charging from 8 percent and 2 points, but no true rate of interest of 12 percent of which I am aware.

Mrs. SULLIVAN. If the gentleman is convinced that the 8-percent usury ceiling in the District of Columbia is too low—and it undoubtedly is out of date on many types of transactions—why is it necessary or advisable to go back and legalize transactions which may have occurred in violation of the law as it existed at that time?

Mr. FUQUA. Let me say that I would oppose the raising of usury rate because I feel as though it should remain at the present level of 8 percent as it is. But historically installment loans have been exempt from the usury statutes and in the District of Columbia this is not clear, that they are exempt by law. The law is rather silent on this particular point. Further, we have other means of credit such as revolving credit and other types that exceed the so-called usury statute. Also, I might point out that Senator Douglas in questioning the Corporation Counsel several years ago when he was looking into the truth-in-lending legislation with reference to the use of installment loans, and the question of interest rates which would be usurious, stated, and I quote as follows:

In 55 American Jurisprudence—"Usury", Section 41, the statement is made:

"The practice of taking interest in advance at the highest legal rate on short-term loans originated in the custom of banks and those dealing in commercial paper in the course of trade and, although, admittedly usurious in principle, has now become a recognized legal right, provided it is not availed of merely to disguise a usurious transaction * * *"

Mrs. SULLIVAN. Mr. Speaker, if the gentleman will yield further, is it not true that the banks in the District firmly believe that they have not been violating the usury law on their 8 percent discount installment loans?

Mr. FUQUA. It is my understanding that they have.

Mrs. SULLIVAN. If they are so convinced of this, why not give them an opportunity to prove it in court, and let anyone who feels he has been victimized sue for damages.

I can see some sense in changing a restrictive law which is out of date by why legalize all past violations?

Mr. FUQUA. We do not want to legalize all past violations.

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield to me at that point?

Mr. FUQUA. I shall be glad to yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I would like to join in responding to the question which has been posed by the gentlewoman from Missouri that it appears to me that in the phrasing of the gentlewoman's question she had indicated that the only concern of this legislation is to legalize the banks' action and have them do it in court. It is in response to such phraseology that I would submit to the gentlewoman that this bill serves in my mind a far more important purpose and that is it places a ceiling under which by this device which by practice has been declared legal—and as the gentlewoman points out, may or may not be legal at the present writing on which there is no ceiling at this point. There is nothing except competition if you want to prevent the banks from exceeding the 15 percent, plus, which they are now charging.

And what this bill does, the purpose of it which it seems to me has gone completely unnoticed is to place a firm ceiling by Statute. I think it is unfair to only limit it to the legalization of a situation which has been accepted in the past.

Mrs. SULLIVAN. If I may answer the gentleman, do we not have a firm legal rate now of 8 percent, and yet they have been getting, for an 8-percent discount loan, 15.75 percent. Have they not, therefore, been getting around the legal usury law?

Mr. STEIGER of Arizona. I would not quarrel with the gentlewoman as to the propriety or impropriety of the past 15 years, however, I would only point out that in the event we are not successful passing this, that if indeed the courts had declared the actions of the banks illegal and therefore there would be no more type of this activity and no more types of these loans, then we unwittingly perhaps have placed into the legal processes of the District the so-called friendly loan companies in the neighboring States. And, of course, the people who are covered by this act, which was questioned by the gentlewoman——

The SPEAKER pro tempore (Mr. SISK). The time of the gentleman has again expired.

(On request of Mr. STEIGER of Arizona, and by unanimous consent, Mr. FUQUA was allowed to proceed for 5 additional minutes.)

Mr. FUQUA. I might just point out Mr. Speaker—and I am holding here a pamphlet put out by the U.S. Department of Housing and Urban Development, about the role of FHA in home improvements, they state that the maximum financing charges, annual percentage rates, vary from 8.83 percent to 10.57 percent, depending upon the amount and the term of the loan.

Mrs. SULLIVAN. Mr. Speaker, if the gentleman will yield further for an additional question, I asked the gentleman if it is not true that the banks in the District firmly believe they have not been violating the usury law, and the gentleman said yes, that they believe that. Then, if they are so convinced, why not permit them the opportunity to prove it in court? Is it not true—and I assure the gentleman that it is true—that the truth-in-lending law expressly covers this point of State usury laws by stating that the disclosure of actual rates charged by lenders, as required under truth in lending, does not "annual, alter or affect in any manner the meaning, scope or applicability of the laws of any State, including, but not limited to, laws relating to the types, amounts of rates of charges, or any element or elements of charges, permissible under such laws in connection with the extension or use of credit, nor does this title extend the applicability of those laws to any class of persons or transactions to which they would not otherwise apply"?

That is what section 111(b) of the Truth-in-Lending Act declares. If 15.75 percent is a legal finance charge under the District's usury ceiling for an 8-percent discount loan, then nothing in the truth-in-lending law makes it illegal. We are considering a question here of practices under the District of Columbia Code over the last 61 years. The Truth-in-Lending Act does not affect that in any way. Either the 15.75-percent rate is now legal in the District or it is not. Truth in lending did not make it illegal. Is that not correct?

Mr. FUQUA. That is true; truth in lending does not make anything illegal other than telling the true rate of interest. However, I think that the reason for this is that the District Code is not very clear as to where there are installment loans, which historically have been exempt from the usury laws where these exist in the District. That is what we are trying to do, to clarify this.

This is what we are trying to do, to clarify this, and I think we have actually made a better bill. At the suggestion made by the chairman of the Committee on Banking and Currency, we eliminated add-ons and discounts and ballooning, which we have done. We have approached this at the true rate of interest—so that everybody can understand. So that if a person is being offered 16 percent, he can go to another bank where they may be offering 14 percent or 15 percent and he knows where he stands and where he can borrow money to his best advantage.

So I think we have made a real improvement in adding some of the suggestions made to the committee.

Mrs. SULLIVAN. A last question, Mr. Speaker, if the gentleman will yield?

Mr. FUQUA. Certainly, I yield to the gentlewoman.

Mrs. SULLIVAN. Is the gentleman familiar with the fact that in reporting the legislation which became the Truth in Lending Act, the Committee on Banking and Currency, in House Report 1040 of the 90th Congress, said the following:

> It (the bill's reference to state laws) makes clear that Congress does not regard the annual percentage rate as an interest rate within the meaning of the usury statutes or the judicial interpretation of the time price doctrine.

Mr. FUQUA. I was aware that this was in the Truth in Lending Act.

Mrs. SULLIVAN. I thank the gentleman.

Mr. HARSHA. Mr. Speaker, I move to strike out the last word.

This is a matter, Mr. Speaker, that has been before us for some time. When the banking interests came before the committee and originally expressed their interest in this legislation, the story at that time was that they had been engaged in this practice for approximately 50 years and because of the Truth in Lending Act, they feared that they might be subjected to a number of lawsuits if they continued their practices.

I was not entirely sold on that argument as to the need for the legislation.

Since then they have advised—at least this Member individually—they have advised that they need this legislation because of the additional costs involved in making loans of this type.

I am certainly more inclined to accept that explanation than the previous one.

However, I would like to use this time to inquire of the chairman as to whether or not he can assure me that if the legislation is adopted, we are not going to be subject to similar practices that they have been engaged in over the past 50 years—that is, that they are not going to discount now the 12 percent or the 14 percent or 16 percent—whatever it may be—and are we going to have add-ons and all this?

Mr. FUQUA. I can give the gentleman the full assurance that under this bill on whether they can discount or add on or balloon any notes—this is made clear on page 4, line 6, where it states:

> The United States rule shall be used in determining whether the interest on any loan is at a rate permitted by law.

Then it goes on further to clarify and answer the gentleman's question. This was of very much concern to the subcommittee, that we prohibit this kind of practice so that a borrower may know exactly where he stands and how much interest he is paying and that there would not be any gimmickery so to speak in the procurement of these loans.

Mr. HARSHA. Then, as I understand the gentleman, whether it be by the device of an add-on, a discount or ballooning or points or what-have-you or any device whatsoever under any circumstances, the kind of loan described by this legislation, the interest rate shall not exceed that rate that is allowed under this schedule of different loans that it applies to?

Mr. FUQUA. The gentleman is exactly correct.

Mr. HARSHA. I thank the gentleman.

Mr. PATMAN. Mr. Speaker, I move to strike out the last word.

(By unanimous consent, Mr. PATMAN was allowed to proceed for an additional 5 minutes.)

Mr. PATMAN. Mr. Speaker, I have never known such a clamor for one purpose since I have been in Congress—41 years—as the clamor of the people for lower interest rates and their vigorous protest against increasing interest rates. If we were to pass this bill, we would send them a message that we have not been successful and have not tried to lower interest rates, but we have succeeded in increasing interest rates 100 percent. That is exactly what this bill does. This bill not only applies to the average run of people, mostly poor people—it is a penalty against the poor because they are poor—but furthermore in the District of Columbia we have thousands of servicemen. They get loans from the local banks. The banks run no risks whatsoever in making loans to servicemen because the military make sure that they are paid and that they are paid promptly, and to charge them 16 percent is certainly a pretty raw deal for the servicemen. That is going on all over the country where it is permitted by State law.

But because it is permitted in some States is no reason why the U.S. Congress should sanction it, encourage it or recognize it as legal. It is not. It is usurious. We all know it is exorbitant interest. We all know that it is excessive interest.

Why should we vote to double the interest rate?

We have heard it said that we should take the proposed action because the banks have been doing it in the past. The truth is that all banks in the District of Columbia have not been doing it in the past. A number of banks have been charging 8 percent simple interest and are charging it right now. If we were to pass this bill as is, it would double the rate of interest for them and for all others, legalizing it. Of course that does not seem exactly fair.

Student loans are in trouble. The banks have been demanding more and more interest on student loans, until they have almost stopped the student loan program. If we were to pass this bill and say to all the States of the union that we in Congress have established for the District of Columbia rates of 16 percent on certain loans, including student loans, servicemen's loans, and others, that would be a kind of hard blow against the students and servicemen. It would be very discouraging. It would be awfully hard for lenders in other fields and other financial institutions to be persuaded to make student loans for less, because they are permitted to charge up to 16 percent.

Of all the times that I have known when something was very untimely, this is it. Only last week the Democratic caucus, by unanimous consent, passed a resolution to investigate high interest rates. Now we want to bypass that committee by going ahead and doing it anyway in advance. Is that what we should do?

Interest rates is a subject that is on the minds of every family in America. There are 55 million families in the United States. The more interest they have to pay, the less they have in their budget to take care of food, clothing, shelter, education, and many other things. That is the reason they are in such a difficult condition today, because of the high interest rates.

The other day, June 8, 1969, a 1-percent increase in the prime rate was announced. That is the best rate given A.T. & T., General Motors, and the Aluminum Co. of America—the very best borrowers in America—8½ percent. The rate was raised 1 percent at one time. That was a terrible blow to the economy of this Nation. It was a terrible blow to every family in the United States. That means that every family in the United States from now on will have to pay several hundred dollars a year extra for that 1 percent. They are part of that 1 percent, and that is a very heavy burden to place on them at this time, in addition to all other interest they are paying, and in addition to all the taxes they are paying. That 1 percent means several hundred dollars a year for each family from now on.

Members can take their books and pencils and arrive at that figure if they desire. The total debt in the Nation today, including the national debt and debts of our entities of Government—we

have 81,000 governments in the United States in addition to the Federal Government—and the debts they owe, including the Federal and all private debts, amount to a trillion and five hundred billion dollars. One percent of that is $15 billion a year.

It is just that simple. After seeing a $15 billion burden placed upon the people just by one stroke of a New York banker's pen, how can we now want to impose this on all the poor folks of the Nation? It is not in the public interest. It is wrong. It is usurious rates which are being recognized and granted. It is wrong from every moral standpoint in addition to other standpoints.

Mr. McMILLAN. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from South Carolina.

Mr. McMILLAN. Mr. Speaker, as for the purpose of this bill—and certainly it is my purpose—this is to try to help the poor people in Washington who occasionally must have a loan. At the present time they have no place to secure loans if they do not get them from the banks, except to go across the line to the loan sharks in Maryland and Virginia. That is where they will all go if we do not pass this bill, for the simple reason that we cannot expect the banks to jeopardize themselves by making these small loans without any profit and without any security, if we do not let them continue to go on as they have during the past 60 years.

I have not had any complaint from anyone who has secured a loan from a bank. I hope the gentleman does not think we are increasing interest rates. We are asking the banks to be permittee to charge the same as they have charged in the last few years.

Mr. PATMAN. Mr. Speaker, I give the gentleman credit for being sincere, but after all, it is increasing the rates by 100 percent. Every person who votes for this bill votes for higher rates of interest, and every person who votes against the bill votes for lower rates of interest.

Mr. Speaker, there was filed in the District of Columbia District Court—that is, in the U.S. District Court for the District of Columbia, a Federal court, a lawsuit to collect the usurious interest and charges by reason of what some of the lenders have been doing in the city, the ones the gentleman has been talking about. This is a lawsuit. This will go to the courts, and the courts can determine whether or not it is usurious. They will have their day in court. There is no doubt about it.

(Mr. PATMAN asked and was given permission to revise and extend his remarks and include extraneous matter, including the petition on file with the court.)

Mr. PATMAN. Mr. Speaker, this is a call for law and order in the banking industry in the District of Columbia.

H.R. 255 and the report accompanying it concedes that the bankers of the District of Columbia have been violating the laws on installment loans. They have been charging, according to the committee report accompanying H.R. 255, more than the 8 percent interest allowed by the District of Columbia Code. I quote from page 5 of the committee report:

> Finally, and most important, the Committee considers the interest rates prescribed in the new section to be nothing more than a reflection of the true interest rates presently charged on small installment loans.

That means that the bankers have been charging 16, 14, and 12 percent interest on loans when the District of Columbia Code says 8 percent is the legal limit.

Mr. Speaker, this is bad enough, but H.R. 255 makes it worse by giving a retroactive excuse from the law to these law violators. If H.R. 255 is passed, as it is presently written, it will wipe out the rights of consumers in the District and the suburbs to bring lawsuits to recover the usurious interest rates that have been charged.

Just this morning a case on this issue was filed in district court. I place this document in the RECORD at the conclusion of my remarks.

Mr. Speaker, the retroactive provisions—giving the bankers a retroactive pardon for their law violations—are in section 4 of H.R. 255.

I quote:

> SEC. 4. The amendments made by this Act shall apply with respect to any loan described in section 28-3307(a) of the District of Columbia Code (added by section 3 of this Act) final repayment of which is due after July 1, 1968.

Mr. Speaker, the House should look at this language very closely. Here is the big loophole through which the bankers will escape legal action.

Mr. Speaker, note the date, July 1, 1968. The new interest rate ceiling of 16 percent will, according to this language, apply to any loan "final repayment of which is due after July 1, 1968."

Mr. Speaker, what this bill and the report do not reveal is that there is a 1-year statute of limitations on the usury laws in the District of Columbia. In other words, a consumer who has been taken by the bankers must bring suit within 1 year of the transaction. H.R. 255 effectively blocks that by inserting language which makes the effective date of this law July 1, 1968.

Mr. Speaker, the House is being asked to give its blessing to the violations of the law which have been engaged in by some of the District of Columbia bankers.

Mr. Speaker, I trust that this bill is not a forerunner of legislation to grant retroactive excuses to law violators in the District of Columbia. I hope that we do not have legislation which will provide retroactive excuses to the rapists, the muggers, the burglars, or any other law violators in the District of Columbia.

If we are going to have law and order in the District of Columbia, let us also include the bankers. Is it any different so far as the principle in the retroactive clause to give a retroactive excuse to a banker than it is to a bank robber?

Mr. Speaker, I am for law and order at all levels in the District of Columbia and I will not vote for any retroactive excuses for any individual or any groups of individuals regardless of their economic power.

Mr. Speaker, I realize that this bill—H.R. 255—affects only a handful of the Nation's 13,000 banks and only a small percentage of the total population. But, Mr. Speaker, what we do here today concerning the interest rates charged in the District of Columbia will affect every citizen in every congressional district across the land.

We cannot stand here today and endorse 16 percent bank interest in the District of Columbia and then tell our constituents that we are for low interest rates.

If H.R. 255 becomes law, installment loan rates in the District of Columbia will be the highest in this area.

The banks and the legislatures across the land will interpret our actions here today as a new mandate—a new standard on usury—on interest rates. Passage of H.R. 255—with its 166-percent interest rates—will hamstring any action this Congress might want to take later to control interest rates across the country.

Mr. Speaker, many Members of this House have spoken in strong terms against the commercial banks' latest increases in the prime interest rate. Others have spoken to me privately and expressed deep concern about the prime rate, and I have seen many of the letters that Members have written to their constituents pledging a fight for lower interest rates.

In fact, last Wednesday, the Democratic caucus of the House voted unanimously to look into the question of high interest rates. A committee is being appointed to carry out this study and to report back to the Democratic caucus in September. This study will be seriously hampered if the House goes on record for a 16-percent interest rate.

Today is an opportunity for the House of Representatives to go on record against high interest—against 16-percent rates for bank loans. It is our first opportunity since the banks raised their rates on June 9.

Mr. Speaker, it is foolish for this Congress to stand up and talk against a national prime interest rate of 8½ percent and at the same time vote for a 16-percent rate under the guise of a District of Columbia bill.

Mr. Speaker, there is much concern about the banking industry nationwide. Many questions are being asked about excessive profits stemming from high-interest rates. The Banking and Currency Committee has an investigation underway concerning the prime rate increase of June 9 and the Justice Department is conducting a full-scale investigation of possible antitrust violations by the banks in the June 9 increase. On the Senate side, there has been much talk of new legislation to control interest rates and there is much pressure on the administration to do something to hold back the bank's demand for more and more profits and higher and higher interest rates.

Mr. Speaker, I hope that no action is taken on H.R. 255 until we have more information about the District of Columbia banks and until such time as these pending investigations are completed.

Again, Mr. Speaker, a vote for H.R. 255 would be highly destructive to efforts to bring down interest rates on a na-

tional basis. A vote for H.R. 255 is a vote for higher interest rates. It should be rejected.

IN THE U.S. DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

Greater Washington Chapter of Americans for Democratic Action, 1346 Connecticut Avenue, NW., Washington, D.C.; Democratic Central Committee of the District of Columbia, 1009 13th Street, NW., Washington, D.C.; David Cohen and Carla Cohen, 1646 Argonne Place, NW., Washington, D.C.; Rev. Luke Torosian and Peggy Torosian, 906 G Street, SE., Washington, D.C.; Franklin Wallick and Ruth Wallick, 7620 Morningside Drive, NW., Washington, D.C.; Susan Davis, 904 Pennsylvania Avenue, SE., Washington, D.C.; Sarah Jane Hardin, 101 North Carolina Avenue, SE., Washington, D.C.; on behalf of themselves and all others similarly situated, plaintiffs, v. District of Columbia National Bank, a banking corporation, 1812 K Street, NW., Washington, D.C.; National Savings & Trust Co., a banking corporation, 15th and New York Avenue, NW., Washington, D.C.; National Capital Bank of Washington, a banking corporation, 316 Pennsylvania Avenue, SE., Washington, D.C., on behalf of themselves and others similarly situated, defendants.

COMPLAINT FOR DECLARATORY RELIEF, INJUNCTION, AN ACCOUNTING, DAMAGES AND PENALTIES

1. Plaintiff, Greater Washington Chapter of the Americans for Democratic Action, is an association engaged in civic activities. Included within its membership are residents of the District of Columbia who have negotiated loans and borrowed money from each member of the defendant class.

Plaintiff, Democratic Central Committee of the District of Columbia is a non-profit political organization, comprised of residents of the District of Columbia. Included within its membership are residents of the District of Columbia who have negotiated loans and borrowed money from each member of the defendant class.

Plaintiffs David Cohen, Carla Cohen, Susan Davis, the Reverend Luke Torosian, Peggy Torosian, Sarah Jane Hardin, Franklin Wallick and Ruth Wallick are adult citizens of the United States and residents of the District of Columbia.

2. The named defendants are District of Columbia National Bank, National Capital Bank of Washington, and National Savings and Trust Company, banking corporations doing business in the District of Columbia.

3. Plaintiffs bring this action pursuant to Rule 23 of the Federal Rule of Civil Procedure for themselves and on behalf of a class of persons similarly situated—to wit: all persons, who like the named plaintiffs, have been extended loans at illegal and usurious rates of interest by lending institutions doing business in the District of Columbia—against the named defendants and a class including all other lending institutions doing business in the District of Columbia that have made, are making, or will make loans at a usurious rate and that are subject to regulation under the National Banking Act, 12 U.S.C. 21 et. seq. The named plaintiffs sue and the named defendants are sued as representatives of a class because (1) the class of plaintiffs and the class of defendants are so numerous that joinder of all parties is impracticable; (2) there are questions of law and fact common to the membership of each of the classes which predominate over any questions affecting only individual members; (3) the prosecution of separate actions by or against individual members of each class would create a risk of inconsistent or varying adjudications which would establish incompatible standards of conduct for the class of defendants; (4) a class action is the fairest and most efficient method of adjudicating the controversy because the amount of damage to individual members of the class makes pursuit of individual remedies economically unfeasible and because individual litigation would result in an unreasonable multiplicity of suits and a corresponding burden on the courts; and, (5) the defendants have acted on grounds generally applicable to the class of defendants, thereby making appropriate final injunctive relief and declaratory relief with respect to that class as a whole.

4. This Court has jurisdiction under Section 11–521, District of Columbia Code, 1961 Edition; Section 28 U.S.C. 1331, 1355, 2201 and 2202. The amount in controversy, exclusive of interest and costs, exceeds the sum of $10,000.

5. The following transactions are representative of those entered into by members of the plaintiff class with members of the defendant class:

(a) Plaintiffs David and Carla Cohen executed a loan with defendant District of Columbia National Bank on October 4, 1968, in the amount of seven hundred fifty dollars ($750): (1) As a condition of the granting of such loan, the plaintiffs were required to assume an obligation for the payment of eight hundred four dollars ($804); (2) The defendant actually tendered seven hundred forty-seven dollars and seventy-two cents ($747.72); (3) The plaintiffs were advised that the interest charge being imposed amounted to forty-eight dollars and twenty-four cents ($48.24), that four dollars and eighty-three cents ($4.83) represented unspecified fees and charges and that three dollars and twenty-one cents ($3.21) represented the charge for life insurance which they were required to take out for the benefit of the defendant; (4) The plaintiffs were obligated to make twelve payments of sixty-seven dollars ($67) each with the last payment due to be paid on October 20, 1969; (5) The interest rate actually imposed amounts to approximately 13.75 percent.

(b) Plaintiffs Reverend Luke Torosian and Peggy Torosian executed a loan on September 23, 1966 with defendant National Capital Bank of Washington in the amount of two thousand dollars ($2,000): (1) As a condition of the granting of such loan the plaintiffs were required to assume an obligation for the payment of two thousand one hundred ninety-four dollars and thirty cents ($2,194.30); (2) The defendant actually tendered two thousand dollars ($2,000); (3) The plaintiffs were charged twenty-one dollars and fifty cents ($21.50) for life insurance which they were required to take out for the benefit of defendant; (4) The plaintiffs were obligated to make twenty-four payments of ninety-one dollars and forty-one cents ($91.41) and the last payment was paid on March 20, 1968; (5) The interest rate actually imposed amounts to approximately 12.00 percent.

(c) Plaintiffs Reverend Luke Torosian and Peggy Torosian executed a loan on March 20, 1968 with defendant National Capital Bank of Washington in the amount of two thousand three hundred dollars ($2,300); (1) As a condition of the granting of such loan, the plaintiffs were required to assume an obligation for the payment of two thousand five hundred twenty-three dollars and eighty-eight cents ($2,523.88); (2) The defendant actually tendered two thousand three hundred dollars ($2,300.00); (4) The plaintiffs were charged twenty-four dollars and seventy-three cents ($24.73) for life insurance which they were required to take out for the benefit of defendant; (4) The Plaintiffs were obligated to make twenty-four payments of one hundred eight dollars and eighty-eight cents ($108.88); (5) The last payment was paid on May 2, 1969 and no rebate was made in consideration of early payment of the loan; (6) The interest rate actually imposed amounts to approximately 15.25 percent.

(d) Plaintiffs Reverend Luke Torosian and Peggy Torosian executed a loan on May 2, 1969 with defendant National Capital Bank of Washington in the amount of two thousand dollars ($2,000); (1) As a condition of the granting of such loan the plaintiffs were required to assume an obligation for the payment of two thousand one hundred and ninety-four dollars and eighty cents ($2,194.80); (2) The defendant actually tendered two thousand dollars ($2,000); (3) The plaintiffs were obligated to make 23 payments of ninety-two dollars ($92.00) and one payment of seventy-eight dollars and eight cents ($78.08); (4) The interest rate actually imposed amounts to approximately 9.00 percent.

(e) Plaintiffs Franklin Wallick and Ruth Wallick executed a loan with defendant National Savings and Trust Company on February 2, 1967 in the amount of five hundred fifteen dollars and fifty-two cents ($515.52): (1) As a condition of the granting of such loan, the plaintiffs were required to assume an obligation for the payment of five hundred seventy-six dollars ($576); (2) The defendant actually tendered five hundred fifteen dollars and fifty-two cents ($515.52); (3) The plaintiffs were obligated to make 18 payments of thirty-two dollars ($32) with the last payment due on September 4, 1968; (4) The loan has been discharged; (5) The interest rate actually imposed amounts to approximately 14.25 percent.

(f) Plaintiffs Susan Davis and Sarah Jane Hardin executed a loan on June 19, 1968 with defendant District of Columbia National Bank in the amount of five hundred ninety-one dollars and forty-eight cents ($591.48): (1) As a condition of the granting of such loan the plaintiffs were required to assume an obligation for the payment of six hundred thirty-six dollars ($636); (2) The defendant actually tendered five hundred ninety-one dollars and forty-eight cents ($591.48); (3) The plaintiffs were advised that they were being charged twenty-nine dollars and eighty-four cents ($29.84) in interest, three dollars and eighty-two cents ($3.82) as an investigation fee and two dollars and fifty-two cents ($2.52) for life insurance which plaintiffs were required to take out for the benefit of the defendant; (4) The plaintiffs were obligated to make twelve payments of fifty-three dollars ($53) and the last payment was paid on June 11, 1969; (5) The interest rate actually imposed amounts to approximately 13.75 percent.

(g) Plaintiff Susan Davis executed a loan on July 3, 1969 with defendant District of Columbia National Bank in the amount of six hundred dollars ($600): (1) As a condition of the granting of such loan the plaintiff was required to assume an obligation for the payment of six hundred fifty-two dollars and eight cents ($652.08); (2) The defendant actually tendered to the plaintiff six hundred dollars ($600); (3) The plaintiff was advised that she was being charged forty-five dollars and forty-six cents ($45.46) in interest and six dollars and fifty-two cents ($6.52) for life insurance which plaintiff was required to take out for the benefit of the defendant; (4) The plaintiff was obligated to make 12 payments in the amount of fifty-four dollars and thirty-four cents ($54.34) with the last payment due on July 10, 1970; (5) the interest rate actually imposed amounts to approximately 15.75 percent.

6. Named plaintiffs and numerous members of plaintiff class have been required to pay, as a condition of the extension to them of a loan by each named defendant and every member of the defendant class, one or all of the following types of charges:

(a) Interest and amounts payable under a discount or any other system of additional charges;

(b) Service, transaction, activity, or carrying charges;

(c) Loan fees, points, finder's fee, or any similar charges however denominated;

(d) Fees for an appraisal, investigation or credit report;

(e) Recordation fees and any fees or charges imposed by law on the lender;

(f) Charges or premiums for credit, life, accident, health, or loss of income insurance written in connection with the loan transaction, such charges or premiums payable either to the lender or a third party;

(g) Charges or premiums for insurance, written in connection with the loan transaction, against loss or damage to property or against liability arising out of ownership or use of property;

(h) Premiums or other charges for other guarantees or for insurance protecting the lender against loss;

(i) Other charges and obligations imposed upon the borrower as an incident of the loan.

7. In the District of Columbia, the highest permissible interest rate that may lawfully be charged in connection with loan transactions of the type specified in Paragraph 5 is eight (8) percent per annum. In defining interest all of the charges identified in Paragraph 6 must be included as part of the interest charge. Under the applicable statutes and for all other relevant purposes, the percentage of interest that has been paid or is to be paid shall be computed by use of the computational method which most accurately reflects, at any given point in the contract, the time the borrower has or had actual use of the amount or portion thereof being lent.

8. Each of the named defendants, and each member of the defendant class, did knowingly and intentionally impose on each of the named plaintiffs, and each member of the plaintiff class, a rate of interest in excess of the legal rate and did therefore commit usury. As a result defendants are required to forfeit all interest charges, to repay all interest collected and to pay as a penalty a further amount equal to the amount of interest collected.

9. The amounts for which each of the named defendants and each member of the defendant class are liable to the members of the plaintiff class are known only to said defendants, but it is believed that said liability amounts to millions of dollars.

10. Numerous members of the plaintiff class do not have the capability to determine the actual rate of interest that has been imposed by each named defendant and each member of the defendant class in connection with loan transactions; and therefore such members of the plaintiff class do not appreciate that an illegal and usurious rate of interest was imposed. Unless enjoined by order of this Court, each named defendant and each member of the defendant class will continue to collect from numerous members of the plaintiff class interest charges at an unlawful and usurious rate.

11. Plaintiffs have no remedy that is either as practical or as efficient in promoting the ends of justice as the remedy of injunctive relief because of the character of the conduct of each named defendant and each member of the defendant class and the extensive threat of continuing injury presented by that conduct, and because of the economic circumstances of numerous members of the plaintiff class, their lack of sophistication with respect to the complexities of financial transactions and the computation of interest charges and the superior expertise of each and all of the defendants, and the relatively small amounts of the claims of the individual plaintiffs which prevent them from obtaining legal redress.

Wherefore, each of the named plaintiffs and each member of the plaintiff class pray as follows:

1. That this court certify this action as a class action, and that thereafter, each member of the respective classes designated herein be given appropriate notice and accorded an opportunity to appear and be heard either as a plaintiff or defendant.

2. That this Court enter a declaratory judgment that all of the fees and charges referred to in Paragraphs 5 and 6 of this Complaint are "interest" charges within the meaning of applicable usury laws.

3. That this Court enjoin each named defendant and each member of the defendant class from the continued collection or imposition of interest charges at a rate in excess of eight (8) percent per annum, utilizing the computational method specified in Paragraph 7, after including as interest all charges referred to in Paragraphs 5 and 6 of this Complaint.

4. That this Court declare forfeiture in favor of the named plaintiffs or the plaintiff class, as appropriate, of all interest charges referred to in Paragraphs 5 and 6 of this Complaint.

5. That this Court award each of the named plaintiffs and each member of the plaintiff class, as appropriate, all interest paid and as a penalty a further amount equal to the amount of interest paid.

6. That this Court determine that but for payment of interest all contracts remain in full force and effect and fix the schedule of repayment of principal, over the full term of each such contract, by application of the computational method determined under Paragraph 7 of this Complaint.

7. That this Court order an accounting for the purpose of determining the amounts of money which each named defendant and each member of the defendant class is liable to the plaintiffs as a result of forfeiture and liability for twice the amount of the charges unlawfully received.

8. That a fund be established which shall serve as the repository for the amounts owing to the plaintiffs as a class by each named defendant and each member of the defendant class, such fund to be equitably distributed as hereafter to be provided by further order of the Court.

9. That named plaintiffs and members of plaintiff's class be awarded out of any recovery herein the expenses, costs and disbursements incident to the prosecution of this action, including reasonable counsel fees.

10. For such other and further relief as may seem just and proper.

BERLIN, ROISMAN & KESSLER,
By EDWARD BERLIN,
Counsel to Plaintiffs.
DOWDEY, LEVY & COHEN,
By LANDON G. DOWDEY,
Counsel to Plaintiffs.

Mr. Speaker, if we cancel this bill, it will cancel this debt that is now due a number of people. If we want to create more poverty, then we should pass a bill like this. This is a bill to create poverty. There is not anything that creates more poverty in the District of Columbia than the loan shark rates, the usurious rates. They are loan shark rates. They are the cause of so much poverty that is going on today.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I suggest to the gentleman from Texas that it would have been well for some people to have been thinking about interest rates when they were voting for so many profligate spending measures in the past.

Mr. PATMAN. That is correct.

Mr. GROSS. And voting for so many treasury deficits in the past. They have bred the crisis situation we have today. It cannot be wiped out by simply attacking interest rates.

Mr. PATMAN. Mr. Speaker, we are in a horrible state. We are going in the direction of a devastating depression. This will make it worse. This is encouraging the thing that has put us in this situation. It should be defeated and defeated by a big vote, and I hope it is.

Mr. BROYHILL of Virginia. Mr. Speaker, I move to strike the last word.

Mr. Speaker, I rise in support of the pending legislation, in spite of the interpretation as to how we may vote on this bill as given to us by the gentleman from Texas (Mr. PATMAN).

I say that what we are proposing to do here today is nothing new. As pointed out before, the banks in the District of Columbia have been doing this here in the Nation's Capital for 50 years, providing for the discount of the interest or the add-on of interest on installment loans. What we are attempting to do here today is to clear up a gray zone in regard to installment credit, which has been brought about by the Truth-in-Lending Act.

Mr. ADAMS. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL of Virginia. I yield to the gentleman from Washington.

Mr. ADAMS. Until the interest rate begins to move beyond 6 percent discounted loans would not violate the usury law, would they? That is something that has happened only very recently.

Mr. BROYHILL of Virginia. There have been conflicting court decisions over a period of years, as to whether add-on interest or discounted interest on installment loans is a violation of the usury statutes in various States. We are trying to clarify this question here at this time. insofar as the District of Columbia is concerned.

Repayment of loans by installments is a common practice throughout the United States. As pointed out by the gentleman from Florida (Mr. FUQUA), 39 States have specific statutes that deal with this particular question. That is what we are trying to do here today, so far as the District of Columbia is concerned.

The costs of administering loans of this type are higher than in the case of those payable on demand. We recognize this truth in many other areas. We recognize, for example, where installment loans for automobile purchases are concerned. We provide by statute that simple interest as high as 16 percent may be charged on installment loans for automobiles.

I am grateful to the gentleman from Texas (Mr. PATMAN) for his assistance on this legislation. I have a great deal of respect for his wisdom. But I cannot understand his concern for these unsecured installment loans being kept down to 8 percent, when the Committee on Banking and Currency has by legislation permitted interest rates as high as 11 percent on secured home improvement loans guaranteed and insured by the Federal Government.

And how about the Fannie Mae loans,

by a Federal organization buying federally insured loans, federally guaranteed FHA and VA loans, with discounts as high as 8 and 10 percent?

Now, it is said, "Oh, the mortgage payer is not paying for that." Does anyone believe the mortgage people and the builders are in business for their health? Of course, this has to be passed onto the homebuyer.

So we are not only tolerating this insofar as the Banking and Currency Committee is concerned, but we have actually authorized it. Yet, here we are told, as to an unsecured loan, an unguaranteed loan, that we have to keep the interest rates lower than on all these other types of loans.

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL of Virginia. I am glad to yield to the gentleman from Ohio.

Mr. HAYS. I should like to have one simple question answered. Does this bill or does it not raise the legal interest on loans?

Mr. BROYHILL of Virginia. The bill does not raise the legal limit. It clarifies what these legal limits are and have been for many years.

Mr. HAYS. What is the legal limit?

Mr. BROYHILL of Virginia. I just got through saying, and it has been stated two or three times this afternoon, that for the past 50 years loans have been made in the District of Columbia on the installment plan at actual interest rates in excess of the rate established by the usury statute.

All this legislation does is merely to clarify what the law is with respect to the adoption of the Truth-in-Lending Act.

Let me complete my statement, and then I shall be glad to yield further.

The gentleman from Arizona pointed out a moment ago, and I believe the gentleman from South Carolina did likewise, that the people who are going to be hurt if this legislation fails to pass are those of low and moderate incomes. Those are the people we are talking about, as the beneficiaries under this unsecured installment loan plan. If such a person cannot get a loan here in the District of Columbia, obviously he is going to have to go elsewhere to get it. There are provisions in the laws of the two neighboring States, which legalize installment loans at a far higher rate of interest.

Bankers in the District have advised us that they make little profit on these small installment loans, and that if they are prevented from charging as much interest as they have been doing for the past 50 or 60 years, they will be obliged to discontinue making such loans altogether. Should this be the case, the people of moderate income in the District will be forced to borrow elsewhere, as in Maryland where the small loan companies are authorized to charge 36 percent.

How about a revolving credit charge? We have no law with regard to the interest on such credit here in the District of Columbia. The merchants have gotten together and decided to charge up to 18 percent for that type of credit, but no action has been taken, or proposals made, to protect people from this practice.

The SPEAKER. The time of the gentleman has expired.

(Mr. BROYHILL of Virginia asked and was given permission to proceed for 2 additional minutes.)

Mr. BROYHILL of Virginia. It has been pointed out that if this bill is not passed, a lot of this lending business will go to the suburbs. We on the Committee on the District of Columbia are very much concerned with economic conditions within the District, and are doing all we possibly can from a legislative standpoint to improve the city's financial situation. We certainly want to avoid taking any action that would encourage any business to go from the District to the suburbs.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL of Virginia. I will be glad to yield as soon as I have finished my statement.

The consumer will know what this rate of interest is. Nobody will be deceived by it. The Truth-in-Lending Act requires that it be published. This fact will cause interest rates to be as low as possible, and, in fact, we place a limit on these rates right here in this bill. But we know also what effect the rule of supply and demand can have in competition between various banks. I say, Mr. Speaker, that we will not protect anyone, least of all the low- and moderate-income people, by denying approval of this legislation.

Now I am glad to yield to the gentleman from Texas.

Mr. PATMAN. The gentleman referred to unsecured loans and said that this would permit this high rate on unsecured loans. Where is it stated in the bill? It says secured loans as well.

Mr. BROYHILL of Virginia. I was referring to secured loans such as automobile loans, where we permit an interest rate as high as 16 percent and secured loans that have been made as a result of legislation approved by the gentleman's committee. However, as I have pointed out, competition will assure lower interest rates on all secured loans than will prevail on unsecured ones. Hence, this bill will not affect secured loans.

Mr. PATMAN. But the gentleman overlooks the fact that this permits high rates on secured as well as unsecured loans.

Mrs. SULLIVAN. Mr. Speaker, will the gentleman yield?

Mr. BROYHILL of Virginia. I yield to the gentlewoman.

Mrs. SULLIVAN. I would like to ask the gentleman how many borrowers know what is meant by an 8-percent discounted loan? I am not talking about sophisticated borrowers now, but I am talking about anyone who goes in to borrow some money or buy something on the installment plan in a store.

Mr. BROYHILL of Virginia. If I may respond to the question of the gentlewoman, that is the purpose and intent of the Truth-in-Lending Act.

Mrs. SULLIVAN. That is right.

Mr. BROYHILL of Virginia. They will be told, as required by law, so that the consumer will know what the true interest rate is.

Mrs. SULLIVAN. The reason they want this law enacted now is that since July 1 under the Truth-in-Lending Act, they have to tell the truth now. When they told the borrower before that they were getting an 8-percent discounted loan, which the average person believes is 8 percent per year, the customer was really paying 16 percent and not knowing it.

Mr. BROYHILL of Virginia. I do not agree with the way the gentlewoman has stated it—that they will now have to tell the truth. They are just clarifying it.

The SPEAKER. The time of the gentleman has again expired.

Mrs. SULLIVAN. Mr. Speaker, I ask unanimous consent that the gentleman have an additional minute to answer another question.

The SPEAKER. Is there objection to the request of the gentlewoman from Missouri?

Mr. HAYS. Mr. Speaker, reserving the right to object, the gentleman keeps saying that he is going to yield when he finishes his statement, but he never seems to get his statement finished. I am wondering if he is going to yield if he gets this additional minute.

Mr. BROYHILL of Virginia. I will be glad to yield if I get the additional time. I did yield to the gentleman from Ohio and the gentleman from Texas.

The SPEAKER. Is there objection to the request of the gentlewoman from Missouri?

There was no objection.

Mrs. SULLIVAN. Mr. Speaker, I would like to ask the gentleman, if this law is enacted to make 12, 14, and 16 percent the legal usury rate in the District, what would prevent the lender from saying, "We will give you a 12-percent discounted loan"? Would there be any reason in the world why they could not do that, just as they are doing it with the 8-percent loan? The average borrower would not understand this rate any more than he understands the 8-percent rate now, except, under the Truth-in-Lending Act now in effect, they have to tell the truth that a 12-percent discounted loan would amount to 24 percent. Would we be allowing this to happen if we vote for this bill?

Mr. BROYHILL of Virginia. I do not agree with the gentlewoman. The language of the bill, I am assured, would not permit any increase in the interest rates prescribed, through discounting or any other means.

The SPEAKER. The time of the gentleman from Virginia has again expired.

Mr. JACOBS. Mr. Speaker, I move to strike the requisite number of words.

(Mr. HOLIFIELD (at the request of Mr. JACOBS) was granted permission to extend his remarks at this point in the RECORD.)

Mr. HOLIFIELD. Mr. Speaker, I do not ordinarily take the floor to criticize a bill which has been reported by the District of Columbia Committee, believing as I do that this committee has been charged with the responsibility to legis-

late in the public interest of the District of Columbia. In the 89th Congress I had the honor to manage the reorganization plan which created the mayor-council form of government for the District. In preparing for the successful floor consideration of that plan, I learned a good deal about the problems of the District and its people. In particular, I saw that the Congress must make extra efforts to assure fair and impartial hearings for the citizens of the District until such time as we have true home rule and effective representation for the District in the Congress.

We have before us today a bill which will have definite economic impact in the District. However, this bill is not the product of anything approaching a broadly based community consensus.

The hearings which were conducted by the committee reflect the fact that the bill solves only the problems of the bankers. I wish to commend both the distinguished gentlewoman from Missouri (Mrs. SULLIVAN) and the distinguished chairman of the House Banking and Currency Committee (Mr. PATMAN) for their efforts to illuminate the weaknesses in this legislation. It would be pertinent to quote from the testimony which Congresswoman SULLIVAN presented to the District of Columbia Committee on April 29, 1969:

After thorough study this Committee and the officials in the District may decide that present D.C. ceilings on interest rates are too low. Undoubtedly, they are lower than in surrounding jurisdictions. But once you open this up, you should be prepared to see pressures mount for vastly higher rates which would increase the cost of borrowing, and hence the cost of living, for thousands upon thousands of low-income families in the District.

I do not think you can resolve that problem without a comprehensive review of the present credit laws and intensive study by the District Government. I certainly do not think you should attempt to resolve it in a piecemeal fashion in the bill intended to give the approval of Congress to a practice which may be in violation of existing District law, and relating to only one type of loan in the District. What about "add-on" loans? Mortgage loans? One-payment loans?

Mr. Speaker, I believe that Mrs. SULLIVAN hit the nail on the head when she asked these very pertinent questions about H.R. 255. Here we have a bill which should be backed up by a comprehensive review of credit practice and policy in the District, but which is in fact piecemeal, special-interest legislation.

There has been much justifiable outcry about this bill in the public press and media. There is significant opposition to this bill in consumer, labor, and civic organizations in the District. There is apparent contradiction in the area of District of Columbia government support for this bill—contradiction which raises questions in my mind about the power of the banks at city hall. As an example of the public outcry, a local radio station, WTOP, recently editorialized against this bill. Some of the points made in the editorial are worthy of consideration:

The bill would affirm in law interest levels the banks have been using for more than 50 years in combination with a discounting procedure.

It's a very murky bill. Consumer groups claim it would legalize usurious interest rates. Rep. Patman says the bankers are getting a "bonanza of profits" and don't need help from Congress. The bankers themselves claim the interest is justified because of the costs of handling small, short-term loans.

The effect the bill would have on home mortgages, credit cards, and other transactions raises additional questions.

The editorial goes on to commend Chairman PATMAN for his courageous fight against this bill. I join Mr. PATMAN in believing that the bill carries national implications which are ominous, and which should not be treated lightly or routinely by the Congress.

Underlining the seriousness of this vote is the fact that a suit has been filed in the Federal District Court for the District of Columbia which would enjoin the banks from collecting more than the statutory 8-percent interest on unsecured loans. The suit was filed on behalf of the Democratic Central Committee of the District and other interested individuals and consumer groups. I believe that insofar as this suit raises a number of questions about past practices of the banks in regard to the usury laws of the District, it would be inappropriate for the Congress to enact a law which specifically exonerates the banks from practices which many consider illegal. Title IV of the bill before us today is nothing other than a retroactivity clause to excuse the banks from the possibility that their long-established customs have been illegal. I simply cannot imagine the Congress passing a bill which contains such dubious language in other areas of public policy.

Finally, Mr. Speaker, I would summarize briefly my reasons for opposing enactment of this bill:

First, the bill is not the result of broadly based public hearings—essential in an area which has significant impact in the huge ghetto community of the National Capital.

Second, there is significant opposition to this bill by labor and consumer groups in the District.

Third, the bill is opposed by the chairman of the Consumer Affairs Subcommittee of Banking and Currency and by the distinguished chairman of the full Committee on Banking and Currency.

Fourth, the bill should go back to committee for further public hearings and comprehensive studies of consumer credit practices in the District.

Fifth, pending adjudication of the suit filed in Federal district court, the Congress would be ill-advised to enact retroactive legislation designed to exonerate past practices of the banks.

Sixth, interest rates are already too high nationally and are having a tragic effect on small-wage earners and homebuyers—this bill has unfortunate national implications and amounts to a reward to the banks for practices of dubious legality.

Mr. Speaker, I hope that the House will vote this bill down today and send it back to committee. If the House passes it, I hope the other body will take a long, hard look at the many imperfections which exist in this kind of approach. Not many weeks ago we had a grim reminder of the kind of social pressures which exist just below the surface of this teeming metropolis. I say that this kind of bill adds to those pressures, and that bringing it to the floor here in late July is not wise. It needs more study and more work—and certainly it needs much broader support in this community than it apparently has at this time.

Mr. JACOBS. Mr. Speaker, I would first like to pay my respects and express my admiration for my subcommittee chairman, the gentleman from Florida (Mr. FUQUA), who is a fairminded man and one who I think has done his best to present this legislation and who conducted the proceedings before the subcommittee in a very fairminded way.

However, I would like to clarify, if I may, one or two points.

The argument has been made that the practice of interest discount has been going on for a period of 50 years and should be condoned and clarified as legitimate now that the Federal truth-in-lending law has taken effect and therefore the true interest is revealed to the customers by the banks in Washington, D.C.

Now, perhaps, it is true that the interest rate should be changed. Perhaps it is true that the interest rate is not high enough in the District of Columbia. But the fact that banks have been charging 16 percent for 50 years is hardly an argument for legalizing 16 percent.

Suppose the Federal Government passed a law which provided that bank robbers should henceforth and hereafter not wear masks. Would we be persuaded if a bank robber said, "We have been robbing banks in the District of Columbia for 50 years while wearing masks. We would like to change the law and clarify the situation now that we no longer wear masks."

Mr. Speaker, I do not say that the bankers have been engaged in robbery as a result of the practices which they have been following. However, I would say it does disturb me that some banker up in New York every few months comes up with the story that the country cannot be saved unless bankers make more money. Some have argued that the bankers of the District of Columbia have extended this kind of loan, not for profit, but in order to accommodate and serve as a convenience to small borrowers in the District of Columbia. How tender.

I can recall the cartoon which showed a shabbily dressed man sitting before the loan officer, and the loan officer saying to him, "No sir, our interest is not very high. And so far as you're concerned, we have none at all."

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. JACOBS. I yield to the gentleman from Ohio.

Mr. HAYS. I have been hearing a lot about clarification of this legislation but as I get this—and tell me if I am wrong—the legal rate is 8 percent?

Mr. JACOBS. That is correct.

Mr. HAYS. But, if we clarify this, it will be 16 percent?

Mr. JACOBS. We would be clarifying it up to 16 percent.

Mr. Speaker, I support a motion to recommit this bill. Why? Because the fact of the matter is that although hearings were held on this bill, hearings were not held on what is contained in this bill now as it has come from the committee carrying a schedule of 12 percent, 14 percent, and 16 percent rate of interest.

In our subcommittee executive session I told my fellow Members that the bankers themselves were not even asking for the kind of interest rate which was voted out of our subcommittee—and there are gentlemen of the subcommittee here will confirm that fact—but by the time we got to the full committee my subcommittee chairman acknowledged I was correct in the subcommittee, and he moved to change the subcommittee action.

An amendment was made to reduce the interest rate to what the bill provides now. But we just got to the place finally in the full committee where we knew what the bankers were asking for. That is where we are right now. We still do not know what the view of the consumer is on this matter. Being old fashioned, I like to hear both sides of the story. That is the reason this bill should be recommitted. Maybe it should be 16 percent, maybe it should be 8 percent, maybe it should be 11 percent, but this business of just throwing a dart at the board, flying backwards with a blindfold, and guessing, is ridiculous if we are to serve the public properly and objectively.

So, Mr. Speaker, I do not say we should vote against this bill and I do not say we should vote for this bill. I say there is nobody here who has any idea which way to vote on the matter until there are reasonable and proper hearings which hear both sides of the matter. And I know that when these hearings were public the consumer people did not come in. Why would the bankers come in and not the consumers? Because the bankers were the sponsors of this legislation and the consumer did not pick it up in the newspapers.

Mr. Speaker, do we not have a duty to invite consumer testimony rather than sitting here and wondering why such testimony did not come uninvited? Would it not be better and would it not serve the interests of the public better if we would have the consumer witnesses in and have objective testimony and lay all the cards on the table and take off the blindfolds? Then we would have a better understanding of this whole situation. Surely no harm could come from learning a few facts before we reorder people's destiny in the District of Columbia.

Mr. STEIGER of Arizona. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, the gentleman from Ohio (Mr. HAYS), made a very good point when he pointed out that in an attempt to clarify this legislation we perhaps have muddied the water. I would only like to say that there has been a great deal of misinformation poured forth in these halls this afternoon, not the least of which is the baldface statement that this bill raises the 8-percent usury rate to 16 percent. It does not do so.

When this bill passes, if it does, the usury rate in the District of Columbia will remain at 8 percent. There will be a ceiling of 16 percent on those loans that qualify under this section for which they now are paying approximately 16 percent.

It would be very nice if somebody could answer the question of the gentleman from Ohio with a simple yes or no, but unfortunately, as I am sure the gentleman understands, there is a qualification. The usury rate will remain the same at 8 percent. There will be a ceiling of 16 percent on those loans exempted by the bill.

Mr. JACOBS. Mr. Speaker, would the gentleman yield at that point?

Mr. STEIGER of Arizona. I would prefer not to yield to the gentleman at this moment.

Mr. Speaker, the gentlewoman from Missouri (Mrs. SULLIVAN), made a very good point when she asked how is it that the banks have been cheating—and this is not her language—and I feel the same way about this particular part of this argument. The gentlewoman indicated that the banks have circumvented the 8 percent interest rate for years by add-ons and so forth. Why then would it not be possible under this change to do the same thing at 12, 14, or 16 percent? I can only tell the gentlewoman that that specific language is in the bill, and I am referring to page 4, starting at line 1, section (c), in which it says that nothing in this section nor in the other sections referred to, and so forth, and it lists all the ways you can discount, add on, balloon, cheat, so long as the rate of interest does not exceed that permitted by this section. In other words with this bill, no matter what device they come up with, they cannot exceed 16 percent. I think this offers protection. I would beg that we recognize what we do as a very pragmatic fact that there are two specific banks in the District or there are at least two banks—there may be more, but there are two that I know of—that are either wholly owned by Negroes or predominantly owned by Negroes. One of them is the Industrial Bank of Washington and the other is the United Community National Bank. I quote from the testimony of April 29, 1969, in which Mr. Mitchell, who is the president of the Industrial Bank states:

> We have 2½ million of these loans out.

He goes on and explains it:

> Approximately 30 percent of our loan portfolio is in these loans.

This was a greater percentage of their portfolio than the banks that we heard of who were making these loans—and I sympathize with the gentleman from Texas, and I do not like to be in the position of urging high interest rates, and I sympathize with the gentlewoman when she is concerned about abuse of those who need those kinds of loans, but I submit if we cannot have these kinds of loans, there is no place for these people to go. There is no so-called friendly loan situation in the District of Columbia, because of the existing high rates. I think it is a very proper situation here. But right over the line in Maryland and Virginia they have rates of approximately 30 and 32 percent.

Within the District of Columbia there are people who operate, known as loan sharks, who charge 5 and 10 percent compounded on a weekly basis.

I would only submit that if you examine what we are doing, if we kill this legislation—and despite what the distinguished chairman of the Committee on Banking and Currency has said, that you are not voting to double the interest rates—when this bill passes, the interest rate in the District of Columbia will still be 8 percent with the exception of these specific loans which are now generating an interest in excess of 15 percent.

Mr. JACOBS. Mr. Speaker, will the gentleman yield?

Mr. STEIGER of Arizona. I am happy to yield to the gentleman from Indiana.

Mr. JACOBS. The point I would make to the gentleman—and first of all I confirm what the gentleman has said about 16 percent being the overall limit no matter what device is used—the point I would make to the gentleman is that 8 percent indeed does apply to this kind of loan now. The generation of 16 percent is a generation which is extra-legal or at least of questionable legal status. Therefore, the interest is being raised with respect to these loans.

Mr. STEIGER of Arizona. I will stipulate that this has been a device. As the gentleman will recall, I was as outraged as the gentleman and the gentlewoman because I felt that this was a device to protect the banks.

Mr. JACOBS. I compliment the gentleman.

Mr. STEIGER of Arizona. But I am convinced that if we, in our attempt to purify the language—if we say there can be no 16 percent interest on installment loans, I would call the attention of the gentleman from Texas to the fact that there was not one single loan in a bank or savings and loan institution with these conditions as stipulated by this bill at the 8 percent figure stated.

Mr. ADAMS. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, I rise in opposition to this bill and particularly do I want to point out one section of the bill that is bad—and that is section 4 which takes away the right of the consumer who has been charged an interest rate that is too high from suing the person who has done this to him.

Now my second point is that we are dealing with the granting of loans on an equal installment basis. As pointed out by the gentleman from Indiana, the people who we are supposed to be helping cannot get a loan now. You go into a bank even if you have a job but are earning less than $5,000 a year and tell them you want to borrow $400 or $500. They do not even talk interest rates with you. They just say, "sorry, you are not going to get any money."

I want to ask the chairman of the committee, because he put in the technical amendment—and I want to be sure of its effect—the present statute, as proposed on page 5 of the committee bill, provides you can apply this rate to them—to all installment loans.

Now as I understood you, your amendment was going to change that. I want to know, does your amendment exempt, or does it exempt them from the application of this 12 percent or 14 percent or 16 percent?

Mr. FUQUA. On this application of 12 percent or 14 percent or 16 percent provision——

Mr. ADAMS. In other words, if I want to borrow money.

Mr. FUQUA. On the points or the add-on or whatever condition that they make provision for in order to make the loan.

Mr. ADAMS. If I want to borrow money on a house, first I take out a mortgage on it—in the District of Columbia where I am purchasing a home—what is the rate that they can charge me—8 percent or 12 percent or 14 percent or 16 percent?

Mr. FUQUA. As recently as last week, money on home mortgages were 7¾ percent and 3 points in the District of Columbia.

Mr. ADAMS. Yes, but you and I both know that if one applies for a loan, he may or may not receive it. I shall mention the suits that will be filed. The question is whether or not this practice is legal. I want to know what we are proposing to authorize. Will we authorize 12 percent on such loans?

Mr. FUQUA. No, it would leave that in the present limit of 8 percent.

Mr. ADAMS. On all first mortgages?

Mr. FUQUA. Yes.

Mr. ADAMS. Suppose you were going to borrow on your house on one of these propositions that would enable you to build a room on the back, or you get the roof repaired, and so on? Would that still be at the rate of 8 percent under your amendment?

Mr. FUQUA. If the gentleman had substantial enough credit, he could get money at 8 percent, or he could also come under the provisions of this act.

Mr. ADAMS. Could they charge me 12 percent?

Mr. FUQUA. They could, on a home improvement loan.

Mr. ADAMS. That is what I want to know. I thank the gentleman for his statement, which is a reply to the gentleman from Ohio. There is no limitation of 8 percent whatsoever on such loans.

Mr. FUQUA. Will the gentleman yield further?

Mr. ADAMS. I yield to the gentleman from Florida.

Mr. FUQUA. What is the rate on an 8 percent add-on or discount at the present time, in the present practice in the District of Columbia?

Mr. ADAMS. It is 8 percent unless they discount it.

Mr. FUQUA. If there is an 8 percent discount, what is the rate of interest?

Mr. ADAMS. It will be up around 12 percent.

Mr. FUQUA. I believe it will be plus 15.

Mr. ADAMS. It depends on how many years the loan would run, the amount of the payback, and so on.

Mr. FUQUA. This is the present situation we have in the District of Columbia.

Mr. ADAMS. Yes, but what the gentleman has pointed out—and the whole purpose of the bill, as I understand it, is that if somebody starts to file lawsuits on this subject, it is going to be established that usury means usury, and that such rates are illegal. Therefore, they are charging more than the legal rate. Otherwise, there is no point in passing this bill, because if they can do what they say they can do now, it is legal and this bill is not necessary.

Mr. FUQUA. If my good friend will yield further, usury normally in most States, including the gentleman's State, has been exempt on installment unsecured loans.

Mr. ADAMS. Only because nobody has gone in and blown the whistle on that practice. That is all. The lawsuits are now about to start, because finally the people who have been charged these rates are beginning to understand what is happening and they are saying there is a difference. They are filing lawsuits and the matter of the true rate will be decided.

The SPEAKER. The time of the gentleman from Washington has expired.

(By unanimous consent, Mr. ADAMS was allowed to proceed for 2 additional minutes.)

Mr. ADAMS. That, to me, is the whole purpose and point of what we are doing. It goes back to what the gentleman from Texas said a little earlier. At some point on a national basis—and this bill is the forerunner of the national issue we are going to face—we are going to have to say to the banks, "You can make money on 8 percent or on 9 percent. We just cannot simply go on with this idea of you raising the rates all the time where there is no longer any competition among money lenders to hold rates down."

When somebody talks to me about a competitive market for money, I say, "Baloney." The big corporate borrowers who used to provide a competitive back pressure on the money lenders now are in a position where they are making large profits, and they can write off their interest expense. These companies have a 7 percent investment credit they can apply against their income taxes. They can borrow the money to build a facility and write it off on an investment credit. They can use accelerated rates of depreciation to reduce taxes. So their effective rate of interest drops down to 3 or 4 percent or less. When they go into the market and someone says it is 9 percent, what they are doing is, they are figuring out what they can deduct, and they say, "OK 9 percent but know they may actually pay 3 percent." But when the little man—and I consider that to be everyone who is not one of the giants—goes in and tries to do that sort of thing, they say, "9 percent," and he pays 9 percent, he cannot deduct much and he does not earn enough to make the deduction worthwhile. That is why we are worried about this bill.

I agree with the gentleman from Indiana. I think the chairman of the committee has done an excellent job in trying to put this thing together. But I think we have not faced the basic nut question, which is, "If it is legal, why do you need this bill? If it is illegal, what should we do?"

The SPEAKER. The time of the gentleman from Washington has expired.

(On request of Mr. PATMAN, and by unanimous consent, Mr. ADAMS was allowed to proceed for 1 additional minute.)

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. ADAMS. I yield to the gentleman from Texas.

Mr. PATMAN. The gentleman mentioned that lawsuits would be filed. There was one big lawsuit filed today. A copy of the petition will be in the RECORD for today and available tomorrow morning. I am glad the gentleman mentioned that because the suits are started.

Mr. ADAMS. Mr. Speaker, I thank the gentleman from Texas. I said I would mention that, and I did not, but there will be today suits filed on behalf of the Greater Washington Chapter of Americans for Democratic Action, the Democratic Central Committee of the District of Columbia, challenging the legality of the present bank interest rates and seeking the recovery of interest.

Mr. HORTON. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I rise in opposition to H.R. 255, pertaining to finance charges on certain installment loans made by financial institutions in the District of Columbia.

I am well aware of the fact that practices authorized by this bill have in fact been in use by Washington banks, savings and loan institutions, and regulated lending firms for a number of years. I am also aware that this bill seeks to clear up the question as to whether these practices of deducting or adding on interest charges violate the District's usury laws. Further, I know that 39 States have seen fit to clear up the same question by enacting similar laws.

One of the strongest arguments put forth by the banks in favor of this bill is that the interests of the District's consumers would be impaired if, without this clarifying statute, small installment loans became unavailable in the Nation's Capital. There is no question that the availability of such loans is important to both the consumers and the District's economy. But if consumer interest plays a key role in justifying this bill, I feel that the consumer groups who have expressed interest in H.R. 255, including many who have opposed it, should have a chance to be heard. I am informed that no consumers or consumer groups testified in any of the hearings held on this bill. Whatever their points of view, I feel they should be heard and considered by our committee before this bill is enacted into law.

Thus, Mr. Speaker, it is my intention at the appropriate time to offer a motion to recommit H.R. 255, so that fur-

ther open hearings can be held which can include these consumer spokesmen.

Mr. HAYS. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I heard a defense of the banking fraternity in the District of Columbia. I happen to have a little bit of knowledge about banking myself. The traditional view of the banker is of a flinty-hearted individual with a steely glare who says no to everybody. But I want to tell Members, the typical banker, compared to the fraternity in the District of Columbia, has a heart like an overripe tomato, because the chiselers in this town really know how to take people—and I know what I am talking about.

I know a mortgage on a piece of real estate was paid off this month, which was a 5½-percent mortgage, which had run for 12 years without a payment ever being missed. One would have thought the bankers would have been delighted to get the balance paid off so they could put it out at what the gentleman says is the going rate, 7¾ percent plus three points—and they charged a point for the loan being paid off early, or 1 percent more.

Talk about a bunch of clip artists. They have them here. My bank would be so happy to get a 5½-percent loan paid off, they would probably pay the fellow a point for coming in and paying it off. We really would be delighted to get in those cheaper loans, so we would be able to loan them out at a straight 7 percent—with no points. That is the going rate in Ohio.

I am a very pragmatic fellow, and I would just love to run against anybody who votes for this bill, because all I would have to say—and nobody could dispute it—is he voted to raise the legal rate of interest from 8 percent to 16 percent, and really everybody in any constituency can understand that language.

Members can explain from now on out that they were only trying to legalize something that was already being done, but I do not think they will hit much bedrock with that kind of explanation to the average man in the street. He is not going to buy that.

He knows the difference between 8 and 16, and he is not interested in having something that is being done illegally legalized if it is going to cost him 8 percent more.

Now, please do not look like you are going to get up, Mr. Chairman of the subcommittee. Do not get up to talk about my statement. I do not want you to, because I know all about it.

I was naive enough many years ago to introduce a bill in the Ohio Senate, to cut the legal rate of interest on small loans from 3 percent a month to 2 percent a month, which is from 36 to 24 percent a year, and I found out how the friendly loan boys operate, and my opponent found out, also, how they operate. He was the recipient of a lot of their largess.

So do not quote anything about Ohio, because what it does in the small loan field I do not approve of.

I realize that in respect to the unsecured loan area one has to have a little more interest if one is going to make those kinds of loans.

Mr. FUQUA. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Florida.

Mr. FUQUA. In comparing Ohio to the District of Columbia, which is not what we are talking about, is the gentleman aware that we do not permit small loan companies in the District of Columbia? I am glad we do not.

Mr. HAYS. I am aware of it, and if I had enough political muscle we would not permit them in Ohio. I must confess I did not have it then, and I doubt if I would have it now if I were back out there because, as I told you, they know how to operate, and they do.

As I say, they have to have a medium amount more, and I am in favor of that, but not 36 percent.

If we are going to allow the banks to operate as small loan outfits, they should have more, but I do not think it should be 16 percent, because I do not really believe that if they use a reasonable amount of caution on the loans they make they will require that.

I do not bleed like my friend from Washington, about the fellow who walks in and cannot get a loan. Some people ought not to have a loan, and we are not doing them a favor by providing them a loan at any percentage.

The SPEAKER. The time of the gentleman from Ohio has expired.

(On request of Mr. FUQUA, and by unanimous consent, Mr. HAYS was allowed to proceed for 1 additional minute.)

Mr. FUQUA. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Florida. It is his minute.

Mr. FUQUA. I would hope that the gentleman would join with me in not trying to help the small loan companies of Maryland and Virginia. That is exactly what we will do if we fail to pass this legislation.

Mr. HAYS. I told the gentleman, I am pragmatic. It is not going to be on my record that I voted to raise the legal rate of interest from 8 to 16 percent, much as I would like to help the gentleman.

Mr. ADAMS. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I yield to the gentleman, if I have time left.

Mr. ADAMS. I agree with the gentleman. I believe that many people ought not to have loans forced on them, and they should not have them.

What is bothering me is that the bankers are beginning to raise that level of those who have a legitimate reason to borrow to a higher and higher level. There are a lot of people who are losing out because the bankers are saying, "It is easier to loan money out to A.T. & T. at 8 percent than to bother with a man who has a pretty good job for 8 percent."

Mr. HAYS. That may well be, and something should be done about it, but not in this manner.

Mr. GUDE. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, the bill which we are considering here today is not half-loaf, in my opinion; it is really a very small slice. It is, however, a small improvement over the present situation where banks can actually charge an unlimited amount of interest by discounting.

I should like to point out to the House that the legislation originally presented to the Committee or the District of Columbia provided for removing the ceiling from the present so-called 8 percent legal rate of interest and providing no ceiling at all.

Conditions are wide open now and would have been wide open with that proposal. There were some of us in the committee who were very concerned about this and as a result we amended the legislation and the resulting bill which we have here now is a slight improvement over that which was originally presented. I urged that we look at the entire problem of interest rates in all areas of commerce but unfortunately there was insufficient support for a complete review. Also the gentleman from Washington (Mr. ADAMS), and the gentleman from Indiana (Mr. JACOBS), and I cosponsored legislation last year which would have resulted in a complete review of the entire question of consumer interest in the District of Columbia as far as interest rate charges are concerned.

For example we felt that revolving and installment credit charges should be examined. I do not know whether it helps a person who is going to put a roof on his house feel better to know that he paid a "legal" 18 percent to a department store supply company for roofing supplies than if he paid a possible "illegal" 15 or 16 percent to a bank for a loan with which he would buy the same supplies.

We should have a complete review of all of these interest rate questions in the District of Columbia and strong legislation providing strict limitations and regulations.

Mr. Speaker, we have two alternatives before the House. First, we can pass this bill. For the first time we would have a certain limitation placed on the banking institutions and the total amount of interest they charge including add-ons. They would not be able to charge over a certain amount of interest. They would be prohibited from ballooning in their loan practices, and under the truth-in-lending bill the consumer for the first time would know actually what he is paying. I am not worried about how the bankers feel or how anyone else in that business feels, but I am worried about the ultimate effect of this bill on the consumer.

The other alternative is that we can kill this bill. The banks might be able to continue their present program if they win their lawsuits. They would really be home free and there would be no ceilings to the add-ons which they could levy. They could go much beyond 16 percent interest. On the other hand, if the banks, lose their suits and went out of this type of loan, we would be faced with a different situation. I believe this would have an undesirable effect on the entire metropolitan area. Many who need to borrow small amounts of money would go to neighboring jurisdictions.

Mr. Speaker, we have loan companies

in Montgomery County across the District line who are charging 36 percent interest on small loans and it is legal. I doubt if it helps the poor people who go out there and borrow money feel any better to know that they are paying a legal rate. I made a personal inspection of the area this morning, and I will give you an idea of where these loan businesses are located. On Georgia Avenue in the first block over the District line there are the following small loan companies: American Finance System, Aetna Finance Co., Seaboard Loans, Household Finance Co., GAC Finance Corp., Personal Thrift Plan Loans, Suburban Finance Co., Landmark Finance Co., and the State Loan Co. In that same block along Eastern Avenue, which parallels the District line, there are: State Loan Co., Landmark Finance Corp., Summit Loans Inc., Liberty Loans, Major Finance Loans, Calvert Credit Corp., City Finance Loans, Budget Finance Plans.

You may have noticed that on both Eastern Avenue and Georgia Avenue I reported the same two companies. The business is so good that they operate all the way through the block. They have doors open on both Eastern and Georgia Avenues. There are 15 of these small loan companies in just this one location, and many others located close to the District line along other arterials leading out of the District.

Mr. Speaker, in my opinion, if we kill this bill it would be a great opportunity for the small loan companies to expand their business with the increased trade from the District. I believe it is better to have money available with limitations and controls here in the District rather than have the unhealthy situation where they are forced into the suburbs.

Mr. DOWDY. Mr. Speaker, will the gentleman yield?

Mr. GUDE. Yes. I yield to the gentleman.

Mr. DOWDY. I have seen the row of businesses out there, but there is a cleaner who actually cleans clothes out there, too, is there not?

Mr. GUDE. Yes. There is a cleaning establishment interspersed with these loan companies.

Mr. DOWDY. I call them all "cleaners."

Mr. GUDE. The gentleman is right.

Mr. Speaker, as I have stated I believe this is the best we can get out of the House Committee on the District of Columbia at this time as far as interest rate legislation is concerned.

We have passed bills here in the House with the feeling that we could obtain hearings and consideration in the Senate which we could not achieve in the House. Possibly that could be done in the case of this legislation because I know the chairman of the Committee on the District of Columbia in the other body is very sympathetic to consumer problems. This represents a possible means of improving the legislation and making it more comprehensive.

Therefore, Mr. Speaker, I support this legislation, but in my opinion it represents a very thin slice or crumb rather than half a loaf.

Mr. WRIGHT. Mr. Speaker, I move to strike the requisite number of words.

Mrs. SULLIVAN. Mr. Speaker, will the gentleman yield?

Mr. WRIGHT. I yield to the distinguished gentlewoman from Missouri.

Mrs. SULLIVAN. Mr. Speaker, this bill is not necessary in order to accomplish what it purports to do, but it does a lot of things it pretends not to do. It is a bad bill. It should either be recommitted to committee for further study—and public hearings on this amended version—or it should be defeated out of hand.

I am amazed that a committee of the House would bring in a bill to extend blanket amnesty to anyone who ever violated a District law which has been on the books for 50 years. Yet that is what this bill does.

Please read section 4 of the bill as amended in committee:

The amendments made by this Act shall apply with respect to any loan described in section 28–3307(a) of the District of Columbia Code (added by section 3 of this Act) final repayment of which is due after July 1, 1968.

Mr. Speaker, do you know of any other bill which goes back 1 full year or more to forgive any violation which might have occurred under existing law?

This bill does. I understand that the statute of limitations for District of Columbia protects any transaction which was completed more than a year ago. So this bill fills in the intervening 12 months, and provides amnesty for that entire period.

Now what does it provide amnesty from? This is the part which is so mysterious. It purports to permit District of Columbia banks and savings and loans to continue offering the same kind of installment loans that they have regularly been providing, and presumably at the same effective rates of interest. But who or what says they cannot continue to offer such loans without the passage of this bill?

There is no explanation in the committee report for this point. We are led to believe from the committee report that unless this bill becomes law, District of Columbia banks no longer will be able to offer what they call 8-percent discount loans, which are actually at the effective annual rate of 15.75 percent.

Nowhere in the report is there any reference made to the Federal Truth in Lending Act which took effect July 1, yet the implication has been given that the truth-in-lending law apparently, or presumably, or possibly, or ostensibly, makes the practices of the District of Columbia banks in extending 8-percent discount loans illegal under the District's 8-percent usury ceiling.

That is simply not true. And I assume that, since it is not true, the Committee on the District of Columbia has therefore carefully refrained from using this argument in its report.

All the Truth in Lending Act requires in connection with these 8-percent discount loans is that the bank reveal that the annual percentage rate of the finance charge is actually 15.75 percent, not 8 percent. In order to avoid any confusion, or to avoid possibility of nuisance suits under the various State usury laws setting maximum rates on interest, the Federal Truth in Lending Act carefully spells out the fact that the finance charge on which the annual percentage rate is based is not regarded as interest under any State usury law.

But because the truth-in-lending law requires the District of Columbia banks, and all other lenders everywhere in the country, to reveal the actual rates of their finance charges—which are far above what the people have generally thought they were paying in terms of an annual rate—the District of Columbia banks now say they fear that some consumers will file nuisance suits against them alleging that they have been violating the District of Columbia's 8-percent usury law ceiling.

In the very brief testimony before the subcommittee which considered the original H.R. 255, the witnesses from the banking industry made it clear that they did not think they have been violating the District's usury ceiling with their 8-percent discount loans, and felt they could easily prove this in court.

I think they should be given the opportunity to do so.

The committee acknowledges hastiness in its draftsmanship by saying that it does not intend the bill to legalize 16-percent or 14-percent or 12-percent interest on home mortgages, and I understand the committee will offer an amendment to its amended bill to make that point clear. But the fact that the bill came out of committee with provisions which could apply such high ceilings to mortgages makes us all wonder what else might be permitted or allowed in this bill that the committee does not know about or has not looked into.

The worst thing of all is the amnesty clause. I will move to strike that out of the bill. What right have we to forgive past violations of law, if they have occurred?

Let me say, Mr. Speaker, that although the committee report implies that no opposition was voiced to H.R. 255 when the brief hearings were conducted on it in this Congress, the RECORD should show that I objected to the bill in its original form, for reasons which I spelled out in detail, in a statement provided to each member of the subcommittee on the morning of the hearing. No mention is made of my opposition in the report. But, in conformance with the recommendations I made in my written testimony, the committee junked the original approach of H.R. 255 and came out with an amended bill which straightforwardly raises the legal rates of interest in the District on installment loans. Undoubtedly, the present 8-percent usury ceiling is too low. But what is the right figure? Should it be 16 percent, as this bill proposes, or 12 percent, as is the case in nearby Maryland? No study seems to have been made on that point. So we do not know, from the committee's work on this bill, whether 16 percent is too high, too low, or just right.

All we do know is that the committee has taken the highest rates currently charged by District banks for installment loans and said, in effect, this is a dandy rate, just right, so let us legalize it.

Mr. Speaker, this bill should be recommitted for further study—and for comprehensive study, not just a whitewash of what has been done. If the Suburban Trust Co. of nearby Maryland can advertise—as it has been doing under truth in lending—that its rates on the kind of installment loans covered in this bill is 12 percent, why do the District banks need 16 percent? Maybe they do. But why?

If we pass this bill, and it becomes law, how soon would it be before the Maryland banks go to their legislature and say that since the District banks can get 16 percent, Maryland banks should not be held to 12 percent. This bill could therefore have tremendous ramifications on all types of consumer loans—on the rates charged.

If the District committee does not want to undertake the research necessary to come forward with a comprehensive bill on consumer credit rates and charges, then it should let the Washington, D.C., City Council do it. But, in the meantime, I can assure the Members of this House that if 15.75 percent has been a legal rate in Washington for a so-called 8-percent discount loan, then the Truth in Lending Act does not make it suddenly illegal, so this bill is unnecessary from that standpoint. All truth in lending has done in that respect has been to smoke out the true rate—and that is what truth in lending is supposed to do.

This is a bad bill.

Mr. Speaker, undoubtedly the District needs new consumer credit legislation, as the gentleman from Florida said, to eliminate gimmicks and abuses. But this bill is not a comprehensive rewriting of obsolete District laws on credit. It is a narrow, special interest bill for banks and mortgage lenders.

Bring us a comprehensive bill on consumer credit, outlawing abuses of the poor, and we might argue about details but we could pass a good bill.

Mr. WRIGHT. Mr. Speaker, it would be very hard to conceive of a more flagrant case of special interest legislation than H.R. 255, which would increase the legal interest rates in the District of Columbia. Its obvious effect would be to legitimatize an unlawful practice, and to do so retroactively for the selfish benefit of those who have been illegally preying upon the poor and the unwary.

High interest is the cruelest oppressor of the poor. It is an economic tyranny from which they cannot escape. Like a leech, it attaches itself to their slender purses and sucks away the lifeblood of their meager substance. To enact this bill would be a deed of crass and unfeeling cruelty.

Moreover, it would amount to a craven surrender in our efforts to protect consumers everywhere. Throughout the land it would be interpreted as a congressional retreat from our determination to protect the needy from the greedy. Surely it would set a dangerous pattern for States to follow in raising the antiusury ceilings. It could begin another round of increases in interest rates everywhere.

High interest, more than any other one device, is slowing down the wheels of economic growth in this country. It is stifling small business, stymieing the production of low-cost homes, and siphoning away the buying power of the Nation.

High interest feeds the fires of inflation in the most cruel and unforgivable way of all. Worse even than high prices and high taxes, it gives absolutely nothing in return. And by increasing the cost of production and the cost of government, it feeds fuel to the fires of high prices and high taxes.

The bill would legalize practices which are clearly violations of the present law. More reprehensible still, it would do so retroactively. It would legitimatize the sinister greed of those who have arrogantly flouted the law and render them immune from prosecution.

Existing law in the District of Columbia defines interest rates which exceed 8 percent as illegal usury. This bill would double that ceiling. It would set a ceiling of 6 percent on installment loans up to $1,200, 14 percent on loans between $1,200 and $2,500, and 12 percent on loans of more than $2,500.

It would say in effect that we recognize the right of lending agencies to discriminate against the small borrower and to take usurious and unconscionable profits out of his hide simply because he of all borrowers is least able to escape or to defend himself.

This is not only an economic issue, although as such it clearly commands our attention. It is preeminently a moral issue. Almost 1,500 years before Christ, Moses gave the following stern commandment:

> If thy brother be waxen poor and fallen in decay with thee, then thou shalt relieve him . . . take thou no usury of him, or increase . . . thou shalt not give him thy money upon usury, nor lend him thy victuals for increase.

It would be hard to conceive a more regressive or oppressive measure than this bill. To pass it would be the trumpet of congressional retreat from enlightened decency and humanitarian concern. It deserves to be defeated by so resounding a vote that none can mistake the clear determination of the Congress to put a stop to this insidious practice of usurious interest charges which are stifling the very wellsprings of our economy and mounting their treasure from the sweat of the poor.

Mr. Speaker, I have a very high regard, personally, for the distinguished gentleman from Florida, chairman of the subcommittee, and I do not accuse him in any sense of bad faith. I am not a member of the Committee on the District of Columbia, but every Member of this House should recognize that this bill is symbolic to the Nation as a whole. There is not any citizen of the United States who ever borrows money or expects to borrow money in the future who is immune from what this bill can conceivably do to them.

Mr. HARSHA. Mr. Speaker, will the gentleman yield to me?

Mr. WRIGHT. I yield to my friend, the gentleman from Ohio.

Mr. HARSHA. Does not the gentleman feel that if we enact this legislation it will be a forerunner of a great effort throughout the United States to change interest rates?

Mr. WRIGHT. That is a very grave concern of mine. I have been here in this House of Representatives for some 15 years and time and time again I have seen increases in interest rates on various types of loans allowed on Government-insured mortgages on the ground that it was necessary to catch up with what was being practiced in the money market.

Mr. Speaker, we have been playing leapfrog. Each time we raise interest under the guise of helping poor people borrow money, what we actually do is to create a situation to allow someone else to raise interest rates somewhere else in turn under the guise or pretense of helping the small borrower. And the sum effect of it all, of course, is to work an enormous detriment upon all borrowers, both big and small. I would say to the gentleman from Ohio that this is one of my greatest concerns.

We have an opportunity here today which we rarely have in the House of Representatives, to come down on the side of higher interest rates or to come down forcefully on the side of lower interest rates. That is what faces us. It is utter folly to come before this body and say that the enactment of this bill would not change interest rates. Of course, it changes the legally allowable interest rate. Presently that rate is 8 percent in the District of Columbia. If this bill is enacted, the legally allowable interest rate will be 16 percent.

So the question is: do we want to be parties to doubling the legal interest rate in the District of Columbia, bearing in mind what effect it might have on interest rates in the rest of the country or upon usury ceilings in many States which might want to stay in step with the District of Columbia.

It seems to me, Mr. Speaker, that regardless of whether some people have been getting by with charging this kind of interest rate in the District under various subterfuges, or whether there may be people across the District line who charge higher interest than 16 percent, to legitimize and sanction the practice would be in my judgment thoroughly unconscionable. I certainly do not want to be a party to permitting this legally and making previous offenders immune from prosecution.

Mr. STEIGER of Arizona. Mr. Speaker, will the gentleman yield?

Mr. WRIGHT. Yes, I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I appreciate the gentleman's concern about the immorality of charging 16 percent interest. However, I would assume that the gentleman would abhor the doubling of that rate to almost 32 percent; is that correct?

Mr. WRIGHT. The gentleman assumes correctly.

Mr. STEIGER of Arizona. That is exactly what he is going to have the people paying who are now paying 15 and 16 percent for their money in the District through old established practices who if this legislation is not adopted are going to be eliminated and deprived from that rate of interest. They are going to be driving out to Maryland and Virginia where they are going to pay up to 32

percent. Those people are not going to vote for the gentleman in Texas.

Mr. WRIGHT. Mr. Speaker, I do not yield further. I understand the points made by the gentleman. I want to say in response to the statement made by the gentleman that, if his heart really bleeds for the people who have to borrow money at those kinds of interest rates in Maryland and Virginia, that if he will join with me, I will certainly join with him so that together we could help to adopt a Federal usury ceiling to apply everywhere alike and to all kinds of loans. I certainly will join the gentleman in that effort if the gentleman will go along with me, and I think the majority on our side of the aisle would join in such an effort. If the gentleman is really concerned about unconscionable interest rates in Maryland and Virginia, then clearly a Federal ceiling is the solution. Most certainly a solution does not lie in suppinely surrendering to the practice by doubling allowable rates in the District of Columbia.

Mr. Speaker, I just do not think any man can stand up here and defend a doubling of the interest rate allowable in the District of Columbia on the ground that it will help the poor people, because higher interest is by all means the cruelest and most burdensome oppression of the poor.

It seems to me, Mr. Speaker, that this bill is one which forces every Member of the House to make his choice. We can come down on the side of high interest which has been stagnating the economic growth of our country, and which has slowed down the building of low-income housing, and which has been siphoning away the buying power and lessening the prosperity of our country. Or we can come down on the side of the people, and that clearly is on the side of low-interest rates.

So let us begin now. Let us start to roll back the interest rates. Let us not sit here and passively acquiesce in the continual raising of interest rates. Let us make it clear and unmistakable by our votes today that Congress is determined to bring interest rates down.

Mr. PODELL. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, for many years when I was in the State legislature I serve on the commitee on banking and our committee did a number of investigatory studies in connection with the charging of interest rates throughout our State. I do not hold with you that those gentlemen who are for this bill are for higher interest rates and those gentlemen who are opposed to the bill are the champions of low interest rates.

I think everyone knows the kind of money these people may borrow and the rates that they must pay. I think most of us know that for many years these loan companies have deducted interest rates in advance and therefore have been charging some 80 percent or 85 percent more on their interest rates than that allowed by the various States of the Union.

That today—even today—these are the same people who are borrowing money and paying exorbitant interest rates.

What this bill does seek to do, and what disturbs me about the bill is that this bill seeks to legitimatize and seeks to ask the U.S. Congress to put its stamp of approval on a higher charge that I and many others regard as illegal.

If we were to pass this kind of legislation, we are going to create a clamor for every State in the United States to adopt legislation likewise that will permit the various loan companies in the various States which are included therein to do the same for themselves. We are going to permit the loan companies from now on to say that the Congress has permitted us to charge 17 percent and 18 percent interest by doing indirectly what you cannot otherwise do directly. This is my concern about the bill.

I think the proponents of the bill do so in good faith, and they understand and will appreciate the problems in the District. I, too, know what is going on. But to ask the Congress to put its stamp of approval on the banks and loan companies—they are the same, call them what you will—is asking too much from the Congress. Because if we do, we shall open up a door which we shall hereafter find very difficult to close.

Mr. BARRETT. Mr. Speaker, will the gentleman yield?

Mr. PODELL. I yield to the gentleman.

Mr. BARRETT. Mr. Speaker, I rise in opposition to H.R. 255, to deduct interest in advance on installment loans in the District of Columbia. This bill is intended to approve a questionalable practice here in the District which may be in violation of the District usury law.

At a time when interest rates in the Nation are at a historic high to enact a bill which would create an effective rate of 16 percent per year on unpaid balances of principal of $1,200 or less is unconscionable. I seriously doubt that any of us would want such a rate to apply to our own district or State.

This legislation would affect those who can least afford to pay exorbitant rates of interest to the moneylenders. It is a further attempt to exploit those who can least afford to be exploited.

The bill is opposed by the District of Columbia Mayor-Commissioner and many local civic and community groups. They have the best interests of the residents of the District of Columbia at heart and I think we should, too.

I urge my colleagues to vote this measure down, not only for the benefit of those living here in Washington, D.C., but also to clearly illustrate to the financial community throughout our Nation that the Congress is deeply concerned with the increase in cost of money and the detrimental effect that it has had on our economy.

AMENDMENT OFFERED BY MRS. SULLIVAN TO THE AMENDMENTS OFFERED BY MR. FUQUA TO THE COMMITTEE AMENDMENT

Mrs. SULLIVAN. Mr. Speaker, I offer an amendment to the amendment offered by the gentleman from Florida (Mr. FUQUA).

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mrs. SULLIVAN to the amendments offered by Mr. FUQUA to the committee amendment: On page 4, strike out lines 16 through 19.

Mrs. SULLIVAN. Mr. Speaker, earlier in the debate on this bill I explained why I oppose H.R. 255. The 16-percent rate of interest which this bill would establish for installment loans under $1,200, the 14-percent rate on loans from $1,200 to $2,500, and the 12-percent rate for loans over $2,500 may or may not be proper and legitimate. These rates may be too high; they may even be too low. The committee has brought in no evidence, and has held no hearings to develop evidence, to show what a proper rate should be for the District of Columbia on this kind of consumer credit. The Maryland banks apparently only charge 12 percent—at least, the Suburban Trust Co. has been advertising 12-percent consumer loans in the Washington newspapers. Perhaps the District banks need 16 percent.

The point is that instead of making an investigation of the cost of lending money—and we all know it is high—the committee has merely taken the rate the banks have been charging right along on these so-called 8-percent discount loans and asks us to say that 16 percent is just right. The committee has not only recommended legalizing this rate, which is double the present legal rate, but has proposed in section 4 of the bill that anyone who may have violated District law by charging 16 percent when the legal rate was only 8 percent should be retroactively absolved of any guilt—granted blanket amnesty. Section 4 takes this back to July 1, 1968. I believe the statute of limitations covers anything done prior to that time.

Let me say, Mr. Speaker, that by charging 16 percent on consumer loans when the District law specified the ceiling on interest charges in this jurisdiction is only 8 percent, the banks here do not feel they have violated the law.

They cite court decisions in other jurisdictions holding that interest taken in advance on installment loans, doubling the effective interest rate from that stated, is not a violation of a State's usury law. Probably they are correct.

But it is the courts which should decide that question as it applies to past practices of the District of Columbia banks, not the Congress in retroactively granting amnesty to any banker who might have violated the District's usury ceiling by charging 16 percent on a so-called 8-percent loan.

Mr. Speaker, I intend to oppose this bill whether or not section 4 is deleted, because I think H.R. 255 is hasty and ill-considered legislation on a subject of vital personal importance to every moderate-income or low-income family in the District of Columbia. This subject of consumer credit rates deserves a thorough study, and a reasoned formula for meeting the needs of the public and also assuring a fair return to lenders.

But with section 4 in the bill, we would be saying to the banks that we do not think they can defend themselves legitimately in the courts on this usury charge—that they have been violating the law for 61 years and we all know it, and so we are going to change the law retroactively to save them from prosecution. I do not feel we should grant amnesty to all violators. Let the courts decide if this practice is legal. If it has

been illegal, those who have been damaged should be allowed to seek redress.

Just bear this in mind, Mr. Speaker, and I urge my colleagues also to bear it in mind:

Under the Truth in Lending Act which took effect July 1, the finance charge of 15.75 percent on 8-percent discount installment loans in the District of Columbia, cannot be held to be "interest" under the District of Columbia usury statute. The rate that the banks disclose under truth in lending is the rate of the finance charge, not the "interest rate." We wrote the truth-in-lending law to cover this point deliberately—so that the legislatures, and the Congress in legislating for the District of Columbia, would not have to pass bills like H.R. 255.

If we pass H.R. 255, we are in effect saying to every State legislature that we did not mean what we said in the Truth in Lending Act about State usury laws. This could cause tremendous confusion among lenders in every State. This is too important a step to take in this casual fashion.

Mr. FUQUA. Mr. Speaker, I rise in opposition to the amendment offered by the gentlewoman from Missouri.

The SPEAKER. The gentleman from Florida is recognized.

Mr. FUQUA. Mr. Speaker, I shall not take the time allotted to me because I know the hour is getting late and we have other legislation to consider. But this clears up the effective date of the bill, and going back, in adopting an effective date so that those loans that are in progress now would in effect say that what has been going on could continue and clarify possible court situations.

Mention was made that several legislatures would soon meet to enact legislation similar to that now before the House. I might state that already 39 States have adopted similar legislation. Historically throughout this land installment loans have been exempt from usury statutes. It is the other type of loans that are subjected to the usury statutes. I would hope that the amendment offered by the gentlewoman would be voted down and that we could go on with the passage of the bill.

Mr. FRASER. Mr. Speaker, will the gentleman yield?

Mr. FUQUA. I yield to the gentleman from Minnesota.

Mr. FRASER. If I correctly understand the purpose of section 4, it is to get the banks out from under any liability they may have incurred if the court should find that they have been violating law. Is that correct?

Mr. FUQUA. For those loans that are still in effect.

Mr. FRASER. I understand the argument for this bill originally was that the truth-in-lending law suddenly threw a cloud on past practices, so this is the reason the banks want them to come in and get a higher rate of interest authorized. Am I wrong about that?

Mr. FUQUA. The proposed legislation would clarify their position. It was the feeling of the subcommittee that the way we would do it would be to spell the interest out, and there could not be any additional interest to add-ons, discounts, or other devices to increase the interest and to increase the cost to the consumer. That is the purpose of this legislation.

Mr. FRASER. But I understand the immediate problem was precipitated by the truth-in-lending law, which would require banks to state their true interest rates, and in effect it would force them to state an interest rate which on the face of it was unlawful. I could understand that problem for the banks, although I am not particularly in sympathy with what they are trying to do. But it seems to me it is going quite a step further to say that we are going back, and if the banks were wrong, and if they charged—as I think a good case could be made—usurious rates to borrowers, why are we now coming and in effect saying, "Do not worry about it. We are going to get you out from under your illegal act?" Why should we do that?

Mr. FUQUA. We are not saying it is actually legal.

Mr. FRASER. But if the courts would decide otherwise, find it illegal, we are saying we are going to take care of them.

Mr. FUQUA. We are saying those in effect now would be under the same provisions as this act.

Mr. FRASER. I just want to register my very strong objection to going backward and giving the banks a basis to get out from under a liability they may have incurred. It seems to me that is quite unreasonable.

Mr. GUDE. Mr. Speaker, I move to strike the last word.

Mr. Speaker, in regard to the remarks made by the gentlewoman from Missouri, the allowable interest rate of banks in Maryland is 12 percent. In other words, usury in Maryland starts at 12 percent, and here in the District it starts at 8 percent. One of the effects of the failure to this legislation would be to move business into Maryland.

I would like further to point out the legislative council of Maryland, an arm of the general assembly, has approved a bill which they are recommending to the general assembly which would provide that the usury rate for loans up to $500 in banks would stand at the rate of 18 percent.

Mr. ADAMS. Mr. Speaker, will the gentleman yield?

Mr. GUDE. I yield to the gentleman from Washington.

Mr. ADAMS. Mr. Speaker, one of the things that is bothering me about this argument is why people are going to want to go some place else to pay more. If it is really true, as the bankers keep telling us, that the money market is competitive, that it is not fixed, and so on, then why, after a certain short period of time, if we can borrow money in the District of Columbia for 8 percent, should anybody go to Maryland and borrow at 12 percent—except maybe in some of those cases, as the gentleman from Ohio mentioned, where the person probably should not have a loan in the first place and we are doing him a disservice to charge him the extra amount and give him the money at that price.

Mr. GUDE. Mr. Speaker, I would like to point out to the gentleman, I read off a list of small loan companies, finance companies, and loan corporations, located right over the line in Maryland. For some reason unknown to him and to me, these people go there to pay up to 36 percent interest. That is exactly the situation we get and failure to pass this bill will worsen it.

Mr. ADAMS. Mr. Speaker, is it not a shame we do that to the people who can least afford it, and why should we legalize it? That is our problem with this bill today, that many of us are beginning to look nationwide at this whole problem of interest rates to see what we should do about it. Why should we do that?

Mr. GUDE. Mr. Speaker, I feel it is better to control the business in the District and set limits, rather than force people to go into another jurisdiction and pay exorbitant rates.

Mr. FARBSTEIN. Mr. Speaker, I rise in opposition to H.R. 255. I believe its passage would only add to the already spiraling increase in interest rates and would signal a significant retreat from the Truth-in-Lending Act so resoundingly passed by Congress only last year, and so long supported by myself.

Passage of this bill in effect would raise the ceiling on installment loans in the District of Columbia from 8 to 16 percent on a sliding scale by permitting banks to deduct interest in advance and to apply add-ons.

The rates proposed by this bill are usurious. The banks are making a high enough profit as is, although they would like to make an even higher one. They have not demonstrated a need for a rate increase to levels of interest which exceed those in the neighboring States for loans under $2,500.

There was a great deal of public concern and outcry when the major banks in this country recently raised their prime interest rates from 7 to 8 percent. Their rationale which is the same as that of the proponents of the legislation before us today, was that they were not making a sufficiently high profit. The doubtfulness of that rationale has led to investigations of that increase by the Department of Justice, the House Democratic caucus, and the House Committee on Banking and Currency. Approval of H.R. 255 at this time, given the rationale behind it, is thus less than opportune and could only serve as an encouragement to other areas of the country to increase their interest rate limit and thus accelerate the ever increasing rate of inflation in this country. It is the senior citizen and others who live on fixed incomes, the potential home buyer, the worker, and the consumer who in the end have to pay the price of high interest rates and inflation. We must stand up for their interest by saying "no" to this bill.

I oppose this bill also because it would undermine the Truth-in-Lending Act which became effective on July 1. A major purpose of that act was to block by revelation sleight-of-hand practices such as discounts and add-ons which mislead the borrowing public. House approval of H.R. 255 would provide an open invitation to State legislatures to devise ways to weaken truth-in-lending.

Finally, I oppose this bill because of its retroactive feature. District of Columbia bankers now fear that their practices of

using discounts and add-ons to evade the District's 8-percent usury law may be challenged under the new Truth-in-Lending Act. Making this bill retroactive to loans outstanding on July 1, 1968, would serve to legitimize these past practices. I can see no reason Congress should pass a bill to protect bankers who are guilty of breaking the law. The discount and add-on procedures are clearly deceptive.

Mr. Speaker, H.R. 255 is bad legislation and should be defeated, not only because the adverse effect it would have on residents of the District of Columbia, but because of its significance to the consumer in every part of this country.

The SPEAKER. The question is on the amendment offered by the gentlewoman from Missouri (Mrs. SULLIVAN) to the amendments offered by the gentleman from Florida (Mr. FUQUA) to the committee amendment.

The question was taken; and on a division (demanded by Mr. FUQUA) there were—ayes 65, noes 11.

So the amendment to the amendments to the committee amendment was agreed to.

The SPEAKER. The question now is on the amendments offered by the gentleman from Florida (Mr. FUQUA) as amended, to the committee amendment.

The amendments as amended, were agreed to.

The SPEAKER. The question is on the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. HARSHA

Mr. HARSHA. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. HARSHA. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. HARSHA moves to recommit the bill H.R. 255 to the Committee on the District of Columbia.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The question was taken and the Speaker announced that the ayes appeared to have it.

Mr. HAYS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 356, nays 19, answered "present" 2, not voting 55, as follows:

[Roll No. 125]

Mr. Mathias with Mr. Nelsen.
Mr. Sandman with Mr. Pettis.
Mr. Ruppe with Mr. Pirnie.
Mr. Stratton with Mr. Whalley.

Mr. SCOTT changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill (H.R. 255) just passed.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

HEALTH AND SAFETY IN BUILDING TRADES AND CONSTRUCTION INDUSTRY

Mr. DANIELS of New Jersey. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 10946), to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 2, line 1, strike out "contractor" and insert "mechanic."

Page 2, lines 6 and 7, strike out "the record after an opportunity for an agency hearing." and insert "proceedings pursuant to section 553 of title 5, United States Code, provided that such proceedings include a hearing of the nature authorized by said section."

Page 2, line 18, strike out "(41 U.S.C. 39)." and insert "(41 U.S.C. 38, 39)."

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

NATIONAL ADULT-YOUTH COMMUNICATIONS WEEK

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 614) authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week."

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 614

Resolved by the Senate and House of Rpresentatives of the United States of America in Congress assembled, That the President is hereby authorized and requested to issue a proclamation designating the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week" and calling upon—

(1) the Nation's television networks to organize and hold a series of three programs of discussion between selected generation groups, the first two programs to present the views of each generation toward its participation in the world today and the last program to present ideas on how the generations can cooperate to understand each other's needs and usefulness;

(2) the secondary schools and colleges to hold similar discussions at the local level; and

(3) businesses to encourage family participation by setting special family rates during "National Adult-Youth Communications Week" for theaters, amusements, sporting events, and other activities.

Mr. ROGERS of Colorado (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the joint resolution and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

AMENDMENT OFFERED BY MR. ROGERS OF COLORADO

Mr. ROGERS of Colorado. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROGERS of Colorado: On pages 1 and 2, strike out everything beginning after the word "upon" on line 6, page 1, and insert in lieu thereof the following: "the people of the United States to observe such week with appropriate ceremonies and activities designed to encourage the communication of ideas and cooperation between persons of different generations."

Mr. GROSS. Mr. Speaker, I move to strike the necessary number of words.

Mr. Speaker, I rise simply to ask the gentleman from Colorado a question. The amendment is the total resolution?

Mr. ROGERS of Colorado. That is correct.

Mr. GROSS. And neither this resolution nor the one to follow requires the expenditure of any money nor contemplates the expenditure of any money from the Federal Treasury?

Mr. ROGERS of Colorado. The gentleman is absolutely correct.

Mr. GROSS. Mr. Speaker, I thank the gentleman.

(Mr. LONG of Maryland asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. LONG of Maryland. Mr. Speaker, the students in social studies class of section 9–B of the Ridgely Junior High School in Timonium, Md., in my district suggested that I sponsor legislation to proclaim a National Adult-Youth Communications Week.

On March 31, I introduced House Joint Resolution 614, which provides that the President proclaim the week of September 28, through October 4, 1969, as National Adult-Youth Communication Week. The resolution calls upon schools and colleges to organize discussions between different generation groups, television networks to broadcast similar dialogs; and theaters, sporting events, and other public activities to encourage family participation by setting special rates.

We should never underestimate the power of youth. Not only did young people get me to introduce this legislation, they have written to Members of the House of Representatives from all over the country, urging them to support this legislation. In addition, they have encouraged their fellow students, friends, and parents to join in support of this legislation.

This legislation has two purposes. First it will demonstrate to young people in all parts of the United States that meaningful change can be brought about through the democratic legislative process rather than using force and violence, or by taking over administration buildings. Second, this legislation will help to improve communications between those over 25 and those under 25.

The SPEAKER. The question is on the amendment offered by the gentleman from Colorado (Mr. ROGERS).

The amendment was agreed to.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

NATIONAL ARCHERY WEEK

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 85) to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week."

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 85

Whereas in recent years archery as a competitive sport and recreation activity has grown in popularity and recognition; and

Whereas the increased stature of archery is evident in the fact that in 1972 this sport will become a gold medal event at the summer Olympic games; and

Whereas the extent of the widespread interest in archery is indicated by its establishment as a major intercollegiate sport throughout the United States; and

Whereas the National Field Archery Association, with some forty thousand members and more than two thousand affiliated clubs in each of the fifty States, has become the leader in promoting the advancement of competitive archery in this country; and

Whereas this organization is engaged in many outstanding civic projects, such as wildlife conservation activities and a youth scholarship program; and

Whereas this association is sponsoring a National Archery Week program of ceremonies and activities during the last week of August in this year; and

Whereas the year 1969 marks the thirtieth anniversary of the founding of the National Field Archery Association; and

Whereas the world archery championship events will be held in the United States during the summer of 1969; and

Whereas, in view of these facts, it is fitting and proper that the Congress should give official recognition in this year to the development of archery as a major sport and to the national interest in the program to be conducted by the National Field Archery Association: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating the seven-day period beginning August 26, 1969, and ending September 1, 1969, as "National Archery

Week", and inviting the Governors and mayors of State and local governments of the United States to issue similar proclamations.

AMENDMENT OFFERED BY MR. ROGERS OF COLORADO

Mr. ROGERS of Colorado. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROGERS of Colorado: On pages 1 and 2 strike out all "whereas" clauses.

The amendment was agreed to.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NATIONAL CLOWN WEEK

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent for the immediate consideration of the joint resolution (H.J. Res. 236) authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week."

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 236

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is authorized and requested to issue a proclamation (1) designating the week of August 1 through August 7 as "National Clown Week", (2) inviting the Governors of the States and territories of the United States to issue proclamations for like purposes, and (3) urging the people of the United States to give heed to the contributions made by clowns in their entertainment at children's hospitals, charitable institutions, institutions for the mentally retarded, and generally helping to lift the spirits and boost the morale of our people, at a time when it is especially desirable and necessary.

Mr. GARMATZ. Mr. Speaker, my bill to designate August 1 to 7 as National Clown Week has brought forth some snide remarks from radio, TV, and newspaper reporters who thought its introduction a joke. Anything that will bring happiness to people is welcomed by the clowns of America, at whose request I introduced the bill.

The idea of a National Clown Week was originated some 19 years ago and the date was selected as the time most clowns could entertain at various charities and hospitals for a summer break. A number of cities and States have designated August 1 to 7 as Clown Week and have done so for several years.

The purpose of the bill is to call attention to some of the activities of the clowns such as entertainment of children in hospitals, mental institutions, and deaf schools; clown contests at picnics, baseball and softball games held for the benefit of local recreational councils; use of a showmobile in ghetto neighborhoods, using name entertainment along with the clowns, to ease tensions and entertain children who lack entertainment. The week would promote clowning as the art it is—good clean entertainment.

As one of the oldest professions in the world, having roots deep in history, I think it deserves recognition and therefore urge passage of House Joint Resolution 236.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the three joint resolutions just passed.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

TEMPORARILY CONTINUING INTEREST EQUALIZATION TAX

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 13079) to continue for a temporary period the existing interest equalization tax, which was unanimously reported to the House by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. BYRNES of Wisconsin. Mr. Speaker, reserving the right to object, I do not intend to object, but I reserve the right in order that I may yield to the gentleman from Arkansas, the chairman of the Commitee on Ways and Means, for an explanation.

I yield to the gentleman.

Mr. MILLS. Mr. Speaker, I thank the gentleman from Wisconsin for yielding.

Mr. Speaker, the bill before the House, H.R. 13079, would temporarily extend the interest equalization tax for a period of 1 month, through August 31, 1969. The tax otherwise expires on Thursday of this week, July 31.

Mr. Speaker, it will be recalled that the interest equalization tax is a part of our balance-of-payments program and is designed to reduce the outflow of dollars from the United States by raising the cost to foreigners of obtaining capital in U.S. markets. The tax imposed on U.S. persons acquiring foreign stocks or debt obligations, and it presently provides the equivalent of a three-quarters percentage point per annum increase in interest costs for foreigners obtaining capital from U.S. sources on the sale of foreign stock or debt obligations. At the present time, the tax rate on stock and debt obligations with maturities of 28½ years or more is 11¼ percent. A sliding scale of lesser rates is provided for debt obligations with maturities of less than 28½ years.

The Committee on Ways and Means believes that it is necessary to extend the interest equalization tax in view of the continued deficit in our balance of payments and the increased amount of borrowing in the United States by foreigners that would occur if the tax were allowed to expire. The Committee on Ways and Means, therefore, has already reported to the House H.R. 12829, which would extend the interest equalization tax for 20 months or until March 31, 1971. It is apparent, however, that it will not be possible for Congress to complete its consideration of that bill prior to next Thursday, when under present law, the tax is scheduled to expire.

Mr. Speaker, if the tax were allowed to expire on Thursday and then at a later date continued, as the committee believes it should be continued, this would create confusion in the securities markets and significant administrative and enforcement difficulties. If the tax were allowed to expire, there is serious doubt as to whether the exemption from the tax for prior American ownership could be adequately administered during the period of expiration and before congressional action on H.R. 12829 could be completed. To the extent that present procedures could not be followed because of any temporary expiration of the tax, the functioning of the present system and the enforcement of the tax would be seriously impaired.

In order to avoid the administrative and enforcement difficulties and the problems in the securities markets which would arise if the interest equalization tax is allowed to expire and then is subsequently continued, the committee recommends enactment of the measure before the House, H.R. 13079, to temporarily extend the tax for a period of 1 month so as to allow the Congress time to complete its consideration of H.R. 12829. Accordingly, Mr. Speaker, the pending bill temporarily extends the interest equalization tax through August 31, 1969. The committee is convinced that this 1-month extension is necessary in order that the tax may continue to operate in an orderly manner and that the risk of evasion of the tax may be minimized while Congress completes its consideration of the administration's request for a 20-month extension of the tax, which is embodied in H.R. 12829, the bill which has been reported by the committee and is now on the Union Calendar.

All of us, I think, are acquainted with what this interest equalization tax program does. If there are any specific questions with regard to it, I will be glad to respond, but it is merely a 30-day extension to enable us to legislate on the larger bill.

Mr. BYRNES of Wisconsin. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the bill, as follows:

H.R. 13079

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That effec-

tive with respect to acquisitions made after July 31, 1969, section 4911(d) of the Internal Revenue Code of 1954 (relating to termination of interest equalization tax) is amended by striking out "July 31, 1969" and inserting in lieu thereof "August 31, 1969".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EXTENSION OF SURCHARGE WITHHOLDING TAX RATES FOR 15 DAYS

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 13080) to continue for an additional 15 days the existing rates of income tax withheld at source.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. BYRNES of Wisconsin. Mr. Speaker, reserving the right to object, I do so only to yield to the gentleman from Arkansas, the chairman of the committee, for a brief explanation of the bill.

Mr. MILLS. Mr. Speaker, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Arkansas.

Mr. MILLS. This would continue, Mr. Speaker, for another 15 days or through August 15, 1969, the present withholding rates which are presently in effect. It will be recalled that the Congress recently did extend these withholding rates for 30 days. This bill would extend it for an additional 15 days in order to afford Congress time to try to legislate prior to the adjournment of the Congress on the 13th of August.

Mr. BYRNES of Wisconsin. Mr. Speaker, I would only add to what the gentleman from Arkansas said that this is essential if we are to give any opportunity for this body or the other body to act further in this area of the surtax extension. It seems to me we have no alternative at this late date.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. HAYS. Mr. Speaker, further reserving the right to object, is the gentleman aware of the statement by the majority leader of the Senate that was purportedly made today? At least I heard a radio newscast of it, in which he said that it might be well to let this thing die on the 13th of August rather than bring it up in the other body.

Mr. MILLS. I was not aware of such a statement, but I will say to the gentleman from Ohio, even if that should transpire, I think it is well for us to put ourselves in a position of trying to cooperate to the best of our ability with the other body in its consideration of the basic bill. If the other body wants to kill it, then that is the responsibility of the other body.

Mr. HAYS. I would like to help them kill it, if I knew of any way to do it. I thought that objecting to this motion might be one step to doing it.

Mr. MILLS. I do not think it would necessarily accomplish that, because if the other legislation should finally pass and there is a gap in the withholding period, then that tax, if the Congress passes it, would be collected on the 15th day of April next year in the larger amount with, I am sure, more inconvenience to the people than if we had this.

Mr. HAYS. I have a great deal of respect for the gentleman's opinion, Mr. Speaker, but in this case I will take the chance that it might help to kill it, and, therefore, I will object.

The SPEAKER. Objection is heard.

PROVIDING FOR CONSIDERATION OF H.R. 2, TO AMEND FEDERAL CREDIT UNION ACT

Mr. PEPPER. Mr. Speaker, on behalf of the able gentleman from Texas (Mr. YOUNG) and by direction of the Committee on Rules, I call up House Resolution 483 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 483

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 2) to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. PEPPER. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from Nebraska (Mr. MARTIN) and, pending that, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 483 provides an open rule with 1 hour of general debate for consideration of H.R. 2 to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes.

H.R. 2 would create a National Credit Union Administration to be headed by an Administrator, appointed by the President with the advice and consent of the Senate. The Administrator will be under the direction of a Board of Governors representing membership from each Federal credit union region, plus a chairman to be appointed at large. Members of the Board will be appointed by the President with the advice and consent of the Senate.

Members of the Board will serve for a 6-year period. The Administrator will serve at the pleasure of the President.

The Credit Union Administration will be responsible for the regulation, supervision, and examination of Federal credit unions, and will perform all the functions presently carried on by the Bureau of Federal Credit Unions.

Operating costs of the Administration will be borne by fees and assessments paid by the more than 12,000 Federal credit unions in the United States.

Members of the Board shall be entitled to receive compensation at the rate of $75 a day when engaged in the business of the Administration as authorized by the Chairman. Also, they shall be allowed travel expenses, including per diem, as authorized by section 5703, title 5, United States Code, for persons in the Government service employed intermittently.

At the present time, regulation of Federal credit unions is under HEW; however, there are 12,689 Federal credit unions in this country, with over 20 million members, and it is felt that there should be an agency charged solely with overseeing them.

Mr. Speaker, I urge the adoption of House Resolution 483 in order that H.R. 2 may be considered.

Mr. MARTIN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of the bill is to create a National Credit Union Administration whose function shall be to regulate, supervise, and examine all federally chartered credit unions. It will replace the current Bureau of Federal Credit Unions which is to be disbanded.

The Federal Credit Union Act was passed in 1934. Since that time the regulation of federally chartered credit unions has been passed from one agency or department to another. However, the program has prospered. There are now 12,689 federally chartered credit unions with some 20 million members and over $14,000,000,000 in savings. The committee believes that the credit unions should no longer be a stepchild but should have an independent administration to regulate their operations.

The bill calls for the creation of a National Credit Union Administration, headed by an administrator who shall be appointed by the President, with the advice and consent of the Senate, and serve at his pleasure. The administrator will be under the direct control of a nine-member board of governors who shall represent the membership from each Federal credit union region. Members will be appointed by the President, with advice and consent of the Senate, and shall serve for 6 years. The board and administrator shall regulate and supervise credit union operations.

No Federal expense will be incurred. All operational costs of the National Credit Union Administration shall be borne by the credit unions themselves, who strongly support the bill.

No agency letters are contained in the report but it is noted that the Department of Health, Education, and Welfare, where the current regulatory body now resides, opposes the change to a new and independent agency.

Mr. Speaker, I have no further requests for time.

Mr. PEPPER. Mr. Speaker, I have no further requests for time.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

SEPARATE FEDERAL CREDIT UNION AGENCY

Mr. PATMAN. Mr. Speaker, I call up the bill (H.R. 2) to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes, and ask unanimous consent that it be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the bill, as follows:

H.R. 2

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Section 2 of the Federal Credit Union Act (12 U.S.C. 1752) is amended by striking out paragraphs (2) and (3) thereof and inserting:

"(2) the term 'Administrator' means the Administrator of the National Credit Union Administration;

"(3) the term 'Administration' means the National Credit Union Administration; and

"(4) the term 'Board' means the National Credit Union Board of Governors."

SEC. 2. The Federal Credit Union Act is further amended (1) by changing "Director" to read "Administrator" each place it appears therein; (2) by changing "Bureau of Federal Credit Unions" to read "National Credit Union Administration" each place it appears therein; and, (3) by changing "Bureau", each remaining place it appears, to read "Administration".

SEC. 3. Section 3 of the Federal Credit Union Act (12 U.S.C. 1752a) is amended to read:

"CREATION OF ADMINISTRATION

"SEC. 3. (a) There is hereby established in the executive branch of the Government an independent agency to be known as the National Credit Union Administration (hereinafter referred to as the 'Administration'). The Administration shall consist of a National Credit Union Board of Governors (hereinafter referred to as the 'Board'), and an Administrator.

"(b) The Board shall consist of nine members to be appointed by the President, by and with the advice and consent of the Senate. In selecting the members of the Board, the President shall designate a Chairman and a Vice Chairman who shall serve as representatives at large. In making his selection of the remaining members, one from each of the seven Federal credit union regions, the President shall receive and give special consideration to the nominations submitted by credit union organizations which are representative of a majority of the credit unions located in the region for which a Board member is to be appointed. The persons so appointed as members of the Board shall be selected on the basis of established records of distinguished service in the credit union movement.

"(c) The term of office of each member of the Board shall be six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and (2) the terms of office of the members first taking office after the date of enactment of this Act shall expire, as designated by the President at the time of appointment, three at the end of two years; three at the end of four years; and three, including the Chairman and Vice Chairman, at the end of six years. Terms of office shall be on a calendar year basis. No member shall serve more than two full consecutive terms of office.

"(d) The President shall call the first meeting of the Board, and thereafter the Board shall meet on a quarterly basis, and at such other times as the Chairman or the Administrator may request, or whenever one-third of the members so request. The Board shall adopt such rules as it may see fit for the transaction of its business and shall keep permanent and complete records and minutes of its acts and proceedings. A majority of the voting members of the Board shall constitute a quorum. The Board shall advise, consult with, and give guidance to the Administrator on matters of policy relating to the activities and functions of the Administration under this Act. The Board shall render an annual report to the President for submission to the Congress, summarizing the activities of the Administration and making such recommendations as it may deem appropriate. Each report shall propose such legislative enactments and other actions as, in the judgment of the Board, are necessary and appropriate to carry out its recommendations. The members of the Board shall be entitled to receive compensation at the rate of $75 for each day engaged in the business of the Administration pursuant to authorization by the Chairman, and shall be allowed travel expenses including per diem in lieu of subsistence as authorized by section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.

"(e) There shall be an Administrator of the National Credit Union Administration who shall be appointed by the President, by and with the advice and consent of the Senate. The Board may make recommendations to the President with respect to the appointment of the Administrator. He shall be the chief executive officer of the Administration which shall be a full time position in the executive department at level IV of the Executive Schedule (5 U.S.C. 5315). The Administrator shall serve at the pleasure of the President."

SEC. 4. (a) All functions, property, records, and personnel of the Bureau of Federal Credit Unions are transferred to the National Credit Union Administration created by this Act.

(b) The Director of the Bureau of Federal Credit Unions in office on the date of enactment of this Act shall serve as acting Administrator of the National Credit Union Administration pending the appointment of an Administrator in accordance with section 3 of the Federal Credit Union Act as amended by this Act.

Mr. PATMAN (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the bill be dispensed with, and that it be printed in the RECORD and open to amendment at any point.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

GENERAL LEAVE

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and insert extraneous material on H.R. 2, separate Federal credit union agency.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, I move to strike the last word.

Mr. Speaker, the legislation before the House today, H.R. 2, is basically a very simple bill. It would merely upgrade the status of the Bureau of Federal Credit Unions, the agency charged with the regulation and supervision of our Nation's Federal credit union system.

The upgrading would be brought about by creating a new agency, the National Credit Union Administration, which would function as a separate agency within the governmental framework.

H.R. 2 was cosponsored by a bipartisan group of 24 members of the Banking and Currency Committee. The legislation was reported by a unanimous vote—35 to 0.

NO COST TO TAXPAYERS

I would like to make it very clear in the beginning that although this legislation sets up a new governmental agency, it will not cost the taxpayers or the Government a single penny, since the funds to operate this agency will come from examination fees and assessments charged to Federal credit unions throughout the country. I can recall very clearly that when the Federal Credit Union Act was passed in 1934, I pointed out at that time that credit unions would pay their own way and would not be a burden to the taxpayers. I am proud that I can stand before you today, 35 years later, and point out that credit unions have not had to resort to taxpayers' funds in order to pay the costs of the operation of the Bureau of Federal Credit Unions. This is a remarkable record and it should not go unrewarded. The credit unions kept their promise not to depend on taxpayers' or governmental funds and the operation of the new agency, the National Credit Union Administration, will follow along in the self-supporting tradition of our Nation's credit unions.

The credit unions do not want to be dependent upon the Government and, in fact, would have been opposed to this legislation if it meant the use of taxpayers' funds. They are willing to pay all the bills and have stated so repeatedly. By spreading out the costs of the operation of the National Credit Union Administration across the nearly 13,000 Federal credit unions in the country, it will not work a financial hardship on any credit union.

There are more credit unions in the United States, 23,625, than all other financial institutions combined and there are more federally charted credit unions, 12,689, than all other financial institutions chartered by the Federal Government.

TABLE 1.—UNITED STATES, 1968—STATISTICS OF THE CREDIT UNION MOVEMENT

State or territory	Number of active credit unions	Number reporting	Percent reporting	Number of members	Shares and deposits (savings)	Loans outstanding to members	Reserves	Assets	Most common dividend rate (percent)
Alabama	365	314	86.0	303,876	$194,660,651	$181,790,933	$12,104,285	$222,460,568	3.51–6.00

[1] No State-chartered credit unions.
[2] Fiscal year Sept. 30, 1968.
[3] Fiscal year June 30, 1968.
[4] Not available.

Note: Statistics taken from International Credit Union Yearbook, 1969.

There are more than 20 million credit union members in the United States with savings in their institutions of more than $14 billion. More than half of the total membership and assets of the credit unions belong to federally chartered credit unions. Yet, despite the magnitude of credit unions, the regulation and supervision of these extremely worthwhile financial institutions lies buried in the Bureau of Federal Credit Unions, which operates at the third tier in the governmental organizational structure. The Bureau of Federal Credit Unions is a subagency of the Social Security Administration, which, in turn, is a subagency within the Department of Health, Education, and Welfare. The Director of the Bureau of Federal Credit Unions does not report directly to the Secretary of the Department of Health, Education, and Welfare, but instead must function through the Social Security Administration. The Bureau of Federal Credit Unions is not provided with full-time legal counsel but must depend on part-time legal help obtained from other sections of the Social Security Administration. This clearly is not an example of how a governmental agency, charged with such a great responsibility, should operate. In short, it is poor governmental administration.

WILL UPGRADE PRESENT AGENCY

H.R. 2 would merely upgrade the operations of the Bureau of Federal Credit Unions by creating a National Credit Union Administration which would function as an independent agency reporting directly to the President and the Congress. The new agency, the National Credit Union Administration, will be governed by a Board of Governors, with the day-to-day operations of the Administration handled by an Administrator. All of these positions will be on a basis of a Presidential appointment by and with the advice and consent of the Senate.

Mr. Speaker, during the hearings on H.R. 2, it became clearly evident that the Bureau of Federal Credit Unions is clearly a stepchild of the Department of Health, Education, and Welfare. During the 90th Congress, I first introduced a bill to create a seperate Federal credit union agency. For 18 months, I tried to get an agency report on the legislation from the Department of Health, Education, and Welfare but was unsuccessful. I have learned that the Department did not adopt a finalized position on the legislation until the afternoon preceding the hearings on H.R. 2. This would clearly indicate that the Department does not pay a great deal of attention to the Bureau of Federal Credit Unions.

Last December, the Department ordered a reorganization of the Federal credit union regions throughout the country. Supposedly, this was done to affect budget cuts throughout the Government. I fail to see the logic in this since all of the funds obtained for operating the Bureau of Federal Credit Unions, as I stated earlier, are paid directly by the credit unions and involve no Government funds whatsoever. The reorganization was accomplished even though not a single credit union, credit union oragnization, or credit union official had complained about the regional setup nor were any credit union people consulted about the reorganization, even though they paid all the bills.

CREDIT UNIONS NEXT TO CHURCH

As I have often said, next to the church, the credit unions do more good for people than any other institution. Perhaps one of the best examples to prove this has been the establishment of credit unions on U.S. military installations overseas. In 1965, the Banking and Currency Committee's Domestic Finance Subcommittee conducted an investigation into the problems that servicemen have in obtaining credit. The subcommittee was shocked to learn that it was not uncommon for servicemen to be charged interest rates of 60, 70, or even 80 percent when they borrowed money or made purchases on credit. Although the problem was severe in the United States, it was of staggering proportions in foreign countries where our servicemen are stationed. The serviceman had to pay these usurious interest rates because there were no low-cost, totally reliable lenders. Witnesses before our committee estimated that servicemen throughout the world were paying $50 million a year in extortionate, excess and usurious interest rates. This was money that they would not have had to pay had credit been available to them at reasonable terms.

It quickly became evident that one of the solutions to this problem would be to establish credit unions on military installations in foreign countries. It took a lot of work and a great deal of time to accomplish our objectives. The committee and the subcommittee had to make certain that the credit unions were allowed under the laws of the various countries involved and it necessitated writing new regulations for the Department of Defense. But once the credit unions were in operation, the results were spectacular. The first credit union was opened in Berlin on December 26, 1967, and shortly thereafter, five other credit unions opened in Germany. Since that time, credit unions have been established in England, the Philippines, Italy, and Korea. At the end of May of this year, these credit unions had signed up more than 56,000 members and had lent more than $33 million.

BALANCE OF PAYMENTS HELPED

Not only are the credit unions helping our servicemen but they are also helping our balance-of-payments situation since servicemen are no longer borrowing from foreign finance companies to finance purchases on the economy but rather are borrowing from the credit union and are thus able to take advantage of the bargains in the post and base exchange and ship store programs.

Mr. Speaker, I have not dealt at length upon the "nuts and bolts" aspect of H.R. 2 since, as I stated in the beginning, this is a totally uncomplicated bill. The operation of the Bureau of Federal Credit Unions would not be changed as far as its function is concerned. However, the Bureau would be replaced by a National Credit Union Administration, which would be headed by an administrator who will be appointed by the President with the advice and consent of the Senate. In addition, the Administration will be guided by a Board of Governors consisting of nine members to be appointed by the President with the advice and consent of the Senate. The members of the Board will serve for a 6-year period, while the Administrator, in order to insure continuity with the President, shall serve at the pleasure of the President.

FIRST STARTED IN NEW HAMPSHIRE

As credit unions grow, it is important that we make certain that the regulation and supervision of credit unions is not a small flea on a large dog.

Mr. Speaker, it is entirely fitting that H.R. 2 should be before this body in 1969, for this year marks the 60th anniversary of the founding of the first credit union in the United States at Manchester, N.H. Shortly after the founding of the first U.S. credit union, a Boston merchant, Edward A. Filene, who had dedicated his life to bettering the conditions of his fellow man, became interested in the credit union movement and persuaded Roy Bergenren, who is also from Massachusetts, to work with him in building credit unions throughout the United States.

The early growth of credit unions in this country was less than spectacular. By 1921, 12 years after the first credit union was established in this country, there were only 190 credit unions. In the early 1930's it became evident that in order for the credit union program to be totally successful, there would have to be a system of Federal credit unions. One of the main reasons for wanting Federal credit unions was that in some States, enemies of credit unions, had blocked the passage of credit union legislation, thus preventing the chartering of State credit unions. About this time, my good friend, Senator Morris Sheppard, who came from my hometown of Texarkana, began to interest me in credit unions. Along with Senator Sheppard, I cosponsored the Federal Credit Union Act. Senator Sheppard sponsored the bill in the Senate and I sponsored the bill in the House and I was the only Member of the House to testify on the bill before the Banking and Currency Committee. Since that time, I have sponsored every piece of Federal credit union legislation. In June of 1934, the legislation was signed by President Roosevelt and the first Federal credit union was chartered in Texarkana, Tex. Since that day in 1934, when Federal credit unions were authorized, the rise of credit unions in the United States has been phenomenal. In 1934, there were less than 2,500 credit unions and by the end of 1969, there will be nearly 25,000 credit unions. Thus, we have seen nearly a tenfold increase in the number of credit unions since the time the Federal Credit Union Act was passed.

The following table illustrates the dramatic growth of credit unions in the United States:

TABLE 13.—OPERATIONS, 1909–68, U.S. CREDIT UNIONS

Year	Number of active credit unions	Number of members	Shares and deposits (savings)	Loans outstanding to members	Reserves	Assets
1968	23,563	20,246,110	$12,217,008,939	$11,261,055,756	$885,194,926	$14,099,216,739
1967	23,053	19,079,864	11,128,197,525	9,879,219,058	779,007,206	12,778,099,851
1966	22,692	17,897,351	10,106,473,629	9,093,839,600	677,904,383	11,609,047,952
1965	22,119	16,753,106	9,248,865,386	8,095,443,809	589,512,465	10,552,125,323
1964	21,807	15,619,210	8,241,615,640	7,046,016,021	510,318,443	9,360,818,386
1963	21,369	14,586,988	7,166,397,511	7,170,577,360	441,453,778	8,130,655,890
1962	20,951	13,762,047	6,331,180,434	5,476,668,785	381,298,538	7,186,213,145
1961	20,615	12,882,793	5,635,808,585	4,817,635,085	325,657,500	6,382,517,938
1960	20,047	12,037,533	4,974,580,218	4,377,305,517	272,284,887	5,653,475,890
1959	19,452	11,262,581	4,436,396,254	3,707,712,487	232,207,013	5,024,163,414
1958	18,838	10,431,606	3,869,853,889	3,078,287,068	197,694,237	4,345,513,247
1957	18,203	9,819,452	3,381,850,852	2,778,305,187	165,257,432	3,813,447,173
1956	17,256	9,061,339	2,914,121,390	2,326,167,885	136,520,194	3,270,944,723
1955	16,201	8,153,641	2,446,846,375	1,933,886,150	109,932,462	2,743,441,284
1954	15,073	7,355,642	2,039,294,483	1,552,050,289	91,068,892	2,270,354,609
1953	13,703	6,635,543	1,688,329,872	1,307,502,648	75,053,792	1,895,106,600
1952	12,291	5,888,287	1,355,820,077	985,044,812	66,572,058	1,516,118,652
1951	11,283	5,196,393	1,040,437,236	747,084,026	59,426,468	1,198,327,876
1950	10,591	4,610,278	850,488,875	679,864,572	52,074,361	1,005,475,598
1949	9,924	4,090,721	702,989,666	515,824,566	43,239,509	827,088,969
1945	8,683	2,842,989	369,122,697	127,903,039	24,416,088	434,622,487

1925	419	108,000				
1921	190	72,310				
1909	1					

Despite the fantastic growth of credit unions, these worthwhile institutions are not resting on past glories but are continually seeking to improve their service.

STUDENT CREDITS ARE NEEDED

I have long felt that students in our school systems are not receiving economic education. Too many students graduate from college without knowing how to write a check or make out a budget. This is one of the reasons I feel that personal bankruptcies in this country have reached such great proportions and why unscrupulous lenders are able to extract such high interest rates from borrowers. In order to overcome this lack of economic education, I was successful in getting the credit union movement to take part in a pilot project which I hope will spread across the country. The program is underway at Fort Knox, Ky., and once we have gained some experience there, it is hoped that the program will branch to other credit unions. Basically, the project involves a student credit union which is sponsored by the parent credit union. The student credit union is run by the students themselves

with an assist from the main credit union in the areas of providing counseling and economic education. The students put their savings in the credit union and also make loans. In short, they are learning how to take care of their own finances. The project at Fort Knox has been open only a few months, but already the students have saved more than $4,000 in the credit union.

This, Mr. Speaker, is a good example of how credit unions are helping America and it is an example of why Congress should pass H.R. 2 so that programs, such as the student credit union, can be more readily put into operation rather than requiring clearance from a number of departments which have no interest in credit unions whatsoever.

Mr. Speaker, H.R. 2 means a great deal to the millions of credit union members throughout the country and it means even more to the thousands of volunteers who have devoted, in many cases, their lives to serving credit unions. Enactment of H.R. 2 is the least that Congress can do to show our gratitude for the wonderful work performed by these great institutions.

Mr. WIDNALL. Mr. Speaker, I move to strike out the last word.

Mr. Speaker, I rise in support of the bill, H.R. 2, a bill to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions.

H.R. 2 would create a National Credit Union Administration which would be headed by an Administrator who will be appointed by the President with the advice and consent of the Senate. The bill also creates a Board of Governors representing membership from each Federal credit union region, plus a Chairman to be appointed at large. Members of the Board will be appointed by the President by and with the advice and consent of the Senate. The members of the Board will serve for a 6-year period, while the Administrator, in order to insure continuity with the President, shall serve at the pleasure of the President.

The National Credit Union Administration will be responsible for the regulation, supervision, and examination of Federal credit unions, and will perform all of the functions presently carried on by the Bureau of Federal Credit Unions.

The bill was favorably reported by the Committee on Banking and Currency without amendment by a vote of 35 to 0.

It should be pointed out that this reorganization will not cost the taxpayer any money whatsoever since all the operating funds of the new agency would be paid for by receipt of fees and asessments paid by the more than 12,000 Federal credit unions in the United States.

Although the existing Federal credit union movement has flourished and grown under existing administration and supervision, many observers, including myself, have long felt that the credit union movement justified a separate credit union agency, particularly in view of the fact that during the 35 years in which the Federal credit unions have been in existence, the supervision has been transferred several times. To put it more succinctly, there are now more than 20 million credit union members in the United States with savings of more than $14 billion. The sheer magnitude of these figures justifies the more elevated status of an independent Federal agency.

While section 3(d) states:

> The Board shall advise, consult with, and give guidance to the administrator on matters of policy relating to the activities and functions of the administration under this Act.

It is my hope that the President will appoint a vigorous and well-qualified Administrator. In keeping with the recommendations of the Hoover Commission and recent Reorganization Acts, it is evident that a vast majority of the Congress feel that independent agencies require strong and effective executive leadership, not fragmented and paralyzed by the close division of opinion which often develops among the membership of appointed boards of directors. While the Board established by H.R. 2 should be responsive to and acquainted with the needs of the constituent Federal Credit Unions which it will supervise, it is my personal hope that the language of section 4(e) of the bill in which the administrator is described as "the chief executive officer" will provide the statutory basis for firm and effective leadership.

Mr. Speaker, I urge adoption of H.R. 2.

(Mrs. HECKLER of Massachusetts asked and was given permission to extend her remarks at this point in the RECORD.)

Mrs. HECKLER of Massachusetts. Mr. Speaker, I wish to add my enthusiastic endorsement for H.R. 2, creating an independent Federal agency for the supervision of federally chartered credit unions. This piece of legislation represents an important step forward for the credit union movement.

During the past few years, I have become thoroughly acquainted with the activities of the Federal credit unions in my congressional district, in Boston, and throughout the Commonwealth of Massachusetts. From my personal experience, I have become deeply impressed with the credit unions' operations and the high caliber of the services which they provide.

Credit unions have made a significant contribution to the economic needs of private citizens in numerous cities and towns and in such economically disadvantaged areas as Fall River in my district as well. Among the services these credit unions offer, is, of course, the ability to make funds available to the workingman. In an area like Fall River, this function can be an important and convenient compliment to the normal sources of financial assistance to the workingman as well as to all citizens. The credit union is thus an important adjunct to usual credit sources especially in times when people have few resources to turn to.

Besides the regularly available services, Federal credit unions have left their mark for their dedication to and the attainment of various social goals. They are well known for their work with the Agency for International Development and the Office of Economic Opportunity, to name only two.

I particularly want to recognize the remarkable achievements of a distinguished Massachusetts citizen, Mr. Julius Stone of CUNA, for his tireless efforts to make the credit union movement a vital, viable aspect of our Nation's economic health and stability.

Mr. Speaker, the present bill gives a much-needed independent status to a Federal credit union agency to insure full and certain representation of the Federal credit unions interests on the national level. Consolidation also lightens the administrative burdens by creating a single operation with complete services and duties and a single unit to formulate policy decisions. In the fast growing area of Federal credit unions, it has now become essential to create this independent agency.

Mr. Speaker, I again emphasize the importance of this bill, H.R. 2, and recommend its adoption to this body.

Mr. HALL. Mr. Speaker, I move to strike the requisite number of words.

I wish to say at the outset that I am certainly in favor of credit unions. I have often been a guest, and indeed have addressed, both CUNA International and members of the National Association of Federal Credit Unions, and one of the reasons that I have been so strongly in their support is that it has been a do-it-yourself organization.

As I have understood it, they have organized, saved, loaned, and done all of these marvelous things that both the chairman of the Committee on Banking and Currency and the ranking member, my colleague from New Jersey (Mr. WIDNALL) have stated. But it seems to me that that is not the question that is before us today. It is not a question of whether we approve of Federal Credit Union agencies or not. That has long since been established. The question here today is whether we create a "czar" and a Board and take away from these agencies and unions the very thing that they themselves have built so well. The question here today, in spite of the statement in the committee report that it will not cost the taxpayers 1 cent, is whether we are going to pay per diems for the Administrator and members of the Board out of the funds of the unions; and who doubts that eventually it will be replaced out of taxpayers moneys as in the case of the International Development Bank and many other agencies which we have created as "independent" agencies? Just as sure as the sun will shine in the east tomorrow as the reins I control and a third party get tighter, they will finally come back asking for complete Federal control and for complete Federal support.

I think this bill does establish what will be known as the "czar" of the credit union agencies. I think there is substance to HEW's objection written into the report. I am not sure how strong the CUNA International or the National Association of Federal Credit Unions are in support of the legislation. Although the statement is in the report, there is no

letter that either one of them have sought for such legislation, or do now support the Federal takeover and the establishment of this czar of our credit unions and our credit committees.

I repeat, Mr. Speaker, repeatedly and for emphasis, that I am in favor of continuing the credit unions. I believe in all of the good works they have done. I know that some of the members have made deposits in order to borrow at the lower interest rates. I find nothing wrong with that, as a business procedure.

I am primarily a low-interest man myself, incidentally, one who is being put out of business by high interest rates back in the district, but, be that as it may, I do not think we should take over as a so-called independent agency of the Government, and establish and elect a czar, to say nothing of a Presidentially appointed board, a going concern, self-controlled and very successful. It will create more patronage, it will create more sufferance, and it will take away the substance and the very thing that the distinguished gentleman from Texas has eulogized here: The fact that these people have helped themselves, these volunteers have worked on their own time, not on Federal time or agency time, in many instances to do the very thing that has made the credit unions a success.

Why, oh why, do we now come here and superimpose some board or some czar over them, to watch over their business, which we say in the report they have effectively done for so long, and in which they have built up so many millions of dollars in reserves?

This is much better than we have done federally with our taxpayers' money, as far as Congress handling it is concerned, and it is much better than other federally supervised funds, including the social security trust fund, which is supposed to be so sacred, not to mention the civil servants retirement fund on which we voted last week.

Mr. Speaker, I hope this bill is voted down.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. HALL. I yield to the gentleman from Texas.

Mr. PATMAN. Mr. Speaker, the gentleman was concerned about CUNA being for or against it. CUNA is the national organization.

Mr. HALL. Mr. Speaker, I know exactly what it is, and I have been their guest on many occasions.

Mr. PATMAN. They operate all over the Nation. The CUNA organization as an organization had regional meetings when this bill was introduced the second time. The first time, in the 90th Congress, it was not insisted upon, and during the 91st Congress they have had meetings all over the Nation and they reached out and embraced every State in the Nation. The resolutions have been practically unanimous. I do not know any place where there was any dissenting voice.

Mr. HALL. Mr. Speaker, I can only say to the distinguished gentleman from Texas, who has been in Congress a long time, it would have been well to print some of those letters in the committee report. I see nothing in the committee report except a statement from HEW that they are in opposition to it. I agree with the chairman and the writer of the report that their reasons are not too sound. I recognize they have a part as an agency, but why intervene to destroy successful voluntarism?

Mr. Speaker, I ask, and surely believe, that this bill should be rejected out of hand, lest its action return in future years to haunt us.

Mr. TAFT. Mr. Speaker, I move to strike the last word.

Mr. Speaker, I would like to say a word or two in support of this legislation. I see no more danger of a czar—in fact a lot of less danger of a czar insofar as the financial institution is concerned in setting up an independent agency, than I do in putting what are truly financial institutions under the Department of Health, Education, and Welfare, where I do not think they properly belong.

These institutions now have approximately $8 billion in assets throughout the United States. I think they should have the separate and immediate concern of a separate regulatory agency, just as our other financial institutions do.

Therefore, Mr. Speaker, I rise in support of this bill, H.R. 2, which would establish an independent agency to supervise Federal credit unions by converting the present supervisory agency, the Bureau of Federal Credit Unions, into a National Credit Union Administration.

My support of this legislation is based primarily upon two considerations—the unique nature of the credit union as a cooperative, self-help financial institution and the fact that the credit unions themselves foot the entire expense of their supervisory agency with no cost to the American taxpayer.

Credit unions are unique among all financial institutions in that they are owned by their members and are designed to serve only their members in the field of savings and low cost borrowing of a provident nature. They are organized by groups of people with a common bond of interest such as, for example, the employees of a particular business or plant, the members of a church or parish, members of a labor union, personnel of a military installation, or residents of a specific community in a low income area. These people with a common interest join together to pool their savings and to provide a source of credit in order to help one another.

This common bond of interest is the basis for one of the greatest differences between credit unions and other financial institutions. The creditor-debtor relationship is unique because the members of a credit union are its shareholders and owners. They all have an equal and direct voice in the operation of the credit union—every shareholder has one vote regardless of the amount of shares he holds.

When a credit union member borrows from a credit union, he knows he is borrowing from the savings of his fellow members. He therefore has a deep sense of responsibility to pay back his loan because of this close creditor-debtor relationship. He is interested and concerned in the credit union's operations because it is his credit union, his savings, his debt to his fellow workers and members. He knows that credit is extended to him because his fellow members have made it possible—because they trust him and want to help him solve his financial problems. And in many cases, he knows that the credit union is the only financial institution where he has credit—that he has no credit standing with other legitimate credit sources.

Today the Federal credit union movement embraces some 12,700 individual credit unions with over 10.8 million members. There are more federally chartered credit unions in the United States than all other federally chartered financial institutions combined. Yet credit unions alone of our federally chartered financial institutions do not have a supervisory agency which is separate and independent.

Certainly, in my opinion, a movement which has demonstrated its stability and responsibility, its value as a self-help institution assisting the common man to solve his economic problems, and its dedication to aid the financially deprived in their efforts to get ahead, deserves the recognition and the prestige of having its own independent supervisory agency operating under the Federal Credit Union Act created by Congress.

My second point in support of this bill is that it will not cost the Government any money. Since fiscal year 1954, the Federal credit union program under the Bureau of Federal Credit Unions has been operated solely on funds paid by Federal credit unions themselves in chartering, supervision and examination fees. Congress has not appropriated funds for the past 15 years for the Federal credit union program. Under this proposed legislation, a National Credit Union Administration would continue to operate as an agency which would be entirely financially independent of the Federal Government and the American taxpayer. No Federal appropriations, no Government subsidies, no taxpayer expense is involved in the creation of this independent supervisory agency. The people who pay the bill—the Federal credit unions—want their own separate, independent agency. Why should we deny them this privilege which they have so obviously earned and for which they are willing to pay the costs?

I am pleased to lend my support to this bill, and I urge my colleagues to join me by passing this bill.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. TAFT. I yield to the gentleman from Texas.

Mr. PATMAN. Mr. Speaker, the distinguished gentleman from Missouri made a statement about the letters not being in the RECORD nor testimonials in favor of this bill. They are mentioned all throughout the hearings. Some of them are printed in full. The State of Missouri credit unions unanimously supported this bill. There is no question about it. We have plenty of support for it. It was so

unanimous in every respect we just did not feel like filling the RECORD up with the hundreds of thousands of letters and telegrams and testimonials we received. But I assure the gentleman from Missouri we had sufficient strength for our committee of 35—each member of which is independent and speaks his own mind—and every one of these 35 voted for this bill, and not one against it. The same thing occurred in the Rules Committee.

Mr. Speaker, I thank the gentleman for yielding.

Mr. ANNUNZIO. Mr. Speaker, I am in wholehearted support of H.R. 2. I support this legislation not only because it will enable credit unions to better serve their members but also it is legislation that has been well earned and deserved by all credit unions.

Mr. Speaker, H.R. 2 is not only a tribute to credit unions but it is a personal tribute to the gentleman from Texas (Mr. PATMAN), the distinguished chairman of the Banking and Currency Committee, who is fondly referred to as the godfather of credit unions.

No man in any branch of our Government has done more for credit unions than WRIGHT PATMAN. He has fought successfully to provide credit unions with the recognition and status that they have earned and H.R. 2 is another example of his foresightedness in the area of credit unions. And the credit unions of our country have not overlooked the contribution that WRIGHT PATMAN has made. He is only one of three people to be given the Distinguished Service Award of CUNA International, the worldwide association of credit unions. This is the highest award in the credit union movement. A group of 14 credit unions in east Texas formed a credit union chapter and, appropriately enough, named their chapter after WRIGHT PATMAN.

Since coming to Congress, I have learned a great deal about money, banking, and finance. WRIGHT PATMAN has been my teacher and he has been a good one. He also got me interested in credit unions and I recall the first time that I heard him say, "Next to the church, the credit unions do more good for people than any other institution."

Based on Chairman PATMAN's observation, it is not unusual that churches and credit unions have become partners in helping humanity.

At the end of 1967, there were more than 1,600 church-related credit unions in the United States and Canada, with 881,880 members and $418 million in assets. Share deposits of these credit unions total $364 million with loans outstanding, totaling $294 million. These credit unions employ 577 full-time employees, 1,402 part-time employees, and 5,362 volunteers. The largest church credit union at the end of 1967 was the Pueblo, Colo., Mt. Carmel with 9,976 members and $7,373,930 in assets. There were other extremely large credit unions in Lewiston, Maine; Covina, Calif., and Detroit, Mich.

To illustrate how the church and a credit union work in cooperation, I am including in my remarks on H.R. 2 an article from the June 1969 issue of Credit Union magazine entitled, "Serving a Suburban Congregation".

In closing, Mr. Speaker, let me say that any group that would work as hard to better the plight of all mankind, as have our credit unions, deserves all the support that Congress can provide. Therefore, I urge my colleagues not only to pass H.R. 2 but to do so unanimously.

SERVING A SUBURBAN CONGREGATION

"We believe a church's members should be able to turn to it in time of economic need, as well as spiritual need. Our's are."

With these few words, Pastor Samuel Bauer of Chicago's Oak Lawn Community Church summed up his pride in the interdenominational church's 180-member credit union.

"Our people have their share of worldly problems," he continued. "I recall a woman member who suddenly lost her husband. With no cash on hand, she turned to the credit union to pay funeral expenses and get back on her feet."

But that, said the pastor, is a single example in thousands among the church's 1,054 members, who represent 23 religious denominations.

During his first 10 years at Oak Lawn, a working-class suburb of Chicago, the pastor on occasion took money from his pocket to solve parishioners' problems.

That was before parishioner Harry Nissen discovered the workings of the Elliott Paint Employees Credit Union where he worked in downtown Chicago. Nissen was convinced that a credit union was just what the church needed.

"Too often," he recalled, "the pastor got stuck because of his generous loan policies. Somebody in need would get a loan, and after a few weeks he'd quit paying and you'd never see him in church again."

The credit union, operating independently of the church, can combine the best of the worlds of business and religion: Its business principles require that members repay their loans. Its religious-oriented principles include benevolence and understanding of special needs.

Starting in October, 1958, the credit union grew slowly at first. By December, 1962, savings totalled $5,957, loans $5,666. Then things began to happen. By December 1964, savings were $20,891 with $16,430 in loans. As 1966 closed, savings totalled $44,364, loans $45,152.

Then savings spurted from $77,000 in December, 1967 to $105,770 by the following December, just two months after the credit union's 10th anniversary. Loans totalled $78,778.

The healthy spurt has no easy explanations. Several underlying factors have long favored the credit union:

Its continuous growth and good service reinforce members' confidence. Richard Holtom, in his sixth year as president, helps symbolize its stability.

Members are aware that the volunteer members of the board and committees work effectively. One volunteer has earned a particularly high reputation.

During the day, Mrs. Camilla Best is an accountant and secretary for a lawyer in Chicago's loop. At night she is the credit union's treasurer, and works 60 hours a month on its business. Her husband, Bernard Best, is the credit union's vice-president.

President Holtom believes members of a church are naturally more trusting of each other—and more trustworthy—than those in other types of common bonds. This, he adds, may be one reason members have saved more than they borrow.

The credit union is convenient. Virtually all business is transacted by mail at the treasurer's home address. This overcomes the difficulty of serving people whose weekday business takes them miles apart from each other.

Addressing envelopes is no problem. Members' names and addresses are stamped on the back cover of their passbooks. These show through the window envelopes in which they are returned.

In 1954, Holtom recalled, he and the treasurer conducted credit union business in the church basement on Sunday afternoons. But that didn't work out. Most members preferred to do business on weekdays.

Every Sunday, the Pastor mentions the credit union among announcements. In fact, he recently mentioned from the pulpit that he borrowed $1,800 to buy a car.

A paragraph on the credit union is also a regular feature of the church bulletin, and the monthly financial statement is posted on the bulletin board.

Payment of a 5-per-cent return has been an incentive for savers. People often say to the effect: "Where else could I get 5 per cent while being able to withdraw at any time?"

The 5 per cent is paid as a 4 per cent dividend and a 1 per cent bonus, payable at the end of the year. The board commits itself to a 4 per cent dividend to facilitate returning to that figure if conditions require it.

Expenses are limited to promotional literature, regular correspondence, postage, the annual meeting, plus $600 a year to rent space in the treasurer's home. Literature is handed out at every important church meeting.

Although loans have fallen far behind shares, there is incentive to borrow more than $1,000. Borrowers pay 12 per cent simple interest on the first $1,000, only 6 per cent beyond that.

A dynamic church with young members helps a church-related credit union move ahead as well. Of the 180 members, 125 are wage earners. Another 23 are housewives, and 32 are children.

Youth are urged from the pulpit to "start saving now. Spend money when you have it. If you need more later, you can borrow it."

One young member of the credit union, a girl, took the advice fully to heart. She won $1,000 on a radio quiz program and deposited it in the credit union.

Pastor Bauer, whose career includes the management of a chain of 19 hotels, foresees bigger things ahead for the church. Its present building on South Merton Avenue has been sold, and construction of a new church will begin shortly on a nearby five-acre estate, purchased at a discount.

"It now goes almost without saying," he added, "that the credit union is as much a part of the church as the sanctuary."

Mr. HANLEY. Mr. Speaker, during the Banking and Currency Committee hearings on H.R. 2, the only questions which were raised in connection with this legislation came up on two features of the bill. I think the committee report answers those two questions most effectively under "General Comments on the Legislation" on page 5 of the subject report.

One question concerned the provision that the President shall give special consideration to the nominations submitted by credit union organizations which are representative of a majority of Federal credit unions located in a region from which a board member is to be appointed. I call your attention to the fact that this provision in no way prevents individuals, single Federal credit unions, or any number of credit union organizations from submitting recommendations of names to be considered by the President for appointment to the board of governors. The primary purpose of this provision is to insure that individuals who are vitally interested in credit unions are considered for appointment to the board of governors. Actually, the committee

hoped that through this provision that credit unions and credit union organizations throughout the country would be encouraged to take an active part in making recommendations to the President. You will also note that the legislation provides that persons appointed to the board of governors shall be selected on the basis of established records of outstanding service in the credit union movement.

The second point raised in connection with this legislation concerns the fact that membership on the board of governors is not specificaly limited to individuals who represent Federal credit unions. The purpose here is to prevent the exclusion of the appointment of outstanding credit unions with a wealth of experience who may be associated with a State chartered credit union. However, the committee in its comments on this legislation emphasizes that it fully expects that a majority of the members on the board of governors of a national credit union administration should consist of individuals who represent Federal credit unions. I am sure that this is reasonable, and I am sure that the intent of this legislation as expressed in the committee report will be followed by the President in nominating individuals to the board, and by the Senate in considering such individuals for confirmation.

Mrs. SULLIVAN. Mr. Speaker, in my opinion, it should be emphasized that the legislation before us today contained in H.R. 2 to create an independent credit union supervisory agency is no "spur-of-the-moment" idea. It is the product of nearly 2 years' study and consideration by the distinguished chairman of the House Banking and Currency Committee and the organized credit union movement in the United States.

A bill to create an independent credit union supervisory agency was first introduced in November 1967 in the 90th Congress by the chairman of the House Banking and Currency Committee, Mr. PATMAN. Legislatively, no action was taken by the 90th Congress on the measure. However, Federal credit unions and credit union organizations were asked to submit recommendations and comments on the measure to improve it as an effective instrument of the credit union movement.

CUNA International, the principal credit union organization, immediately took steps to publicize the measure to all Federal credit unions and to seek recommendations on the measure. In 1968, CUNA International adopted resolutions in State and district meetings and finally its U.S. Forum, which consists entirely of U.S. credit unions, endorsed the legislation in principle. Subsequently, numerous comments and recommendations were submitted on the bill itself, and, as a result, Mr. PATMAN and 23 other members of the House Banking and Currency Committee introduced a revised bill, H.R. 2, in the 91st Congress.

Following the introduction of H.R. 2 on January 3, 1969, CUNA International again publicized this bill to all Federal credit unions and made a special staff study of it. The measure was again reviewed in State and district meetings. The U.S. Forum in May 1969 voted specific approval of H.R. 2 without changes.

I think it is extremely important that we realize that the Federal credit unions of this country have had nearly 2 years to study this measure and to suggest revisions to it. As a result of this study, the organized credit union movement at all levels has given its unqualified endorsement to this measure. Finally, the U.S. Forum of CUNA International adopted a resolution giving its complete approval of the bill.

We have in H.R. 2 legislation which would elevate the Bureau of Federal Credit Unions to an independent agency status as the National Credit Union Administration, and we have the unqualified endorsement of the people most affected—the Federal credit unions of this country. On that basis, I think we have every reason to pass this legislation as a justifiable recognition of the need and desire of our Federal credit unions to have their supervisory agency placed on a par with the supervisory agencies of other federally chartered financial institutions.

Mr. BARRETT. Mr. Speaker, during the hearings on the legislation to create an independent credit union supervisory agency, I was particularly impressed with certain factors regarding the growth of the Federal credit union program in this country.

When the Federal Act was passed in 1934, a section to administer and supervise the Federal credit union program was established in the Farm Credit Administration. The Farm Credit Administration administered the Federal credit union program from its inception in 1934 until 1942. During that period, 4,228 Federal credit unions were chartered and nearly 1.5 million people became shareholders therein.

In 1942, the Federal Credit Union section was transferred from the Farm Credit Administration to the Federal Deposit Insurance Corporation where it remained through 1947. During this period, under a bank-oriented agency, the number of federally chartered credit unions dropped to 3,845 and membership remained at approximately 1.5 million people.

In 1948, the Bureau of Federal Credit Unions was established, replacing the Federal Credit Union section and the program was placed under the Federal Security Administration, a forerunner of the Department of Health, Education, and Welfare. Under this more favorable atmosphere, the Federal credit union program once again flourished and by 1953 there were nearly 6,000 Federal credit unions with 2.8 million members. From 1953 to the present time, federally chartered credit unions have increased to 12,750 with over 10 million members under the more favorable climate of the socially oriented Department of Health, Education, and Welfare, despite the fact that the Bureau exists as a "stepchild" in the Department.

There is every reason to believe that with its own independent supervisory agency exclusively devoted to the progress and advancement of Federal credit unions we can expect the continued advancement of the Federal credit union program. Certainly Federal credit unions have grown to a mature status which justifies an independent agency devoted exclusively to their supervision.

Mr. ASHLEY. Mr. Speaker, the creation of a National Credit Union Administration to replace the Bureau of Federal Credit Unions as a supervisory agency for federally chartered credit unions has a particularly redeeming feature in that it will not cost the American taxpayer a single cent.

Fiscal year 1969 marks the 15th year that the Bureau of Federal Credit Unions has operated solely on funds received from Federal credit unions for chartering and supervisory services. Since fiscal 1954, Congress has not appropriated funds for administering the Federal credit union program.

This legislation makes no change in such a procedure. An independent National Credit Union Administration would continue to be supported entirely by fees assessed for chartering, examining, and supervising Federal credit unions. These fees, I emphasize, would be paid by the Federal credit unions themselves. Not only would the National Credit Union Administration be an independent agency—it would also be a financially independent agency supported entirely by the Federal credit unions which it serves.

Federal Government cost is therefore not a consideration in this measure. Congressional appropriations are not required. The taxpayer's dollar will not be called upon to support this independent supervisory agency.

Certainly Federal credit unions who will pay the cost of this agency and who desire an independent National Credit Union Administration deserve to have the prestige, the recognition, and the equality which an independent agency will give them. And in this day and age when a great movement is financially independent of government subsidy and appropriations, it certainly deserves to have this legislation enacted into law.

Mr. MOORHEAD. Mr. Speaker, it is inconceivable to me that 10 million Americans belonging to some 12,700 Federal credit unions who pay the entire bill for their own supervisory agency should not have that agency elevated to an independent status in accordance with their desires.

Federal credit unions have made it abundantly clear that they desire an independent agency which will be on a par with the supervisory agencies of other federally chartered financial institutions. Certainly Federal credit unions are entitled to the independence, recognition, prestige, and responsiveness which a National Credit Union Administration would provide.

Since fiscal year 1954, the present supervisory agency, the Bureau of Federal Credit Unions, has operated solely on funds assessed Federal credit unions for chartering, examining, and supervisory services. The administration of the Federal credit union program has not required appropriated funds for the past 15 years. This policy of self-support would be continued under the legisla-

tion contained in H.R. 2. A National Credit Union Administration would be entirely supported by the Federal credit unions themselves. The American taxpayer would have no expense whatsoever.

Furthermore, this legislation provides a means by which the Federal credit unions could have a greater voice in the administration of their own affairs through a Board of Governors appointed by the President from the various geographical Federal credit union regions. Certainly the people who pay the bill for the administration and operation of the Federal credit union program are entitled to have a greater voice than they now have in the policies and administration of their program.

I think this legislation represents a reasonable recognition of the importance of the credit union movement and its role in our socioeconomic life. Federal credit unions have reached the stage of maturity where they deserve such recognition as an independent National Credit Union Administration.

Mr. BRASCO. Mr. Speaker, since the Federal Credit Union Act was passed in 1934, Federal credit unions have grown until today they number over 12,700 with over 10 million members. The credit union movement as a whole, both Federal and State chartered, represents the fourth largest financial type institution in our Nation based on asset size.

Yet Federal credit unions alone of our federally chartered financial institutions do not have an independent supervisory agency, such as banks and savings and loan associations have. The Bureau of Federal Credit Unions is buried at a third echelon level of the Department of Health, Education, and Welfare under the Social Security Administration. At this organizational level, it is well isolated in our Federal hierarchy. This isolation results in a lack of responsiveness, both to the Federal credit unions and to the Congress itself.

The Director of the Bureau of Federal Credit Unions in making major policy decisions must secure approval both from the head of the Social Security Administration and from the Secretary of the Department of Health, Education, and Welfare, after going through channels of numerous assistants to the Secretary. An example of this isolation is the fact that the House Banking and Currency Committee asked in writing for departmental comments on the independent agency bill some 18 months ago. The correspondence was ignored during that long period until the committee held hearings on H.R. 2 in the latter part of June of this year. At that time, the Secretary of Health, Education, and Welfare delegated the Commissioner of the Social Security Administration to appear before the committee and present testimony on the bill. Obviously these points emphasize the fact that the Bureau is actually a stepchild in the Department of Health, Education, and Welfare organization. This definitely contributes to the unnecessarily time-consuming and cumbersome procedures which the Bureau must follow in establishing major policies.

The responsiveness of the Bureau to urgent requirements of the Federal credit union movement is shackled by this same procedure in securing approval of various policy matters. Certainly an institution of over 10 million members, such as the Federal credit unions of this Nation have, is entitled to greater responsiveness and undivided attention which would result from an independent supervisory agency.

Mr. RODINO. Mr. Speaker, in considering H.R. 2, a bill to create an independent credit union supervisory agency, I am struck with the fact that Federal credit unions are supervised by a bureau buried at the third-echelon level in the Department of Health, Education, and Welfare. On the other hand, other federally chartered financial institutions, such as banks and savings and loan associations, have their own independent supervisory agency.

What makes this all the more unrealistic is that there are more federally chartered credit unions than all the other federally chartered financial institutions combined. With over 12,000 Federal credit unions in this country boasting of over 10 million members, it seems unreasonable that our Federal credit unions should not be given the same recognition and dignity of other financial institutions.

This bill merely elevates the Bureau of Federal Credit Unions to independent agency status as the National Credit Union Administration. It does not change the Federal Credit Union Act in any other particular.

This bill has my support and I urge its passage because it gives long overdue recognition to the Federal credit unions of this country by elevating the supervisory agency to independent status, thus giving it the prestige the Federal credit union program deserves.

Mr. MINISH. Mr. Speaker, since 1965 I have been privileged, on a number of occasions, to serve as chairman of a special subcommittee of the Domestic Finance Subcommittee of the House Banking and Currency Committee, to investigate credit problems faced by servicemen both at home and abroad.

Chairman PATMAN has mentioned briefly some of the problems that we uncovered in our investigations. He also mentioned that by establishing credit unions, we were able to overcome many of these problems. I concur wholeheartedly in what Chairman PATMAN has said. I support H.R. 2 as I would support any legislation that would facilitate the operation of credit unions. Given the latitude of operation which they deserve and by freeing them from bureaucratic apron-strings, the credit unions can go a long way toward solving the economic problems of our servicemen, our low-income families, and the little man who finds that no matter how hard he works, his paycheck never seems to go far enough.

In 1967, the Department of Defense published its first directive dealing with credit unions. It was a strong directive. Just recently, the Department of Defense republished this directive to give added strength and to make certain that credit unions would be established wherever there was a need.

Mr. Speaker, in the past 3 years, I have visited a large number of major military installations throughout the world. Almost without exception, I found support and a need for a credit union at every one of these installations. This support came from servicemen of all ranks from privates to generals. Because of the support received for credit unions, the work of the subcommittee and the constant efforts of Chairman PATMAN, the Department of Defense launched a program of opening credit unions at military installations overseas. To illustrate how successful these credit unions have been and the reception they have received from servicemen, I would like to quote from the special subcommittee's report of October 1968, regarding the credit union operations in Germany:

> When the subcommittee visited the Pease Air Force Credit Union at Ramstein, the office was completely jammed with servicemen and their dependents waiting to deposit funds, apply for loans, or obtain credit counseling. It was estimated that there were nearly 50 people in the credit union at the time of the committee's visit. When the subcommittee visited the Andrews Air Force Base Credit Union at Weisbaden, it was 8:30 in the morning, an hour prior to the credit union's opening of its business day. There were already several servicemen waiting in line to get into the credit union and by the time the credit union opened its doors, there were 29 servicemen and their dependents standing in line. These two incidents, the subcommittee was informed by military and credit union officials, are typical of the situations that are occurring at all of the credit unions and clearly demonstrate the need and acceptability of credit union service among our military personnel stationed in Germany.

I think it is important that Members of the House are made aware of how much good the credit unions are doing for our troops. The following section of the subcommittee's October report states the case quite clearly:

> Without exception, every officer or enlisted man who testified before the subcommittee indicated that the operation of American credit unions in Germany was a great boost to the morale of the troops. Maj. Gen. Robert Ferguson, Commander of West Berlin, when asked as to the effect that the credit union in Berlin had on U.S. servicemen, replied "Just the fact that the credit union is here is a great morale booster. The troops now know that they do not have to go to loan sharks in order to get money." It should be noted that General Ferguson was the first member to join the credit union when it opened its doors in West Berlin. And, General Ferguson did not become merely a token member, since his initial deposit was $500.
>
> When the subcommittee visited Ramstein Air Base, Col. Winston Anderson, Vice Wing Commander of the 26th Tactical Reconnaissance Squadron, said that "the credit union provides a great morale lift to the troops and has made an important contribution to my men." Colonel Anderson pointed out that there had been instances of low morale because of debt problems prior to the credit union's opening but that these situations had been corrected by the credit union's operation. He also explained that the credit union provided a terrific initial morale boost to his troops because the stateside manager of the Pease Air Force Base Credit Union, Mr. Richard Grant, when he visited Ramstein to discuss a site for the credit union, made several loans to airmen prior to the official opening of the credit union. According to Colonel Anderson, this type of interest in the troops expressed by Mr. Grant and the credit union, made a lasting impression upon the airmen at Ramstein.

Lt. Gen. Andrew Boyle, Commander of the V Corps in Frankfurt, told the subcommittee that his area desperately needed a credit union since it was too far for the average serviceman to go to Wiesbaden, approximately 30 miles away, in order to get credit union service. General Boyle pointed out that in Frankfurt alone, there are 50,000 American servicemen and civilian Department of Defense employees eligible for credit union membership and when the Frankfurt suburban areas are included, that figure is increased to 80,000 or 90,000. General Boyle said that his men have been borrowing from finance companies in the area and although their rates are extremely high, their contracts are all legal. He expressed a desire to obtain credit union service so as to cut the cost of borrowing for his men. General Boyle said "credit unions are for the soldier. He knows he can get advice and counseling at the credit union and will not get a hard sell." General Boyle added that it was important to get a credit union because the serviceman in need of money, whether for an emergency or a frivolous purchase, will go to wherever he can get the funds and he is not worried about the interest rate at that time. It is partly because of the impulse borrowing that General Boyle feels his area needs a credit union.

It should be noted that during its hearings at Wiesbaden Air Base, the subcommittee stressed the view presented by General Boyle as to the need for a credit union in the immediate Frankfurt area. The manager of the Andrews Air Force Base Credit Union, which services Wiesbaden on a direct basis and also has Frankfurt in its geographical territory, said that arrangements were being made to establish a satellite office of the credit union in Frankfurt. The subcommittee feels that based upon the large Department of Defense civilian and troop concentration in the immediate Frankfurt area, that if a satellite office of the Andrews Air Force Base Credit Union is not satisfactory as far as providing full credit union service, that consideration should be given to opening a seventh credit union in Germany with its main suboffice in Frankfurt.

Brig. Gen. William McDonald, Chief of Staff of the U.S. Air Force in Europe, told the subcommittee that since credit unions had opened at European Air Force installations, and the Department of Defense had cracked down on debt practices, the Air Force Inspector General has had the fewest number of debt complaints from airmen of any 18-month period. When General McDonald was asked if the credit union helped morale, he answered: "It is difficult to set a yardstick to measure morale, but I do know that if I don't get any complaints and don't have any problems, I know that the morale of my men is up." In discussing what credit unions have meant in terms of reduction of debt complaints, a legal officer in USAFE Headquarters commented, "I have seen a revolution. There used to be numerous complaints about sharp practice operators and high-rate finance companies gouging the servicemen. We seldom get such complaints anymore." A sergeant at the hearing in Wiesbaden said that the credit union was an invaluable tool in the work of the first sergeants since they could send men with debt problems to the credit union for counseling and if loans were necessary in order to bail a man out of trouble, they could be obtained from the credit union at a reasonable interest rate.

Col. Norbert Treacy, commanding officer of Wiesbaden Air Force Base, told the subcommittee that they have had no real debt problems concerning sharp practice companies in 2 years. He said that he realized that there had been a great deal of problems in the Wiesbaden area during the subcommittee's earlier visit but that for the past 2 years, there has been a heavy emphasis on personal counseling of servicemen, as well as their wives. Colonel Treacy said that he was highly pleased with the operation of the credit union, and that although the credit union started slowly, "as soon as the word spread to the troops, it grew very rapidly."

Col. Fred Field, whose command includes the installations in Furth and Wurzburg, told the subcommittee that there are still some high-rate finance companies operating outside the gates of the military installations but they do not present any problems now that the credit unions have gone into operation. Colonel Field added that although there had been some respectable credit facilities in Europe, such as American Express, prior to credit unions that credit unions were the ideal setup since the average soldier could not obtain a loan from American Express.

Mr. Speaker, an independent agency will allow credit unions not only to continue the outstanding work that they are performing but will free those charged with regulating credit unions from having to sell their programs to an agency totally devoid of credit union expertise and, in some cases, interest.

Based on the support alone that credit unions have given our servicemen, I feel that there is enough justification for an independent agency. But when you consider all of the other areas in which credit unions have performed so admirably and the fact that this legislation will not result in the expenditure of any taxpayers' funds, I find that it is one of the easiest bills to vote aye on that I have cast a vote for during my terms in Congress.

Mr. GONZALEZ. Mr. Speaker, I wish to emphasize that H.R. 2 would not create another Government agency per se—it would merely elevate the existing Bureau of Federal Credit Unions to independent status as the National Credit Union Administration. It will place Federal Credit Unions, of which there are more than all other federally chartered financial institutions combined, under an independent agency which would provide a status similar to that enjoyed by banks and savings and loan associations.

Creation of a National Credit Union Administration as an independent agency is not a step toward expanding the role of Federal Credit Unions in relation to other financial institutions. It would merely improve their prestige and status and give deserved recognition to the 10 million-plus Americans who are Federal Credit Union members. Only Congress can change the Federal Credit Union Act and the powers it grants to the supervisory agency for Federal Credit Unions. By elevating the Bureau of Federal Credit Unions to independent status, we are not giving the agency or Federal Credit Unions any additional authority, privileges, or operational changes. Congress alone can change the Federal Credit Union Act, and any major changes in credit union legislation must be made by legislation passed by the Congress.

Actually this legislation will enhance congressional influence over Federal credit unions since it establishes a Board of Governors of the National Credit Union Administration which is required by the legislation to submit an annual report to the President for transmission to the Congress together with recommendations, including recommendations for changes in the Federal Credit Union Act. Such a report is not now required of the Bureau of Federal credit unions which only infrequently submits legislative recommendations. With such an advisory board, the National Credit Union Administration will have a direct pipeline of information from the field informing it of the needs and desires of Federal credit unions for changes in the Federal Credit Union Act. With this improved communication of experience data from the field, certainly the independent supervisory agency will be in a far better position to serve more effectively the over 12,000 Federal credit unions which it supervises.

I support passage of H.R. 2 for these reasons. It should provide an agency more responsive to the needs of Federal credit unions in this technological age, as well as providing Congress better information upon which to exercise our legislative obligations.

Mr. GETTYS. Mr. Speaker, one of the features of H.R. 2 which would elevate the Bureau of Federal Credit Unions to an independent agency status as the National Credit Union Administration is the provision which would establish a Board of Governors to advise, consult with, and give guidance to the Administrator on matters of policy. Such a Board of Governors would be composed of members appointed by the President from the various Federal credit union regions of the country. This would provide representation of Federal credit unions on a broad geographical basis. It would also provide for an expression of ideas and needs from the grassroots level to the supervisory agency. This is a feature which is woefully lacking in the present status of the Bureau of Federal Credit Unions.

All too frequently Federal credit unions and Federal credit union leaders are not consulted on major policy matters to secure their reactions, their advice, or their comments.

A case in point is the consolidation of certain Federal credit union regions which was effected in January of this year. At that time, the Department of Health, Education, and Welfare issued a directive which eliminated three Federal credit union regions by consolidating them into other existing regions. The New York region was absorbed in the Boston region; the Charlottesville, Va., region was absorbed into the Harrisburg, Pa., region; and the Kansas City, Mo., region was merged into the Dallas, Tex., region which was then moved from Dallas to Austin. This major reorganization which directly affected hundreds of Federal credit unions came as a complete surprise to them and to the credit union organizations representing them. Not one single Federal credit union nor one single credit union organization was informed of, or consulted with, on this action, prior to the issuance of the directive. The people and organizations directly concerned and who underwrite all the expenses of the Bureau of Federal Credit Unions were completely ignored on this matter. This arbitrary action was taken in a strictly bureaucratic manner.

A National Credit Union Administration with a Board of Governors representing the various Federal credit union regions in this country would eliminate actions such as this by giving varied reactions to such a far-reaching proposal. The Board of Governors would be able to bring a wealth of experience and background in credit union problems and attitudes to such major policy decisions. The members of such a Board of Governors would certainly give a much broader base of experience and viewpoints to guide a Federal credit union supervisory agency in the performance of its mission.

The requirement in H.R. 2 that the Board of Governors make an annual report to the President for submission to the Congress is another feature which will insure that Congress is informed on the problems and needs regarding legislative actions. Under the present setup no such report is submitted to the Congress, nor is the Bureau of Federal Credit Unions, in itself, directly answerable to the Congress for its actions.

Not only will H.R. 2 provide for an infusion of opinion from grassroots Federal credit unions into supervisory agency policymaking, but it will also insure more information to the Congress as well as more control by the Congress of Federal credit union policies and regulations.

Mr. DORN. Mr. Speaker, one of the important features of the bill—H.R. 2—elevating the Bureau of Federal Credit Unions to an independent agency status, is the fact that it provides a means for making the supervisory agency more responsive to the needs of the Federal credit union movement and the desires of Congress.

At the present time, the Bureau of Federal Credit Unions is more or less isolated in its communication with the Federal credit unions which it serves. This bill would create a Board of Governors who would be named by the President "by and with the advice and consent of the Senate" to serve for 6 year terms. The members of the Board of Governors would be appointed to represent each Federal credit union region in the United States. Thus, the independent supervisory agency would, in effect, have constant contact with the problems and need of Federal credit unions.

The Board of Governors, being composed of members representing broad geographical regions of the country, would be in a position to communicate and influence policy of the National Credit Union Administration.

At present, no such representation of Federal credit unions exists in relation to the Bureau of Federal Credit Unions. Only an informal liaison committee of CUNA International exists to bridge the communications gap between the Federal credit union movement and the Bureau. At best, this is inadequate.

The provision in this bill to create a Board of Governors to "advise, consult with, and give guidance to the Administrator on matters of policy" fills a long-standing need for closer relationships between the Federal credit union supervisory agency and the Federal credit unions which it supervises and serves.

Furthermore, I should like to point out one additional feature of such a Board of Governors. Under this legislation, the Board will be required to make an annual report to the President for submission to the Congress. In this report, the Board is required to summarize the activities of the National Credit Union Administration and to make recommendations to the Congress which it may deem appropriate. Obviously, this gives the Congress greater insight into the Federal credit union program than it now has and insures that the Congress will retain absolute control of the Federal credit union program.

Mr. BURLISON of Missouri. Mr. Speaker, H.R. 2 would create a National Credit Union Administration which would be headed by an Administrator who will be appointed by the President with the advice and consent of the Senate. The Administrator will be under the direct control of a board of governors representing membership from each Federal Credit Union region, plus a chairman to be appointed at large. Members of the board will be appointed by the President, by and with the advice and consent of the Senate. The members of the board will serve for a 6-year period, while the Administrator, in order to insure continuity with the President, shall serve at the pleasure of the President.

The National Credit Union Administration will be responsible for the regulation, supervision, and examination of Federal Credit Unions, and will perform all of the functions presently carried on by the Bureau of Federal Credit Unions.

One of the most important aspects of this legislation is that the establishment of the administration will not cost the taxpayers a single penny nor result in any appropriations by Congress, since all the operating costs of the agency will be borne by fees and assessments paid by the more than 12,000 Federal Credit Unions in the United States. For more than 15 years, the supervision and regulation of credit unions has been carried out without any expense to the taxpayers. In short, all costs of operating the National Credit Union Administration will be borne directly by credit union fees and assessments.

There are more credit unions in the United States—23,625—than all other financial institutions combined. And, there are more federally chartered credit unions, 12,689, than all other financial institutions chartered by the Federal Government. There are more than 20 million credit union members in the United States with savings in their institutions of more than $14 billion. More than half of the total membership and assets of the credit unions belong to federally chartered credit unions. Yet, despite the magnitude of credit unions, the regulation and supervision of these extremely worthwhile financial institutions lies buried in the Bureau of Federal Credit Unions, which operates at the third tier in the governmental organizational structure. The Bureau of Federal Credit Unions is a subagency of the Social Security Administration, which, in turn, is a subagency within the Department of Health, Education, and Welfare. The Director of the Bureau of Federal Credit Unions does not report directly to the Secretary of the Department of Health, Education, and Welfare, but instead must function through the Social Security Administration. The Bureau of Federal Credit Unions is not provided with full-time legal counsel but must depend on part-time legal help obtained from other sections of the Social Security Administration. This clearly is not an example of how a governmental agency, charged with such a great responsibility, should operate.

The Federal Credit Union Act was passed by Congress and signed into law in June of 1934. The first Federal credit union was chartered on October 1, 1934, by the Federal Credit Union Section which was established in the Farm Credit Administration. Federal credit union supervision and regulation was under the Farm Credit Administration until May 15, 1942, at which time there were approximately 4,100 credit unions with more than 1.3 million members. In May of 1942, Federal credit union regulation was transferred from the Farm Credit Administration to the Federal Deposit Insurance Corporation. For the next 6 years, under the FDIC, the Federal credit union program, rather than growing, actually decreased to 3,800 credit unions, although total membership increased by about 200,000. On July 28, 1948, the Bureau of Federal Credit Unions was established and transferred to the then Federal Security Agency, a forerunner of the present Department of Health, Education, and Welfare.

During the 35-year history of the Federal credit union program, regulation of Federal credit unions has been shuffled from one agency or department to another. Credit unions have earned and deserve the right to be regulated and supervised by an agency charged solely with overseeing Federal credit unions. The Bureau of Federal Credit Unions has consistently operated as a stepchild within the Federal Government. The upgrading of this agency to the status that it has earned is long overdue.

The Department of Health, Education, and Welfare, while agreeing that the status of the Federal credit union program within the Federal Government needs upgrading, opposed the enactment of H.R. 2 for the following reasons: First, the location of the credit union program in the Social Security Administration of the Department of Health, Education, and Welfare, has not hindered the growth of Federal credit unions; second, by being a part of the Department of Health, Education, and Welfare, the Bureau of Federal Credit Unions is better able to coordinate programs designed to improve the economic and social security of the American people; and, third, the establishment of another independent agency is not desirable from an administrative management point of view.

The objections are vastly outweighed by the need for a National Credit Union Administration.

While it can be pointed out that the number of credit unions has increased under the present location of the Bureau of Federal Credit Unions, it is felt that if there had been a separate credit union

agency during the period the Bureau of Federal Credit Unions has been under control of the Department of Health, Education, and Welfare and its predecessor agencies, the growth of the Federal credit union movement would have been equal to, if not greater, than the records established under the present arrangement.

The growth of the credit union movement is a tribute to the thousands of volunteer workers throughout the country who have formed credit unions and the millions of volunteers who operate these credit unions rather than the fact that Federal credit union supervision falls within the jurisdiction of the Department of Health, Education, and Welfare.

The innovative programs, such as Project Moneywise, which provides economic and consumer training for credit union leaders in low-income areas, are commendable efforts on the part of the Bureau of Federal Credit Unions. However, both Mr. Robert M. Ball, Commissioner of Social Security of the Department of Health, Education, and Welfare, and Mr. J. Deane Gannon, Director of the Bureau of Federal Credit Unions, told the committee that the programs such as Project Moneywise could be continued within the framework of an independent credit union agency. The objection to H.R. 2 on the grounds that such programs would not receive the coordination needed to carry them on, is not valid.

Mr. Speaker, as evidenced above, the Committee on Banking and Currency feels that a strong case has been made for creation of an independent Federal agency for supervision of federally chartered credit unions. I wish to echo those sentiments and feel that this legislation will be a forward step in serving those valuable members of our Federal service who participate in the Federal credit union movement.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. HALL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 357, nays 10, not voting 65, as follows:

[Roll No. 126]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Holifield with Mr. Bow.
Mr. Celler with Mr. Lipscomb.
Mr. Long of Louisiana with Mr. Watkins.
Mr. Kirwan with Mr. Hosmer.
Mr. Hébert with Mr. Cahill.
Mr. Evins of Tennessee with Mr. Andrews of North Dakota.
Mr. St. Onge with Mr. Ashbrook.
Mr. Charles H. Wilson with Mr. Don. H. Clausen.
Mr. Yates with Mr. Brock.
Mr. Abbitt with Mr. Berry.
Mr. Carey with Mr. Minshall.
Mr. Howard with Mr. Eshleman.
Mr. Patten with Mr. King.
Mr. St Germain with Mr. Hastings.
Mr. Gallagher with Mr. Brown of Michigan.
Mr. Garmatz with Mr. Johnson of Pennsylvania.
Mr. William D. Ford with Mr. Powell.
Mr. Edwards of California with Mr. Landgrebe.
Mr. Blatnik with Mr. Lloyd.
Mr. Teague of Texas with Mr. Anderson of Illinois.
Mr. Fallon with Mr. Devine.
Mr. Stratton with Mr. Mathias.
Mr. Hawkins with Mr. Halpern.
Mr. Corman with Mr. Conyers.
Mr. Baring with Mr. Burton of Utah.
Mr. Stuckey with Mr. Lujan.
Mr. Whitten with Mr. Cunningham.
Mr. Dawson with Mrs. Chisholm.
Mr. Mollohan with Mr. MacGregor.
Mr. Nelsen with Mr. Pettis.
Mr. Sandman with Mr. Ruppe.
Mr. Whalley with Mr. Skubitz.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

PROPOSED INCREASES IN THE EDUCATION APPROPRIATION

(Mr. JOELSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. JOELSON. Mr. Speaker, when the House considers the appropriation bill for the Departments of Labor, and Health, Education, and Welfare this week, I intend to propose increases for education. In order that my colleagues may be informed about the nature of my proposal, I insert a chart, which follows:

PROPOSED INCREASES FOR EDUCATION

[In thousands]

Item number, program	Fiscal year 1969, appropriations	Fiscal year 1970, package	Over House committee	Increase over fiscal year 1969
1. Impact aid	$505,900	$585,000	$398,000	$79,100
2. ESEA title II, school library	50,000	50,000	110,453	0
3. NDEA title III, equipment	78,740	78,740		0
4. NDEA title V, guidance and counsel	17,000	17,000		0
5. ESEA title III, supplemental centers	164,876	164,876		0
6. Vocational education	248,216	488,716	331,500	240,500
7. Higher education construction, 4 year undergraduate	33,000	33,000	33,000	0
8. NDEA student loan	193,400	229,000	40,794	35,600
9. Title I, ESEA	1,123,127	1,396,975	180,800	273,848
Total	2,414,259	3,043,307	894,547	629,048

EXPLANATION FOR INCREASES

1. To provide sufficient funds for 90% of the authorization.
2. To provide funds equal to the amount appropriated in fiscal year 1969.
3. To provide funds equal to the amount appropriated in fiscal year 1969.
4. To provide funds equal to the amount appropriated in fiscal year 1969.
5. To provide funds equal to the amount appropriated in fiscal year 1969.
6. To provide additional funds to meet urgent needs in vocational education.
7. To provide funds equal to the amount appropriated in fiscal year 1969.
8. To provide necessary funds for increased demand for student loans.
9. To restore diminished funds for grants to local educational agencies resulting from amendments adding additional participating agencies and to offset increases in program costs.

Mr. Speaker, The above increases are endorsed by a group known as the Emergency Committee for Full Funding, which is composed of the following list of organizations:

Academy For Educational Development, 1424 16th St., NW.

AFL–CIO, 815 16th St., NW.

American Association for Health, Physical Education and Recreation, 1201 16th St., NW.

American Association of Junior Colleges, 1315 16th St., NW.

American Association of School Administrators, 1201 16th St., NW.

American Association of State Colleges and Universities, 1785 Massachusetts Ave., NW.

American Association of University Women, 2401 Virginia Ave., NW.

American Council of Education, 1785 Massachusetts Ave., NW.

American Educational Research Association, 1126 16th St., NW.

American Federation of Teachers, 1012 14th St., NW.

American Industrial Arts Association, 1201 16th St., NW.

Upper Midwest Regional Educational Laboratory, 1640 East 78th St., Minneapolis, Minnesota 55423.

Urban Coalition Action Council, 1819 H St., NW.

H.R. 2, SEPARATE FEDERAL CREDIT UNION AGENCY

(Mr. HANNA asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HANNA. Mr. Speaker, assuming the bill H.R. 2 is considered on today's calendar, 20 million Americans will be recognized. When the House approves the Federal Credit Union Administration bill, 20 million Americans will become first-class citizens of our Nation's financial community.

This event is long overdue. The 23,625 credit unions have a combined savings of $14 billion. All of our Nation's other financial institutions combined do not equal the number of credit unions. More than half of these institutions are federally chartered.

Yet, our policy toward the encouragement and supervision of credit unions has not been consistent with their progress. While the credit union movement has increasingly become an important and vigorous segment of our savings and finance community Federal policy has been one of casual observation by bureaucrats buried deeply in the lower echelons of the organizational chart.

Unfortunately, the history of Federal policy toward credit unions suggests that our Government has considered these institutions the stepchildren of the bureaucracy. During the 35-year history of the Federal credit union program no less than three different agencies have had jurisdiction.

Today, the Federal Bureau of Credit Unions supervises the more than 12,000 federally chartered institutions. This agency is a small branch of the Social Security Administration. The Director of this agency is directly responsible to the Commissioner of Social Security. The Commissioner of Social Security is, of course, in turn responsible to the Secre-

tary of Health, Education, and Welfare. The irony of such a vital and growing organism as the credit union movement being relegated to a subtentacle of the welfare octopus is evident. The results of such unimaginative policy are disheartening.

For example, in the past 5 years the House Committee on Banking has had to initiate more legislation dealing with credit union problems than the Bureau. When the Bureau undertook a major reorganization of its structure no one in the industry was consulted. Although an advisory committee of credit union executives is available the Director of the Bureau can see no real need to consult them more than once a year.

Mr. Speaker, if I may be permitted an indulgence at this point, I would like to make a comment about the question of consultation. Surely, even a casual observer would have noticed the seriously problem-ridden state of the country's financial structure. It is absolutely amazing to me how anyone who is responsible for supervising credit institutions whose assets are in the billions could not see the need, nor have the imagination to realize the necessity of consulting with his advisory council in order to discuss the role credit unions might play in meeting the needs of the market.

During the hearings on H.R. 2, I had the opportunity to question both Social Security Commissioner Ball and Bureau Director Gannon. The questioning led me to this observation and exchange with Banking Committee Chairman PATMAN. I quote it because I believe it highlights the point I am now making:

Mr. HANNA. In terms of the association with HEW * * * it does appear to me that if you look at the history of our handling of particularly the welfare aspects of HEW, that the mentality has been more addressed to lifting problems than to solving problems. And I rather suspect that the dynamics of today would dictate that there are more areas of opportunity in financing for the country that the credit unions could solve if they had a more financial posture. And I would suspect, Mr. Chairman, it was your anticipation this legislation would put them in a position to be more dynamics in terms of helping to solve the problems.

The CHAIRMAN. You are certainly correct, sir.

Perhaps when the first credit union was chartered in 1934 we were able to afford to hold these institutions within a narrow perspective. Perhaps, during the quiet 6-year period when the credit union movement was under the supervision of the Federal Deposit Insurance Corporation we could allow unimaginative policies. Perhaps, even in the early years of the Bureau, the credit union movement did not warrant serious consideration.

Those days, however, are gone. Unfortunately, a great deal of the thinking which guided policy in those days remains. The bill before us today will make our policy toward credit unions relevant to 1969. An independent administration composed of people who know the business and the time will encourage and possibly accelerate the growth of the credit union movement.

One other point needs to be made. Pundits often tell us it is a rare occasion when the Congress does something meaningful for the workingman. No one would deny that this bill offers such an occasion.

The credit union movement in America is a workingman's movement. Credit union roots are deeply imbedded in the wage earning soil. And as is so typical of the strength and honesty of America's workingman their Credit Union Administration will earn its own way. There will be no cost to the taxpayer for the running of the National Credit Union Administration. The credit unions will pay the costs.

These facts, coupled with the unanimous support of credit union movement should persuade every member. I am proud to be a cosponsor of the National Credit Union Administration because I am proud of our Nation's credit unions.

I am hopeful the Congress will give this legislation the overwhelming support it deserves.

MOON CONTAMINATION

(Mr. THOMPSON of Georgia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. THOMPSON of Georgia. Mr. Speaker, our Apollo astronauts are now in quarantine because of the concern of some of our most competent scientists that there may exist on the moon micro-organisms, bacteria or germs which may be harmful to life here on earth. For this reason we have isolated the astronauts for about a 21-day period to determine whether or not they will be affected by any unknown micro-organisms which they may have brought back with them from the moon.

Over the weekend, Mr. Speaker, I read press accounts wherein 14 NASA scientists have been contaminated through exposure to the moon dust and rocks which the astronauts brought back with them.

It appears to me, Mr. Speaker, that if our scientists were sufficiently concerned to require the quarantine of the astronauts who were encased in protective clothing and were constantly breathing filtered oxygen, then we should also be concerned about the effects of the exposure to the 14 NASA scientists who apparently were not so protected. If it is necessary to quarantine our astronauts then it is likewise necessary to quarantine all persons who are exposed to moon dust and rocks until it is determined that there are no harmful elements present which had not yet been determined.

Mr. Speaker, the moon has been with us for eons and we have just now been able to obtain actual samples of the moon. Does it not make sense that these moon samples could have also been quarantined—for a 21-day period—while awaiting the results of the quarantine of the astronauts to determine whether or not any harmful micro-organisms were present?

It is appalling to me that our scientists are so impatient that they could not resist the temptation to immediately start examining these samples until after the results of the quarantine were determined.

It is for this reason, Mr. Speaker, that I have today wired the head of NASA and requested that he immediately place in quarantine all NASA personnel who have become contaminated through contact with the moon dust and rocks and to quarantine the moon samples until it is affirmatively proven that such possible harmful micro-organisms do not exist.

NATIONAL RIFLE ASSOCIATION HAS A FRIEND IN THE WHITE HOUSE

(Mr. KOCH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOCH. Mr. Speaker, it is 6 years since the death of John F. Kennedy; and a little more than a year since the deaths of Martin Luther King, Jr., and Robert F. Kennedy. Those awful events precipitated legislative action providing Federal registration and licensing laws governing the ownership and use of guns. The law that was ultimately passed was wholly inadequate and a victory for the National Rifle Association. That law did not register guns or license gun owners.

It is shocking that the Nixon administration has now publicly stated its opposition to Federal gun registration and the licensing of gun owners. That opposition totally reverses the position of the prior administration. The salient facts which should move the Nixon administration into taking the lead for effective legislation are: First, every 2 minutes in this country someone is killed, maimed, or wounded by the use of a gun; second, since 1900, 800,000 Americans have been killed by guns which is more than all the lives lost in all the wars in U.S. history; and third, every day 10,000 guns are purchased in the United States and there are estimated to be between 100 and 200 million guns in private hands.

In 1968, the survey taken on the subject of gun control showed that 80 percent of the American people favored strong gun laws and that 65 percent of American gun owners favored strong gun laws. The latest statement on this subject by the Nixon administration indicates that the National Rifle Association has been most effective in lobbying not only in Congress but at the highest executive level—the White House itself. Surely it should not take another tragedy and martyrdom to arouse the American public so that this Congress and the President of this country will finally undertake the registration of guns and licensing of gun owners so long and so wrongly deferred.

TEXTILE IMPORT PROBLEMS

The SPEAKER. Under a previous order of the House, the gentleman from Arkansas (Mr. MILLS) is recognized for 40 minutes.

Mr. MILLS. Mr. Speaker, although I recognize that there are import problems involving several different types of construction and production, today I want to talk about only one of these

import problems, and that is the question of textile imports.

Mr. Speaker, I have just seen the latest Government figures on textile imports, and I am shocked at the increasing evidence that this situation is out of control. We now have foreign trade results for 5 months prior to June 1. In that period total imports of cotton, wool, and manmade fiber textiles rose to a new alltime high, despite the dock strike in the early weeks of the year.

The impact of this constantly rising textile import trend on our balance of trade is most serious. In fact, 1957 was the last year in which the United States had a favorable balance on the textile trade account, and our deficit in such trade for 1968 was $1.1 billion. Cotton, wool, and manmade fiber textile imports accounted for more than $800 million of this deficit, and in 1968 alone recorded a $300 million increase. I repeat, in 1 year we experienced a $300 million increase in our textile trade deficit. Obviously, our Government cannot ignore such developments.

The trend is clear: Imports are growing so much more rapidly than the domestic market that we must have a slowing of import growth if a healthy fiber and textile economy is to be maintained in this country. I have had an intense continuing interest in textile trade matters for many years. When the GATT control arrangements on cotton textile trade were developed some 8 years ago, I welcomed them as a reasonable solution to the unfair competitive pressures our cotton textile people were under from overseas producers who benefit from substantially lower wage costs. Unfortunately, no such control arrangements have yet been achieved for wool and manmade fiber textiles, and the results of the cotton arrangement leave a great deal to be desired. For the first 9 months of the seventh long-term arrangement year, cotton textile imports reached an alltime high, even though they are subject to an arrangement of voluntary control.

Manmade fibers today are substantially more than half of our total fiber consumption in this country; and it is precisely in manmade fiber textiles that imports are growing most rapidly. For the first 5 months of 1969, they rose 29 percent over the comparable period in 1968—a 29-percent rise over the comparable period of the year before—and in 1968 they recorded a 54-percent increase over 1967. Yet, there are no reasonable restraints whatsoever on this segment of our textile imports despite the fact that almost all other textile importing countries—I repeat, almost all other textile importing countries—do maintain import controls on such textile trade.

It is in the area of wool textiles that import penetration has been deepest, resulting in an intolerable situation today. Wool textile imports now exceed 25 percent of U.S. consumption—nearly twice the ratio existing as recently as 1961. Such unreasonable growth obviously cannot be permitted to continue.

It has been my hope that reasonable restraints on the imports of wool and manmade fiber textiles could be achieved by international negotiations and I have, therefore, been hoping for the success of the missions which Secretary of Commerce Stans has been conducting in Europe and Asia, looking toward such an agreement. I am very disappointed that up to the present, at least, his statesmanlike approach has not been reciprocated by our overseas trading partners. They are, in my view, being extremely shortsighted in this matter. The pressures for unilateral action for textile import relief are stronger than ever in the Congress and throughout the country.

I have taken the opportunity of discussions with representatives of various foreign governments concerned to stress to them my belief that it would be in their own best interests as well as ours for them to agree to negotiate international control arrangements covering the other fiber articles.

Unless such an agreement is reached by this fall—and I want you to catch the date—unless such an agreement is reached by this fall, I am confident that Congress will act. If the efforts of Secretary Stans to bring about a negotiated arrangement fair to all parties cannot succeed, there is no alternative but for the Congress to legislate on this subject before the end of the present session.

What is required is a new international arrangement making possible the establishment of import restraints on wool, manmade fiber and blended textile articles. Nothing else will suffice. Our textile trade patterns demonstrate clearly that because so many categories of textiles are subject to import penetration, an arrangement with comprehensive coverage is absolutely essential to an equitable solution of our import problem.

It is extremely difficult for me to understand the adamant position of our Japanese friends. Indeed, I believe that if the Japanese would agree to negotiate, the other countries involved would be quite ready to join in the discussions, and it is more than just a belief. Our trade deficit with Japan exceeds that which we have with any other country in the world. As a matter of fact, in some recent years just the increase in Japan's total exports—textiles and others—to the United States was greater than its total exports to any other country in the world. Here is the country with the second highest gross national product in the free world and perhaps the highest annual rate of growth anywhere in the world, and, among the developed nations of the world, Japan probably has the most restrictionist trade and investment policies. Yet, from all indications, it has refused to discuss with us a reasonable solution to our growing textile import problem.

We must have a viable growing textile industry in the United States. We need it as a major source of employment for all of our population groups, particularly in the South for our minority groups who are so employed in such great numbers in this industry whose jobs are now being threatened. We need it as a mainstay of many depressed rural areas of our country. It is located in North and South Carolina, I believe, Mr. DORN, in what is referred to as the Appalachia area.

We need it as a keystone in the prosperity of our cotton farmers and sheepherders, as well as our chemical and machinery industries for each of whom the American textile industry is a very important customer. And, we need it for national security reasons.

For all of these reasons I want to make it quite clear, if I understand the Congress of the United States, we have no intention of letting it go down the drain.

Our need is so great, our objective so reasonable, our resolve so determined, I know we will find a solution to the textile import problem. I hope it will be a negotiated solution, and not one unilaterally reached by Congress, but if any of our trading partners think that we lack the will, the wisdom, and the know-how to pass a unilateral arrangement here in the Congress, they are sadly mistaken. I hope it will not come to that, but I am saying to them that if they do not show more disposition to negotiate with our people who are now in Japan and who have been to the other countries, there is no resort left to the Congress.

Mr. LANDRUM. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Georgia.

Mr. LANDRUM. Mr. Speaker, as the distinguished chairman of the House Committee on Ways and Means, the gentleman from Arkansas has stated any action contemplated that would lead to controls of skyrocketing imports of textiles should apply to all categories of textile articles of all fibers.

This is absolutely essential in view of the experience of our country in attempting to keep imports of textiles from low-wage nations from flooding our markets and threatening an industry as important as the textile industry of the United States.

Most of you are familiar with the fact that the Geneva long-term arrangement, commonly known as LTA, an international control of exports of cotton textiles, is now in its 7th year. Although this arrangement has not provided the type of restraints we had hoped for, it nevertheless has established a means by which the United States can limit all its cotton textile imports.

In part, as a result of the LTA, there has been a shift abroad from cotton textiles to goods manufactured from manmade fibers and blends. This shift has further intensified the problems of all manufacturers of textiles in this country.

Even under the umbrella of the LTA for cotton textiles, foreign nations often were able to circumvent category limitations and concentrate on particular items to such an extent that certain portions of the industry were badly damaged.

But this was nothing as compared with what foreign textile interests did in shifting to manmade fibers for export.

The imports of manmade fiber yarns, fabrics, and apparel last year—1968—more than quadrupled their level of 1964.

In only 5 years the import total for manmade fiber goods jumped from 328

million equivalent square yards in 1964 to 1,440 million equivalent square yards in 1968. That shows what can be done by foreign exporting nations when there are no restraints whatsoever by our Government on imports. And through May, of this year, imports of manmade fiber textiles were running well ahead of the comparable period in 1968.

During the first 5 months of this year, imports of manmade fiber goods totaled 694.1 million equivalent square yards, as compared with 537.2 million yards in the same period of 1968.

At this rate, the imports of manmade fiber textiles would reach a total of 1,665.8 million square yards by the end of this year. This would mean an increase of 225.8 million yards over 1968.

Our woolen and worsted textile imports continue to maintain the highest degree of market penetration of any. Woolen textile imports constitute 25 percent of our market today. And, while in terms of total volume, wool textile imports may seem relatively small compared with those of cotton and manmade fiber this impact is very great.

The junior Senator from Georgia, Mr. TALMADGE, once aptly described the LTA as equivalent to daming half a stream, and that is not any dam at all.

Mr. Speaker, we have seen the number of countries shipping us textiles proliferate and grow. We have seen imports shift from one article to another, from one category to another. We can no longer afford to permit foreign nations virtually unlimited access to our domestic textile market.

Our Government is currently seeking an international arrangement that would permit us to establish restraints on imports of woolen, manmade fiber, and blended textile articles. We must have such an arrangement and it must cover all textile articles. To do less will not solve the problem. For it is only under the umbrella of a multilateral arrangement that we can responsibly and equitably restore orderliness to our textile trade.

We have had some experience with trying to moderate our textile imports through a bilateral agreement. A 5-year bilateral covering cotton textile imports was negotiated with Japan in 1956, and what happened? Other exporting nations simply filled the vacuum created by the limitations on Japan and our cotton textile imports actually grew.

The United States has got to be able to control its total textile imports regardless of the source and regardless of the fiber or article. This can only be achieved under one multilateral, international arrangement.

Time and time again, we have emphasized our position on this situation. Neither we, nor the textile industry, is seeking to cut off all imports. We are willing to accept an extremely large volume of textile imports in the interest of world trade. But we are not going to accept the thesis that our foreign friends, most of whom dwarf us in protective devices, have a preemptive right to our market.

We are aware of the flat refusal of Japan and Hong Kong to agree to negotiations with our Government on this most serious problem. We know the reactions of the Western European countries to Secretary Stans request for negotiations.

I can only suggest to such countries as Japan and Hong Kong that it is in their own best interest to meet with us at the negotiating table. This problem has grown in intensity and proportion. And we in the Congress are not going to permit it to go unresolved for much longer.

Mr. Speaker, I thank the distinguished gentleman from Arkansas for first taking this time during which to make this speech and to thank the gentleman moreover for yielding to me.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Texas.

Mr. MAHON. Mr. Speaker, I do not want to speak at length. I just want to commend the distinguished gentleman from Arkansas for his determined effort to solve the textile import problem. As I see it we must find the solution in the interest of our own textile industry, our cotton industry, and industry generally.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the distinguished gentleman from Massachusetts in order to get back to the Ways and Means Committee executive session.

Mr. BURKE of Massachusetts. Mr. Speaker, I wish to thank the distinguished chairman for yielding me this time.

Mr. Speaker, the distinguished chairman of the Ways and Means Committee has chosen a most opportune moment to emphasize again the necessity of attaining a meaningful solution to the textile import problem.

Like most other Americans, I favor healthy trade relations with all friendly nations. I do not, however, believe that we can afford any longer to be dogmatic about what this means in terms of foreign trade policy. The United States has participated in good faith in numerous postwar negotiations designed to lower tariff barriers and stimulate world trade. These negotiations have resulted in a steady erosion of the protection enjoyed by numerous industries in our manufacturing sector. Meanwhile, our traditional trading partners have developed new and highly effective barriers to our exports in the form of border taxes, administrative controls and positive financial incentives to their exporters who then are able to underprice our exporters in third markets. Most of these trade control devices are alien to American experience and are not to be found in our administration of trade relations with the rest of the free world. Their purpose, of course, is to foster and support adequate and balanced growth in manufacturing.

Yet when the Government of the United States becomes alarmed at the surging growth of textile imports and seeks the cooperation of other governments in the establishment of reasonable controls over the rate of growth of such imports, our leaders are informed that this is immoral and not to be countenanced. Japan has been especially uncooperative in this connection, notwithstanding the constructive and generous attitude the United States has taken toward her economic recovery and expansion since World War II. Thus, confronted with a community of nations in which all other governments accept the responsibility for maintaining balanced internal growth, we are asked to sacrifice one of our largest manufacturing industries on the altar of abstract economic theories to which no one pays any attention except when negotiating with us over our trade policies.

Mr. Speaker, this posture is no longer defensible, and we must proceed with determination to rectify the situation in textile trade before the deepening flood of imports does irreparable damage to our textile industry, its workers, and the communities dependent upon them. We applaud Secretary of Commerce Stans' vigorous and resourceful efforts toward this end and look forward to their success.

Mr. Speaker, again I wish to commend the distinguished chairman of the Committee on Ways and Means for taking this time to emphasize the importance of solving our textile import problem. The efforts of the chairman in this regard are deeply appreciated by the entire textile industry of our country and indeed our country as a whole.

Mr. MILLS. Mr. Speaker, I thank the gentleman for his comments.

Mr. Speaker, I now yield to the gentleman from South Carolina (Mr. RIVERS).

Mr. RIVERS. Mr. Speaker, I want to thank the distinguished chairman of the Committee on Ways and Means for taking this time to do what the gentleman has done today in bringing so forcefully to the attention of the country the problem involving those who are competing with the lifeblood and the lifestream of the second most important industry in America, our textile industry.

The quartermaster general in World War II said that next to steel the most important contribution in the war effort was made by the textile industry.

Over 10,000 items that are indispensable to our defense comes from the textile area.

We have been tolerant and we have been patient with Japan. The time has come for us to speak with authority. The chairman of the great and powerful Committee on Ways and Means has done this today. The way we have proceeded in the past has availed us nothing. I think Japan will get the message today. This is unfortunate.

No nation in the history of the world has gotten defense or protection for the price that Japan is paying for it. We are committed to their security, yet we cannot fly our combatant planes to the aid of our *Pueblo* off the cost of Korea because this would offend, or affect or compromise their national security under our treaty with Japan.

We cannot operate combatant planes to Vietnam because of this arrangement with Japan.

We have given them everything and yet they attack the livelihood of the people of our country and the very life of

our country itself. Why are they unwilling to resolve this important problem?

Japan is No. 2 in automobile production and they are way up in the electronic industry. But I think they will get the message that you have given them in language that they will understand. Secretary Stans is reasonable with his approach—Japan should not force our hand to resort to unilateral action. The question is now in Japan's hands. They can decide our future relations in this vital area.

Mr. MILLS. I thank the gentleman.

Mr. JONAS. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman.

Mr. JONAS. Mr. Speaker, throughout my service in Congress it has been necessary to wage a continuing fight to prevent serious damage to the textile industry from ever increasing imports from low-cost countries abroad. Those of us who have conducted this fight have been accused of being opposed to world trade and of favoring the erection of a high tariff wall around this country to prevent imports. These charges are unfounded. I do not know of a single Member of Congress against whom that charge would properly lie. It certainly would not apply to the spokesmen for the textile industry or to the 2½ million Americans who derive their livelihood directly from that industry or other millions who make a living out of allied industries. All that any of us have ever asked is that the increases in textile imports be limited so that domestic producers may have an opportunity to grow and retain a fair share of the domestic market.

The mere recital of a few statistics should convince any fair-minded person that the domestic textile industry, with its comparatively high labor costs, cannot long survive if low-cost producers from abroad are not restricted in the amount of exports they can send into this country. A few years ago the United States had a substantial textile trade balance but since 1957 this favorable balance has been transformed into a deficit and the deficit is now growing at an alarming rate. At the end of the decade following 1957, the U.S. textile trade deficit had grown to $766 million. The deficit increased in 1968 to $1.1 billion.

The result of this fantastic increase in textile imports has been the closing of many textile plants and the loss of thousands upon thousands of textile jobs. In January of this year the directors of a textile plant that had been operating in my district since 1891 decided to liquidate the operation. This is a mill that at one time gave employment to 1,600 people. It had been completely modernized a few years ago. This mill is now in the process of liquidation, brought about not because it was antiquated but solely because of an inability to continue to compete against low-cost producers abroad. So chalk up one more scalp to a Government policy which seemed to be based upon a willingness to stand by and see this great industry destroyed.

Realizing that some steps must be taken to stabilize this import situation for textiles, last August I sent a telegram to Mr. Richard Nixon, then campaigning for the presidency, pointing out the impact this continuing increase in textile imports was having on the millions of wage earners employed in the textile and related industries, and recommended that he announce a program to restore equity in international trade in textiles and apparel. Others who were aware of the situation sent similar telegrams. I was encouraged when, on August 21, 1968, Mr. Nixon responded in a telegram that received widespread circulation. In it he stated that his policies as President would be:

> I will assure prompt action to effectively administer the existing Long-Term International Cotton Textile Arrangement. Also, I will promptly take the steps necessary to extend the concept of international trade agreements to all other textile articles involving wool, man-made fibers and blends.

The position stated by Mr. Nixon has been reaffirmed on several occasions since his inauguration. He delegated to Secretary of Commerce Stans the responsibility for negotiating agreements with foreign producers to bring textile and apparel imports under control. Secretary Stans has been diligent and aggressive in his efforts to promote such agreements, and within the next day or two he will be meeting with Government officials in Japan, which will be his second trip to that country as a part of his mission, seeking to work out suitable arrangements—not to cut off Japanese exports to this country but to impose some reasonable limitation upon the future growth of textile imports from that country into the United States. Recently I had the pleasure of listening to Secretary Stans report in detail on his efforts and I was most encouraged by his obvious dedication to the cause and by his reasonable approach and presentation of our problems to the principal textile exporting countries.

Unfortunately, this reasonable approach to a very serious problem by Secretary Stans has not produced agreements. As previously stated, another effort is currently under way, and I believe officials of exporting nations would be well advised to meet this reasonable attitude of our Government, as enunciated by Secretary Stans, with reasonable reciprocation. The patience of millions of U.S. citizens, who see their very livelihood endangered if textile imports continue to escalate, is rapidly being dissipated. They cannot understand the attitude of foreign governments in demanding ever-increasing chunks of our market while strictly protecting theirs.

If the reasonable approach to this problem by our Government's representatives continues to be met with stony silence by foreign governments, then I see no recourse except for Congress to take affirmative action to impose mandatory controls. I do not know of anyone who wants mandatory controls. But it is unreasonable to expect the U.S. Government to stand idly by and witness the continued deterioration of an industry that is so vital to so many people and, indeed, vital to the national security of our country.

Recently I have noted reports in the press implying that an all-fiber comprehensive arrangement is unnecessary to the solution of this problem. It is being suggested that we single out specific products and seek import restraints only on those. Such an arrangement obviously would not provide much relief from a situation that is rapidly becoming intolerable.

Mr. Speaker, if there is any one thing we should have learned from our experiences with growing textile imports it is that such an approach as suggested will simply shift the burden of imports from from one article to another and that it will merely shift the supply of imports from one country to another. The only way this problem can be solved is through an all-inclusive arrangement, and it is for this reason that I strongly urge the President and his associates to stand firm against any suggestion that it be dealt with on a piecemeal basis.

Coming as I do from a textile-producing area of the country, I can report that there is growing concern that unless a limitation is placed on the growth of textile imports to this country an entire domestic industry, vital to the strength and security of this country, is going to be damaged severely. I think growth restrictions should be imposed by voluntary agreements but if foreign governments continue to be indifferent to this problem and oblivious to the dangers it poses for the entire U.S. textile industry and the millions of workers employed by it, there will be no recourse left except for legislative action.

As one who fully recognizes that trade is a two-way street, and who acknowledges that we have to be willing to accept some imports if we expect to export, and as the Representative in Congress of an important textile-producing district, I strongly urge the administration to persevere in its efforts to work out suitable overall limitations on textile imports into this country and also urge the foreign governments with whom conversations have been and are continuing to be held to meet our reasonable attitude with a reasonable one themselves. This problem can be solved by mutual agreements and I hope the current efforts to accomplish this will be successful in order to avoid a more drastic approach which will be necessary unless reason prevails.

Mr. MILLS. Mr. Speaker, because there is an executive session of the Committee on Ways and Means in progress right now, I would ask unanimous consent that the remainder of my time be yielded to the gentleman from South Carolina (Mr. DORN) and that he, in turn, be permitted to yield to others within that time.

The SPEAKER pro tempore (Mr. ALEXANDER). Without objection, it is so ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from South Carolina (Mr. DORN) is recognized.

Mr. DORN. Mr. Speaker, I want to commend the great and beloved chairman of the Committee on Ways and Means for recessing his own committee, which is involved in some of the most pressing problems the Nation has ever

faced, to come here in the well of the House today and tell us so frankly and forthrightly his position on this ever-increasing textile-apparel-fiber import problem.

We are all extremely happy about the position that Secretary Stans has taken. I thank he has been one of the finest leaders for the cause of the textile industry and its employees that we have ever had in my 21 years of experience in this Congress. I wish him well on his trip to the Far East today. He begins meeting tomorrow with his Japanese counterparts, and he, too, hopes that this problem can be resolved in a voluntary way.

He recently came before our House textile group, which has been reorganized, with the distinguished gentleman from Georgia, PHIL LANDRUM, who spoke to us a moment ago, as chairman. I am happy to say that the group elected as its vice chairman the distinguished and able gentleman from North Carolina (Mr. JONAS). So it is as it has always been a nonpartisan group.

Mr. Stans briefed us at our first meeting. I have never heard a finer statement, with the possible exception of the statement by the gentleman in the well a moment ago, Mr. MILLS. Mr. Stans assured us that he intends to exert every influence to achieve a voluntary and equitable agreement with our foreign trading partners to limit U.S. imports of textile articles. We wish him every success. But failing in his most reasonable approach, I was delighted to hear the chairman of the Ways and Means Committee say that this Congress at this session would take action. There will be absolutely no alternative.

I would like to remind my colleagues here today that when the distinguished Secretary of Commerce was in Japan several weeks ago, he was met with demonstrations and with a unanimous vote by the Lower House of the Diet opposing any negotiation or any conference whatsoever. I do hope that this time he will find more hospitality and more response.

I will say this, when the Prime Minister of Japan, Mr. Sato, comes here this fall, he will be received cordially and in friendship.

We want to resolve our textile problem voluntarily. But I must repeat what has been said here today, that if not as my colleagues have said before, this Congress will act.

Mr. Speaker, the problem of textile imports from low-wage-paying foreign producers is very real to South Carolina and its people. The textile industry is the predominant industry in our State. Fully two-thirds of the numerical and dollar payroll comes from textile and associated industries in South Carolina.

Some 53 percent of the wage earners in the State are employed directly in textiles, according to the latest annual report of the South Carolina Department of Labor. In addition, South Carolina has a larger percentage of textile workers in its overall industrial work force than any other State. And it has more textile spindles in place and more textile finishing production than any other State in the Union.

As the textile industry goes, so goes the State of South Carolina. The well-being of its economy depends upon a healthy textile situation. And since this is a fact, the people there are becoming more and more concerned—even alarmed and shocked—by the increase in textile imports.

Unquestionably, I think anyone would be alarmed if he felt his savings, his security, and his very future were threatened by some event beyond his control. This is the feeling of the average textile worker of South Carolina. Our textile employees are, however, well aware that the Government and the Congress can take positive action to insure his job security. He is aware that President Nixon and Secretary Stans have provided encouragement and hope for the future by strong public statements that action will be taken.

The losing of a job is a serious matter. It is even more serious for the textile worker, for the nature of the textile industry itself is different.

In South Carolina, for example, textiles have historically served as an agent in getting jobs for those who have no other source of employment, our young people, the displaced farmworkers, and farmers who have been the victim of a changing farm economy. These people, through textile employment, now have a comparatively good paying and steady job, along with an improved station in life. In the past, textiles performed this service for the whites; now it is performing it for the blacks as well.

The losing of a job is a serious matter for the local economy—and ultimately to the national economy. If we suddenly erased the textile industry from South Carolina, we would also erase the estimated payroll amount of $745 million a year that goes to textile workers. And we would erase nearly 60 percent of the wages paid to all the State's hourly paid workers at the same time. Filling stations, retail stores, barber shops, beauty parlors, banks, loan agencies, doctors, lawyers, and virtually every small business in South Carolina depends on textile employment and the textile payroll. Our textile industry is the economic lifeblood of South Carolina.

In South Carolina last year, textile workers spent nearly $162 million for food and related products; $190 million for housing; $60 million for clothing and upkeep; $79 million for transportation; $35 million for medical care; $33½ million for recreation; $16 million for personal care; and nearly $53 million for State, local, and Federal taxes. South Carolina textile workers are large consumers of beef, poultry, household appliances, automobiles, and various commodities from other sections of the country. The specter of 4-day workweeks, curtailment, and unemployment will hurt other businesses and jeopardize job security in other fields.

This Nation has come to know that joblessness in one area can haunt the entire country. Robert S. Small, president of Dan River Mills, Inc., which has corporate offices in Greenville, S.C., recently in a speech detailed the contribution made by textiles to the Nation's economic system. Mr. Small said that the United States needs gainful employment for all degrees of unskilled and skilled employees, and he added that the textile industry is providing steady employment in some of the most needy areas.

Mr. Small pointed out that Negro employment in the textile industry has advanced four times faster than the national average for all manufacturing since 1960. And he predicted that over the next decade the employment and promotion of Negroes and other minority groups by the textile industry will be a vital economic factor affecting the total economy.

The progress made in minority hiring cannot continue, however, unless some action is taken on textile imports. At present, industry figures show, more than 20 percent of the State's textile workers are black. In 1968, South Carolina textile plants employed 1,476 more nonwhite females and 2,098 more nonwhite males than in the previous year.

Not only that, the industry continues to move into the counties of South Carolina where there is a pressing need for industrial jobs. Two textile companies—J. P. Stevens & Co., Inc., and United Merchants and Manufacturers, Inc.—have in recent months announced plans to locate in largely rural sections of the State where job opportunity is lacking.

Mr. Speaker, my Committee on Public Works authorized the Appalachia program. In this session we are continuing this program. This program is designed to provide job security and job opportunity for our people in disadvantaged areas. It is costing over a billion dollars. It is successful; but Mr. Speaker, if we lose 400,000 textile jobs, or any portion of them in the Appalachia region, it will be a tragedy and could not be explained to the American people.

We have also authorized the Coastal Plains Commission which will take in 159 counties in North Carolina, South Carolina, and Georgia which will promote industrial and economic development. These programs cost money and the funds will help those in depressed areas to help themselves. Imports of textiles are threatening these areas and these people who are beginning to have hope.

The textile industry must be permitted to grow if these trends are to be maintained. They cannot, of course, be maintained unless some action solves the inequities of the present trade situation. Secretary of Commerce Maurice Stans recently was quoted as saying that the United States is the only free market for textiles and that imports had increased 300 percent in 7 years, with Japan getting more than its share of the increase.

While Japan has been prospering at the expense of the United States, that country has stubbornly opposed attempts to discuss relief measures. The July 4 issue of Time magazine points out:

> Though the Japanese complain about the injustice of textile quotas, they maintain a closed-door policy at home, shutting out considerable amounts of United States goods and capital.

The magazine goes on to quote a committee of the Organization for Economic Cooperation and Development that—

> No other advanced country confronts the foreign investor with the sort of obstacles presented by Japan.

These are not the only favorable competitive trade advantages enjoyed by Japan. The most obvious one is the wage structure difference between Japanese and American textile manufacturers. As Time stated:

> It is the documented United States business contention that Japan has been flooding American markets with goods made at far lower wage rates than any U.S. company could get away with paying.

Dan River's President Small pointed out that the American textile industry has increased its workers' wages eight times since 1961, and payroll costs, including fringe benefits, have been upped some 60 percent. In Japan—and in every other major foreign textile-producing country—the goods are manufactured at far below the legal minimum in this country. Latest figures show Japanese textile mills pay their workers less than one-sixth the average hourly earnings made by the textile worker in the United States.

In view of such policies, it is little wonder that the people of South Carolina are anxious and concerned.

Secretary Stans and his colleagues are making every effort to meet this growing import problem. His request for negotiations to work out a sound solution to this matter, unfortunately, have met with strong resistance to say the least. However, he has the support of a broad segment of the Congress in his objective, and we shall be prepared to take the steps necessary to obtain the kind of broad, comprehensive restraints on our imports of all textiles as are required to preserve this industry.

I now yield to my good colleague, the gentleman from Massachusetts (Mr. KEITH), who sat with me in President Kennedy's office 8 years ago, when efforts to work out this very problem were initiated on a global scale, and who has been dedicated to its solution ever since.

Mr. KEITH. Mr. Speaker, I thank the gentleman for yielding and I would like to associate myself with the forthright remarks of the distinguished chairman of the Committee on Ways and Means.

Mr. Speaker, 5 years ago I addressed this House on the subject being discussed today. At that time I said:

> The wool and cotton textile industries are at a crucial crossroads. Their ultimate survival depends to a great extent on the trade policies of the Federal Government. This industry, which is the largest single manufacturing employer in the Nation, has seen imports climb 1,100 or more percent in the past 15 years, while exports have dropped by almost half in that same period.

The situation, as outlined today by the gentleman from Arkansas, is, 5 years later, immeasurably more serious. While none of us in the Congress favor the erection of protective tariff walls or wish to see our trade partners excluded from the American market, the time has clearly come to provide some measure of relief for the U.S. textile industry. Thousands of jobs in rural and economically depressed areas are being endangered by the flood of imports. The viability of an industry vital to our national defense is seriously in question. This situation will grow worse if action is not taken in the near future.

Mr. Speaker, the distinguished gentleman from Arkansas is correct in urging our Japanese trade partners to agree to Secretary Stans offer to negotiate voluntary quotas. All of us should join him in this appeal. If no fruitful results are forthcoming from the Commerce Secretary's second trip to Japan, then clearly Congress must act. Unilateral quotas are preferable to the demise of a vital industry.

In a larger sense, however, there is another step which the administration should take to relieve the textile industry. This is to combat inflation more vigorously. Without a stabilization of the wage and price level in the United States, the penetration of our domestic markets and the loss of our foreign ones will accelerate.

Having made these points, Mr. Speaker, I wish to commend the gentleman from Arkansas for his perceptivity and concern in addressing the House this afternoon. The distinguished chairman of the Ways and Means Committee is widely known for his expertise and fairness in trade matters. He would not have made this forthright statement in favor of textile quotas if the situation did not warrant it.

Indeed, none of us would favor further barriers to free trade if the textile industry were not in such a precarious position. All of the growth of demand for textiles in the American market is being absorbed by foreign suppliers. The survival of the industry is now being threatened, and quotas must be established. We hope the textile quotas will be instituted voluntarily. We hope our trading partners will respond sympathetically and flexibly to the problems of our textile industry. But assuredly, action must be taken if we are to preserve a vital American industry.

Mr. DORN. I yield to my colleague, the gentleman from New Hampshire (Mr. CLEVELAND).

Mr. CLEVELAND. Mr. Speaker, I thank the gentleman for yielding. I wish to commend him and the gentleman from Arkansas (Mr. MILLS) and the other Members who have spoken out on this problem today. I think it was particularly appropriate that the gentleman from Massachusetts (Mr. BURKE) pointed out that much of the so-called free trade that we hear so many people talking about is not free trade at all. It is not even fair trade. I think those parts of Mr. BURKE's remarks should be underscored along with the other remarks that have been made here.

Mr. DORN. May I say to my colleague, who serves so ably on the Public Works Committee with us, that you know of the hundreds of millions of dollars that we have authorized for Appalachia and other regional programs throughout the Nation, including the great Ozark area and the Coastal Plains. Yet with 400,000 textile jobs in Appalachia at stake, they turn right back around and let imports from low-wage foreign friends undermine the whole Appalachia program. It seems ridiculous to the extreme, I am sure you would agree.

Mr. CLEVELAND. If the gentleman will yield further on that point, as the gentleman from Arkansas (Mr. MILLS) pointed out in his earlier remarks, one of the reasons why this problem is so intensely important is that these areas of Appalachia the gentleman from South Carolina has talked about and the areas of rural New England and other areas such as the Ozarks which we have been trying to help, are all areas where we find many of the people are dependent on jobs in the textile industry. These are some of the areas so-called poverty programs are aimed at and which they try to help.

The hearings in the committee have shown we could not spend enough money in the poverty programs to get people back to work if these jobs in the textile industry are lost to us.

Mr. Speaker, I would like to now add a few additional comments. Certainly the remarks of the gentleman from Arkansas (Mr. MILLS) are very timely in view of the fact that Secretary Stans is now preparing for his final effort to negotiate these matters in Japan. In this connection, the business section of this morning's New York Times carried an article by Edwin Dale summarizing the importance of Mr. Stans' visit to Japan. I shall include it at the end of my remarks.

Unfortunately, the so-called credibility gap has plagued the affairs of this land so long, that it may well be that our friends abroad will not really believe what we say. All we can do, as Members of Congress, is to stress, in this forum and everywhere else that we can, that we do mean what we say. It is true, as the gentleman from Arkansas (Mr. MILLS) stated, that, if we cannot dispose of this question through negotiation and mutual understanding, the Congress will have to act and act vigorously, effectively, and promptly.

Many of the Members now engaged in this discussion have lived with this problem longer than I, but ever since I came to Congress in January 1963 I have expressed my concern particularly because of the wool manufacturing industry in my district. My efforts to assist this beleaguered and vital industry have been unflagging since that day.

Before closing my remarks, I want to reemphasize my respect for the efforts of the gentleman from Massachusetts (Mr. BURKE) and to salute him for them. He has been immensely helpful to me, and, of course, he is a real champion to the working people as well as the management in the textile industry in his district and State. The success which I am certain we are going to have will be due in large measure to his efforts to bring sense to the arena of free trade.

The point he has stressed and which I think cannot be stressed enough is that few people realize in discussing this issue how absolutely unfair some of the import policies of other countries are against us. The Wall Street Journal today carried an article describing such a situation as

it obtains in Japan. It shows how totally intransigent the Japanese Government has been—and is—and how essentially protectionist their attitudes have been.

I shall offer this article at the end of these remarks also.

I was particularly interested to read of the Japanese situation because I have personal knowledge of a situation in which they have adopted policies designed deliberately—that is the only interpretation which I can make of the facts—to knock out a small but vital industry in our country. If successful, this would leave key elements of the national defense dependent on foreign suppliers, principally Japan. Our investigations, by the way, show that in this endeavor the Japanese may well be guilty of violating the antidumping laws and, through U.S. affiliates, of violating the antitrust laws.

That is a tale to be told in its time, however, and the time is not now. I mention it only to illustrate the strength of the deliberate power which is arrayed against us.

But it must be emphasized that in discussing free trade we should consider whether the beneficiaries of our free trade policies are in fact practicing fair trade.

And, for that matter, how are they treating their labor? How well are they paying the workers, and under what conditions do they work? If trade is to be free, it must be fair.

The above-mentioned articles follow:

U.S. TRADE POLICY IS AT CROSSROADS—FIRST RESTRICTIVE LAW IN 11 YEARS IS POSSIBLE IF JAPAN WON'T CURTAIL EXPORTS—STANS SETS FINAL PLEA TO URGE VOLUNTARY ACCORD FOR RESTRAINT IN TEXTILES AT TOKYO CONFERENCE

(By Edwin L. Dale Jr.)

WASHINGTON, July 27.—United States trade policy faces a potentially major turning point this week—not in Washington but in Tokyo.

If Japanese Cabinet Ministers, as expected, tell their American counterparts that they will not accept voluntary limitation on exports of textiles to the United States, the Nixon Administration may in the end permit, without much opposition, the first seriously restrictive trade legislation in 11 years.

The change of 11 years ago, known as the "national security" clause in the permanent trade law, was vigorously opposed by the importing community and by free-trade groups generally. In practice, it has led only to restrictions on imports of oil, which was its purpose in the first place. Debate continues on whether oil-import restrictions are good or bad.

WIDER IMPLICATIONS

But the new restrictive legislation, assuming it is enacted, could have wider implications. Though its origin is the problem of textiles, it will be designed to handle the import problems—real or imagined—of shoes, electronics and other domestic industries.

The meeting in Tokyo, one of a regular series between the United States and Japan, is not supposed to negotiate anything. But in practice it is almost certain to represent the last try of the Secretary of Commerce, Maurice H. Stans, to solve the textile-import problem by a voluntary agreement among exporting countries. Without Japan, such an agreement stands no chance.

If Mr. Stans comes back empty-handed, as he did on his previous trip to Asia in May, it is probable that he will recommend to President Nixon a favorable attitude toward a sophisticated move, already under way in Congress, to give much greater Presidential authority for import limitation.

Mr. Stans has already submitted a paper to the President. Its contents are not known in detail. The paper aims in general at freer trade—in which Mr. Stans believes—but also suggests what should be done if the initiative for textile import limitations fails.

The move in Congress is being developed by Senator Ernest Hollings, Democrat of South Carolina. A political realist, Mr. Hollings has abandoned his nearly successful attempt of last year to impose, by law, quotas on imports of textiles alone.

Instead he is preparing an amendment—possibly to be attached to legislation as important to the President as the income-tax surcharge—that would do two things.

First, it would change the "escape clause" of present law to make it much easier for domestic industries to obtain relief, through higher tariffs or even import quotas, in cases where imports are rising rapidly and damage can be shown.

Second, it would establish a new Presidential authority to impose import quotas, beyond the present "national security" provision, probably based on a share-of-the-market principle. As far as is known, the Hollings amendment would not be mandatory on the President, but it would be a potent weapon in the textile dispute.

President Nixon, according to available evidence, has not faced up yet to the issue of the Hollings amendment. Mr. Stans is only one advocate, and there may be some on the other side, including Secretary of State William P. Rogers.

TWO SIDES OF PROBLEM

But, after the Tokyo meeting this week, Mr. Nixon cannot long avoid the problem. On the one side will be the "credibility" of Mr. Stans, who has argued to exporting countries that the textile problem is serious. On the other will be the President's clear desire to avoid major clashes with other countries, as revealed in the dispute with Peru over nationalization of the International Petroleum Company, a subsidiary of the Standard Oil Company (New Jersey).

In the background will be Senator Hollings and a Congress—though not outright "protectionist"—ready to listen to the cries of pain of a few domestic industries, led by textiles.

That is why a turning point is at hand in Tokyo, though Tokyo is only the dress rehearsal.

[From the Wall Street Journal]

JAPAN'S TRADE CURBS MAY BE LOOSENING, BUT UNITED STATES SEES FEW CONCESSIONS IN TALKS

(By William D. Hartley)

TOKYO.—There are faint glimmerings that Japan's government and businessmen are taking a fresh look at loosening this country's tightly restrictive trade and foreign-investment policies.

Only a few solid steps in this direction have appeared so far, trade observers say, but there seems to be a subtle switch in attitude. "The Japanese finally are beginning to understand they can't keep the doors closed forever," says one observer. "The outside pressure just is getting too great," adds Yoshizane Iwasa, chairman of Fuji Bank. "Now we are working for more liberalization with a more active attitude."

Still, "active" in Japan trade circles tends to mean "move, but move slowly." Japan isn't about to change policies overnight. By American standards, the Japanese have a long way to go in the direction of free trade.

Nor can American Cabinet officers, who begin meeting here tomorrow with their Japanese counterparts, expect many concessions. At best, one source says, "We might get a few door prizes." Indeed, the American Embassy here has begun stressing that the talks, the seventh meeting of the U.S.-Japan Committee on Trade and Economic Affairs since 1961, shouldn't be considered negotiations.

But beyond conferences, there has been some recent motion by the Japanese toward liberalizing trade, most of it done quietly. The Government in April removed quotas on six items, five of which were sought by the U.S. This public list wasn't impressive. It included such products as color movie film of 35mm. or greater, Bourbon, pet food and cow intestines.

INCLUDE SEWING MACHINES, LIGHT AIRCRAFT

At the same time, however, there were hidden relaxations that hearten traders. Reliable sources say Japan, without fanfare, increased quotas and is allowing more automatic import licensing on a wide range of industrial and agricultural items that have been on the American Government's "must" list for years. Among the food items were citris fruit, particularly grapefruit, which has been an item of high interest. On the industrial side, the relaxations included sewing machines and light aircraft.

"The U.S. didn't get all it wanted," says one source, "but it got quite a bit." Others warn, though, that the Japanese can easily reverse this as, officially, nothing has been done. On the books, Japan still has 120 import categories controlled by quotas, more than any other developed nation. Last week, the government announced it would halve that list by the end of 1971.

Another change, although small, is a recent decision to drop "end-user" information requirement for importers of machinery. This ordered an importer to specify to whom he was selling the item. Critics say it opened the buyer to pressure from government officials to purchase a domestic product instead.

There also are changes in the field of liberalizing foreign investment. The list of industries, in which foreigners can invest currently is unattractive. Ice-making and weaving of silk yarn are classic examples. But the Japanese are running out of dull industries and the next list, expected to contain more alluring areas, observers say.

The recent decision by Chrysler Corp. and Mitsubishi Heavy Industries Ltd. to form a joint venture here is prompting reevaluation of Japan's policy on automobile liberalization. Chances that the venture will be swiftly approved still are slim, but many in government say the move forces the Ministry of International Trade and Industry to speed up liberalization timing.

The ministry wanted to reorganize the local auto industry into two big companies from the half-dozen or so existing before allowing foreign investment. But that has been opposed by the industry and the ministry is having doubts it should push the plan. The apparent attitude now is to set a liberalization date and let the auto makers do what they please.

SAN FRANCISCO PARLEY

Part of Japan's switch in attitude, analysts say, is coming from an understanding that American feelings are stiffening. Many cite a June conference in San Francisco between U.S. and Japanese business figures. In the past, says one American in the Tokyo business community, "American attitude was divided, or disinterested, and not many businessmen did their homework for the meeting. The Japanese always did. This time, they found a unified U.S. business community up in arms and definitely growing opposition. It really set them back on their heels."

The Japanese also are beginning to appreciate the intensity of protectionist pressure in the U.S. Congress, it's believed. When Commerce Secretary Stans was here in May, he told officials there were 365 bills in Congress

aimed at cutting imports. The main hope of the cabinet conference this week, planners say, is to convince the Japanese of the necessity of more and quicker liberalization.

"Before this Congress adjourns, we have got to have some assurance from the Japanese," says Herman Barger, U.S. Embassy Minister for economic affairs. "If we're going to have a chance of getting a liberal trade bill through Congress, we must have a demonstration of trade restrictions around the world being removed."

Japan's other trade partners complain about restrictions, but it's the U.S. reaction that is the most important here. Nearly one-third of Japan's trade is with the U.S. Its favorable trade balance with America was $1.1 billion last year, greater even than exports to the next biggest customer, the European Economic Community. Mr. Barger estimates the trade imbalance this year will reach $1.5 billion.

DISPUTES WITHIN GOVERNMENT

Opinion here isn't monolithic and there are disputes within government over liberalizing. Observers say it ranges from the Foreign Ministry's desire to push liberalization to the Agriculture Ministry's defiant opposition. Most businessmen are stubborn, but some speak in favor of easing rules. "The Japanese business society has come to the opinion that Japan must (raise) the freedom of the economy to the level of advanced countries as soon as possible," says Norishige Hasegawa, president of Sumitomo Chemical Co.

Adds Mr. Iwasa of Fuji Bank: "Japan's economy has achieved tremendous growth in the past few years and our scheduled liberalization tempo couldn't catch up with that growth. But the government is trying to speed up our tempo and therefore we can't understand why the U.S. is demanding our hasty action or it will impose restrictions."

There are many hard-liners, though. This exchange with a senior vice president of one of Japan's biggest electrical corporations is instructive:

"As far as our industry is concerned," the executive says, "we are of the opinion Japan should liberalize because our industry already is enjoying major status in the world."

But when asked if that belief includes liberalizing the import of computers, currently tightly controlled, he responds:

"Oh no. Computers are a young industry in Japan. The industry is still weak. Liberalization wouldn't be good for that industry."

The lesson, analysts say, is that the Japanese dislike competition from outside unless they're more than able to defeat it. Even on an equal basis they accept in the home market only as much as they're forced to accept. Indeed, remarks one man, "All the rest of the world is treated as a Japanese colony, even the U.S., that supplies raw materials and to which it ships manufactured goods." Japan's trade pattern supports the charge. Nearly 88% of last year's imports were raw materials and agricultural goods, barely 2% were consumer goods and the rest was capital equipment.

HOST OF UNWRITTEN BARRIERS

So, cynics charge, even if Japan makes a grand gesture and does away with all quota restrictions, it will require an even greater switch in thinking to free its trade by world standards. Past practice has built up a host of unwritten barriers that hamper imports now and could be used with great effect even with "total" liberalization.

There is, for instance, what the Japanese call "administrative guidance." Major capital investment decisions in Japan often are discussed within an industry and with the government. There is the charge that a desire to buy, say, an American machine tool, is headed off in these discussions. Pressure, which the government denies, sometimes is used on distributors, others charge, to play down the foreign item in competition with domestic goods.

Restrictions take some odd forms. Not long back, an American company selling air conditioners decided to treat its distributors to a trip to the U.S. to see the factory. But the Japanese Fair Trade Commission ruled the trip an unfair trade practice. There have been reports some importers were ordered to license Japanese companies to make an item before they could import the same product.

Tomorrow's economic and trade conference begins with a televised opening ceremony and is expected to end about noon Thursday.

American participants in the conference include Secretary of State Rogers, Commerce Secretary Stans, Agriculture Secretary Hardin and Paul McCracken, chairman of the Council of Economic Advisers.

But, "The Japanese aren't terribly interested in an economic conference as such," says an embassy official. Japanese newspapers are billing this as the "second round" in the Okinawa reversion negotiation and Mr. Rogers is scheduled to talk with Foreign Minister Aichi and Prime Minister Sato on that subject. The first round was Mr. Achi's June visit to Washington. The Japanese are seeking return of Okinawa by 1972.

It's expected that the U.S. may gain from the conference some sort of commitment, though perhaps vague, from Japan to increase its aid to Asian countries. Also, it's understood there may be an agreement to do joint research in transportation and air and water-pollution problems.

The subject of voluntary cutbacks by Japan in textile exports to the U.S. is expected to arise again. Mr. Stans unsuccessfully sought such an agreement in May. The Japanese, Mr. Barger estimates, are more likely to try to fend off U.S. protectionist pressures by yielding on trade liberalization than by cutting their own exports.

Mr. DORN. Mr. Speaker, I thank my friend, the gentleman from New Hampshire (Mr. CLEVELAND).

I yield now to another able and distinguished committee chairman, my good friend, the gentleman from South Carolina (Mr. MCMILLAN), who represents a district in the Coastal Plains area.

Mr. MCMILLAN. Mr. Speaker, I associate myself with the remarks of my good friend, the gentleman from South Carolina, and the gentleman from Arkansas, Chairman MILLS, and the gentleman from North Carolina, and others who have already spoken. I think it is a great tribute to these gentlemen for them to be willing to come here this evening and speak on this very important subject.

Mr. DORN. Mr. Speaker, I thank the gentleman from South Carolina for his remarks.

Mr. Speaker, I yield now to my colleague, the gentleman from North Carolina (Mr. TAYLOR), whose district adjoins mine.

Mr. TAYLOR. Mr. Speaker, I thank the gentleman from South Carolina for yielding, and I commend him on his fine statement. I also commend our colleague from Arkansas for taking this time and bringing this to our attention.

Mr. Speaker, I too am deeply concerned over the import problem faced by the American textile industry and desire to associate myself with all that has been said. During the 90th Congress I was one of 195 House Members to introduce a bill designed to aid in solving the problem.

At a time when the United States is enjoying general prosperity, we find that imports of yarns and fibers and various textile products are displacing the products of American manufacturers and American textile workers. The textile industry has not contributed to today's problem of inflation. While the cost of most commercial commodities has increased greatly since the base period of 1957–59, the price of textile products has decreased by 2½ percent.

The shortened workweeks and layoffs of personnel at textile mills which have occurred in the latter part of 1966 and in 1967 are direct evidence of the effect of imported goods on the American market.

During the last 5 years, imports of manmade fibers increased 144 percent, while imports of manmade fiber fabric and apparel increased 274 percent.

Our textile workers deem it most unfair to suffer from shorter hours and unemployment while foreign low-wage competitors are supplying much of the American market.

In my congressional district, 52 percent of the 51,000 manufacturing jobs are textile-related. More than half of the manufacturing jobs in the State of North Carolina are in textile mills or manmade fiber and apparel industries.

In 1966 textile imports into the United States exceeded exports by $902 million. The overall U.S. balance-of-payments deficit in 1966 was $1.4 billion. This means that the textile trade deficit was equivalent to almost two-thirds of this balance-of-payments deficit. Solution of the textile import problem would contribute much toward solving the balance-of-payments problem that our Nation faces.

The United States has the most modern and efficient textile industry in the world and our workers are the best paid in the world. However, this industry finds it difficult to compete with countries whose textile workers are paid only a fraction of what ours receive.

The textile industry is in deep trouble, fighting for survival against its foreign competitors. Either we get quotas put on imports or many of our mills will close and unemployment in the textile industry will become a national problem. The future of one of our basic and most essential industries is in jeopardy, and we cannot afford to wait any longer for action.

Mr. DORN. Mr. Speaker, I thank my good friend, the gentleman from North Carolina.

Mr. Speaker, I yield now to the gentleman from Georgia (Mr. FLYNT) who has been on every conference at the White House and at the Commerce Department. The distinguished gentleman from Georgia (Mr. FLYNT) is always there.

Mr. FLYNT. Mr. Speaker, I thank the distinguished gentleman from South Carolina for yielding.

Mr. Speaker, I certainly associate myself with the remarks the gentleman has made, and also with the remarks which were made by the gentleman from Arkansas (Mr. MILLS) and the other speakers who have preceded me this afternoon.

Mr. Speaker, I thank the gentleman from South Carolina and the gentleman from Arkansas, together with the others who have set forth, in language which no one can misunderstand, the necessity for working out some kind of voluntary agreements on this very important subject. I do not think any language which has been used here today could be called a threat to anybody, but I think the time has come when we must let the governments of other nations know that we do not consider the American textile industry to be expendable.

I am sure the gentleman from South Carolina will agree with me, as I know he has before—and we have discussed this on literally hundreds of occasions, both in bilateral conversations and in group conversations—that this industry to whose rescue we are coming this afternoon, is as important both in time of war and in time of peace to the American economy and also the American defense effort as any industry in the United States. It is imperative, Mr. Speaker, that this industry remain strong and that it continue to grow and keep pace with the growth of the American economy and the world economy generally.

Speaking not provincially, but speaking as an American first and as a Georgian second, it is not necessary for me to recount the importance of this great textile industry to my own State. It is the largest single employer of Georgians of any industry in our State. In addition to that related industries employ many additional thousands of people.

It means so much to the economy of our State and of our Nation. It could literally be described as the lifeblood of the economy of the State of Georgia because of the employment which it provides.

The textile industry in our State is now undertaking capital expansion to provide additional employment for thousands of additional Georgians.

I certainly hope, Mr. Speaker, that the words which have been spoken here today will be listened to not only here in America but throughout the world, as we do our part to incorporate into voluntary agreements, if possible, the true principles of reciprocal trade. If satisfactory voluntary agreements are not reached, legislation will be necessary.

Mr. Speaker, I believe that the gentleman from South Carolina will agree with me that true reciprocal trade does not include the compounding of an imported surplus on an already existing domestic surplus. Rather, we should create and encourage a reciprocal flow of commerce and trade which will not be detrimental to any nation. Reciprocal trade agreements were never intended to be the vehicle through which any industry could be destroyed or placed in jeopardy.

Mr. DORN. The gentleman is absolutely correct, and has made a splendid statement.

Mr. GETTYS. Mr. Speaker, will the gentleman yield?

Mr. DORN. I yield to my colleague from South Carolina.

Mr. GETTYS. I thank the gentleman, my distinguished colleague from South Carolina.

Today perhaps might mark the beginning of the end of the tremendous textile import problem we have in America.

I want to join my colleagues in wishing for Secretary Stans a successful trip in negotiating a voluntary agreement to limit the imports.

I want to associate myself with the purpose of this special order, and to extend my best wishes and thanks to the distinguished Members of the House who have today expressed the crying need to cure one of the greatest domestic problems we have in this country.

I thank the gentleman.

Mr. DORN. Mr. Speaker, I now yield to my colleague from Maine, who represents a State similar to our Appalachian region, with a lot of small rural towns where the people are largely dependent on this great industry for their jobs.

Mr. HATHAWAY. Mr. Speaker, the textile import problem is affecting the textile industry in Maine and the Nation. Both management and labor are becoming increasingly concerned about the industry-depressing effects of low-cost foreign imports and have turned to Congress for help. Those of us who represent textile manufacturing States are determined to provide relief from excessive import competition for the domestic textile industry. The problems now facing the industry will continue to worsen unless import controls are worked out.

While I am in favor of arriving at voluntary controls through international agreements, I shall insist on legislative means to curtail the ever-increasing flow of foreign textiles to this country.

Maine has more than 12,000 people employed in the textile industry. Production of textile products for defense needs has minimized the effect of imports, but a sharp curtailment of Defense Department orders could deal the industry a severe economic blow. Action must be taken soon to keep the American textile industry from vanishing. The domestic producers must be assured a fair share of the present and future expansion of the textile market. We must not relax our efforts to effect voluntary or legislated quotas for nations exporting to this country.

Mr. STEPHENS. Mr. Speaker, will the gentleman yield?

Mr. DORN. I yield to my colleague from Georgia, who likewise joins our district on the South Carolina side and is tremendously interested in protecting and saving the jobs of our textile people.

Mr. STEPHENS. I thank the gentleman from South Carolina for yielding to me.

It is true, with Congressman TAYLOR on one side of you and me on the other, we all join hands in support of what has been said today.

The statements made by the gentleman from South Carolina (Mr. DORN) by Chairman MILLS and by Congressman LANDRUM are the most forceful ones we have heard on the floor of the House or in any meeting we have had.

I agree, too, with what Congressman FLYNT said about the basic economic factors in our section and in America.

We also ought to emphasize the fact that our textile people are a most integral and vital cog in the defense program of the United States. If we should let the textile industry go by the board, then we shall have failed to provide for the proper defense of America, because of the clothing for our servicemen and because of the clothing for all people who work in every kind of endeavor in America.

I cannot emphasize too greatly the fact that the defense program of America is dependent on the livelihood, well-being, and health of the textile industry.

Mr. DORN. I thank my colleague for an excellent statement.

Mr. Speaker, I yield to my colleague, the gentleman from Georgia (Mr. BRINKLEY).

Mr. BRINKLEY. Mr. Speaker, I appreciate the gentleman from South Carolina yielding to me.

I also rise to join this group and to associate myself with their remarks. I want to add this thought: When the busy season of the textile industry becomes their slow season, we all know that something is wrong. I can see it in my own hometown of Columbus, Ga., and I have heard of it happening in other areas from the discussions which we have had. I am glad to know that further negotiations with Japan are to take place. My hope is that they will be fruitful. If not, the Congress must act.

Mr. DORN. I thank my friend from Georgia.

The SPEAKER pro tempore. The time of the gentleman from South Carolina has expired.

Mr. WEICKER. Mr. Speaker, I ask unanimous consent that I be permitted to yield 15 minutes of my time to the gentleman from South Carolina.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. DORN. Mr. Speaker, I want to thank my colleague for his generosity. I know that these other gentlemen here who are waiting to be heard are indeed grateful to you.

Now, Mr. Speaker, I yield to my colleague, Mr. MANN, who represents the Fourth Congressional District of South Carolina, with perhaps more textile employees in it than any congressional district in the country.

Mr. MANN. Mr. Speaker, I thank the gentleman for yielding to me. Mr. DORN just stole my opening remark, but this session would not be complete without my speaking on behalf of the economy and the population of the Fourth District of South Carolina, which, as he indicates, not only probably has more textile spindles than any similar geographical area in the world but also is the site of the major textile expositions and shows of our country, including the American Textile Machinery show in my hometown of Greenville, S.C., this October. I hope that will be the occasion for the celebration of the completion of voluntary agreements. If it is not, then I join my colleagues in stating that I hope it will be the occasion for our enacting legislation which will accomplish that purpose.

One of the best barometers of the problems facing our domestic textile industry is the fact that capital investments within the industry dropped from $1.1 billion in 1966 to $750 million last year. In spite of this drop in investments, wages have continued to rise. In fact, they have risen 46 percent in the last 10 years, so that the $2.28 per hour wage rate in the United States is well ahead of the $1.33 per hour wage in Great Britain, $0.56 per hour wage in Italy, and $0.36 wage in Japan.

The amount of imports coming into the American market has continued to rise at an alarming rate. For example, manmade fiber imports have risen twenty-fivefold in the last 10 years, and cotton textile imports have risen threefold in that period. The overall value of imported textile goods has risen from $526 million in 1957 to $1.8 billion at present.

Profits in the textile industry, whether measured on sales or percent of equity, lag behind other manufacturing industries. Net profits after taxes, on sales, for 1968 were 3.1 percent, compared with the all-manufacturing average of 5.1 percent. Apparel industry profits are even lower.

The textile industry provides 75 percent of South Carolina's work force with employment, either directly in manufacturing or through related jobs.

All of us in South Carolina are grateful for the efforts being made by Secretary of Commerce Maurice H. Stans on behalf of the textile industry. We hope that his efforts in Japan will lead to a more equitable situation for our textile industry and the people of the United States.

One of the leaders of the textile industry in America is Mr. Robert S. Small, president of Dan River Mills, Inc. In a recent address to the Textile Section of the New York Board of Trade Mr. Small gave a very lucid and informative synopsis of the textile import problem. It is my privilege to present that address for the information of my colleagues at this point in the RECORD:

ROBERT S. SMALL SPEECH TO TEXTILE SECTION, NEW YORK BOARD OF TRADE, JUNE 19, 1969

I had two reasons for choosing as my topic: "Tell It Like It Is". One, it's the "in" thing to do, and if you don't believe me, visit any college campus (providing you have proper escort, of course), or ask your teenage child. Second, when you have the facts as the foundation for your story, why not "tell it like it is?".

Charlie Myers, president of the American Textile Manufacturers Institute, reminded a recent audience of an interesting editorial. The editorial said, in part:

"With its mature economy the United States has outgrown textile manufacturing as an appropriate livelihood . . . The point to remember is that no amount of protectionism can help the textile industry". Continuing, the writer observed:

"Efforts by the President to provide relief for the textile industry are temporary protection against the inevitable day when textiles as a major American industry will not exist."

This editorial appeared in the Washington Post in May 1961, just after the late President Kennedy announced his seven-point program for the textile industry. But shortsighted and ludicrous as the writer's observations were, they brought into focus the pat assumption that textile manufacturing is an easy-entry business, produces commodities so basic, relatively, that a technologically sophisticated and affluent society need not waste its resources, its talents, and energies on producing these things.

This contention is pure hogwash, of course. I'll tell you clearly that if this industry earned its livelihood from producing just basic necessities, the editor of the Washington Post would probably have seen his prediction come true. What he—and many others—fail to comprehend is this; namely, as a society's affluence and technological capabilities grow, its interpretation of needs undergoes evolution, too. Fulfilling a basic obligation to clothe society is almost incidental to our role today. Sure, we do this, but much more besides, and in the process, we not only compete with other textile firms here and abroad, we compete with boat builders, leisure time industries and a host of others. We, like most other industries, are competing for the attention of the rising discretionary purchasing power of the consumer. And in so doing, we have to produce the fabrics and products which suit the life style of a sophisticated, affluent people.

When you come right down to it, there is only one thing basic about the American textile industry—and that is its contribution to the American economic system. Textiles are the mainstream of industrial America! Textiles have a good case to sell to the American public—as mentioned earlier, you members of the board of trade have been our spokesmen in this important market since 1927—let's take a look at our case, both pro and con.

During the past 10 years, sales rose from 14 to 21.5 billion dollars: production increased over 38 percent; and the industry invested almost eight billion dollars in new plants and equipment—which incidentally is 50% of total textile plants and equipment—this is a modern industry!

The textile-apparel industries have 36,000 plants in all 50 states. Today, by any yardstick, the industry is large ($21½ billion annual sales volume), important to the economy (2.5% of GNP), and a significant employer of the Nation's labor force (.03% of the gainfully employed).

However, the full significance of the industry is far greater than these numbers suggest. The chemical industry, for example, depends upon the textile industry for over 50% of its sales volume. The cotton growers depend on the industry to consume most of their output. Moreover, numerous jobbers and middlemen are dependent upon distribution of the industry's products to durable, nondurable, and service industries across the Nation. The products of the industry supply two of the most basic needs of every individual—clothing and shelter. The Nation must have the capability of fulfilling both of these needs by domestic manufacturers in time of war and peace.

In the industrial skill ladder textiles are not at the top, but they certainly are not at the bottom. It would be wonderful if all of our industrial workers were all well-educated and had the potential for the most sophisticated skilled jobs. Clearly, this is not the case—and unlikely to be the case in the foreseeable future. The fact is—and let's tell it like it is—the U.S. needs gainful employment for all degrees of unskilled and skilled employees rather than welfare extension! It needs self-supporting jobs for all, especially in our underdeveloped areas and in our urban ghettos. Consider Appalachia for a moment which is a case in point. In the Appalachian region, embracing 373 counties in several major textile producing States, there are some 453,000 people employed in the textile industry alone. In many of these counties, textiles account for almost all manufacturing employment.

Another case in point is right here in New York City where over 325,000 persons are employed in the textile and/or garment trades.

The fact is we are providing steady, gainful employment in many of our most needy areas. Our theoretical economist would do well to recognize this.

Although textile wages are somewhat below the national average for all manufacturing, with the most recent wage increase just announced, textile wages will have been increased eight times since 1961 and payroll costs, including fringe benefits, upped more than 60%.

At the same time the wholesale price index for textile mill products shows an increase of only .06% over 1957–59. Many important textile items such as carpeting show a reduction in price. The wholesale price index for textile mill products throughout 1968 averaged 100.6 compared to the all-industrial commodity index in 1968 of (109%). Certainly, textiles are not contributing to the inflationary price spiral affecting almost all other consumer products.

How do you account for this tremendous performance? Maybe this way! For the past 23 years, the textile industry has increased its productivity at an average rate of 4.5% per year (which is absolute and does not include inflation) while American manufacturing as a whole has averaged only 2.8%. Somehow this impressive performance by our industry doesn't get the headlines which are accorded to more sensational subjects.

Closely associated with these facts, is the question of equal employment opportunity. The industry has made dramatic progress in recent years, newspaper accounts notwithstanding. It is ironic, indeed, that one of the newspapers which has pontificated regularly about the alleged sins of the textile industry in this regard found its own house was not in order, and that its performance in equal employment opportunity was something less than impressive. It will come as no surprise to you that this publication did not use its own pages to publicize its own shortcomings.

Negro employment in the textile industry has advanced four times faster than the national average for all manufacturing since 1960. While employment ratios vary from company to company and state to state, the textile industry offers unusual opportunities for unskilled Negro employees to become productive and skilled members of the manufacturing segment of our economy.

Since 1960, for example, the number of non-white employees in the industry has tripled, from only 3.3 percent to over 9.5 percent in 1968. It is undoubtedly higher today. In my own company, this figure currently is nearly double that—or more than 17 percent. And in some mills, as many as 50 percent of all new hirings in 1968 were Negroes.

The improving role of the Negro in the textile industry is reflected in both opportunities for initial employment and opportunities for advancement. U.S. Department of Labor statistics show that of the 984,000 production workers employed in primary textiles in 1968, approximately 94,000 were Negroes. This was an increase of 10,000 over 1967.

And, I predict that over the next decade the employment and promotion of Negroes and other minority groups by the textile industry will be the most important single economic factor effecting our total economy during this period. We will provide this opportunity as no other industry can.

Against this background of achievement, progress, and economic contribution to our nation's welfare, the future contribution of this vast industrial complex is being besieged by a steadily growing flow of low wage imports.

Let's take a realistic look at this import picture—

In 1968, textile imports exceeded 3¼ bil-

lion square yards. This left us with a textile trade deficit last year of $1.1 billion and the gap grows wider every year.

Worship at the altar of free trade has become one of the rituals of our age. Prominent among the worshippers—to mix metaphors—are those whose ox has not been gored by imports. But free trade simply does not exist. There is nothing free about trade unless the rules are the same for everyone. And this clearly is not the case. In this imperfect world, it is not likely to be in the future.

It is high time that some responsible economist or government official addressed himself—honestly—to the subject of so-called free trade.

There has never been free trade among independent nations—there is none now. Cordell Hull at least addressed it for what it was intended to be when he fathered our present trade policy with the "Reciprocal Trade Act of 1934". Reciprocal was the word then and the intent then. It should be now!

Somehow over the intervening years, we have lost the drive for reciprocity and have allowed our trade policy to be dubbed "free trade", by certain elements of the press and the professional economic fraternity. "Free trade" has become an unimpeachable clarion call, such as the Bible, the Bill of Rights, or motherhood. No man can question it, much less condemn it—except to risk castigation as an irresponsible profligate advocating the utter ruin of the world—not just the United States. But let's face it, there are circumstances when even motherhood is not the most desirable condition.

President Nixon has also seen fit to describe his trade policy as free trade. And, I hasten to add, I for one, believe there is no creditability gap in the White House. But why doesn't someone say it like it is and affirm a policy of organized trade!

Organized trade is flourishing in the world today and our trading partners recognize it as such. Our trade negotiators were astonished to learn last year that all of the members of the E.E.C. had secret import quota agreements with the Far Eastern countries, including Japan—and had had them for several years.

Before the so-called Kennedy round of tariff reduction agreements of 1967–68 were even begun to be implemented, our trading partners in Europe were increasing border taxes, custom duties and other trade impediments, in some cases by more than the tariff reduction.

Here are just a few of the hidden trade restrictions which exist among the so-called developed trading nations which to this date have been non-negotiable: Border taxes, custom duties, transportation tax, added value tax, import licenses, trading associations, government subsides, downright embargoes. I'm sure there are many more.

Now, let's speak specifically about Japan—

The arrogance of Japan in refusing to discuss quota restrictions on wool and manmade fabrics with the Stans' Mission last month is incomprehensible. If the facts were known, Japan, the free world's second most advanced country economically, is probably exporting directly or indirectly to the United States well over 35% of all imported goods, and possibly as much as 50% of manmade blends.

Do you realize that Japan is running a surplus trade balance with the U.S. of over $1 billion annually?

Do you realize that while Japan ships into this country over a billion yards of cloth annually, yet Japan effectively embargoes U.S. cloth from her market? What kind of reciprocity is that!!

Do you realize that Japan, a mature economic nation, pays her textile workers less than 40c per hour? And, in addition, frequently subsidizes her exports—by our standards both illegal—yet, our textile workers lose their jobs while our Government tolerates an ever increasing percentage of these imports.

Do your realize that Japanese have 100% owned textile plants in this country, yet U.S. textile firms are forbidden ownership in Japanese textiles?

Do you realize that Japanese manmade fiber producers are constructing or have constructed plants in Korea, Taiwan, Thailand, Indonesia, and are looking at the Philippines—in some cases aided and assisted by the Japanese Government?

Secretary Stans went to Japan, pointed out the fact that the U..S. was the only free market in the world for textiles, that imports of textile products had increased 300% in six years, and that Japan had gotten more than her share of this increase.

He indicated Japan would not be asked to reduce its exports to the U.S. but in addition would be allowed to participate in the annual anticipated growth of the U.S. market. All he asked was that Japan join with the U.S. and work out some orderly organization of this textile trade—he didn't even suggest that Japan lower her barriers to the U.S. textiles.

What did he get? An insulting rebuff. Responsible textile officials refused even to meet with him. No high American official in recent years has been treated so discourteously by Japan—a country, as I said, enjoying a fat trade balance over one billion dollars and whose budget for defense in effect is paid for by the American taxpayer.

There is a question of equity and fairness involved in the textile situation. What we are talking about is simply this. Must the U.S. carry almost the entire burden of reciprocity when it comes to the textile industry?

Less developed countries have been singled out as being readily adapted to the production of textiles. Consider the situation of 19 less developed countries in Latin America and Asia. In 1967 these countries had a favorable balance of trade in textiles with the U.S. of $318 million dollars. On the other hand, the E.E.C. countries with an aggregate population equal to the U.S., sold $50 million more in textile products to these 19 less developed countries than they bought from them. In the case of Japan again, that country had a favorable textile trade balance of $211 million with these same less developed countries.

In other words—and putting it bluntly—the U.S. is on the short shaft of both the developed and underdeveloped countries—and the shaft is sharp, not blunt.

In spite of these problems, whatever an American does or wants to do—go to work, drink cocktails, ski at Aspen, cruise the Bahamas, take a bath, camp at Jackson Hole, dance at discotheque—we provide him with a selection of products and a selection of prices.

The choice of textile products today is literally unlimited. When one considers what technology and fashion have accomplished with just three basic weaves of textiles, it's truly amazing.

The Bureau of Census publishes periodic production figures on more than 350 different variations of the basic weaves. When you count the blend possibilities of at least 14 generically different fibers, including cotton, manmades, wool and silk, we already have a near-infinite number of basic fabric possibilities.

Now add to this the more than 100 chemical and mechanical finishes—consider the fact that there are somewhere between 40,000 and 50,000 different printed fabrics in retail stores at any one time—bear in mind that the Bureau of Standards lists five million conceivable color possibilities for textile products—then consider that clothing design by itself offers virtually unlimited possibilities to the consumer.

All told, it's not difficult to conclude that every man, woman and child in the United States could easily be provided with a complete wardrobe—and no two garments would be exactly alike.

We are going to continue to offer to the American consumer exciting new products to stimulate the imagination and satisfy the demands of the world of tomorrow—we have every intention of meeting the obligations imposed on us by a changing economy and a viable social structure. We have done so in the past; we can do better in the years ahead, it is our purpose to do so.

We refuse to be tolerated or written off by the Washington Post or any other simplistic theorists who have deluded themselves into believing that textiles is a simple, elemental industry.

This industry is an integral factor in the Nation's complex economic system. We are an important and vital contributor to all facets of our national life. We will strain our talents and resources to assure this continues to be true. We insist we be recognized for what we are and what we do, and are ready to do combat with those who would cast us in a lesser role.

Gentlemen, that's telling it like it is and like it has to be!

Mr. DORN. Mr. Speaker, I thank my colleague from South Carolina. You have a good many people in the Appalachia region who are associated with the textile industry and who are living in small rural areas. Their jobs are being threatened by unfair, low-wage imports. There is no question of excessive textile imports keeping us from maintaining a vital economy in the gentleman's district.

Mr. PREYER of North Carolina. Mr. Speaker, will the gentleman yield?

Mr. DORN. I yield to the gentleman from North Carolina.

Mr. PREYER of North Carolina. Mr. Speaker, I appreciate the remarks of the distinguished gentleman from Arkansas, Mr. MILLS.

I want to say thank you on behalf of the textile workers and on behalf of the grocery store operators, the filling station operators, and the school teachers of North Carolina to Chairman MILLS and the other distinguished gentlemen who have spoken today about the textile problem. In short I am expressing the appreciation not just of the textile industry but of the entire economy of North Carolina and of the South.

I believe it is an unchallenged fact of American history that our section of the Nation has traditionally supported a foreign policy that encouraged the participation of the United States in efforts for international cooperation.

We understand that trade has an important role to play in bringing the nations of the world together and that the United States accepts a large amount of textile imports in the interest of world trade. We cannot, however, allow other countries to prosper at the expense of our own domestic textile market, and thereby create additional economic problems in a part of our country only now realizing the profits of the industrial revolution.

The distinguished gentlemen who spoke before me gave you many alarming facts concerning textile imports. It is evident that restraints must be levied against rising imports in order that the best interests of our own domestic market be protected. What is needed is a new

international arrangement which would make possible these restraints. Japan, Hong Kong and other textile importing countries are going to have to agree to negotiations concerning this problem or this Congress will be forced to act out of necessity.

I would prefer that we achieve this protection through negotiation rather than unilateral action. That would be better for the country and better for the free world. It would certainly be better for the South. But I agree—if not soon that way, then Congress will have to act.

One statistic alone should be enough to convince us of the imperative nature of our need. That was cited by my friend and colleague from North Carolina (Mr. JONAS) an increase in the U.S. textile trade deficit from $766 million 10 years ago to $1.1 billion last year.

This is not just a selfish one State or one region interest. Our national welfare requires that the problem be resolved quickly and effectively.

Mr. DORN. Mr. Speaker, we are grateful to the gentleman from North Carolina for pointing up how the textile import problem affects virtually every business and every school in our area. There is a school district in my own congressional district where the tax revenue generated by a newly established textile plant helped so tremendously that they were able to erecte the new schools that they had long needed. In fact, the tax revenue produced by this plant made possible the erection of the first air-conditioned high school in the State of South Carolina. Now, however, increasing imports of textile articles jeopardize the future of this plant and in fact the fundamental economic base of my district and State.

The gentleman is absolutely correct. This means so much to education and to all segments of our economy in moving our Nation and particularly our area forward.

Mr. Speaker, I do want to say that the only real solution to this recurring problem is a multilateral agreement to limit a reasonable degree imports into the United States. No form of a one segment agreement will work, but it will take a multilateral agreement which will cover all categories; cotton, wools, blends, manmade fibers, and all other categories of the textile industry.

Mr. RIVERS. Mr. Speaker, will the gentleman yield further?

Mr. DORN. I yield further to my distinguished chairman of the Armed Services Committee who made an outstanding statement a moment ago that I believe will go around the world because he knows, perhaps, more than any man in the United States that our Armed Forces, that our space program and everything that we are engaged in with reference to the strength of America is dependent, next to steel and gunpowder, upon the textile industry, food and fiber.

Mr. RIVERS. I want to thank the gentleman from South Carolina. I want to thank the gentleman for carrying forward the cause of our textile mills.

Mr. Speaker, the gentleman from South Carolina (Mr. DORN) has kept our textile group together. He has given tremendously of his time, his wisdom, and his great experience. I think he has helped today to focus upon the activities of Japan and our other textile competitors the question of whether or not our friendly relations in this area will be affected or will the Congress be compelled to unilaterally act in this area which we strive to avoid.

I agree with the necessity of Secretary Stans and all who have been elected and selected to represent us at the varying places throughout the world on this subject. This is the only man who in my opinion has talked since so that I as a layman can understand what is going on.

It is my further belief that the message today will go forth since I have heard the distinguished gentleman from Arkansas (Mr. MILLS) speak as well as these other giants of the Congress in warning as to what may happen if this admonition is not heeded.

Mr. Speaker, I wish to again thank the gentleman from South Carolina who has done such a magnificent job for the State of South Carolina. The Nation is proud of him.

Mr. DORN. I want to thank my beloved and distinguished colleague, the chairman of the Armed Services Committee of the House of Representatives of the United States of America.

Mr. HAGAN. Mr. Speaker, I join with the Honorable WILBUR MILLS and many of my other colleagues in the House today to express my concern over the problem of textile imports into the United States. This is a matter of great interest not only to the Congress, but to the administration and virtually everyone in the U.S. textile industry.

The situation was brought to surface during the present administration when the President was touring in Europe earlier this year. Suggestions to curb the situation have been met with strong resistance by countries involved. With almost one-half of our Cabinet in Tokyo for meetings this week which will no doubt include the subject of textiles and with meetings to be held in other countries at a future date, everyone will be anxiously waiting to see if agreements can be met to provide a basis for fair and orderly participation by all nations involved in the U.S. market.

Looking at the overall import problem of textiles, those opposing import limitations declare that the industry has experienced a few good years, but by the same token, they concede that the problems of the present and the future do not resemble those of the immediate past. In effect, they have admitted there is a "serious import situation" in certain man-made fibers.

Apart from whatever economic justification can be made, the continuing requests for comprehensive quotas rest ultimately on the Congress if voluntary, quantitative restrictions cannot be negotiated at these meetings.

Textile imports have continued to move upward, and sometimes the flow has been tabbed at a very substantial rate. At stake are our balance of trade and our economy.

Because these countries have not placed voluntary restrictions on their exports, and because the textile import problem grows progressively more serious, several of us in the House and in the Senate have introduced import control legislation during the 90th and the 91st Congresses.

Some protections of the items not covered by the Long-Term Agreement for Cotton Textiles must be found and hopefully, this Congress will seize the opportunity to stem the tide of imports if the representatives of the foreign governments and industries cannot come to agreements with our elected officials.

Mr. ULLMAN. Mr. Speaker, the distinguished chairman of the Ways and Means Committee, the gentleman from Arkansas (Mr. MILLS) has again directed the attention of the House to the urgent need for an all-fiber solution to the import problem facing the U.S. textile industry. I applaud his initiative, and I reaffirm my position that a legislated solution to this problem will be necessary if the cooperation of other principal textile producing nations in achieving a negotiated solution is not promptly forthcoming.

I am concerned about the impact of wool textile imports, which have risen to 26 percent of U.S. consumption, approximately double their 1961 level. I am also concerned by the rapid rise in imports of manmade fiber textiles.

Secretary of Commerce Stans is now in Tokyo, where I understand he will this week renew his efforts to persuade the Japanese Government to agree to participate in the negotiations of an international arrangement on trade in wool and manmade fiber textiles. It is timely, therefore, that we review U.S. trade relations with Japan, particularly textile trade relations.

Between 1961 and 1968 Japanese exports to the United States of woven wool fabrics grew from 15 million square yards to over 49 million. Japan accounted for 76 percent of the increase in woven wool fabric imports into this country during that period. In the process, Japan increased its share of total U.S. imports of such cloth from 35 percent to 56 percent.

Japan has enjoyed for years the highest economic growth rate of any major country in the world and is now the second ranking manufacturing power outside the Communist bloc. The United States has contributed vitally to this remarkable achievement by technical and financial assistance following World War II, by opening our markets to Japanese exports and by tolerating Japan's restrictive trade policies regarding manufactured imports and foreign capital investment.

The importance of U.S. imports to Japan's manufacturing-oriented growth strategy—manufacturing accounts for about 30 percent of her gross national product and 87 percent of her exports—can be seen in 1967 statistics that show we absorbed fully 34 percent of her total manufactured exports. Japan's natural market area, the rest of the Far East, accepted about 33 percent of her manufactured exports, with the remaining 33 percent divided among the rest of the

world's nations. Total U.S. imports from Japan, overwhelmingly manufactured, more than tripled between 1961 and 1968 alone and exceeded $4 billion last year.

I am certain most Americans are pleased that we have been able to assist Japan in her postwar recovery and expansion, although they might have preferred to see other prosperous countries bear a more equitable share of the burden. But we have arrived at a situation in which the growth rate of Japanese exports to the United States, and in particular their concentration in textiles, is beginning to generate serious economic and social problems for this country. The gravity of the situation in textiles is such that we cannot afford to accept Japan's refusal to negotiate a solution.

Development plans recently published by the Japanese Government call for maintenance of an average annual real GNP growth rate of 12 percent between now and 1980. These plans depend to a unique degree upon growth in manufactured exports.

As sympathetic as I am to Japanese aspirations, we must not sacrifice our domestic textile industry—hence our domestic wool producing industry—so that Japan's Gross National Product will grow at a fantastic 12 percent per year.

We cannot sacrifice our textile industry and its workers on the mistaken assumption that we are helping a poor, developing nation. Japan is a developed, formidable industrial power. It is true that real incomes for the masses are low in Japan, notwithstanding its remarkable postwar growth, but this is because Japanese policy has kept them low, not because the country is poor or underdeveloped. Japanese planners and industrialists have chosen to channel 30 percent of her gross national product into capital formation rather than to permit more rapid expansion in consumption per capita. That is why wages are low.

Japan, of course, is free to determine how its economy is to evolve in the future, as well as how the proceeds of rapid growth are to be divided between workers and other income claimants. But Japan cannot expect the Government of the United States to stand idly by while its own essential textile industry falls victim to the effects of the export calculations upon which that nation's ambitious growth plans are clearly based, we have a right to expect the cooperation of the Japanese in solving this problem. Otherwise, the Congress must act—promptly and decisively.

Mr. GRIFFIN. Mr. Speaker, I commend the gentleman from Arkansas for initiating a discussion in the House on problems associated with textile imports.

Twenty-two percent of all manufacturing in Mississippi is in the apparel industry. Close to 40,000 families depend upon a strong apparel industry to provide economic necessities of life for themselves and their families. It is to be hoped that early, reasonable, and adequate solutions can be found to the ever increasing problems of imports of textile products. Otherwise, severe unemployment and more depressed areas are in prospect.

Mr. BURLESON of Texas. Mr. Speaker, the warning from our esteemed colleague from Arkansas on the critical situation in which we find our international trade cannot be overemphasized.

I would like to take just a moment to express my wholehearted support for the concern expressed by Representative MILLS, and illustrate just a bit of my concern for this situation.

Day by day we are finding our industries suffering more and more from the import of low-wage-level products. Of very serious concern to me and to my many fine constituents in Texas is the rapidly growing threat of unchecked imports of apparel and textile items.

Apparel manufacturing is a significant economic factor in my State of Texas. We now have nearly 57,000—56,600—apparel workers whose annual income is some $205 million. This employment, incidentally, has been increasing steadily since 1965, when we had 47,000 apparel workers.

There are numerous apparel industries located within my congressional district. Although not extensive, they are highly important to the economy of the area and, of course, to the employees of the industry.

Just to the southwest of my district is the city of El Paso, nestled in the foothills of the Rockies. Here is one of the major apparel producing areas in the United States. The apparel industry there is also a major employer of minority workers. It is significant to note, too, that nationally the apparel industry is a consistently greater employer of minority persons than most other industries. Last year, the national average for nonwhite workers in the manufacturing industries was at 9.7 percent. At the same time, however, the apparel industry's nonwhite employment stood at 12.7 percent considerably above the national average.

Mr. Speaker, we just simply cannot afford to lose an industry such as this that offers the low-skill threshold entry opportunity such as the apparel industry offers. This is the stark reality we face if the continued, unchecked growth of textile and apparel imports, particularly in wool and manmade fibers, is not governed by an orderly access arrangement whereby we can share the growth or decline in our markets with the developing nations of the world.

You know, Japan now enjoys the second largest gross national product in the free world, yet takes only 2 percent of the apparel exports from the developing countries of Asia. The United States takes 75 percent of these exports.

We are also talking about an industry that is doing much to alleviate the increasing unemployment in our other major underdeveloped area here in this great country—the core city. Just as in Texas, many of our Nation's apparel manufacturers are able to locate in rural areas, offering employment to individuals who might not otherwise be able to contribute to a family income. Offering this employment in the rural areas has a decided effect on the concentration of unemployed in our core cities, and the competition for available employment. Incidentally, these plants, modern in design and landscape, do not pollute our air, nor our vital water resources.

Just as an aside, I might point out that our two great cities of Dallas and Houston are now known as major fashion centers in this country, thus giving the apparel industry even greater emphasis in the Southwest.

Again, let me congratulate Representative MILLS and others for their very significant leadership in expressing our concern over the present international trade situation. I am confident that Commerce Secretary Stans enjoys overwhelming support for his position that any agreement in the apparel and textile import area must be for a total arrangement. Such an agreement must cover all fibers, whether natural or manmade.

The apparel-textile complex is an extremely vital segment of our industrial sector and we cannot afford the luxury of allowing it to decline.

Mr. ANDREWS of Alabama. Mr. Speaker, this Nation's strategic textile industry is facing a grave crisis in the form of foreign textile imports. Action must be taken now to save this vital industry, which time and time again has demonstrated its importance to our national defense and to the 2.4 million workers that it employs.

It is ludicrous to think that our American textile producers can compete with low-wage textile-exporting nations. We can no more force Japan to raise her industrial wage standards than we can force her to give us military assistance in Vietnam, where we have been fighting for the defense and indeed survival of a free Southeast Asia.

While our own Government requires our textile industry to pay the minimum wage, $1.60 per hour, it circumvents its own law by permitting a flood of textile imports, made with labor that is paid 15 to 30 cents an hour, to come into this country completely unrestricted. In other words, our Government is permitting foreign goods, made by cheap hourly labor, to put out of work the people the minimum wage law is supposed to protect.

In fact, all textile imports would be in violation of our U.S. statutes were they made here, because it is illegal to ship manufactured products from one State to another that are made by people who are paid less than the legal minimum wage.

Despite the fact that the textile industry operates with unmatched efficiency, has ample capacity to supply the needs of this country, and sells at prices less than they were 20 years ago, over 2 billion yards of imports caused mills in this country to run short time in 1967.

What we can and must do to protect our own industry and our own workers is limit textile imports from foreign nations that threaten to wreck this important segment of our economy.

It is easy to see the disastrous effect cheap foreign textile products are having on our domestic industry. This Nation imports about $800 million more in cotton, wool, and synthetic fibers than we export. This is a textile trade deficit that we can no longer ignore.

The dilemma facing textile manufacturers across the Nation was evidenced

recently when following a general wage increase that added about 6 percent to present wages, an Alabama manufacturer told one of his big customers that the wage increase would mean a slight increase in the price of knitted tee shirts to him. Whereupon, the customer declared that he would not consider paying any additional price increase at all and would buy his goods from the Japanese where he could get them cheaper. The loss of that customer meant that half a million dollars left my State.

The Secretary of Commerce has admitted that the worsening situation could mean the loss of some 600,000 jobs. Many of these jobs are being filled by the disadvantaged and unskilled, for whom the Federal Government has committed itself to spend millions of dollars. Are we to surrender our textile market to Japan and throw American men and women out of work for the sake of some political or diplomatic gratuity? To do so would be unthinkable and tragic.

Our textile industry can never hope to fulfill the vital role of employing the unskilled if it is forced to compete with the unregulated flow of imports from countries whose access to this market depends almost exclusively on the fact that the wages paid their textile workers would be intolerable in this country.

Our efforts at orderly trade in textile articles have been unsuccessful so far, since negotiations with Japan have produced an unwillingness by that country to agree to voluntary quotas. Of course, being rebuffed by foreign nations is certainly no new experience for the United States. Everyone wants the American dollar, and we have been ridiculously generous in the past, but no one wants to reciprocate.

It appears that voluntary limitations will not be adopted, based on the Japanese attitude to date. Therefore, mandatory quotas must be set for the essential protection of the American workingman and American industry.

Mr. Speaker, I know well the contributions of the textile industry to my State. It is the second largest industry in the State of Alabama, employing 42,200 people, and this year their annual wage will climb above the $200 million mark.

Textile men have been among the outstanding citizens, civic and government leaders in my district and State. They span the course of history, providing the canvas sails of the clipper ships in the commercial fleet of the United States soon after the War for Independence and now providing some of the latest textile needs for the Nation's space program.

This industry is essential to my State and to our national economy. I shall not stand by while hardworking American men and women are pushed aside and a great and valuable industry is given back-seat treatment for the sake of contributing to the economic boom of some foreign nation.

Mr. BLATNIK. Mr. Speaker, I would like to take this opportunity to express my appreciation to that great and able Representative from Arkansas for his very knowledgeable and authoritative remarks concerning our international trade situation. Let me assure you that we all share in your deep concern relative to this gnawing and growing problem.

One of the critical problem areas, of course, concerns the import of apparel and textile items. I would like to take just a moment to illustrate the importance of this vital industry to the economy of my area, and to the economy of a vast share of our great country.

Employment has been a chronic problem in my district due to the continuing depletion of the high-grade natural iron ores. Fortunately, the apparel industry has been able to move in and offer employment to many of these wonderful people who otherwise would be facing a serious employment crisis.

The apparel industry has been able to offer a similar economic uplift to other depressed areas of our country. The vast Appalachia area, for instance, stretching through a significant sector of our country, has felt the economic gain from this vital apparel industry. In this area, 25 percent of the manufacturing workers are in the apparel-textile industry. This is an industry which can provide jobs to relatively unskilled or semiskilled workers. Training can be done on the job after the person has been hired, and high educational levels are not needed for the majority of jobs in this industry.

This means that the apparel industry has also been able to offer a source of employment to another underdeveloped area—that of our core cities, where we have traditionally had the highest unemployment rates among the many minority groups. In the apparel industry, nonwhite employment runs consistently higher than the national average for manufacturing industries. In 1960, apparel employment of nonwhite workers was 11 percent, compared with the national average of 7.6 percent. In 1968 nonwhite apparel employment had grown to 12.7 percent, compared with the national average of 9.7 percent. Nonwhite employment in the apparel industry in 1968 is estimated at 180,000.

According to the Bureau of Labor Statistics, nonwhite employment for the first quarter of 1969 was running at a rate of 10.6 percent for textiles and 13.5 percent for apparel, or some 23,000 jobs ahead of last year.

These national figures, however, show only a part of the picture. The new hires in many individual firms are running as high as 40 to 50 percent.

Are we to allow these vital job opportunities to be sluiced away to oblivion because foreign imports from low-wage countries force our manufacturers out of business, or constrict their expansion plans?

Let me again urge each of you to heed the warning expressed so eloquently by the distinguished chairman of the Ways and Means Committee, the gentleman from Arkansas (Mr. MILLS). Unless an equitable international arrangement, covering the import of all major fibers and apparel is effected, the apparel-textile industry cannot make plans for growth, plans to hire more people, start up new plants, or enter the new areas where reserves of unemployed people are waiting to work. We cannot and should not settle for less.

Mr. FISHER. Mr. Speaker, as Representative of the principal woolgrowing district in the Nation, I have for years worked with my colleagues from fiber-producing and textile areas to provide some relief for the U.S. textile industry from the increasing disruption being caused by foreign imports.

I have seen wool-textile imports double their share of the U.S. market in the 8 years since the Government's textile program was initiated, with no sign of an abatement in the upward trend. And I am concerned, not only for the welfare of the textile industry and its employees, but because the woolgrowers of the United States have no market other than the wool manufacturers of this country.

As a member of the Armed Services Committee, I have been acutely worried over the erosion of the potential of our domestic wool-textile industry to meet essential defense requirements in the event of a national emergency. As Col. Robert T. Stevens, former Secretary of the Army, recently pointed out:

> In my considered opinion the American woolen and worsted industry as presently constituted is incapable of producing the huge quantities of fabric for military, medical and essential civilian use that would be required during any all-out emergency. I have testified to this effect before Committees of Congress. We have to turn the industry around pretty quickly if it is to survive as an important segment of the economy. The most vital step that can be taken is to put some rule of reason into effect now with regard to wool textile and apparel imports. Our national security is deeply involved in this situation. Suppose we had to fight in a temperate or cold climate. Are we going to rely on Japan for our uniform fabric? I don't think that is the desire of the Congress or the American people.

Congress has wisely declared that production of wool is essential to the security of the United States, but the security value of wool depends upon the existence within this country of capacity to manufacture it into usable textile products.

So, Mr. Speaker, I have been encouraged by the determined efforts of the present administration to deal effectively with the textile import problem. Secretary of Commerce Stans has our wholehearted support in his continuing attempt to negotiate an international arrangement on trade in wool and man-made fiber textiles. Secretary Stans, in an address in Tokyo on May 13 of this year, explained that—

> (1) The United States is the only remaining free market for textiles among the major nations of the world. All the others have imposed restrictions of one kind or another on imports. The United States just cannot absorb the entire potential output that all the producing nations can deliver. Isn't this understandable?
>
> (2) If this problem is worked out promptly, no jobs need be lost in Japan or anywhere. We are willing to allow all producers to share in the growth of our market. All we seek to do is to stop a growing wave of imports that will deluge our markets and bring catastrophe to our industry and its workers. Isn't this reasonable?

Therefore, we seek an international un-

derstanding on textiles. In view of the circumstances, we regard such an accommodation as necessary to preserve the overall thrust of our policy toward freer trade. An exceptional circumstance does not deny the major premise in open markets.

If Japan and the other major textile-producing nations of the world fail to heed the Secretary's words, a responsible U.S. Congress will have no alternative but to do so.

Mr. WILLIAMS. Mr. Speaker, in 1968, the importation of textiles reached an alltime record of 3.2 billion square yards. This is twice the yardage imported in 1964. This means that 1 out of 4 yards of textiles purchased in 1968 was imported. The impact of this on persons employed in textile and apparel mills is most serious. At the present level of importation, 200,000 jobs are being displaced annually because of the increase in textile imports. The trade deficit in dollars is $1.1 billion, which quite obviously has been damaging to our balance-of-payments situation.

The flood of imports must be brought under control. They are not entering the United States because foreign textiles are any better, for America manufactures the best textile products. They are entering this country because they are made at wage scales and under working conditions which would be illegal in this country.

Everywhere we turn we hear pleas for welfare programs to help this or that segment of our society. By bringing under control the burgeoning increase of textile imports, this Congress has an opportunity to help and protect a large group of hardworking Americans who are being unnecessarily oppressed by these low-wage imports.

Mr. FULTON of Tennessee. Mr. Speaker, I wish to associate myself with the remarks of the distinguished chairman of our Committee on Ways and Means. As usual, he has placed the issue in its proper perspective. I would hope that the representatives of our Government and, in particular, the representatives of the Government of Japan will take note and act accordingly in their deliberations in the joint United States-Japan economic ministerial meeting tomorrow in Tokyo.

The statistics on imports of textiles and apparel into the United States, particularly in recent months, make crystal clear the growing threat hanging over the heads of the textile companies and their workers. The rates of increase in imports of textiles and apparel can no longer be ignored or explained away by appeals for consistency in trade policy or sound international relations. For what is at stake is the maintenance of a sound and viable textile economy and just as important, continuation of textile and apparel production and jobs in literally hundreds of small communities throughout the country.

I believe the chairman is right in that congressional patience is wearing thin with continued delay on the part of the executive branch in reaching agreement on wool and manmade fiber textiles and apparel. Congressional patience is even more sorely tested by the intransigence of the Japanese Government, its textile industry, and those in Europe who continue to oppose a reasonable solution to the textile problem.

There seems to be a lack of appreciation that individual Congressmen must be responsive to the threat posed by the rising tide of textile and apparel imports. In my district, I have one of the larger manufacturers of work clothes. Even under the International Cotton Textile Arrangement, imports have poised a larger and larger threat to the health of this operation. Should some reasonable degree of import control on apparel imports of manmade fiber not be reached, the economic contribution that this plant makes to the economy of the community is in grave danger.

I believe that the Japanese textile industry and the Japanese Government should have some appreciation for the importance of the broad U.S. market not only in textiles but in a growing number of manufactured goods. The continuation of the unwarranted increases in textile and apparel exports to the United States threaten not only their share of the domestic textile and apparel market but their export interest in the market for other manufactured goods as well.

I can only echo the chairman's hope that reasonable controls on the exports of wool and manmade fiber textiles and apparel can be achieved through international agreement at an early date in order that the hundreds of small textile firms and their workers in the small communities throughout the country may be assured that they will have an opportunity to compete on a fair basis.

Mr. KUYKENDALL. Mr. Speaker, I am glad to join with the distinguished chairman of the Ways and Means Committee and my colleagues who have expressed their deep concern over the textile import situation.

While we do not grow much cotton in the Ninth District of Tennessee, the textile industry is a vital bulwark to the economy of Memphis and the surrounding territory. Every segment of this key industry, from the cotton producer to the manufacturer of finished textiles has a stake in the import policies concerning textiles.

In order to protect the hundreds of thousands of people who earn their livelihood in some phase of textile production, we must demand a realistic approach to control of cheap foreign imports. American businesses, American workers and American farmers must be protected against unfair competition if they are to survive.

For these reasons I believe the concern of the chairman of the tax writing committee is fully justified and I support his efforts to find a workable solution to a very serious problem.

Mr. RUTH. Mr. Speaker, the matter being discussed by the gentleman from Arkansas is of great importance to the residents of the Eighth Congressional District of North Carolina. Millions of dollars have been invested in the textile industry and thousands of workers are dependent on this vast business for their livelihood. The industry has established an enviable record of accomplishment. It is my hope that those officials representing our Government will present the position which will protect our people. It is no secret that there is a real effort being made to shift textile production in some areas of the world to the cheap labor market.

There is an urgent need to maintain the high level of production in our country and to protect our workers and our industry from the competition of cheap labor. It is my hope that the standard of living can be raised in all nations without injury to our own.

Mr. KYROS. Mr. Speaker, I would like to commend Chairman MILLS for his attention to this very important problem of textile imports, and I would like to associate myself with his remarks.

More than 12,000 residents of Maine are directly employed in the textile industry, and many more persons feel that their livelihood is directly threatened by the alarming increase in textile imports from foreign nations. I am especially disturbed by the decline which is taking place in the funds spent in Maine for textile plant modernization and equipment; it is all too obvious that manufacturers are uneasy about the future of the textile industry at a time when foreign imports are increasing at such a rapid rate.

The Secretary of Commerce has correctly pointed out that our textile industry can accept existing levels of imports. This industry is, however, far too large to be realistically assisted by remedial measures which do not stabilize future imports at a reasonable level. I would like to pledge my support to all efforts which will bring some very much needed clarity and stability to the future of our textile industry, for the future is cloudy and bleak indeed without such action limiting foreign imports.

Mr. BROYHILL of North Carolina. Mr. Speaker, I am glad that the gentleman from Arkansas (Mr. MILLS) has taken this time to explain to the Members of the House some of the problems facing the American textile industry. Simply stated, if imports of foreign textile products continues unabated, America stands to lose thousands of jobs in the textile industry. These are American wage earners and taxpayers. Why should we in the Congress permit such a great industry, employing hundreds of thousands of people, to go down the drain?

I do not think this Congress will permit this to happen.

I am pleased with the efforts of the Nixon administration to solve this import problem through negotiations with foreign governments. Secretary of Commerce Maurice Stans has made extensive trips to other countries in an effort to arrive at a settlement. President Nixon has personally stated on his trips abroad that the American textile industry deserves some relief. It seems to me that the Congress of the United States can back up and support these efforts. I know that Representative MILLS and many others on both sides of the aisle stand ready to assist in any way. I commend these efforts.

Mr. RARICK. Mr. Speaker, the need for some fairly administered, reasonable control on textile imports has never been greater than it is today. The flood

of imports from low-wage countries is threatening to destroy the domestic textile industry and in destroying this industry will take with it the domestic cotton industry which in turn would free 16 million acres of productive farmland for planting into other crops which in turn would destroy their markets.

The cotton industry is not asking that the level of imports be rolled back to the level of the early 1950's when total textile imports were much less than they are today. In the same respect, the cotton industry cannot live with a level of imports which gives to foreign manufacturers practically all of the growth in the American textile market. However, such a situation now exists. Virtually all of the growth in the American textile market is supplied by foreign manufacturers. While mill consumption of cotton in the past 20 years has increased by about 1 million bales, the increase in cotton imports in manufactured form has also increased by about 1 million bales. The need to correct this situation is urgent. The most responsible solution seems to be a fairly administered, reasonable restraint on textile imports which would allow the foreign manufacturers a reasonable portion of the increase in domestic markets while reserving for domestic manufacturers the bulk of the home market's growth.

This proposal does not seem unreasonable; yet representatives of our Government sent abroad by President Nixon to discuss the intolerable trend in textile imports constantly have been rebuffed by foreign officials. The time has come for the Congress to act if a lack of cooperation in solving the textile import problem persists among our trading partners around the world.

If we do not act, the United States will become the textile dumping ground for cheap labor manufacturers from all over the world, causing untold damage to our domestic economy. Today's threat against U.S. textile goods is tomorrow's threat against every U.S. manufacturer.

GENERAL LEAVE

Mr. McMILLAN. Mr. Speaker, I ask unanimous consent that all Members may have 3 days in which to extend their remarks on the subject of this special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina.

There was no objection.

CLOSING OF PASSPORT OFFICES

The SPEAKER pro tempore (Mr. ALEXANDER). Under a previous order of the House the gentleman from Connecticut (Mr. WEICKER) is recognized for 48 minutes.

(Mr. WEICKER asked and was given permission to revise and extend his remarks and to include extraneous matter.)

Mr. WEICKER. Mr. Speaker, I address my comments this evening to what has become a national disgrace.

It was over 2 months ago that I was informed of the closing of the passport offices in the Fourth Congressional District of Connecticut which it is my honor to represent.

I confess to you that as a freshman Congressman, I thought the resolution of the problem would be relatively simple. Yet the past 2 or 3 months have led me down a trail and in fact into the Aegean stables of confusion, personal jealousies and the disregarding of the warnings of many years, both in the elected and appointive areas of Government.

It is my purpose today not only to give the background to this confusion but along with my colleague ROBERT GIAIMO from Connecticut to propose a bipartisan solution. The situation in Connecticut was not at all different from that which existed throughout the United States. In fact at the same time the passport offices in Connecticut were being closed, threatened closures or actual closures were taking place in Anchorage, Alaska; Bridgeport, Conn.; New Haven, Conn.; Jacksonville, Orlando, Tampa, and Sarasota, Fla.; Detroit, Mich.; Minneapolis-St. Paul, Minn.; Dallas, Fort Worth, and Houston, Tex.; and Tacoma, Wash.

Why all of a sudden should this problem blossom out and create a huge inconvenience to the American public? History is clear that the circumstances of our life as a nation have changed during the past 25 years. Specifically, as our society has become more affluent, people have wanted to travel more while at the same time the issuing of passports by the Federal courts and the State courts of this Nation, was becoming an intolerable burden to these branches of the Government because of their increased workload of judicial items.

Why the cosponsorship of this bill? Because it was not a partisan matter and the mess that has been created has been created by Republicans and Democrats alike. I am today, along with Congressman ROBERT N. GIAIMO, of Connecticut, introducing a bill that will alleviate the increasingly difficult and at times even embarrassing and disgraceful situation which has developed to obtain a U.S. passport.

I am particularly mindful of the situation which exists in my own district of the State of Connecticut and I am also mindful that the same situation pertains throughout many other areas of the country. In many areas of the country our citizens cannot obtain a U.S. passport or even execute an application for a U.S. passport without great inconvenience.

Just in the last several weeks we have seen pictures of the lines formed at the Passport Office in the city of New York—but, after all, I suppose it is better to stand in line than not be able to obtain a passport at all. Yet for all practical intents and purposes such was the case for some 2.5 million citizens. In the State of Connecticut several months ago, because of the fact that the Bridgeport office had been closed and also the office in New Haven had been closed, it was necessary to make a 2-month appointment in order to get a passport in Hartford. Also the White Plains Passport Office which is adjoining my State was closed to Connecticut residents.

So, despite the warnings from the Passport Office during the last several years—in fact for the last 10 years—we had arrived at a situation where a very basic right was in practice denied to citizens of this country.

The Passport Office has 10 passport agencies, in addition to its Washington office, located in strategic cities throughout the country. However, in most areas of the country it is dependent to a large extent upon clerks of Federal and State courts to accept passport applications and to forward them to these agencies.

Recently some of these courts in various part of the country have refused to continue to accept applications pleading their own ever-increasing workload as a result of widespread crime and the lack of sufficient funds to hire additional clerks needed to perform this function. After all, the function was initially assigned to these courts only as a temporary measure and as one which inexpensively served the purposes of 25 years ago but is hardly adequate to meet the needs of today. The Passport Office of the State Department has little or no control over the clerks of Federal or State courts who accept passport applications. Judges of these courts decide whether they shall or shall not provide passport service to their areas, and there is nothing the Passport Office can do about it. This is exactly what happened in my own State of Connecticut and throughout the United States.

In other words, the system of using clerks of courts in many areas of the country to accept passport applications for the Passport Office is cracking under the strain of increased workload.

Last year Congress denied the request of the courts to provide 183 deputy clerks and we are now reaping the reward for such shortsightedness.

As presently constituted, the Passport Office is not authorized to take any constructive action to solve this national problem. Its existing 10 agencies and its Washington Office are buried under the avalanche of citizens who want passports to travel abroad.

I need only refer you to the recently well publicized "disgrace" of the New York passport agency. With its present inadequate complement of personnel and physical facilities, it is simply unable to meet the demands of the public. The same situation to some degree exists in almost every one of the nine other agencies. It has been necessary for these agencies to forward hundreds of applications to the already overburdened Washington Office for issuance. That Office, as well as the agencies, has already expended large amounts of money in overtime in an effort to cope with this problem. In the past fiscal year, over $89,000 has been spent in overtime pay for passport employees. But there is a limit to the amount of funds that can be spent in this manner and, even more critical, a limit to the physical endurance of the employees of the Passport Office and its agencies.

This situation is not new, nor is it unknown to the Department of State. This

crisis has increased year after year. The Director of the Passport Office has clearly and consistently warned her superiors in the Department of the growing travel explosion and of the need for more flexible measures to meet the challenge. Her warnings have fallen on deaf ears. Year after year the Passport Office has faced arbitrary cuts from its budget request, which is based on a very measurable product; namely, overseas travel by U.S. citizens. Consider the fact that there has been almost 13-percent increase in general travel of U.S. citizens in the past 5 years and a 6.2 percent in official and diplomatic travel.

Mr. Speaker, it is a fact that the Passport Office is one of those extremely rare Federal agencies who return a profit or revenue to the U.S. Treasury every year. In the last 5 years the Passport Office has returned over $33 million to the Treasury.

Last year it operated on a budget of $5 million. It brought in $13½ million and that is a profit of $8.5 million that was paid for by the taxpayers to the United States and returned to the Treasury of the United States.

Paid for what? Increased convenience? No. Increased personnel? Increased localities where to obtain a passport? No—not 1 cent that was paid for by the taxpayers has come back to him in any form whatsoever except longer lines and longer delays.

It is estimated that the Passport Office will return in excess of $20 million in the next 2 years. Why is it then that the Passport Office is refused the authority to open additional self-support field agencies? Why is the Passport Office denied additional personnel? Why, indeed, is this small, efficient, and popular public service cut in budget and cut in personnel instead of being supported and expanded?

There is a simple solution to this problem, Mr. Speaker, if we are willing to take the steps necessary to implement it—and not the kind of steps which have been advocated year upon year since the warnings were issued 10 years ago. It is not only a question of that shift of responsibility from the Department of State to the judicial branch of our Government, but rather of seeing to it that the particular Government agency originally charged with the responsibility of issuing passports to U.S. citizens be given the tools to see that the job is done correctly—and that is the Passport Office of the U.S. Department of State.

Even as I speak, go to any city where there is a passport problem and find out how it is being resolved.

Is it being handled with Passport Office personnel as requested by the gentleman from Connecticut?

Are temporary personnel of the Passport Office being assigned to handle it? Oh, no, it is the clerk of the Federal court or a clerk of the State court or foreign service officers in Houston, Tex., who are performing the function of a passport officer at considerably more cost on the basis of individual salary and turning out one-half of the number of applications of a Passport Office employee.

I propose that Congress establish a revolving fund in the Passport Office so that some of the revenue which it returns to the Treasury every year can be used to provide needed services to the public. This will eliminate the constant fiscal emergencies that confront the Passport Office year after year. This revolving fund does not provide the Passport Office with unlimited funds and they will be strictly accountable for every expenditure, but it will provide that office with the flexibility which it requires to solve the problems of today and to meet the challenges of the future.

I propose that the Passport Office be authorized to establish Passport Agencies or Passport Service Agencies out of these funds whenever and wherever the needs of the public justify it.

I propose that the Passport Office be authorized to establish passport agencies, passport service agencies, out of these funds referred to whenever the needs of the public justify it.

I propose further that in certain instances the clerks of the Federal courts designated to accept passport applications be required by law to accept these applications. It will then be necessary for the courts to provide in their budget for sufficient clerks to perform this function in those areas where there is not sufficient population to establish a need for a Passport Office.

There are indeed very few Members of the Congress who are not aware of the effectiveness of the Passport Office.

These three proposals, which I believe will solve the present passport dilemma and provide a needed service to the American people, I have incorporated in the bill which Congressman GIAIMO and I have introduced today. The American public is paying for those services with their taxes and their passport fees. They are entitled to receive the most efficient and convenient service possible.

In conclusion, Mr. Speaker, it is clear to those that are much more senior in the Congress than I, and who know the difficulties and the problems that have existed between this branch of the Government and the Department of State, and those conflicts that have been within the Department of State itself, that the solutions to the passport problems which have been devised over the past several years have been geared to individuals in Washington rather than the facts of a national problem. That is what this legislation attempts to cure, and I have a feeling that this is what the American traveler expects of the American politician.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield?

Mr. WEICKER. I yield to my colleague from Connecticut.

Mr. GIAIMO. I thank the gentleman and I want to commend him for the effort and the concern which he has demonstrated in this area. I am happy to have joined with him today in introducing legislation designed to set up passport agencies and to provide passport service officers in those areas where there is a demonstrated need for service.

More and more Americans are traveling abroad each year, and therefore, requests for passports have increased astronomically. In our own State of Connecticut, it is estimated that upwards of 40,000 passport requests will be made this year. Yet we find that we are still operating in a horse-and-buggy era, insofar as the granting and processing of passport applications are concerned. In two of our major cities in Connecticut, for example, the gentleman's city of Bridgeport and my city of New Haven, the courts discontinued processing passport applications this past spring. Service was resumed only recently through emergency authorization of temporary help to process the passport applications.

It is obvious that the method which worked in the past—namely, having the district courts process these applications and send them to the nearest passport office, is not working today with this tremendous increase in the number of passports sought by the American people.

Also there have been added burdens placed on the clerk's offices of the U.S. district courts—the new jury system; much of the civil rights legislation; and the fact that people in our States are using the Federal courts today more than they did in the past. All of these have put additional pressure on an already overburdened court clerk's office. In addition, the tremendous increase in passport applications has meant delays and otherwise inadequate service. When we consider, then, that even this inadequate service was terminated in a State such as Connecticut and in other parts of the country, we recognize that we cannot make do with temporary solutions. We must find a permanent solution.

What would be a more logical solution than to expand the facilities and the operations of the Passport Office, which at the present time is limited to 10 offices nationwide? What would be more logical than to provide passport office facilities in the large metropolitan areas where they are needed—particularly since passport service is a function of the Government which, as the gentleman has pointed out, pays for itself? It operates on a yearly budget of approximately $5 million and turns back to the Treasury approximately $13.5 million to $14 million a year.

It seems to me that we must find a permanent solution to this problem rather than continuing the temporary route of using the U.S. district court offices for passport service in many of the large cities of the country. The legislation which we have designed and introduced today can solve this passport crisis which, I contend, must be done without further delay.

One has only to read news articles of the last several months in New York City, Detroit, Chicago, Connecticut, and in other parts of the United States to realize the long delays with which people are confronted whenever they attempt to obtain a passport. I think this situation is intolerable. I do not believe it is something which the American people are willing to tolerate, nor in fact is it something which they should have to tolerate any longer. The time is long past due when we must take proper, positive steps to resolve this problem which has grown

worse each year and which has reached crisis proportions this year.

At this point I wish to insert in the RECORD various newspaper accounts attesting to the interminable delays which confront passport applicants in many of our Nation's cities.

[From the Boston Globe, July 7, 1969]

VISIT TO PASSPORT OFFICE HECTIC JOURNEY ITSELF

(By Ann Dilworth)

The jangled nerves have calmed somewhat and the lines have gotten shorter.

The June flood of applicants at the Boston passport office has subsided to a steady stream in July.

"In less than 21 working days, our office processed 27,000 applications for passports," said John J. Flynn, passport agent.

"That is a 38 percent increase over last year and represents the largest business in the history of the Boston passport office," he said.

Passport applications all over the country have increased by 35 percent according to the New York Times.

Flynn attributes this rush to the greater affluence of Americans, and to the increased speed and decreased expense of travel abroad now.

"It's cheaper to travel to Europe than to Miami," said Flynn.

Twenty-seven people are on duty, some working overtime, to process applications at the four-desk office in Government Center. Boston handles all applications from Massachusetts and upstate New York.

The busiest time is lunch hour, when applicants rush from their work to grab a passport. Only, it wasn't that easy in June.

Some people waited 90 minutes only to find that they didn't have the right kind of pictures or a proper birth certificate.

Although the lines have gotten shorter in July, the same problems persist.

Take John Stevenson of Malden for instance. He was docked for time away from his job while trying to get a passport. Stevenson stood in line for what seemed a long time.

"You do not have a properly certified and dated birth certificate with the seal of this state imprinted on it," said the monotoned voice of the desk agent, who obviously had said the same sentence at least 400 times.

"But this says where and when I was born," said Stevenson.

"This is a photostatic copy, we can only accept the original birth certificate," said the expressionless voice. "You can get such a document at the state office building, room 272 . . ."

"Where is that place? Listen, I don't have time for all this," said Stevenson.

"Sir we have certain rules that must be followed to insure the safety of our country and of our citizens abroad. The original birth certificate is just such a regulation." The picture of the U.S. Capitol Building and the American and Massachusetts flags loomed in back of the agent to emphasize his point.

Stevenson sighed, "I'm not so sure I want to go to Europe."

Birth certificates seem to be the major problem, but passport pictures are another worry.

"Many people come here with vending machine pictures and expect to use them," said one of the agents. "These pictures fade after awhile and sometimes they melt at high temperatures."

Officials of the State Department's Passport Agency contend that insufficient Congressional appropriations were a basic cause of the "crisis" situation, the New York Times reported.

The agency officials attributed the situation to an inadequate number of passport offices across the country, as well as insufficient personnel and equipment, at a time of sharp rise in applications, the Times said.

"We just simply had an over-load on all our people and machines," Flynn said. "We processed these applications as fast as possible, and none took over two weeks. But we breathed a real sigh when July came," he said.

The lines at the passport office now are "only" three or four at the busiest times, Flynn said.

[From the Chicago Tribune, July 6, 1969]

PASSPORT APPLICATIONS INCREASING IN CHICAGO

(By Rudolph Unger)

Americans are going overseas in record numbers this vacation season and the trips are being led by midwesterners, the Chicago passport office reported yesterday.

"There has been an unprecedented flow of passport applications this spring and summer season," Elmo G. Poole, head of the Chicago office, said.

INCREASE ACROSS UNITED STATES

"In May, the latest month for which complete figures are available, applications across the nation increased 24.8 per cent over May, 1968, which was up from 204,311 to 247,792," Poole said. "And in the vanguard was Chicago, with a 37.5 per cent boost, from 22,471 to 30,891."

Increases in the nation's nine other regional passport offices ranged from Miami's 31.8 per cent to 15.3 per cent in Philadelphia.

And there was no let up in Chicago in June, Poole stated. Preliminary figures show a 36 per cent increase in the demand for passports here, up from 18,738 to 25,487.

STAFF WORKING OVERTIME

Poole reported that his 44-man staff has been working overtime and seven days a week in inadequate quarters with outdated machinery in an effort to keep up with the passport demand. Also, some of the applications have been sent to the Washington office for processing to meet the large number of requests, Poole said.

Waiting time for obtaining the passports has been running from three to four weeks in the rush season, compared to two weeks or less in the off season, he said. Emergency passports, however, can be handled in half a day, Poole said.

"In the week ending June 4 [the office's week runs from Wednesday to Wednesday], applications were up 70 per cent over a year ago," Poole said. "In the week ending June 11, they were up 75.5 per cent.

JUNE 9 BIGGEST DAY

"We have been averaging 1,250 total applications a day this rush season, with 300 to 400 applying in person and the remainder by mail.

"But June 9 was our biggest day on record. I have never seen anything like it. Some 1,500 appeared in person seeking application and scores had to be turned away when we locked the doors at 5 p.m."

Poole said the jam would have been even worse if Congress had not amended the law last August, making each passport good for five years. Heretofore, passports had to be renewed after three years.

COVERS SIX STATES

The Chicago office covers six states and part of a seventh. They are:

Illinois, Indiana, Missouri, Iowa, Minnesota, Wisconsin, and northern Michigan.

Robert D. Johnson, chief deputy to Miss Frances G. Knight, director of the passport office, which is an agency of the state department, told THE TRIBUNE that the office is badly in need of increased appropriations.

OPERATING IN BLACK

"The passport agency is one of the few government agencies operating in the black," Johnson said. "Last year, we turned over 18 million dollars to the treasury.

Johnson said the office expects to issue 2 million passports this year, compared to 540,000 in 1954.

[From the Washington Daily News, July 7, 1969]

PASSPORT OFFICES ARE SWAMPED

(By Richard H. Boyce)

The passport office and its 10 branches across the nation are swamped with a record backup of passport applications from affluent Americans who want to travel abroad this summer.

In some cities people have to stand in line up to two hours to make application for a passport, and the flood of requests has stretched the time it takes to get the needed overseas travel document from a few days to as much as two months in some places.

In May, 247,792 passports were issued, up 21 per cent from the 204,311 issued in May, 1968. But the number of passports issued in May ran 18,294 behind the number of applications received.

APPLICATIONS UP

Nationwide, passport applications in May were up 25 per cent over the previous May.

Passport employes handle up to 12,000 applications a day, an all-time high, according to Frances G. Knight, passport office director.

"Plenty of money and low-cost package tours abroad," are two big reasons for the boom, she said.

But two other factors aggravate the problem:

The State Department has not provided additional personnel to process passports, despite repeated warnings by Miss Knight the crisis was coming.

Thirteen courthouses in seven states recently have stopped processing passport applications, adding to a growing list of courts that have halted this service in the past six years.

Besides its Washington operation, the passport office has branches in New York, Chicago, Los Angeles, Boston, Philadelphia, San Francisco, New Orleans, Miami, Seattle, and Honolulu.

Persons living elsewhere can present their applications—this must be done in person, not by mail—to the clerk of the nearest state or Federal court, for forwarding to the passport branches. There are about 3,500 such courts in the United States.

STAND IN LINE

In the past few months, however, state courts in Sarasota, Fla., and Bridgeport, Conn., and Federal courts in New Haven, Conn.; Anchorage, Alaska; Jacksonville, Orlando and Tampa, Fla.; Tacoma, Wash.; Detroit, Minneapolis-St. Paul, Dallas, Fort Worth and Houston have stopped handling passports.

[From the New York Times, June 26, 1969]

LONG LINES JAM PASSPORT OFFICE HERE

(By Joseph P. Fried)

Thousands of New Yorkers applying for passports for summer travel are waiting in long lines that often move with agonizing slowness.

Officials of the State Department's Passport Agency said yesterday that the delays were part of a national situation that they considered a "disgrace."

An official of the agency contended that insufficient Congressional appropriations were a basic cause of a situation that the agency fears will assume "crisis proportions."

The agency officials attributed the situation to an inadequate number of passport offices across the country, as well as insufficient personnel and equipment, at a time of sharply rising applications for passports.

"My experience is that a situation like this has to reach crisis proportions before it gets better," a high official of the Passport Agency, who preferred not to be identified, said yesterday in Washington. "It's a national situation, but New York is getting the brunt of it," the official said.

For example, a Federal Court clerk who handles the passport applications in Detroit reported yesterday that the flow of applications was proving too much for his staff. The situation was described as serious in Texas also.

For residents of New York City and the surrounding area, the situation means the kind of experience that George Woshakiwsky and Mario Daddario had yesterday.

Mr. Woshakiwsky, a 22-year-old student who plans to go to Italy next month, walked into the New York office of the Passport Agency at 630 Fifth Avenue, between 50th and 51st Streets, at 12:30 P.M. yesterday.

With the application form filled out and the two required photographs in hand, he joined a long line at "Station 14" in the large office, whose blue and yellow walls surrounded a dozen such lines.

At 1:45, Mr. Woshakiwsky finally reached the head of the 15-foot-long line—having thus traveled a dozen feet an hour to apply for a passport that will permit him to travel to Rome at more than 600 miles an hour.

Mr. Daddario, an automobile dealer from Bridgeport, Conn., went to the New York passport office because, he said, the passport situation in Connecticut had deteriorated so badly that he might have had to wait more than two months for a passport if he had applied for one in Hartford. He and his wife plan to go to Germany July 12.

"Oh, my God," Mr. Daddario said as he reached the corridor outside the Passport Agency office here and saw the long lines through the glass doors.

Mr. Woshakiwsky's wait was typical of those currently being experienced by applicants who show up at the New York passport office in late morning and early afternoon, the only time available to many applicants—who often have to use their lunch-hour breaks—to take care of passport formalities.

The average wait on the application lines during those periods of the day is an hour and a half, Joseph R. Callahan, agent in charge of the New York office, said.

He noted that June was always a busy month in his office because of the large number of passport applications by persons planning summer-vacation trips abroad. But this June is shaping up as the busiest for his office, he said, and Passport Agency officials in Washington said that the same situation prevailed nationwide.

Peering at the statistics before him, Mr. Callahan noted that, from Thursday, June 5, through Wednesday, June 11— a "reporting week" in the Passport Agency—his New York office had received 13,592 passport applications. This, he said, was a 40 per cent increase over the corresponding reporting week last year.

In Washington, officials reported that, nationwide, there were 35 per cent more passport applications during the first 18 days of this June that there were during the corresponding period of June last year.

These statistics do not include passport renewals by mail. An applicant who has not had a passport before, or whose previous one was issued more than eight years ago, must apply in person. Passports are good for five years under current law.

In addition to the main office in Washington and the office here, there are Passport Agency offices in Philadelphia, Boston, Chicago, Miami, New Orleans, Los Angeles, San Francisco, Seattle and Honolulu.

Residents of other places must either go to the nearest office or apply for a passport in person at Federal or state courts, which forward the applications to the Passport Agency.

This is the arrangement that has broken down in Connecticut and is deteriorating in several other places.

According to Representative Lowell P. Weicker Jr., Republican of Connecticut, the State Superior Court in Bridgeport stopped handling passport applications about two months ago. He said the reason given was that the clerk who had handled passport applications had died and there was nobody to take his place.

Then, the Representative said yesterday, the Federal District Court in New Haven stopped taking applications "because they said the courthouse was being remodeled."

The Hartford Federal District Court then said that it had such a backlog that passport applicants would have to apply two months in advance, Mr. Weicker said. This, he added, was followed by a decision by the New York State Supreme Court in White Plains not to handle applicants from Connecticut residents because the New York court had enough work dealing with applicants from residents of its own state.

Hence Mr. Daddario's trip yesterday to New York City.

However, Mr. Weicker reported, some relief is in sight for Connecticut passport applicants. Partly as a result of his efforts, he said, two staff people from the office of the Federal Court Administrator in Washington will go to Connecticut, "probably next week," to accept passport applications.

In Detroit yesterday, Frederick W. Johnson, clerk of the Federal Court in the Eastern District of Michigan, reported that passport applications in his court were steadily rising and that his staff was having increasing difficulty in handling them.

He said his court wanted to stop handling the applications and had so advised the State Department.

A Passport Agency official asserted yesterday that more offices staffed by the agency itself were vitally needed and that overloaded courts could not cope with the passport applications by the rising number of Americans traveling abroad.

Mr. Callahan, the New York office head, urged those planning trips abroad in August or September to put off applying for passports until about a month before their scheduled departure. He said this would allow sufficient time for receiving the passports.

[From the Washington Post, July 17, 1969]

PASSPORT UNIT SNOWED UNDER BY BOOM IN FOREIGN TRAVEL

(By Marquis Childs)

Now it's a travel explosion. As though not a word had ever been spoken about seeing America first, the perils of the dollar balance and the gold outflow, Americans in unprecedented numbers are rushing off to foreign shores.

The fly-now, pay-later plan is said to account for a large part of the travel boom. The low rate on chartered flights is another reason. Clubs, often improvised for the purpose, sign up for a charter at a cost to members far below that of regular airline fares.

Travel bargains are attracting those who never before ventured out of the United States. An example is a 22-day escorted tour of six countries (if it's Tuesday, this is Belgium) for $495, which includes round-trip fare, meals and hotel. At that rate, the bargain hunter argues, you can hardly afford to stay home.

An unhappy consequence of the travel boom is a virtual breakdown, or at any rate a frustrating slowdown, in the issuance of passports. Long lines of irate citizens at every passport center, and particularly in New York, reflect the clogged passport machinery. The most irate citizen is Director Frances G. Knight of the State Department's Passport Office. The tart-tongued Miss Knight has run an efficient shop. She was caught in the travel deluge without the essential extra personnel through no fault of hers, according to her staff.

What happened is an example of the penny-wise, dollar-foolish economy policies prevailing in other departments as well as State. Miss Knight has asked State's budget makers for funds for the fiscal year just ended to hire an additional 22 persons on a permanent basis. For the current fiscal year she asked for another 24. A total of 64 is considered the minimum to handle the ever-rising demand.

Nothing quite like the present travel boom had been anticipated. Total applicants for passports in June were 36 per cent above June a year ago. The daily average is close to 12,000, running 30 per cent above 1968. The staff of the Passport Office is on a 10-to-12 hour-a-day schedule which includes Saturdays. Especially galling to Miss Knight is that the passport operation more than pays its way. The operating budget is $5 million, while the office takes in more than $15 million in fees.

The travel boom is expected to slacken as the rush of summer trippers subsides. The plight of the passport office is evidence of the urgent need for an overhaul of the system. Aside from the passport offices in 10 cities, reliance has been on Federal or state courts. With clogged court calendars there is increasing reluctance to perform this function. Passport applicants complain of delays of two months or more.

The passport tangle is only one comparatively small example of how the narrow frame of Government has been inadequate to encompass the swiftly expanding economy or the rise in the number of educated people bent on foreign travel. Both high-school and college students are on the move as never before.

The expansion has been sparked by a credit explosion. Ever-new credit devices have sent the debt total of private individuals soaring to unprecedented levels. How much fly-now, pay-later has contributed, it is too early to say, since this powerful appeal through every advertising medium is fairly recent.

The total of installment credit as of May 31 for autos, home appliances, television sets and the whole range of buy-now-and-pay-by-the-month goods was an almost incredible $91.8 billion. This represented a jump of $9.5 billion in the previous 12 months. An added $2.3 billion was outstanding in credit-card and check-credit plans. These figures do not include real estate and insurance loans.

The outflow of tourist dollars is an important factor in the balance of payments problem. Various cures were considered under the Johnson Administration, including taxes on airline tickets and a limit imposed on the amount the tourist could spend. The travel industry was powerful enough to fend off these remedies and now the Nixon Administration is faced with the same situation enhanced by the travel boom.

An effort has been made with limited success to offset the outflow by persuading foreign visitors to come to America. For the first five months of this year 557,948 foreigners bent on either business or pleasure came to the United States, an increase of 17 per cent over the same period in 1968. It did not include nearly 11 million visits of over 72 hours by Canadians and a half million Mexican visitors. Measured against the horde of Americans leaving by every available plane and ship, the offset is small.

A far more serious side of the narrow frame of Government is the airport and airways squeeze. At principal airports the overcrowding is intolerable and the air controllers repeatedly testify to the hazards

of hundreds of near misses in the corridors where traffic is heaviest. This is without the jumbo jets to come into service in the fall. The White House has proposed a long-range plan calling for quick expansion and the taxes to pay for it. Delay will imperil life and limb as well as a major industry.

Mr. GIAIMO. Mr. Speaker, I commend once again the gentleman from Connecticut for trying to resolve this problem and I thank him again for taking this time today to thoroughly explain this serious situation.

Mr. WEICKER. Mr. Speaker, I thank the gentleman from Connecticut (Mr. GIAIMO) a member of the Appropriations Committee, whose service in this Congress has been considerably longer than mine, for assisting in the drafting of this bill and for joining in this matter that really concerns people and which has nothing to do with party.

COMPREHENSIVE NARCOTIC ADDICTION AND DRUG ABUSE AND CONTROL ACT OF 1969

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. WILSON), is recognized for 10 minutes.

Mr. CHARLES H. WILSON. Mr. Speaker, today it is my pleasure to introduce, along with 22 concerned cosponsors, a bill that for the first time provides for a comprehensive and coordinated attack on the narcotic addiction and drug abuse problem. Because this bill not only addresses itself to the law and order aspects of the dilemma but also attempts to bring about greater understanding of the root causes underlying the fantastic spread of narcotic and other drug use in our country, I feel that it represents the most sensitive and realistic approach to the problem to date. Senator YARBOROUGH, sponsor of this proposed legislation in the other body, reports that he has been joined by 15 other Senators in a bipartisan effort to insure its promulgation this session of the Congress. We, both Members of the House and the Senate, are all attempting to approach this area with the sensitivity and understanding as well as the determination and strength needed to successfully resolve the problem.

Narcotic addiction and drug abuses are reaching epidemic proportions. No segment of the population is secure from the intrusion of these means to self-destruction and moral decay. The problem which was once fairly limited to slum ghettos can now be found as easily in suburban high schools and on the college campus. Perhaps the inability of middle-class Americans to identify the problem as being of relevance to their lives has brought about the situation with which we are now faced.

Perhaps had we all acted like our "brother's keeper" many of the tragic situations facing our land today would not have come into existence. In any event, the problem has been brought home for all to see and the consensus of public opinion has finally coalesced, demanding solutions now.

The proposed legislation that we introduce today calls for increased Federal funding for the construction, staffing, and operation of treatment facilities, the establishment of professional training and evaluation programs, the authorization for research and studies relating to drug use and addiction, the institution of drug abuse education activities, the dissemination of related instructive materials, and, the increased control of various dangerous substances.

In the facilities construction area, the Community Mental Health Centers Act would be amended to allow eligibility for Federal funding of operation and maintenance costs as well as construction and staffing expenses. It shall increase the allowable Federal participation in funding the costs of construction of treatment and rehabilitation facilities from 66⅔ to 90 percent, and in the costs of operation, staffing, and maintenance of these facilities to 90 percent for the first 2 years and then 75 percent for the next 6 years. In addition, authorization for future funding appropriations would be granted by the promulgation of this proffered legislation through the fiscal year ending June 30, 1974, as well as providing discretionary continuation grants covering fiscal year 1971 and each of the next 11 fiscal years.

In the area of professional training and education, provision has been made for development of specialized training programs and materials for the prevention and treatment of drug abuse and for the training of personnel to administer such programs and services. Research and study relating to current and projected personnel needs in the field of drug abuse as well as planning and conduct of surveys and field trials to evaluate the adequacy of State drug programs will be undertaken. Fellowships and grants for individual studies will be made available under the supervision of the Secretary of Health, Education, and Welfare with the approval of the National Advisory Mental Health Council. Grants will also be made available to the States and political subdivisions, as well as to public and nonprofit private agencies for the collection, preparation, and dissemination of educational materials and for the development and evaluation of programs of drug abuse education directed to the general public, school-age children and other high-risk groups. Dissemination of information shall be channeled through the Secretary acting in coordination with the National Institutes of Health.

In addition, the Public Health Services Act would be amended to authorize studies of depressant and stimulant drugs as well as studies of narcotics. A broad program of research into all phases of drug use with needed investigations and surveys will be begun along with construction of a National Addiction and Drug Abuse Research Center to be part of the National Institute of Mental Health.

Knowledge in this area will increase by geometric leaps and bounds and the root causes of the problem will be fully revealed for elimination by a now aroused citizenry. Drug abuse and narcotic addiction are national problems of such magnitude and seriousness as to call for the marshaling of Federal resources to meet the challenges that the use of these substances poses to our society. This challenge shall and will be met. The stakes are too high and the inability to surmount the difficulties in this area would portend serious consequences for our society, consequences that are more horrible since they first would be manifested by the deterioration and destruction of the physical and mental well-being of this Nation's youth. Rapid enactment of the Comprehensive Narcotic Addiction and Drug Abuse Care and Control Act of 1969 is a vitally needed step in the right direction.

Joining me in cosponsoring this bill are the following Members of Congress:

Mr. ADDABBO of New York.
Mr. ANDERSON of California.
Mr. BROWN of California.
Mr. BYRNE of Pennsylvania.
Mr. DONOHUE of Massachusetts.
Mr. EDWARDS of California.
Mr. FRIEDEL of Maryland.
Mr. GIAIMO of Connecticut.
Mr. HAWKINS of California.
Mr. JOHNSON of California.
Mr. LEGGETT of California.
Mr. MIKVA of Illinois.
Mr. MOORHEAD of Pennsylvania.
Mr. NIX of Pennsylvania.
Mr. PATTEN of New Jersey.
Mr. POWELL of New York.
Mr. REES of California.
Mr. ROSENTHAL of New York.
Mr. THOMPSON of New Jersey.
Mr. VIGORITO of Pennsylvania.
Mr. WHALEN of Ohio.
Mr. WRIGHT of Texas.

I now submit the full text of the Comprehensive Narcotic Addiction and Drug Abuse Care and Control Act of 1969 for my colleagues' information. In addition, I am including the text of my letter published in the Saturday, July 26, 1969, edition of the Washington Post in answer to their editorial of July 18 which asked: "Is it not time, in short, for a fresh approach to drug addiction—an approach designed not so much to vent anger as to offer help?" The bill that I introduce today offers such help. It also offers hope.

NARCOTICS BILL OFFERS DIFFERENT APPROACH

I have just finished your editorial of July 18 entitled "A Fresh Approach to Narcotics." At the end of your statement, you ask: "Is it not time, in short, for a fresh approach to drug addiction—an approach designed not so much to vent anger as to offer help?"

It is my opinion that such an approach has been found. On the day that Mr. Nixon delivered his message to Congress, Senator Yarborough introduced a bill which would provide for a comprehensive and coordinated attack on the narcotic addiction and drug abuse problem. It was my pleasure to introduce an identical bill in the House of Representatives the following day.

A reading of the bills so introduced will show significant differences from Administration proposals in specific recommendations, as well as in conveying a totally different tenor due to the utilization of another approach to the problem.

For example, marijuana, under the Yarborough-Wilson bills, will be removed from coverage under the Internal Revenue Code and added to the definitions of depressant or stimulant drugs in the Food, Drug and Cosmetic Act, thereby making it subject to the controls imposed on such substances rather than those provided for hard narcotic drugs in the Internal Revenue Code.

In addition, authority is transferred from the Attorney General back to the Secretary of Health, Education and Welfare to make findings that a substance is or is not an opiate, and to determine medical, scientific and other legitimate needs of the United States for the purpose of establishing export or import quotas in this area.

Furthermore, provision is made for increased Federal funding by amending Section 251 of the Community Mental Health Centers Act to cover costs of operations and maintenance of treatment facilities and coverage is extended to meet staffing expenses. The bill authorizes the appropriation of $200 million for the construction of treatment facilities and for the above mentioned operational needs for the period ending July 30, 1974.

Grants would also be provided for the development of specialized training programs and materials for the prevention and treatment of drug abuse and for the training of personnel to administer such programs and services. Funds will be made available for the collection and dissemination of educational materials, the conduct of public educational programs, the provision of technical assistance to state and local health and educational agencies and for the development and conduct of workshops and other institutions.

Further grants would be authorized to conduct broad research programs into all phases of drug use and abuse, to investigate and study improved diagnostic and treatment techniques, to develop and improve methods of operation and administration for appropriate state institutions, to conduct surveys to evaluate adequacy of treatment and prevention programs, and to support construction, staffing, operation and maintenance of regional centers for research.

In addition, the bill specifies that one of these research centers be established as a National Addiction and Drug Abuse Research Center to be located in close proximity to the National Institute of Mental Health central research facilities.

Other provisions which likewise treat the problem as a cancerous disease that has spread throughout our land are included. The root causes of narcotic and other drug abuses must be found and eliminated. Enactment of the legislation that I have introduced in the House will go a long way toward accomplishing this purpose. In other words, this legislation does not vent anger; rather, it offers help.

CHARLES H. WILSON,
U.S. Congressman.

WASHINGTON.

(ORIGINALLY H.R. 12882)

A bill to provide for a comprehensive and coordinated attack on the narcotic addiction and drug abuse problem, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Comprehensive Narcotic Addiction and Drug Abuse Care and Control Act of 1969".

DECLARATION OF FINDINGS AND PURPOSES

SEC. 2. (a) The Congress finds that—

(1) Narcotic addiction and drug abuse are major health and social problems afflicting a significant proportion of the public, and much more needs to be done by public and private agencies to develop effective prevention and control.

(2) Narcotic addiction and drug abuse treatment and control programs should whenever possible: (A) be community based, (B) provide a comprehensive range of services, including emergency treatment, under proper medical auspices on a coordinated basis, and (C) be integrated with and involve the active participation of a wide range of public and non-governmental agencies.

(3) There is an urgent need to educate young people and the public in general on the abuse of drugs and that insufficient manpower currently are available to undertake such educational programs.

(4) There is a serious shortage of professional and other personnel trained to work more effectively in relation to the prevention and treatment of narcotic addiction and drug abuse.

(5) Current knowledge regarding the causes, prevention, and treatment of narcotic addiction and drug abuse are inadequate.

(b) In order to preserve and protect the health and welfare of the American people in meeting these needs, it is the purpose of this Act to authorize the Secretary of Health, Education, and Welfare to establish a program of grants and contracts for the construction, staffing, operation, and maintenance of facilities for the prevention and treatment of narcotic addiction and drug abuse, for the development of narcotic addiction and drug abuse education programs, for the training of professional and other personnel, for the conduct of appropriate study, research, and experimentation, and for the creation of appropriate demonstration projects relating to narcotic addiction and drug abuse.

TITLE I—CONSTRUCTION, STAFFING, AND OPERATION OF TREATMENT FACILITIES

SEC. 101. (a) Section 251(a) of the Community Mental Health Centers Act is amended by striking out "of compensation of professional and technical personnel for the initial operation" and inserting in lieu thereof "of operation, staffing, and maintenance."

(b) Section 251(b) of the Community Mental Health Centers Act is amended by striking out "in excess of 66⅔ per centum" and inserting in lieu thereof "in excess of 90 per centum."

(c) Section 251 (c) of the Community Mental Health Centers Act is deleted and the following is inserted in lieu thereof:

"(c) Grants under subsection (a) for the costs of operation, staffing, and maintenance of a facility may be made only for the first eight years that such facility is in operation and the amount of any such grant shall not exceed 90 per centum of such costs for the first two years of the grant and 75 per centum of such costs for each of the next six years."

(d) Section 261(a) of the Community Mental Health Centers Act is amended to read as follows:

"(a) There are authorized to be appropriated $15,000,000 for the fiscal year ending June 30, 1970; $20,000,000 for the fiscal year ending June 30, 1971; $40,000,000 for the fiscal year ending June 3, 1972, $50,000,000 for the fiscal year ending June 30, 1973; and $75,000,000 for the fiscal year ending June 30, 1974; for construction, operating, staffing and maintenance grants under parts C or D. Sums so appropriated for any fiscal year shall remain available for obligation until the close of the next fiscal year."

(e) Section 261(b) of the Community Mental Health Centers Act is amended to read as follows:

"(b) There are also authorized to be appropriated for the fiscal year ending June 30, 1971, and each of the next eleven fiscal years such sums as may be necessary to continue to make grants for staffing with respect to any project under part C or D for which a staffing, operation, and maintenance grant was made from appropriations under subsection (a) of this section for the fiscal years ending June 30, 1970, through 1975.

"(c) For purposes of parts C and D, the term 'staffing' means salaries, fringe benefits, and travel allowances for professional, technical, and support personnel needed to provide services to administer, evaluate, operate, and maintain the facilities and program of a treatment center.

"(d) For purposes of parts C and D, the term 'operation and maintenance' means upkeep and repairs, supplies, utilities, rent, equipment cleaning, food and drugs, and similar items of cost incurred by a treatment facility."

TITLE II—TRAINING AND EVALUATION, AND DRUG ABUSE EDUCATION

SEC. 201. (a) Section 252 of the Community Mental Health Centers Act is amended to read as follows:

"TRAINING AND EVALUATION

"SEC. 252. (a) For the purpose of assisting in overcoming the critical shortage of scientific and professional personnel trained to deal with drug abuse and addiction, the Secretary is authorized to make grants to States and political subdivisions thereof and to public or nonprofit private agencies and organizations, and to enter into contracts with other private agencies and organizations, for—

"(1) the development of specialized training programs or materials relating to the provision of health services for the prevention and treatment of drug abuse;

"(2) the development of inservice or short-term refresher courses with respect to the provision of such services;

"(3) training personnel to operate, supervise, and administer such services;

"(4) the conduct of a program of research and study relating to (A) personnel practices and current and projected personnel needs in the field of drug abuse (including prevention, control, treatment, and rehabilitation), (B) the availability and adequacy of the educational and training resources of individuals in, or preparing to enter, such field, and (C) the availability and adequacy of specialized training for persons such as physicians and other health professionals who have occasion to deal with drug addicts, including the extent to which such persons make the best use of their professional qualifications when dealing with such persons; and

"(5) the conduct of surveys and field trials to evaluate the adequacy of the programs for the prevention and treatment of narcotic addiction within the several States with a view to determining ways and means of improving, extending, and expanding such programs.

"(b) Training grants under this section may be made only upon recommendation of the National Advisory Mental Health Council. Such grants may be paid in advance or by way of reimbursement as may be determined by the Secretary, and shall be made on such conditions as the Secretary finds necessary.

"(c) As used in this section, the term 'professional persons' shall include, but not be limited to persons in the fields of medicine, psychiatry, nursing, social work, psychology, education, and vocational rehabilitation.

"(d) There are hereby authorized to be appropriated for carrying out the provisions of this section $2,000,000 for the fiscal year ending June 30, 1970; $3,000,000 for the fiscal year ending June 30, 1971; $5,000,000 for the fiscal year ending June 30, 1972; $6,000,000 for the fiscal year ending June 30, 1973; and $6,000,000 for the fiscal year ending June 30, 1974."

SEC. 202. The Community Mental Health Centers Act is amended by redesignating sections 253 and 254 as sections 255 and 256 respectively, and by inserting after section 252 the following new sections:

"FELLOWSHIP GRANTS

"SEC. 253. (a) The Secretary is authorized to make fellowship grants (including such

stipends and allowances (including travel and subsistence expenses) as the Secretary may deem necessary) to professional personnel for training in relation to drug addiction and other drug-abuse related problems. Each applicant for a fellowship shall present a plan for his training which includes appropriate information regarding the participation of the institutions or agencies who will be providing the training.

"(b) Training grants under this section may be made only upon recommendation of the National Advisory Mental Health Council. Such grants may be paid in advance or by way of reimbursement as may be determined by the Secretary, and shall be made on such conditions as the Secretary finds necessary.

"(c) As used in this section, the term 'professional persons' shall include, but not be limited to persons in the fields of medicine, psychiatry, nursing, social work, psychology, education, and vocational rehabilitation.

"(d) The term 'fellowship' shall include such stipends and allowances (including travel and subsistence expenses) as the Secretary may deem necessary.

"(e) Training and fellowship awards under this title shall be made at such levels as may be required to facilitate the recruitment of the necessary professional manpower to this high priority area.

"(f) There are hereby authorized to be appropriated for carrying out the purpose of this section $400,000 for the fiscal year ending June 30, 1970; $600,000 for the fiscal year ending June 30, 1971; and $1,000,000 for each of the next three fiscal years.

"DRUG ABUSE EDUCATION

"SEC. 254. (a) The Secretary is authorized to make grants to States and political subdivisions thereof and to public or nonprofit private agencies and organizations, and to enter into contracts with other private agencies and organizations, for—

"(1) the collection, preparation, and dissemination of educational materials dealing with the use and abuse of drugs and the prevention of drug abuse, and

"(2) the development and evaluation of programs of drug abuse education directed at the general public, school-age children, and special high-risk groups.

"(b) The Secretary, acting through the National Institute of Mental Health, shall (1) serve as a focal point for the collection and dissemination of information related to drug abuse; (2) collect, prepare, and disseminate materials (including films and other educational devices) dealing with the abuse of drugs and the prevention of drug abuse; (3) provide for the preparation, production, and conduct of programs of public education (including those using films and other educational devices); (4) train professional and other persons to organize and participate in programs of public education in relation to drug abuse; (5) coordinate activities carried on by such departments, agencies, and instrumentalities of the Federal Government as he shall designate with respect to health education aspects of drug abuse; (6) provide technical assistance to State and local health and educational agencies with respect to the establishment and implementation of programs and procedures for public education on drug abuse; and (7) undertake other activities essential to a national program for drug abuse education.

"(c) The Secretary, acting through the National Institute of Mental Health, is authorized to develop and conduct workshops, institutes, and other activities for the training of professional and other personnel to work in the area of drug abuse education.

"(d) All grants made under this section can be made only upon recommendation of the National Advisory Mental Health Council.

"(e) There are hereby authorized to be appropriated for carrying out the purposes of this section $2,000,000 for the fiscal year ending June 30, 1970; $4,000,000 for the fiscal year ending June 30, 1971; $6,000,000 for the fiscal year ending June 30, 1972; and $8,000,000 for each of the next two fiscal years."

TITLE III—AMENDMENTS TO THE PUBLIC HEALTH SERVICE ACT FOR RESEARCH AND STUDIES RELATING TO DRUG USE, ABUSE, AND ADDICTION

SEC. 301. (a) Section 302(a) of the Public Health Service Act (42 U.S.C. 242(a)) is amended—

(1) by inserting "depressant or stimulant drugs and" before "narcotics" in the first sentence;

(2) by striking out "the use and misuse of narcotic drugs," in the first sentence and inserting in lieu thereof "(1) the use and misuse of depressant or stimulant drugs and narcotic drugs, and (2)"; and

(3) by striking out "at his discretion" in the second sentence.

(b) Section 302 of the Public Health Service Act is further amended by adding a new subsection (c) at the end thereof to read as follows:

"(c) The Secretary is authorized to establish a program of grants to be administered by the National Institute of Mental Health to—

"(1) support and conduct programs of research into all phases of drug use and abuse, including the origins, causes, incidence, and prevention of drug use and abuse, the abuse potential of drugs, and the therapeutic and rehabilitation agents and techniques;

"(2) make grants to State or local agencies and other public or nonprofit agencies and institutions, and to enter into contracts with any other agencies or institutions, for the conduct of investigations, experiments, demonstrations, studies, and research projects with respect to the development of improved methods of diagnosing drug addiction and abuse and of care, treatment, and rehabilitation of drug addicts and drug abusers;

"(3) make grants to State agencies responsible for administration of State institutions for care, or care and treatment, of drug addicts or abusers for developing and establishing improved methods of operation and administration of such institutions;

"(4) conduct surveys evaluating the adequacy of programs for the prevention and treatment of drug abuse and for necessary planning studies;

"(5) develop field trials and demonstration programs for the prevention and treatment of drug abuse;

"(6) establish a National Registry of Narcotic Addicts to facilitate research in drug addiction; and

"(7) make project grants to State or local agencies and other public or nonprofit agencies or institutions for the establishment, construction, staffing, operation, and maintenance of regional centers for research in drug abuse and related problems, one of which centers shall be established as a National Addiction and Drug Abuse Research Center as part of the National Institute of Mental Health, and shall be located in close proximity to the central research facilities of such Institute so as to avoid duplication of basic science laboratories and to allow for exchange of scientific information in collaboration between researchers in these closely related areas.

Any information contained in the National Registry of Narcotic Addicts, established under paragraph (6), shall be used only for statistical and research purposes and no name or identifying characteristics of any person who is listed in the Registry shall be divulged without the approval of the Secretary and the consent of the person concerned except to personnel who operate Registry. The Secretary may authorize persons engaged in research under this subsection on the use and effect of drugs to protect the privacy of individuals who are the subject of such research by withholding from all persons not connected with the conduct of such research the names or other identifying characteristics of such individuals. Persons so authorized to protect the privacy of such individuals may not be compelled in any Federal, State, civil, criminal, administrative, legislative, or other proceeding to identify such individuals.

"(d) The following amounts are hereby authorized to be appropriated:

"(1) For carrying out the purposes of section 302(c) (1) through (6), $3,000,000 for the fiscal year ending June 30, 1971; $10,000,000 for the fiscal year ending June 30, 1972; $10,000,000 for the fiscal year ending June 30, 1973; and $10,000,000 for the fiscal year ending June 30, 1974.

"(2) For carrying out the purposes of section 302(c)(7), $3,000,000 for the fiscal year ending June 30, 1970; $10,000,000 for the fiscal year ending June 30, 1971; $25,000,000 for the fiscal year ending June 30, 1972; $10,000,000 for the fiscal year ending June 30, 1973; $20,000,000 for the fiscal year ending June 30, 1974; and $15,000,000 for the establishment of the National Addiction and Drug Abuse Research Center, to remain available until expended."

TITLE IV—CONTROL OF DANGEROUS SUBSTANCES

SEC. 401. (a) The Congress finds and declares that the importation, manufacture, distribution, possession, and use of narcotic drugs and depressant and stimulant drugs for nonmedical and nonscientific purposes have a substantial and detrimental effect on the health and general welfare of the American people, that the medical and scientific use of such drugs are important elements of the practice of medicine and of scientific research, and that adequate provision must be made to insure the availability of controlled drugs for such legitimate purposes.

(b) The Congress further finds that there is a need for a single comprehensive code which makes the necessary distinctions among narcotic drugs and depressant and stimulant drugs with respect to the degree of control required and between their medical and scientific use as against their abuse for nonmedical and nonscientific purposes. It is therefore the purpose of this title to provide for the establishment of such a code, by utilizing the medical and scientific expertise of the Secretary of Health, Education, and Welfare, and the particular competence and expertise of persons versed in the fields of mental health and pharmacology.

SEC. 402. (a) In order to aid the States and communities, the medical and scientific professions, law enforcement authorities and other concerned groups and individuals in coping with the problems of drug abuse, while at the same time encouraging ready access to certain substances for scientific, therapeutic, industrial, or other legitimate purposes, the Secretary shall—

(1) carry out the studies and investigations pertaining to narcotics and depressant and stimulant drugs as directed by section 302(a) of the Public Health Service Act;

(2) determine which substances should be subject to control because of their ability to produce physical or psychological dependence which could lead to abuse;

(3) place these substances in such classes and categories as he shall find necessary, ranked according to the extent of their ability to produce physical or psychological dependence and their relative capabilities for abuse;

(4) promulgate a list of all such substances classified or categorized as directed by paragraph (3); and

(5) amend such list from time to time by adding, deleting, or changing the classifica-

tion or categorization of a substance as he shall find necessary in the light of new scientific knowledge.

(b) No substance may be included on such list unless it is a narcotic drug (as defined in section 4731 of the Internal Revenue Code) or is a depressant or stimulant drug determined under section 201 of the Federal Food, Drug, and Cosmetic Act and not exempted under section 511(f) of that Act.

(c) The initial list promulgated by the Secretary shall not take effect until after such list has been published in the Federal Register, and not less than thirty days shall have passed thereafter. If within such thirty-day period any person adversely affected by such listing shall require opportunity for a hearing, the Secretary shall provide for such hearing, in conformity with the procedures prescribed in section 701 of the Federal Food, Drug, and Cosmetic Act, with judicial review available in conformity with such section. After such list shall have become final, any change in the category of any substance may be carried out by the Secretary only after similar notice, opportunity for a hearing, and opportunity for judicial review in conformity with such section 701.

SEC. 403. Before making any of the determinations required by section 402, the Secretary shall consider the advice of the Advisory Committee on Narcotics and Dangerous Drugs, established by section 503 of this Act, and shall consult with the Attorney General.

CONTROL OF ILLEGAL TRANSACTIONS IN MARIHUANA

SEC. 404. (a) Section 201(v)(3) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321(v)(3)) is amended (1) by striking out "and any other" and inserting in lieu thereof "marihuana, and any"; and (2) by striking out ", and marihuana as defined in section 4761 of the Internal Revenue Code of 1954 (26 U.S.C. 4731, 4761)" and inserting in lieu thereof "of the Internal Revenue Code of 1954".

(b) Section 201 of such Act is amended by adding at the end thereof the following new paragraph:

"(y) The term 'marihuana' means all parts of the plant Cannabis sativa L., whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant; its seeds, or resin; but shall not include the mature stalks of such plant, fiber produced from such stalks, oil, or cake made from the seeds of such plant, any other compound, manufacture, salt, derivative, mixture, or preparation of such mature stalks (except the resin extracted therefrom), fiber, oil, or cake, or the sterilized seed of such plant which is incapable of germination."

REGISTRATION OF RESEARCH ESTABLISHMENTS

SEC. 405. Title V of the Public Health Service Act is amended by adding at the end thereof the following new section:

"REGISTRATION OF RESEARCH ESTABLISHMENTS

"SEC. 513. (a) No person may conduct any research project with any narcotic drug (as defined in section 4731 of the Internal Revenue Code of 1954) or with marihuana (as defined in section 201(y) of the Federal Food, Drug, and Cosmetic Act) unless such research is conducted by an establishment currently registered by the Secretary under this section. Registration under this section shall be for one-year periods, and shall be renewable for like periods.

"(b)(1) No establishment may be registered under this section except pursuant to application which shall set forth—

"(A) the name of the applicant;

"(B) his principal place of business;

"(C) the number or other identification of any applicable Federal, State, or local license of registration, relating to narcotic drugs or marihuana, currently held by the applicant including the number or other identification of any such Federal license or registration previously held by the applicant;

"(D) procedures for accountability for drugs used in research projects of the applicant and the methods to be used and the safeguards to be instituted against diversion of the drugs used in such projects to nonmedical or nonscientific uses; and

"(E) any other information required by the Secretary by regulations.

The Secretary may not register an establishment under this section unless he determines that the applicant has established adequate procedures to provide for accountability for drugs used in research projects of the applicant and adequate methods to safeguard against diversion of such drugs to nonmedical or nonscientific uses, in accordance with regulations issued by the Secretary, with the concurrence of the Attorney General. Such regulations shall permit the conduct of double-blind studies.

"(2) Each applicant registered under this section shall, before any drugs are administered to human beings under a research project of the applicant, submit to the Secretary, in such form and containing such information as the Secretary may require, a research protocol, describing the research to be conducted, listing the investigators (each of whom must be registered under section 4722 or 4753 of the Internal Revenue Code, as applicable) and their qualifications to engage in such research, and otherwise conforming to the requirements of section 505(1) of the Federal Food, Drug, and Cosmetic Act. No such research protocol may provide for the dispensing or administration of drugs to human beings except by persons licensed to dispense or administer such drugs under applicable State laws.

"(c)(1) The Secretary may revoke or suspend the registration of any establishment granted under this section if he finds (A) that the application for such registration contains any untrue statement of material fact, (B) that research projects in such establishment are not being conducted in accordance with approved procedures or methods relating to accountability for drugs or safeguards against diversion of drugs used in such project to nonmedical or nonscientific uses, or (C) research projects involving the dispensing or administration of drugs to human beings are being conducted by persons not licensed under applicable State law to dispense or administer drugs.

"(2) Regulations of the Secretary shall provide for notice and opportunity for a hearing before revocation or suspension of registration under this section, except that, upon a finding of imminent hazard to the public health, such registration may be suspended or revoked prior to such hearing, but opportunity for a hearing shall be granted immediately in such cases."

AMENDMENTS RELATING TO DRUG RESEARCH IN REGULATED ESTABLISHMENTS

SEC. 406. (a) Section 4704(b) of the Internal Revenue Code of 1954 is amended by striking out the period at the end thereof and inserting in lieu thereof "; or", and by inserting immediately below paragraph (2) the following new paragraph:

"(3) RESEARCH.—To the dispensing or administration of narcotic drugs in the course of a research project conducted by an establishment currently registered under section 513 of the Public Health Service Act, if records of the drugs so dispensed or administered are kept as required by this subpart."

(b) Section 4705(c) of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following:

"(5) RESEARCH.—To the dispensing or administration of narcotic drugs to any person in the course of a research project conducted by an establishment currently registered issued under section 513 of the Public Health Service Act. Such registrant shall keep a record of all such drugs dispensed or administered, showing the amount dispensed or administered, the date, and the name and address of the person to whom such drugs are dispensed or administered, except such as may be dispensed or administered to a patient upon whom a physician, dentist, veterinary surgeon, or other practitioner shall personally attend; and such record shall be kept for a period of two years from the date of dispensing or administering such drugs, subject to inspection, as provided in section 4773."

(c) Section 4721(5) of the Internal Revenue Code of 1954 is amended by striking out "research, instruction, or analysis" and inserting in lieu thereof "instruction or analysis, or for the purpose of research by an establishment currently registered under section 513 of the Public Health Service Act,".

(d) Section 4742(b) of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following:

"(6) RESEARCH PROJECTS.—To a transfer of marihuana to or by a person in the conduct of a research project conducted by an establishment currently registered under section 513 of the Public Health Service Act. Such registrant shall keep a record of all such marihuana used in such project, showing the amount used and the name and address of the person using such marihuana, and such record shall be kept for a period of two years from the date of such use, and be subject to inspection as provided in section 4773."

(e) Section 4751(4) of the Internal Revenue Code of 1954 is amended by striking out "research, instruction, or analysis" and inserting in lieu thereof "instruction or analysis, or for the purpose of research by an establishment currently registered under section 513 of the Public Health Service Act,".

TITLE V—MISCELLANEOUS

TRANSFERS OF AUTHORITY

SEC. 501. The functions, powers and duties of the Attorney General under Reorganization Plan Number 1 of 1968 to designate a drug as a depressant or stimulant drug under section 201(V) of the Federal Food, Drug, and Cosmetic Act, and to make a finding that a drug or other substance is an opiate under section 4731 of the Internal Revenue Code of 1954, to determine the medical, scientific, and other legitimate needs of the United States for the purpose of establishing manufacturing quotas for narcotic drugs under section 509 of the Narcotics Manufacturing Act of 1960, and the amounts of narcotic drugs that should be imported or exported under sections 173 and 182 of title 21 of the United States Code, are transferred to the Secretary.

AMENDMENTS RELATING TO TRANSFERS OF AUTHORITY

SEC. 502. (a) The Internal Revenue Code of 1954 is amended as follows:

(1) Section 4702(a)(1) is amended by striking out "The Secretary or his delegate" where it appears after subparagraph (B) and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(2) Sections 4702(a)(3) and 4702(a)(5) are each amended by striking out "The Secretary or his delegate" where it appears in those sections and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(3) Section 4705(c)(2)(C) is amended by striking out "The Secretary or his delegate" and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(4) Sections 4731(g)(1) and 4731(g)(2) are each amended by striking out "The Secretary or his delegate (after considering the

technical advice of the Secretary of Health, Education, and Welfare or his delegate, on the subject)" and inserting in lieu thereof in each such section "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(b) Section 2(b) of the Narcotic Drugs Import and Export Act is amended by striking out "the board" and inserting in lieu thereof "the Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(c) Section 10(a) of the Opium Poppy Control Act of 1942 (21 U.S.C. 188) is amended by striking out "The Secretary of the Treasury" and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(d) The Narcotics Manufacturing Act of 1960 is amended as follows:

(1) The second sentence of section 5(b) (21 U.S.C. 503) is amended by striking out "The Secretary or his delegate and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(2) The second sentence of section 5(d) is amended by striking out "The Secretary or his delegate" and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(3) Section 6 (21 U.S.C. 504) is amended by striking out "The Secretary or his delegate" the first and third time it appears and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(4) Section 7(b) (21 U.S.C. 505(b)) is amended by striking out "if the Secretary or his delegate" and inserting in lieu thereof "if the Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(5) Paragraph (1) of Section 8(a) (21 U.S.C. 506 (a)) is amended by striking out "which will produce" and inserting in lieu thereof "which the Secretary of Health, Education, and Welfare, after consultation with the Attorney General, determines will produce".

(6) Section 11(a) (21 U.S.C. 509) is amended by striking out "the Secretary or his delegate" and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

(7) Section 11(b) is amended by striking out "the Secretary or his delegate" the first time it appears in that section and inserting in lieu thereof "The Secretary of Health, Education, and Welfare, after consultation with the Attorney General".

ADVISORY COMMITTEE

SEC. 503. The Secretary of Health, Education, and Welfare shall appoint a committee of experts to advise him with respect to any of the determinations pertaining to drugs which he is required to make under amendments made by this Act. This committee shall be known as the Advisory Committee on Narcotics and Dangerous Drugs. It shall be composed of not less than twelve persons of diverse professional backgrounds, including the fields of pharmacology, psychiatry, psychology and other behavioral sciences, manufacturing, and distribution, who, in the opinion of the Secretary, qualify as experts on the subject of narcotic drugs or depressant or stimulant drugs.

THE STUDENT TEACHER CORPS ACT OF 1969

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. STEIGER) is recognized for 15 minutes.

Mr. STEIGER of Wisconsin. Mr. Speaker, I am introducing today a bill entitled the "Student Teacher Corps Act of 1969." Joining me in cosponsoring this legislation are Representatives BIESTER, BRADEMAS, BROCK, BURTON of California, BUSH, COUGHLIN, ESHLEMAN, FREY, HATHAWAY, HAWKINS, HOGAN, LUJAN, MCCLOSKEY, MEEDS, REID of New York, RIEGLE, RUPPE, SCHEUER, VANDER JAGT, and WHITEHURST.

This legislation would establish a Student Teacher Corps within the framework of the existing Teacher Corps. The Teacher Corps would provide the leadership, but the program would be operated entirely at the State and local level. The proposal envisions a carefully structured program of recruitment, training, and deployment of tutors, drawn from high school, college, and to some extent, the adult community.

As under the regular Teacher Corps program, proposals would be developed at the local level by schools and universities working in cooperation with community members and with the approval of the State department of education. The Federal Government would pay training, administrative costs and 90 percent of compensation. After training, Corps members would serve in the schools in teams under a leader from the school system.

The act provides for an increase in the present Teacher Corps authorization from $56,000,000 to $80,000,000.

No method of compensation of volunteers has been provided for under this bill and this is a feature which I feel would have to be drafted in committee as a result of hearings.

Mr. Speaker, a recent Gallup poll survey found that over one-half of our present college students have done volunteer work among the poor. The study also found that "an extraordinarily high proportion of students today want to go into the 'helping' professions, notably teaching—29 percent indicated that they expected to be engaged in teaching at age 40."

The recent trip that I made with 21 of my colleagues to college campuses throughout the country confirmed this trend. We found an encouraging desire to do something to help overcome the problems of our society.

This dedication or commitment to help others is a hopeful, important area which should be encouraged—

We reported. Our report went on:

We also recommend establishing a Student Teacher Corps. Many more students are considering entering the teaching profession and this idea is one which we feel should be encouraged. In concert with the Teacher Corps, the student teacher concept can be a valuable tool to tap student potential and expand the learning opportunities for the disadvantaged.

President Nixon has also given his endorsement to the idea of a Student Teacher Corps. During the 1968 presidential campaign, Mr. Nixon said:

Young Americans have shown their idealism and their dedication in the Peace Corps and in VISTA. To these now should be added a National Student Teacher Corps of high school and college students; carefully selected, paid volunteers who would work at the tutoring of core-city children. What they might lack in formal teaching skills, they could make up in the personal bonds of friendship and respect. . . . It represents the kind of helping hand needed across the nation.

The Subcommittee on Education of the Senate Labor and Public Welfare Committee held hearings on this legislation on Tuesday, July 15. The Senator from Wisconsin (Mr. NELSON), has introduced this measure in the other body. Witnesses at the hearings include: Judge Mary Conway Kohler, director, National Commission on Resources for Youth, Inc., accompanied by Mr. Meredith Weaver and tutors and tutees from the Washington youth tutoring youth project; Mrs. Louise C. Johnson, supervising director, department of pupil personnel services, title I program, District of Columbia Public Schools; Dr. Harris Wofford, president, State University of New York at Old Westbury; Dr. Carl Megel, legislative director, and Mr. David Selden, president, American Federation of Teachers; Mr. Allen Toothaker, director, Tutorial Assistance Center, National Student Association; and Mr. Earl Avery, director, UCLA tutorial project, University of California, Los Angeles.

The energy and concern displayed by our Nation's youth is a logical and important source of manpower and talent to help us improve our system of education, and yet we cannot expect our young people to simply volunteer their time and energy without giving them encouragement and direction. Experience has shown that often the volunteer is discouraged and frustrated because the efforts that he made on his own initiative to offer his services are unappreciated or ignored. Studies of existing tutoring programs demonstrate that careful training, a strong program structure within the school system, and close cooperation with parents and community groups are essential if student tutorial programs are to be effective. The Student Teacher Corps offers such a program.

ADMINISTRATION OPPOSES EDUCATION FUNDS CUTOFF

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee (Mr. BROCK) is recognized for 15 minutes.

Mr. BROCK. Mr. Speaker, the Nixon administration has made very clear its position on legislation that would cut off funds to colleges and universities because of campus disorders. Two weeks ago, Health, Education, and Welfare Secretary Finch and Attorney General Mitchell, at the request of the President, wrote congressional leaders stating that the administration is opposed to punitive or repressive legislation.

Secretary Finch further spelled out the administration's position on campus unrest legislation in remarks before the Conference of Regional Education Laboratories meeting in Washington, July 17, 1969.

Mr. Speaker, I think it appropriate that each Member be allowed to study the administration's position and the arguments in its favor. Accordingly, I insert the text of the Finch-Mitchell let-

ter and excerpts from Secretary Finch's speech to be printed in the RECORD at this point:

TEXT OF LETTER TO SENATOR EVERETT DIRKSEN AND CONGRESSMAN GERALD R. FORD, JULY 17, 1969

We understand that efforts may be made during House debate on future appropriations bills to add a rider which would cut off Federal funds to institutions of higher education which experience campus disorders, or would require them to develop certain rules of behavior and plans to control conduct as a condition of receiving assistance. The President has requested that we give you the views of the Administration with regard to such legislation.

We realize that Congress is rightly concerned with the situation on college and university campuses. Violence and intimidation must not be permitted to undermine the university institution. In our studied judgment, however, such legislation would be counterproductive, and would seriously jeopardize the relationship between the academic community and the Federal government which has been of such inestimable benefit to our society. We strongly feel the threatened cutoff of institutional funds is an entirely inappropriate way of dealing with a serious problem. More specifically, we feel:

First, forcing institutions to submit or certify that they have developed such policies and plans dealing with campus disorders would imply a Federal standard by which their policies and plans would be judged. The Federal government must not be placed in the role of enforcer or overseer of rules and regulations for the conduct of students, faculty, and other university employees.

Second, the administrative independence of colleges and universities is an essential element of the academic freedom which this Nation has always cherished for its institutions of higher education. Responsibility for the orderly maintenance of these institutions should not be preempted by any Federal agency.

Third, Federal legislation already exists which withdraws aid from students who engage in disruptive violent acts at college. To extend this cutoff to institutions would go beyond existing laws and punish the entire academic community—which is, after all, the victim, not the instigator, of violence.

We are actively studying ways in which the Federal government might constructively assist institutions and protect the right of all Americans to pursue their education without disruption.

The President has asked us to send you these views with the hope that you will call them to the attention of your colleagues, so that there may be no misunderstanding of the Administration position in case such legislation is offered in the House.

Sincerely,

ROBERT FINCH,
Secretary, Department of Health, Education, and Welfare.

JOHN N. MITCHELL,
Attorney General.

EXCERPT FROM REMARKS BY HON. ROBERT H. FINCH, SECRETARY OF HEALTH, EDUCATION, AND WELFARE, BEFORE THE CONFERENCE OF REGIONAL EDUCATIONAL LABORATORIES WASHINGTON, D.C., JULY 17, 1969

Let me turn now to the second core problem to which I referred earlier—to that of "student unrest . . . and what to do about it."

Today, the Attorney General and I sent a letter to the Congressional leadership setting forth the Administration's position with respect to proposals for punitive legislation against the Nation's campuses. We state our unalterable opposition to certain techniques that have been proposed.

A full-scale affirmative response to issues of student unrest would take me too far afield . . . into the complexities of institutional change and renewal . . . and that is not my purpose today. But I feel rather sure of what not to do about it—and I want to spell out my objections once again for the record.

I am speaking now of the fund cut-off technique that some propose, to punish institutions of higher education where student unrest persists. My Department, of course, has informed the Nation's colleges and universities of their enforcement responsibilities under existing Federal legislation. We have placed the burden for coping with ferment, and for undertaking educational reform, squarely where it belongs—with the authorities on each local campus.

In every State there are laws adequate to curb disruption and punish violence. Implementation of these laws is a local responsibility—and, if the concept of federalism means anything at all, so it must remain.

Even the Federal laws now on the books, the ones that terminate financial assistance under certain specified circumstances, can only be administered by the institutions themselves—and so, in fact, were they designed by Congress. This means that we in HEW have no master list of the nearly 1.5 million students who receive some form of Federal assistance. We channel almost every dollar through campus officials.

DeTocqueville once observed that Americans—perhaps because they began with a written Constitution—always have tended to reduce social and political questions to legal ones. But this tendency . . . this penchant always for passing law . . . can also become a barrier to rational—and effective—response.

Not all our problems are open to a legislative solution. And certainly this is the case with respect to proposals for fund cut-offs to universities that cannot, on command, quell campus disorders.

On the basis of hundreds of letters that have crossed my desk, and scores of personal talks, not a single educator—hard-line or soft-line or anywhere in between—favors this approach. They recognize that it does not address the causes of unrest, and I agree with this expert view.

Such a mechanism would not, in any case, really reach the wrongdoers—the militants on the barricades who, mostly, are children of the affluent and not of the poor. Financial pressures are just not operative on them—they can pack their bags and start trouble elsewhere. And to extend the cut-off to institutions would be to punish the entire academic community—which is, after all, the victim, not the instigator, of violence.

Furthermore, the technique of institutional cut-offs would play right into the hands of the extremists. They want the schools shut down. All they need is the cynicism to create a disruptive situation—and we know how easy that really is—at which point someone presumably decides that the quantum of ferment has been exceeded, and the green Federal juices dry up.

Many institutions would probably be forced to close their doors—which is fair neither to society, nor to the vast majority of students who want an education—and I am unalterably opposed to putting such an extortion weapon into the hands of the extremists.

The administrative implications of enforcing such fund cut-offs would, in themselves, raise a further range of unanswerable questions. Enforcement would have to proceed according to some arbitrary thermometer of revolt. How much disruption is too much? Is it to be measured by the institutions' own codes? If so—how are they, and how effectively do they preserve legitimate dissent?

There is no Federal code of student conduct—there can be none, and there never should be one. And Federal enforcement of State, local, and institutional codes would involve a Federal force of campus policemen numbering in the thousands—and would constitute an administrative nightmare, devoid of criteria for rational judgment.

One final objection—and this one perhaps the most fundamental of all. Such techniques of repressive Federal intervention into the affairs of each local campus violate the most deep-dooted, the most honored traditions of American education—and would, in the end, destroy its essential nature.

We want our universities to be centers of diversity . . . creative, independent, components of a vigorous pluralism. We do not want a monotonous and monolithic imposed unity—in which all our educational institutions conform to a Federal code of conduct, to a stifling Federal intervention.

To advocate such intervention, in my view, is a form of radical extremism—fatal, indeed, to the perpetuation of our free and pluralistic society.

COMPREHENSIVE PROGRAM FOR VETERANS EDUCATIONAL ASSISTANCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. HALPERN) is recognized for 10 minutes.

Mr. HALPERN. Mr. Speaker, to correct the deplorable circumstances which cause returning Vietnam veterans not to take advantage of their GI bill of rights, I have introduced H.R. 13006 to provide added educational and training incentives for returning veterans and to establish a predischarge education program.

The blatant inadequacies in the current veterans' law are disgraceful. Only one out of every 10 veterans is using the GI bill benefits today and those who need it the most—the disadvantaged and high school dropouts—are ignoring it.

Certainly we have an obligation to motivate these men and women to be just as valuable to their country in civilian life as they were in military life. Twenty-three percent of the 1 million men and women in the Armed Forces who will be discharged this year are high school dropouts, yet only 2.4 percent are participating in GI bill education programs.

The bill I have introduced is identical with the goals of similar legislation introduced by Senator ALAN CRANSTON, S. 2668. It would establish four programs administered by the Veterans' Administration. They are:

First. Educational assistance payments for college preparatory or academic deficiency courses in other than secondary schools.

Second. Direct allowances for expenses for refresher courses, tutorial or remedial aid, counseling or other special aid for veterans already enrolled in school.

Third. Allow noncredit deficiency courses to be counted toward full-time status to enable veterans to secure a full-time educational assistance payment.

Fourth. A predischarge educational program—PREP—providing veterans with education or vocational training prior to their discharge from active military duty.

The program would be financed by VA payments to the eligible veterans or on

their behalf to educational institutions. The VA would also consult with the Secretary of Defense and would draw upon the experience of the Office of Education in establishing these programs.

Before explaining how each of these programs would operate, I want to say a few words about the failure of the existing GI bill which was amended in 1967 to help educationally disadvantaged veterans. One of the reasons the program has failed is because benefit allowances are not sufficient for today's cost of living. Following World War II, 50 percent of the eligible veterans utilized the college and vocational aid available under the GI bill. But since January of 1966, only 21.4 percent of the Vietnam vets have utilized their benefits. One of the reasons for this is the lack of funding available for prospective college students. At the present time only $130 a month is available for a single man who wishes to continue his education. With the increase in prices since World War II, this amount is grossly insufficient. The gentleman from Texas (Mr. TEAGUE) has introduced H.R. 11959, which would raise these allotments. I heartily support his bill, as well as my own bill, H.R. 12461, which proposes an even larger increase in funding—a 50-percent increase to $190 a month.

But the real reason for the failure of the GI bill today is lack of motivation. The average 22-year-old returning veteran today does not look favorably upon the prospect of returning to high school—especially if he already has a family or plans to get married, and most of these programs until now have not really met the needs of returning GI's.

This is evident from the statistics on veteran utilization of GI benefits. After World War II, 50 percent of the veterans used their rights; after Korea, 42 percent used their rights. Today a little over 20 percent are using their rights.

Today, almost a quarter of the over 70,000 returning Vietnam veterans each month have not finished high school. Only a tenth are taking advantage of the existing programs available under the GI bill. Many of these young men are from disadvantaged backgrounds—from the Nation's ghettos as well as its rural wastelands where they have become alienated from the mainstream of American life.

It is essential that the country now does not lose the energy of these young men. President Nixon recognized this problem when he said, upon establishing his Committee on the Vietnam Veterans:

> Veterans benefits have become more than a recognition for services performed in the past, they have become an investment in the future of the Veteran and his country. The time has come for a careful re-evaluation of this investment. Just as there is a difference between the kinds of battles fought at Normandy in 1944 and in South Vietnam in 1969, so there is also a difference in the kinds of problems faced by the returning veterans of these battles. Therefore, we must be certain our programs are tailored to meet the needs of today's veterans.

The first of the four programs established under H.R. 13006 tries to help motivate veterans to use their educational benefits under section 1678 of title 38 of the United States Code. This program permits refresher courses to be taken at any appropriate institution offering such courses, including junior and senior colleges. At present these courses can only be taken at secondary schools which usually are not sensitive to the needs of veterans with records of failure in high school.

Under the 1967 GI bill amendments, the veteran who needed additional high school or equivalent training was entitled to receive full educational assistance allowances without having it charged against his entitlement. But the veteran was required to take these courses at a secondary school. The low utilization level—10 percent—which I previously mentioned has arisen from multiple causes which could be offset by this new program.

Presently, a veteran who needs a refresher or deficiency course in order to qualify for admission to an educational institution for which he is otherwise qualified, must take these courses at a secondary school. My bill would permit these courses to be taken at any qualified institution offering precollege assistance. This would include junior colleges, preparatory schools, community colleges, and special programs under the auspices of universities.

The second provision in H.R. 13006 provides for direct payment to the educational institution for expenses of refresher courses, remedial assistance, tutorial, counseling, or other assistance or training the veteran may undertake while enrolled there. This provision also falls under section 1678 which covers special training for the disadvantaged veteran. As in the first program, the payment is made directly to the educational institution involved and no charge is made against the veteran's period of entitlement under the GI bill.

The third provision would provide that noncredit courses, which the veteran must take because of some deficiency in his educational background, may be counted toward full-time status, so that he can receive the full-time educational assistance allowance.

For instance, if a veteran started college before entering the service and now wants to change his major, but he is deficient in certain areas, the noncredit prerequisite courses he would have to take would count toward his full-time allowance eligibility. This would not apply to any noncredit courses which the Veterans' Administration would be paying for under the second provision in this bill.

The veteran would be allowed to take the number of noncredit courses necessitated because of a deficiency, which when added to his credit hours would be the equivalent of a full semester load.

The final provision envisioned in the bill is the most far reaching. It establishes a predischarge education program—PREP—to provide educational vocational training to veterans prior to their discharge from active military duty. This would represent the farthest step yet taken to speed the assimilation of the veteran into civilian life.

As Senator CRANSTON so well stated, when introducing his bill:

> Increasing GI Bill utilization is the principal purpose of the PREP program which would be established by the bill. This program would seek to reach the Veteran before his discharge by involving him, in the last year of his military service, in education or training which would prepare him to pursue education or training under the GI Bill.

Joseph Cannon, the acting director of the veterans' affairs division of the Urban League has stated:

> Two major problems his organization faces are—
>
> The inability of emerging servicemen to get information in regards to pursuing education and available education program; and
>
> The failure of the average Negro GI to obtain skills in military service which can easily be transferred to any civilian jobs which offer upward mobility in either pay or status.

Although the PREP program is not limited to people from disadvantaged backgrounds, it is clear that they are the ones who are most in need of the assistance which PREP would provide. It would involve them in the program and then guide them in taking advantage of continuing aid available under the regular GI bill following their discharge.

The PREP program would operate as an extension of Project Transition presently run by the Defense Department. Project Transition was established in 1967. It is primarily for individuals who most need vocational training or education in order to make the change to civilian life. The in-service training is provided during the serviceman's last 6 months of duty and emphasizes counseling, training, education, and placement.

Thus far, the program has not reached its potential. Of the 940,000 men and women separated from the armed services during this period, only 60,000 were reached. Only 26 percent of the participants in the program have not finished high school. This is only slightly higher than the overall military level of 21.4 percent. Most of the training under Project Transition has been undertaken by the military services themselves. PREP would fill a link here by providing funds to entice private instruction, counseling, and guidance.

All members of the Armed Forces who have served at least 1 year of active duty and have 12 months or less of active duty remaining would be eligible. The Veterans' Administration, working jointly with the Secretary of Defense and the Commissioner of Education, would pay the expenses necessary for the program. It is important to note that the servicemen enrolled in PREP may only take courses required for, or preparatory to the educational training or vocation they plan to pursue following their release from active duty. As with the other provisions in the bill, the funds will be paid directly to the educational institution.

These four programs which provide educational and training assistance represent a giant step in repaying our obligation to our veterans and helping de-

velop them into worthwhile citizens of peace. Senator KENNEDY expressed this feeling recently when he said:

This nation has a rare opportunity to assist and benefit from the men who have broken out of disadvantaged background; and matured in the service. If we follow through with full veterans programs, including educational services for veterans, we can insure that returning servicemen will not revert to unproductive lives in ghettos or other areas. Rather, veterans whose horizon and aspirations have broadened in the service can continue to contribute to our national welfare as constructive, well-educated citizens. We have an obligation both to the men as individuals, and to society as a whole to give them a chance.

It is my feeling that the enactment of H.R. 13006 would be an investment in these men which would reap a profit for all the citizens of America.

JULY 25 IN PUERTO RICO

The SPEAKER pro tempore. Under a previous order of the House, the Resident Commissioner from Puerto Rico (Mr. CÓRDOVA) is recognized for 15 minutes.

Mr. CORDOVA. Mr. Speaker, the 25th of July is a date which has long been significant in Puerto Rico. Its original significance, while Puerto Rico was part of the once vast Spanish domain in America, lay in the fact that it is the feast day of the patron saint of Spain, the Apostle James—Santiago. It acquired a very special significance in 1898, when Gen. Nelson Miles and his troops landed at Guánica on July 25 and brought with them the Stars and Stripes which have ever since flown in Puerto Rico. A third dimension was added in 1952, when July 25 was selected, precisely because of its already significant importance in Puerto Rican history, as the date on which the Constitution of the Commonwealth of Puerto Rico should become effective.

In a very real sense, the 25th of July symbolizes not only some of the most significant elements of the history of Puerto Rico but also some of the most significant elements of its culture and its spirit. For Puerto Rico is proud of the Spanish heritage, the Christian faith, which are recalled on this date in the celebration of the feast of Santiago throughout the Spanish-speaking world. Puerto Ricans are proud of the citizenship which they share with 200 million other Americans in the 50 States of the Union. Puerto Ricans are proudly bearing the Stars and Stripes in remote regions of the world, in the service of their country, as they have previously done in all of the conflicts in which our Nation has been involved since the First World War. And Puerto Rico is extremely proud of the democratic tradition, and the principles of individual dignity and integrity which are embodied in the Constitution of the Commonwealth.

In observing this anniversary, Puerto Rica is particularly happy to salute the three men who have successfully terminated the most momentous journey in the history of man, and to give thanks to God for their safe return.

U.S.S. "PUEBLO"—A TRAGEDY OF ERRORS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. BRAY) is recognized for 10 minutes.

Mr. BRAY. Mr. Speaker, after 5 months' work and extensive hearings, the Special Subcommittee on the U.S.S. *Pueblo* and the EC–121 of the Committee on Armed Services has finished its report. I had the honor to serve as ranking Republican member of this subcommittee. The result of long, painstaking work, the report, in its own words, lays bare "serious deficiencies" with "frightful implications" for our national security. The subcommittee felt it was beyond the scope of the report to make specific recommendations for solutions to the problems uncovered. But the subcommittee does recommend, to quote from the report: "that the President establish a special study group of experienced and distinguished civilian and military personnel to approach this problem on an emergency basis and make such recommendations for changes in both the National Security Act and the military structure itself that will provide our Nation and its military forces with a genuine capability to respond quickly and decisively to emergencies of a national security nature."

The report, quite lengthy, reflects the unanimous view of all nine members of the subcommittee. The consequences of the *Pueblo* are that the incident destroyed a 150-year-old image of prestige and invincibility, and did incalculable harm to our diplomatic credibility, as well as to our reliability as military allies. It is an extremely serious compromise of our Nation's intelligence capability. Following are some of the highlights of the report.

U.S.S. "PUEBLO" INADEQUATELY PREPARED

Loss of the ship itself, and its equipment, was relatively harmless. But, overall, considering loss of the documents aboard, as the report says:

We have sustained a most serious intelligence loss, a loss which could have been precluded entirely by appropriate planning for the intelligence collection mission.

There was inadequate preparation; this was the first intelligence-gathering mission directed against North Korea, but the *Pueblo* did not have adequately trained personnel. The ship had no provision for storage of registered publications, nor did it have a proper incinerator. A request by Commander Bucher for emergency destruction devices was turned down.

The security group detachment was never formally inspected. Its state of readiness was only assumed. The officer in charge of the detachment knew that the North Korean linguists on *Pueblo* were not qualified, but he failed to inform Commander Bucher of this. The linguists were incapable of obtaining and passing on information that might have been monitored from North Korean radio broadcasts, and this fact alone may have contributed materially to the situation.

The Navy had not allowed for delays in outfitting the ship before it left, and, as a result, many of Commander Bucher's requests for outfitting were never approved. And, although the Navy had some months earlier ordered installation of defensive armament on all ships, save hospital ships and submarines, the Commander Naval Forces Japan never received the directive. As a result, the *Pueblo* only received two .50-caliber machineguns; the least any ship was to receive was 20-millimeter cannon.

The *Pueblo* was inspected by higher authority at Japan, before it sailed, to check the effectiveness of destruction capability of classified material, but the inspection was found to have been "informal and cursory" and *Pueblo*'s capability was obviously inadequate. Commander Bucher was told in Japan that his mission was probably to be off North Korea, and that, if he was attacked, U.S. forces were prepared to act. But he was also told any rescue help would be too late to save the ship.

A POSSIBLE NORTH KOREAN REACTION TO "PUEBLO" IGNORED

The report is especially critical of failure of high defense authority to realize the high risk involved in the *Pueblo*'s mission. The risk was classed as minimal on the grounds that the ship would be operating in international waters, and on the very shaky and thoroughly unjustified assumption that North Korea would respect and observe international law in this regard. But, at the time *Pueblo* sailed, North Korea had been giving ample demonstration in various ways, for some time, of an increasingly hostile and belligerent attitude.

The National Security Agency, alone, deserves special praise for being alert to the risk. NSA, on December 29, 1967, sent a message to the Joint Chiefs of Staff and to the Joint Reconnaissance Center which, and I quote from the report: "questioned the minimal risk assessment assigned the U.S.S. *Pueblo* mission."

The report continued:

This message recited a history of North Korean incidents and suggested that in view of the evident increase in hostile actions taken by the North Koreans, it might be considered desirable to establish ship protective measures for the U.S.S. *Pueblo* mission.

THE LOST MESSAGE

This message never got from the Joint Chiefs, to the Chief of Naval Operations. It was lost somewhere in the Pentagon. A copy was sent to the Defense Intelligence Agency by the Pentagon's Special Communications Center but DIA took no action. When our subcommittee asked why, the explanation given was that the message came in at night over a holiday.

As the report says, about the handling of this message:

At best, it suggests an unfortunate coincidence of omission; at worst, it suggests the highest order of incompetence.

The existence of such a message was never even hinted at when the Pentagon briefed congressional committees immediately after the incident, and no mention was made of it until March 4, 1969. The impression is that there was a

deliberate attempt to conceal the fact the message had ever existed. Handling of it was bad enough, but trying to cover it up is worse yet.

NORTH KOREA OPENLY BELLIGERENT

In addition to this, North Korea's Radio Pyongyang, on January 8 and January 11, 1968, accused the United States of committing provocative acts along the east coast of Korea, and the North Koreans threatened retaliatory action. The *Pueblo* was seized on January 23, 1968; neither the commander in chief, Pacific Fleet Headquarters, nor commander, Naval Forces Japan, had been made aware of these newest North Korean threats.

Now, it has been known for some time that North Korea's Premier Kim Il-Sung is a reckless and quite possibly unstable man who will stop at nothing to get what he wants. A fellow-Korean has called him:

A Stalinist dictator whose fanatical dedication to revolutionary objectives is surpassed only by his brash audacity in seeking to carry them out in the face of all obstacles.

THE COMMUNICATION GAP

The Navy had no contingency plans for rescue of the *Pueblo* in case of an emergency. To compound this lack, the only forces on call that could have helped were air, but there was no provision for communication between the *Pueblo* and aircraft; the provisions were only for ship-to-ship transmission.

The report expresses great concern over, and uses the term "human inefficiency" to describe the delays in the two critical messages getting from *Pueblo* to higher authority, which could have acted. The report, incidentally, carries a full log of messages from the *Pueblo* and others, showing timelag until receipt.

I would like to cite some of these timelags. With the first message, it ranged from 23 minutes—to commander, Naval Force, Japan—up to 2 hours and 34 minutes—to the Joint Chiefs of Staff. With the second, it reached commander, Naval Forces Japan in 4 minutes, but did not get to the JCS for 1 hour and 39 minutes.

Lacking of emergency telephone procedures meant a 40-minute delay in the Navy's asking help from the Air Force. The Navy had a carrier about 1 hour's flight time away, but did not use it. At the same time, of the many Air Force bases in Japan, not one was alerted, nor was aid sought from them, by responsible authorities.

Air Force planes were eventually dispatched from Okinawa, but they did not have enough fuel, were diverted to South Korea, then kept from taking off again because of darkness. It seems the responsible commanders had both the authority and opportunity to act if they could have done so at once. But they could not, for the reasons outlined above.

REACTION OF COMMANDER BUCHER

I want to comment specifically on Commander Bucher's role when the ship was first threatened, then boarded. Our subcommittee studied transcripts of the messages sent to and from the *Pueblo*, from the time of the first threat to actual boarding. A complete log of these messages, with their content, and time of transmission, is included in the report. It is obvious from the text of the messages Commander Bucher sent, and from those going back to him, that he did not intend to resist, and that higher authority did not react to this, nor did they order him to take any other course of action.

Again, to quote directly from the report:

Therefore, the failure of Commander Naval Forces Japan and higher naval authority to officially respond to these communications and direct the *Pueblo* to take more aggressive and positive actions constitutes, in the view of the subcommittee, a tacit endorsement and approval by Commander Naval Forces Japan of the actions taken by the *Pueblo*.

EC–121

The subcommittee was also given responsibility for investigation of the EC–121 incident, when an air reconnaissance plane was shot down by North Korean planes in international air space, over the Sea of Japan, on April 14, 1969. Our response to this was quick, but, again, we found preparations had been lacking.

CONCLUSION

I wish to conclude by quoting directly from the "Summary of Findings and Recommendations" in the subcommittee's report:

The inquiry made by this special subcommittee into the U.S.S. *Pueblo* and the EC–121 incidents has resulted in the unanimous view that there exist serious deficiencies in the organizational and administrative military command structure of both the Department of the Navy and the Department of Defense. If nothing else, the inquiry revea's the existence of a vast and complex military structure capable of acquiring almost infinite amounts of information, but with a demonstrated inability, in these two instances, to relay this information in a timely and comprehensive fashion to those charged with the responsibility for making decisions.

As President Nixon recently said, "When a war can be decided in 20 minutes, the nation that is behind will have no time to catch up."

The reluctant but inescapable conclusion finally reached by the subcommittee is that because of the vastness of the military structure, with its complex division into multiple layers of command, and the failure of responsible authorities at the seat of government to either delegate responsibility or in the alternative provide clear and unequivocal guidelines governing policy in emergency siuations—our military command structure is now simply unable to meet the emergency criterion outlined and suggested by the President himself.

FEDERAL CONTRACTING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 20 minutes.

Mr. FARBSTEIN. Mr. Speaker, I have today introduced legislation which would bar for a 2-year period Federal contracting and procurement officers from taking jobs with contractors or other direct beneficiaries of the contracts that they have participated in granting, awarding, or administering. It is the companion measure to legislation introduced by Senator PROXMIRE, of Wisconsin, last Thursday.

The country has increasingly become aware of the fact that prime military weapons systems contracts normally exceed their estimates by 100 to 200 percent, that deliveries can be delayed for years, that the quality of the finished product is frequently quite poor, and that defense contractors in many instances enjoy huge levels of profits.

By taking effective steps now to eliminate this kind of waste, billions of dollars could be slashed from the defense budget annually without affecting national security or reducing funds for the Vietnam war. A former official of the Defense Department's Office of the Controller puts the figure that can be saved for fiscal 1970 at $9.2 billion.

The Congress and the American people have the right to ask why the Defense Department not only has allowed this situation to develop but has attempted to cover it up once it was brought into the open.

I do not believe there is a conspiracy to defraud the American people. In the past many of the officers have performed valiant and even heroic service on behalf of the United States. The country is indeed grateful to them for their past service and for their patriotic endeavors.

But what can be said, and should properly be said, is that there are inherent factors in the present system of defense procurement which contribute to the waste and inefficiencies.

Primary among these is the fact that less than 10 percent of defense contracts are handled through open bidding. The advanced state of technology, we are told, has left the checks and balances of the free enterprise system inoperative. The highly specialized nature of military technology today has meant that only a few contractors, and in some cases only one, have the capacity to undertake many defense contracts. Turning this figure around, this means that over 90 percent of the $40 billion in defense contracts annually let are negotiated putting DOD personnel on one side of a table with personnel of the defense firm on the other.

A second major fact is the conglomerate nature of the defense industry. A handful of American firms control the overwhelming majority of the personnel and facilities needed to successfully complete a defense contract. The result is that only 10 defense contractors during fiscal 1968 accounted for 30 percent of all defense contracts.

But what makes these two facts so critically important is that so many Defense Department personnel end up working for defense contractors when they leave the Department. According to a report prepared by the Department in March, there are 2,072 retired military officers of the rank of colonel or Navy captain and above employed by the 100 contractors, which do the most business with the Defense Department.

I am sure this most dangerous and shocking situation is not a question of deliberate wrongdoing, but rather a question of what can be called the old school tie—a community of interest between the Defense Department official and the defense contractor which works

to the benefit of the large contractors who employ a large number of retired Defense Department personnel.

Former high-ranking military officials have access to the Pentagon that others do not have. Former high-ranking officials have personal friendships with those still at the Pentagon.

And in some cases former officers may even negotiate contracts with their former fellow officers. Or they may be involved in developing plans and specifications, making proposals, drawing up blueprints, or taking part in the planning process or proposing prospective weapons systems. And they may be doing this in cooperation with their former fellow officers with whom they served and by whom in some cases even promoted.

In addition, there is the subtle or unconscious temptation to the officer still on active duty. After all, he can see that over 2,000 of his fellow officers work for big companies. How hard a bargain does he drive with them when he is 1 or 2 years away from retirement?

Witness the case of five former Air Force officers who blocked efforts to cut costs on the Minuteman missile guidance and control system. In so doing they were helping the contractor. Subsequently, these officers accepted executive jobs with the system's manufacturer, North American Rockwell. According to the Justice Department, these officials violated no current law.

What we have is a 1969 version of the 5 percenters of the Korean war era—former Government employees who peddled their "influence" to contractors for a fee—usually 5 percent of the contract.

The bill I am introducing today would go a long way toward remedying this situation by making this type of activity a violation of Federal law, subject to criminal penalties.

My bill would bar an employee who participated personally and substantially in the granting, awarding, or administration of a contract or grant from taking a job within 2 years of terminating his Federal employment with anyone who has a direct or substantial interest in the contract or grant. The penalty for violating this bar would be a maximum fine of $10,000 and/or a maximum prison sentence of 2 years.

This legislation is designed to cut down on the incentive for Federal contracting and procurement officers to make lucrative awards to private companies and then leave the Federal Government to accept a generous job offer from one of those companies. The ultimate effect should be to cut down substantially on the tremendous cost overruns that the Federal Government has been experiencing on its contracts.

The bill will apply to those individuals who play an important role in the decisional process which confers a financial benefit upon a contractor, grantee, claimant, or any other beneficiary. However, I do not intend to prevent any Federal officer or employee who works for the procurement or grant office, or who has responsibility over it, from taking subsequent employment with any beneficiary of Federal largesse. My bill would only prevent such employees from taking jobs with those contractors or grantees who have benefited directly from some action on their part—the participation must be personal and it must be substantial. The pro forma signature of the Secretary of Defense on a procurement authorization, for example, would not, in my opinion, constitute personal and substantial involvement such as to bar subsequent employment under this bill.

The text of H.R. 13138 follows:

H.R. 13138

A bill to amend Public Law 87-849, approved October 23, 1962, to strengthen provisions relating to disqualification of former Federal officers and employees in matters connected with former duties and official responsibilities, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Subsection (a) of section 1 of Public Law 87-849 approved October 23, 1962 (76 Stat. 1123), pertaining to disqualification of former officers and employees in matters connected with former duties or officials responsibilities, and disqualification of partners, is hereby amended by inserting after the word "responsibility" at the end of subparagraph (b) a new subparagraph (c) as follows:

"(c) Whoever, having been an officer or employee of the executive branch of the United States Government, or any independent agency of the United States, or of the District of Columbia, including a special Government employee, and who, having participated personally and substantially during the last two years of such employment as such officer or employee, through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise, in the granting, awarding, or administration of any contract, bid, grant, or procurement authorization whose total value exceeds $10,000, is employed in any capacity within two years after his employment has ceased by anyone other than the United States who has a direct and substantial interest in the contract, bid, grant, or procurement authorization in which he participated personally and substantially while so employed—".

SEC. 2. Subsection (a) of section 1 of Public Law 87-849 is hereby further amended by—

(a) striking, after the word "responsibility" at the end of the second subparagraph, the dash, and inserting in lieu thereof ", or";

(b) inserting after the words "That nothing in subsection (a) or (b)" in the third subparagraph, the words "or (c)";

(c) striking the period after the word "employee" at the end of the third subparagraph, inserting in lieu thereof a semicolon, and inserting further the following additional proviso: *"Provided further,* That nothing in subsection (a) or (b) or (c) prevents a former officer or employee from becoming employed by an agency of any State or local government or any educational institution if the head of his former department or agency shall make a certification in writing, published in the Federal Register, that the national interest would be served by such employment, and that such former officer or employee may act as agent or attorney during such employment on any matter formerly within his official responsibility or in which he has personally and substantially participated if the certification shall so state."; and

(d) striking at the beginning of the fourth subparagraph the clause designation "(c)" and inserting in lieu thereof the clause designation "(d)".

MACHIASPORT

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, for over a year now, Machiasport, Maine, has been in the news as a potential free trade zone. The establishment of this foreign trade zone and the building within it of an oil refinery and industrial complex could bring substantial economic benefits to all of New England.

The benefits of an oil refinery at Machiasport would save New Englanders as much as $158 million annually according to the enclosed editorial from the New York Times and reprinted in the Daily Eagle of Claremont, N.H.

I have included this editorial for the interest of my colleagues and urge Secretary Hickel to act favorably and promptly.

The editorial follows:

SERVICE FOR WHOM?

In an oblique attack on proposals to build an oil complex in Maine that would utilize imported petroleum at lower prices than currently available, Secretary of the Interior Walter J. Hickel told the National Petroleum Council the other day that the present import quota system for oil had "served well until we began to develop many exceptions."

There is no question that import restrictions have well served those who profit handsomely from protected, high-cost domestic oil production. But for the many New Englanders who are compelled to purchase petroleum products, oil quotas have meant hundreds of millions of dollars a year in excessive prices. Professor Joel B. Dirlam of the University of Rhode Island estimated before a Senate subcommittee last spring that the proposed Main refinery alone could result in savings for New England of as much as $158 million annually.

It is the responsibility of the Interior Secretary, who is a member of the presidential task force studying the Maine proposal, to serve a broader public interest than that of domestic oil producers.

INTER-AMERICAN DEVELOPMENT INSTITUTE

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, on behalf of six of my colleagues of the Committee on Foreign Affairs and myself, I am today introducing a bill to establish an Inter-American Development Institute. And I would like to say a few words about it.

Mr. Speaker, the cause of freedom, security, and economic progress in this hemisphere depends essentially on two factors: What the Latin Americans do for themselves, and what we in the United States do to assist them to bring about peaceful social and economic revolutions in their countries.

Both of those tasks are being closely reexamined at this time. The failures and the achievements of the Alliance for Progress are being reviewed and initial decisions are already being made about a new development strategy for the 1970's.

Last week, following 5 months of hearings and related studies, the Subcommittee on Inter-American Affairs of the House Foreign Affairs Committee issued a report recommending sweeping changes

in U.S. aid and trade policies aimed at Latin America.

We did not recommend increased foreign aid. But we did urge that some of the fundamental premises and emphases of our aid programs be carefully and thoroughly redirected.

For example, we recommended that instead of concentrating so overwhelmingly on economic development, the United States should apply increased attention and assistance to the task of promoting social and civic development of Latin America.

Among the new directions which the subcommittee proposed was the creation of an imaginative, flexible instrument through which the talents, ingenuity, good will and other resources of the American people could be brought to bear on that type of development.

These changes—changes in attitudes of peoples, in their skills, and in the basic organization of their societies—cannot be accomplished overnight.

They take a long time, require many inputs, and—generally speaking—can be advanced most effectively with maximum help and participation of the private sector.

Today, together with Congressmen JOHN S. MONAGAN, EDWARD R. ROYBAL, BENJAMIN S. ROSENTHAL, JOHN C. CULVER, F. BRADFORD MORSE, and JAMES G. FULTON, of Pennsylvania, I am introducing legislation to carry out this part of our subcommittee's recommendations.

The bill which we are introducing would establish the Inter-American Development Institute—a semiprivate entity, created by the Congress, and managed by a board of directors drawn partly from the private sector and partly from U.S. Government agencies involved in inter-American affairs.

This Institute would obtain its capital from a variety of sources—private and public, governmental and international—interested in promoting long-term social and civic change in Latin America.

And while connected with and guided by U.S. policies, the Institute would operate outside the formal U.S. presence in Latin America—outside our embassies and AID missions.

Mr. Speaker, the proposal which we are introducing today does not involve an increased authorization or appropriation for foreign aid. It would simply provide a better, more effective way of using some of the funds provided by the Congress for the Alliance for Progress.

At this point I insert the text of our bill, and the text of a memorandum explaining its purposes, in the RECORD:

H.R. 13120

A bill to promote the foreign policy of the United States and to provide for the establishment of the Inter-American Development Institute to promote developmental activities in the Western Hemisphere, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is created as an agency of the United States of America a body corporate to be known as the "Inter-American Development Institute" (hereafter in this Act referred to as the "Institute").

SEC. 2. (a) The future of freedom, security, and economic development in the Western Hemisphere rests on the realization that man is the foundation of all human progress. It is the purpose of this Act to provide support for developmental activities designed to achieve conditions in the Western Hemisphere under which the dignity and the worth of each human person will be respected and under which all men will be afforded the opportunity to develop their potential, to seek through gainful and productive work the fulfillment of their aspirations for a better life, and to live in justice and peace. To this end, it shall be the purpose of the Institute, in cooperation with national governments, regional and international organizations, and nongovernmental entities, to—

(1) strengthen the bonds of friendship and understanding among the peoples of this hemisphere;

(2) support self-help efforts designed to enlarge the opportunities for individual development;

(3) stimulate and assist effective and ever wider participation of the people in the development process;

(4) encourage the establishment and growth of democratic institutions, private and governmental, appropriate to the requirements of the individual sovereign nations of this hemisphere.

In pursuing these purposes, the Institute shall place primary emphasis on the enlargement of educational opportunities at all levels, the production of food and the development of agriculture, and the improvement of environmental conditions relating to health, maternal and child care, family planning, housing, and other social and economic needs of the people.

(b) The Institute shall carry out the purposes set forth in subsection (a) of this section through and with private organizations, individuals, governmental agencies and international organizations by undertaking or sponsoring appropriate research and by planning, initiating, assisting, financing, administering, and executing programs and projects designed to promote the achievement of such purposes.

(c) In carrying out its functions under this Act, the Institute shall, to the maximum extent possible, coordinate its undertakings with the developmental activities in the Western Hemisphere of the various organs of the Organization of American States, the United States Government, international organizations, and other entities engaged in promoting social and economic development of Latin America.

SEC. 3. The Institute, as a corporation—

(1) shall have perpetual succession unless sooner dissolved by an Act of Congress;

(2) may adopt, alter, and use a corporate seal, which shall be judicially noticed;

(3) may make and perform contracts and other agreements with any individual, corporation, or other body of persons however designated whether within or without the United States of America, and with any government or governmental agency, domestic or foreign;

(4) shall determine and prescribe the manner in which its obligations shall be incurred and its expenses allowed and paid;

(5) may, as necessary for the transaction of the business of the Institute, employ, and fix the compensation of, officers, employees, agents, and attorneys.

(6) may acquire by purchase, devise, bequest, or gift, or otherwise lease, hold, and improve, such real and personal property as it finds to be necessary to its purposes, whether within or without the United States, and in any manner dispose of all such real and personal property held by it and use as general funds all receipts arising from the disposition of such property;

(7) shall be entitled to the use of the United States mails in the same manner and on the same conditions as the executive departments of the Government;

(8) may, with the consent of any board, corporation, commission, independent establishment, or executive department of the Government, including any field service thereof, avail itself of the use of information, services, facilities, officers, and employees thereof in carrying out the provisions of this Act;

(9) may accept money, funds, property, and services of every kind by gift, devise, bequest, grant, or otherwise, and make advances, grants, and loans to any individual, corporation, or other body of persons, whether within or without the United States of America, or to any government or governmental agency, domestic or foreign, when deemed advisable by the Institute in furtherance of its purposes;

(10) may sue and be sued, complain, and defend, in its corporate name in any court of competent jurisdiction; and

(11) shall have such other powers as may be necessary and incident to carrying out its powers and duties under this Act.

SEC. 4. Upon termination of the corporate life of the Institute all of its assets shall be liquidated and, unless otherwise provided by Congress, shall be transferred to the United States Treasury as the property of the United States.

SEC. 5. (a) The management of the Institute shall be vested in a board of directors (hereafter in this Act referred to as the "Board") composed of seven members appointed by the President, by and with the advice and consent of the Senate, one of whom he shall designate to serve as Chairman of the Board and one of whom he shall designate to serve as Vice Chairman of the Board. Three members of the Board shall be appointed from private life. Four members of the Board shall be appointed from among officers or employees of agencies of the United States concerned with Inter-American Affairs.

(b) Terms of the members of the Board shall be at the pleasure of the President of the United States.

(c) Members of the Board appointed from private life shall receive compensation at the rate provided for level IV of the Executive Schedule (5 U.S.C. 5315), except that any such member serving as Chairman of the Board shall receive compensation at the rate provided for level III of the Executive Schedule (5 U.S.C. 5314). Members of the Board who are officers or employees of the United States shall serve without compensation in addition to that received for their services as such officers or employees. Members of the Board shall be reimbursed for travel and subsistence expenses in accordance with subchapter I of chapter 57 of title 5 of the United States Code.

(d) The Board shall direct the exercise of all the powers of the Institute.

(e) The Board may prescribe, amend, and repeal bylaws, rules, and regulations governing the manner in which the business of the Institute may be conducted and in which the powers granted to it by law may be exercised and enjoyed. A majority of the Board shall be required as a quorum.

(f) In furtherance and not in limitation of the powers conferred upon it, the Board may appoint such committees for the carrying out of the work of the Institute as the Board finds to be for the best interests of the Institute, each committee to consist of two or more members of the Board, which committees, together with officers and agents duly authorized by the Board and to the extent provided by the Board, shall have and may exercise the powers of the Board in the management of the business and affairs of the Institute.

SEC. 6. The Institute shall be a nonprofit corporation and shall have no capital stock. No part of its revenue, earnings, or other income or property shall inure to the benefit of its directors, officers, and employees and such revenue, earnings, or other income, or

property shall be used for the carrying out of the corporate purposes set forth in this Act. No director, officer, or employee of the corporation shall in any manner directly or indirectly participate in the deliberation upon or the determination of any question affecting his personal interests or the interests of any corporation, partnership, or oganization in which he is directly or indirectly interested.

SEC. 7. When approved by the Institute, in furtherance of its purpose, the officers and employees of the Institute may accept and hold offices or positions to which no compensation is attached with governments or governmental agencies of foreign countries.

SEC. 8. The Secretary of State shall have authority to detail employees of any agency under his jurisdiction to the Institute under such circumstances and upon such conditions as he may determine. Any such employee so detailed shall not lose any privileges, rights, or seniority as an employee of any such agency by virtue of such detail.

SEC. 9. The principal office of the Institute shall be located in the District of Columbia, but, there may be established agencies branch offices, or other offices in any place or places within the United States or elsewhere in any of which locations the Institute may carry on all or any of its operations and business.

SEC. 10. The Institute, including its franchise and income, shall be exempt from taxation now or hereafter imposed by the United States, or any territory or possession thereof, or by any State, county, municipality, or local taxing authority.

SEC. 11. Of the funds made available to carry out the provisions of Part I of the Foreign Assistance Act of 1961, as amended, not to exceed $50,000,000 shall be available for the fiscal year 1970 to carry out the purposes of this Act and, notwithstanding any other provision of the Foreign Assistance Act of 1961, as amended, funds used for such purposes may be used on a loan or gant basis. For subsequent fiscal years there are authorized to be appropriated such sums, to remain available until expended, as may be necessary from time to time to carry out the purposes of this Act.

SEC. 12. The right to alter, amend, or repeal this Act is hereby expressly reserved.

SEC. 13. The Institute shall be subject to the provisions of the Government Corporation Control Act.

BACKGROUND MEMORANDUM—WHY THE INTER-AMERICAN DEVELOPMENT INSTITUTE?

Social and civic development is a slow, difficult, at times painful process for the developing countries.

It may entail a wholesale change in the basic organization of a society, and the restructing of its human skills and attitudes.

Such changes are not easily achieved. They may require decades, even generations, of continuing effort.

Consequently, programs aimed at the promotion of social and civic change ought to be conceived as long-term undertakings. For maximum effectiveness, they should not have to depend for their sustenance on year-to-year fluctuations in the political climate and the recurring "ups and downs" in relations between sovereign countries.

In many cases, such undertakings can produce best results if they are divorced from the formal structure of inter-governmental relations and are managed by private or semi-private institutions.

This applies, in particular, to the following types of activities:

(a) *Title IX* undertakings aimed at increasing participation in the processes of change, and sharing of the products of development, by each and every man in his society;

(b) *Research and education* in the meaning and means of participation, more equitable income distribution, and key attitudinal barriers to an equitable society;

(c) *Support* of research and pilot efforts to solve the bottlenecks in educational systems, agricultural production and urban development which have denied large segments of the populations of the developing countries the opportunity to join the modern world;

(d) *Technical assistance* in local government, legislatures, legal systems, peasant and urban leadership, cooperatives, credit unions, democratic labor union promotion, adult literacy, civic education, taxation and the formation of private foundations devoted to socio-political progress;

(e) *Family planning* and population control;

(f) *Capital assistance* for small-scale, self-help projects at the community level designed to enhance the income of *Campesinos, barrio* dwellers, and urban workers; and for programs providing support for agrarian reform, education for the masses, community development and others.

AID's involvement in some of these activities has met with serious obstacles. It has aroused political opposition in the developing countries; it has caused problems for U.S. embassies; and it has been only partially successful because of AID's inability to embark on long-range undertakings, to recruit and keep the types of personnel required for staffing them, and to deal with certain private groups in the developing countries.

Moreover, the identification of these activities with the formal U.S. Government presence in the countries concerned has "turned off" some local groups while exposing U.S. embassies to criticism for "meddling" in sensitive internal affairs of other countries.

Witnesses who testified before the Inter-American Affairs Subcommittee during the 1969 hearings, and testimony of a number of experts who appeared earlier before the International Organizations and Movements Subcommittee, favored the creation of a separate agency or foundation to support social and civic development.

The proposed Inter-American Development Institute is intended to serve that purpose.

The Institute could gradually take over some of the politically sensitive activities of AID in Latin America—and do them better.

By having its own identity, a Board of Directors drawn partly from the private sector, multiplicity of sponsors, longer-term assurance of resouces, and greater flexibility in operations, the Institute could operate at a level at which the formal machinery of the U.S. Government cannot, by its very nature, be effective in promoting social and civic change.

The resources of the Institute would come in the first instance, from the U.S. Government. Specifically, $50 million of the funds authorized for Fiscal Year 1970 for economic development assistance under part I of the Foreign Assistance Act would be made available as the initial capital of the Institute. Later appropriations could be made, as necessary, when the Institute gets on its feet and it becomes clear which AID activities it can absorb.

In addition, the Institute would be empowered to accept funds from Latin American governments, from international organizations—for example, the World Bank and the Inter-American Development Bank—and from private sources in the United States in Europe and in Latin America itself.

In conclusion, three points should be borne in mind:

First, that in order to promote the kind of change that the Congress has said is desirable in Latin America, the U.S. Government must operate at two levels: the Government-to-Government level and the Nation-to-Nation (or people-to-people) level. The Institute will provide a useful, flexible instrument for dealing with development problems at that second level.

Second, while the Institute represents a new approach, it does not entail increased foreign aid. It simply provides a more effective instrument for doing some tasks which the United States presently funds through AID and through a number of international organizations. In time, by using private and public funds, and loan repayments, it can become self-sustaining. And—

Third, since 4 out of its 7 directors would be U.S. Government officials concerned with Inter-American relations, the Institute would be unlikely to depart from the major objectives pursued by the United States in Latin America.

CLEAN WATER RESTORATION ACT CONSTRUCTION GRANT PROGRAM

(Mr. DINGELL asked and was given permission to extend his remarks at this point and to include extraneous matter.)

Mr. DINGELL. Mr. Speaker, on July 10, 1969, I placed in the CONGRESSIONAL RECORD—on pages 19102–19121—responses from some 30 State Governors and the Governors of Guam and the Virgin Islands to my earlier request to them for information on the impact of short-funding of the Clean Water Restoration Act of 1966. As I stated at that time, "I am pleased to be able to report that a substantial majority of those who have responded support the efforts of myself and others to secure full funding of the Clean Water Restoration Act construction grant program for fiscal year 1970."

Subsequently, I have received additional responses from the Governors of several States, the Commissioner of the District of Columbia, and the Georgia State Water Quality Control Board. So that my colleagues may have an opportunity to be aware of the views expressed in these letters, I include their texts at this point in the CONGRESSIONAL RECORD:

STATE OF ALASKA,
OFFICE OF THE GOVERNOR,
Juneau, July 1, 1969.

Hon. JOHN D. DINGELL,
House of Representatives,
Rayburn House Office Building,
Washington, D.C.

DEAR MR. DINGELL: Thank you very much for your June 6, 1969, letter inviting me to comment on the implications to Alaska of the shortage of Federal funding of water pollution control programs.

For several years Alaska has made good use of its entire allocation of construction grant funding in the water pollution control program. Particularly, with the implementation this year of our new Water Quality Standards, I anticipate that substantial additional amounts could be used by our local governments for the construction of sewage treatment plants if these funds could be made available.

Best personal regards.

Sincerely yours,

KEITH H. MILLER,
Governor.

THE COMMONWEALTH OF MASSACHUSETTS, WATER RESOURCES COMMISSION,
Boston, July 18, 1969.

Hon. JOHN D. DINGELL,
U.S. House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR SIR: Massachusetts has adopted a most comprehensive water pollution control law featuring a $150M bond issue authorization with pre-financing capabilities and a strong enforcement program vested in a new

Division of Water Pollution Control under the control of the Water Resources Commission in the Department of Natural Resources. We also have provided two tax inducements for industry and a new and broad authority for control of oil pollution in the waters of the Commonwealth.

Since the inception of this program, grants have been made to communities reflecting about $55M worth of sewage treatment works construction. In recent years the Federal government's contribution to this program has been about $5.3M/year requiring the pre-financing of approximately $11.0M of State monies in anticipation of future Federal reimbursements. This has maintained the integrity of the implementation program adopted by the State up until now but as the larger community projects come due, the program will unquestionably be severely curtailed.

The Federal government has not honored its financial commitments to the State and as such one must question the advisability of continuing to subsidize the Federal share on eligible pollution control projects throughout the State.

The Federal interest in this program can only be confirmed by positive action in overcoming the accumulative Federal appropriation inadequacies and making provisions for a separate authorization to reimburse the states that have utilized their pre-financing capability.

Should alternative methods of financing be the subject of future Federal legislation, it is obligatory on the Congress of the United States to maintain the equitability of alternatives to the present construction grant percentages specified in the Federal Water Pollution Control Act. If a debt service contract approach is necessary, it is extremely important that the interest charges for the Federal share be borne directly by the Federal government.

I appreciate your concern in this matter and am hopeful my comments may be of assistance to you.

Very truly yours,

THOMAS C. MCMAHON,
Director.

STATE OF MINNESOTA,
OFFICE OF THE GOVERNOR,
St. Paul, July 23, 1969.

Hon. JOHN D. DINGELL,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DINGELL: Thank you for your recent letter requesting information on the impact of the reduced level of Federal funding on water pollution abatement and control in this state.

Applications submitted over the last four fiscal years have been broken down as follows:

TABLE I

Fiscal year	Amount requested	Number of applications	Federal allocation
1970	$15,333,257	43	$3,931,000
1969	15,453,640	61	3,931,000
1968	11,843,586	41	3,728,000
1967	6,896,473	35	2,743,250

TABLE II

Fiscal year	Number of grants certified	Projects that proceeded under reimbursement
1970	[1]29	9
1969	36	14
1968	18	8
1967	10	2

[1] Assumes same level of funding as fiscal year 1969.

As can be readily noted in Table I the grant amount requested greatly exceeds Minnesota's actual or anticipated congressional allocation. Based on discussions with municipal officials or their representatives, we do not expect as many communities to utilize the reimbursement provisions of the Federal Act in FY70 as did in FY69 (see Table II). The main reason for this is the difficulty of arranging the necessary financing for the entire eligible project rather than only 70 or 67 percent as the case may be if a Federal grant were available.

Because of change in Minnesota's FY70 and 69 system for establishing priorities which split the congressional allocation based on population between what is known as the seven county metropolitan area (basically Minneapolis, St. Paul and some fifty suburbs) and the balance of the state, it was possible to certify a substantially greater number of applicants for grants (see Table II). Based on the 1960 Federal census, this results in a respective 45 and 55 percent split of funds between the seven county metropolitan area and the rest of the state. The seven county metropolitan areas has a much lower number of projects, however, substantially higher cost while the reverse situation exists for the remainder of the state.

No community outside of the metropolitan area in FY69 proceeded under the reimbursement provisions, nor do we anticipate that any will in FY70. While many larger communities which have an immediate water pollution control need have indicated their desire and are proceeding to comply with Minnesota's interstate and intrastate water quality standards, some have qualified their statements contingent upon the availability of Federal Aid.

In general, it can be stated that some projects have been delayed because of the lack of Federal assistance and any substantial increase over the funding level of FY69 will greatly assist in water pollution abatement and control.

Minnesota does not have a state grant program. A bill was introduced in the last legislative session but failed to pass. Instead a 1.5 million dollar program to pay the interest on the Federal portion of an eligible project was passed. It is still too early to predict what effect this program will have.

Your effort in securing full or a substantial increase in funding of the act for FY70 will be greatly appreciated.

If you have any questions, or if we can be of further assistance, please let us know.

Sincerely yours,

HAROLD LEVANDER,
Governor.

EXECUTIVE OFFICE,
Jefferson City, Mo., July 10, 1969.

Hon. JOHN D. DINGELL,
Member of Congress,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DINGELL: This is in reply to your letter of June 6, 1969 concerning the impact on our pollution control program caused by the shortage of federal funds on our water pollution control program.

The funds authorized by the Water Quality Act would have provided sufficient federal funds for matching municipal projects in Missouri. However, the funds appropriated are only a fraction of those authorized. The result has been that construction of abatement works has been materially reduced. The backlog continues to grow, and if we are to make real progress in pollution abatement, federal funds and state funds must be increased.

During Fiscal Year 1969 and in Fiscal Year 1970, the Missouri Legislature has appropriated state funds to match all of the federal funds available to Missouri municipalities. A survey of municipal needs indicates that if the federal funds for Missouri cities were increased from $5 million to $12–15 million per year, and accompanying state grants of $6–7½ million were available, that the backlog could be wiped out in approximately five years.

Sincerely yours,

WARREN E. HEARNES.

STATE OF NEW MEXICO,
OFFICE OF THE GOVERNOR,
Santa Fe, July 3, 1969.

Re funding for water pollution control activities.

Hon. JOHN DINGELL,
Member of Congress,
House of Representatives,
Washington, D.C.

DEAR MR. DINGELL: I sincerely appreciate your letter of June 6, 1969. I can with pride report that the State of New Mexico has 100% of all sewered communities complete with secondary sewage treatment facilities.

In the past several years, the State of New Mexico has not completely utilized its construction grant funds under the P.L. 660 Program. Construction needs in the State are only those necessary to keep up with increased population and industrial growth of the State.

The funding which our State requires is in the administrative and regulatory area. We hope to improve operation of existing facilities by closer supervision. Anything which you can do to permit an increase for water pollution control funds under the State Program Grant Provision of the Federal Water Quality Act would be greatly appreciated and would benefit the State of New Mexico substantially more than an increase in construction grant funds.

Yours in water pollution control.

DAVID F. CARGO,
Governor, State of New Mexico.

STATE OF MONTANA,
OFFICE OF THE GOVERNOR,
Helena, July 18, 1969.

Re your letter of June 6 in which you ask for information relative to the impact which short funding of the Clean Water Restoration Act may have caused the State of Montana in the area of water pollution control and abatement.

Hon. JOHN DINGELL,
House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN DINGELL: The short funding of this Act has not had a great deal of impact on Montana in the past, but possibly could have in the future.

In explanation, in Montana, all municipalities that were sewered have had treatment plants provided. This program was completed in 1966. The federal allocation of funds to the state has been more than adequate to meet the grant requests on these sources.

When the Water Quality Standards of 1967 were adopted, it was required that secondary treatment be provided for all municipalities and industries. Most municipalities were given until 1972 to upgrade their treatment from primary to secondary. This involved primarily our larger municipalities, approximately twenty of which are involved. In order to meet this need, it is anticipated that during the next three years there will be approximately thirteen million dollars spent on sewage treatment projects in their state.

The last two sessions of the Legislature have seen considerable activity by our larger municipalities endeavoring to have legislation passed authorizing the state's participation in construction grants for sewage treatment works. There were several reasons for the legislation not passing. However, the one that probably had the greatest influence on our Legislature was that the majority of our municipalities already provide secondary treatment of their wastes and these communities apparently question whether they should be responsible for providing funds for those that need additional treatment

when they have already paid for it themselves.

The problem is that by 1972 all municipalities will have to meet the standards set up by the Water Quality Standards of the 1967 Session of the Montana State Legislature. If the state does participate in helping provide funds to pay for secondary sewage treatment, this will mean that the Federal Government's share of funds towards completion of the secondary plants will be greater according to federal standards. The other alternative is if the Legislature did not fund construction grants for secondary treatment plants, many of the municipalities, which are waiting until the 1971 Legislature has met and considered this funding, will be applying for federal money at the same time in order to complete their secondary treatment plants by the deadline of 1972. This would mean a greater influx of requests for federal funds which might result in a shortage of the same.

I trust this is the information which you desired. I will be pleased to supply you with any additional information you may need.

Sincerely yours,

FORREST H. ANDERSON, *Governor.*

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, July 22, 1969.

DEAR MR. DINGELL: Thank you for your letter concerning Federal funding under the Clean Water Restoration Act.

Municipalities, under the $1 billion New York State Pure Waters Bond Act, are provided a basic State construction grant of thirty percent, and prefinancing of the Federal share up to thirty percent; thus, the State guarantees to the municipality a sixty percent grant of the eligible project cost.

As you are aware, existing Federal legislation currently entitles municipal sewage treatment works projects to either a fifty percent of fifty-five percent Federal construction grant. Due to the short-funding of the Federal program, no project in the State of New York has received its full Federal grant. The national appropriation for Federal program for fiscal year 1969 was only $214 million, with the New York State allocation being only $15.8 million of this appropriation. If the active projects in the State were funded to the 50/55 percent figure, an additional $752 million in Federal grant funds would be required.

The failure of the Federal Government to match existing authorizations with appropriations has slowed our Pure Waters Program. If Federal funds were available, municipalities would be eligible to receive a total construction grant of eighty percent or eighty-five percent of the eligible project cost. This would then limit the local municipal share of the project cost to either twenty percent or fifteen percent; would make it easier for the taxpayers within the municipality to shoulder the fiscal burden; and would encourage the municipality to move ahead with its project to abate water pollution.

Your efforts to secure full funding of the Clean Water Restoration Act for fiscal year 1970 are very much appreciated.

Sincerely,

NELSON A. ROCKEFELLER.

GOVERNMENT OF THE DISTRICT
OF COLUMBIA, EXECUTIVE OFFICE,
Washington, D.C., June 16, 1969.

Hon. JOHN D. DINGELL,
House of Representatives,
Washington, D.C.

DEAR MR. DINGELL: Thank you for your letter of June 6, 1969, expressing your concern about Federal short-funding and its impact on the District of Columbia's water pollution control program.

We will be happy to provide the information you have requested. However, it will take a few days to get it together, and I will forward it to you as soon as we have it ready.

With best wishes,

Sincerely,

WALTER E. WASHINGTON,
Commissioner.

GOVERNMENT OF THE DISTRICT
OF COLUMBIA, EXECUTIVE OFFICE,
Washington, D.C., July 10, 1969.

Hon. JOHN D. DINGELL,
House of Representatives,
Washington, D.C.

DEAR MR. DINGELL: This is in further response to your letter of June 6, 1969, expressing your concern about the low-level funding of the federal sewage treatment construction grants program and its impact on the District of Columbia's water pollution control program.

The principal impact of funding below authorized levels has been to upset fiscal planning. The result has been more frequent and increased use of borrowing authority to keep the construction program going. Inasmuch as loan repayments must be made from revenue, that action, in turn, has reflected the need to increase sewer rates. Thus, existing authority to increase rates and to borrow has been reduced in increasing degree. This fact, coupled with an imminent, enlarged construction program of abatement facilities, will necessitate requests to Congress for additional borrowing and rate increase authority. Although the impact on our water pollution control program has not been significant in amount up to this point, since District funding for the expanded program did not begin until F.Y. 1969, nevertheless we are now faced with the necessity of requesting additional funding authority. Our 1970 program is unfunded by approximately $7.8 million, a large portion of which can be attributable to low-level federal funding.

According to Public Law 660, as amended, the District is eligible for grants of 55 per cent to aid with the construction of sewage treatment facilities. In order to meet water quality standards, we will need to upgrade basic treatment facilities over the next five years to remove 90 per cent of organic pollutants at a cost currently estimated at $108 million. The District's eligibility for construction grants on that amount would be $59.4 million. However, full eligibility cannot be realized since the formula in the Act would limit D.C. to $15.8 million even if appropriation of the full authorization were made. Recognizing that the Act expires in F.Y. 1971 and assuming that the present level of appropriation of $214 million will hold, we cannot expect more than $5.2 million on the above construction. Thus, it is obvious that local financing will have to make up the difference, $10.2 million in this case.

In the years ahead the District is faced with extremely large expenditures for waste water treatment. I am advised that it will cost not only the $108 million previously mentioned to upgrade our basic treatment facilities to provide 90 per cent biochemical oxygen demand (BOD) and suspended solids removal from flows expected in 1980, but, following this, additional expenditures of $170 million for advanced waste treatment for the same flows must be contemplated if water quality standards are to be met. Increased sewer service charges and borrowing authority to be requested together with anticipated federal grants will enable us to construct and operate the basic plant only. The method of financing of the advanced waste treatment facilities has yet to be worked out. This should show you the magnitude of our problem.

I hope the above information will be helpful. If I can be of further service, please let me know.

Sincerely yours,

WALTER E. WASHINGTON,
Commissioner.

STATE WATER QUALITY CONTROL BOARD,
Atlanta, Ga., July 18, 1969.

Hon. JOHN D. DINGELL,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN DINGELL: We note from the Congressional Record of July 10, 1969, you wrote the Governors of the States requesting information related to construction grant needs under the provisions of the Clean Water Restoration Act. We have checked with our Governor's office and there is no record of your letter having been received. However, since this matter is so urgent to us, we are taking the liberty of providing you with the information anyway.

The failure of Congress to appropriate the funds authorized in the Act has left the State of Georgia in a very difficult position in obtaining effective water pollution abatement programs from local governments during the past three to four years. The implementation plan and water quality standards adopted by this State and approved by the Department of the Interior in 1967 are becoming less and less a reality.

This State now has seventy-four (74) applications and three (3) requests for supplemental grants pending which are requesting almost $35 million in FY 1970. Based on engineering reports already reviewed by this office, the situation will be worse next year.

By letter dated July 9, 1969, this office was informed by the Southeast Regional Office of F.W.P.C.A. that Georgia would receive $4,589,000 for FY 1970. This, of course, is based on an appropriation of $214 million. You can see that the bulk of the applications will remain in the drawer for another year.

Your interest and concern in this matter are vital. Your assistance in obtaining additional funding will be appreciated by many.

Best regards.

Sincerely,

WARREN O. GRIFFIN,
Assistant to the Executive Secretary.

(For R. S. Howard, Jr., Executive Secretary.)

POSTAL SERVICE

(Mr. OLSEN asked and was given permission to extend his remarks in the body of the RECORD at this point and to include extraneous matter.)

Mr. OLSEN. Mr. Speaker, I wish to call the attention of my colleagues to an article published in This Week magazine on Sunday, July 28, in which the Post Office has been awarded some long overdue praise. The author, Mrs. Yetta Horn Jay, and the publication are to be commended for bucking the trend of the day, which has been unrestrained criticism of the postal operation.

Mrs. Jay shows a complete understanding of the Post Office which most of the critical writers on the subject have not evidenced. In the third paragraph of her article she makes the most effective point on this matter I have seen in newsprint this year when she says:

> But unlike private industry the Post Office must take on all comers; it can't reject or control the growing demands made upon it.

Here Mrs. Jay underlines the fact that the Post Office is by and large an effective public service and she urges her readers to recognize it.

This Week magazine and Mrs. Jay have done the public a great service by publishing this article. We hear entirely too much criticism about a system that does a good job. We have seen the mail volume increase by 45 billion pieces and the population increase by nearly 50 million since the end of World War II: Yet each of us still receives daily, personal, efficient, and expeditious mail service. Somebody must be doing something right down at the Post Office.

The article referred to follows:

YOU ARE RUINING OUR POSTAL SERVICE

(By Yetta Horn Jay)

NOTE.—Mrs. Jay worked for the Post Office, as a mail sorter, at intervals over more than four years. She has received several awards from the Post Office for her suggestions on improving the service.)

America's postal system is headed toward a mammoth breakdown, due not so much to the glut of mail as to the negligence and sloppiness of those who mail it.

True, our mail volume is staggering: every day our Post Office handles more than one piece of mail for every man, woman, and child in our 50 States, moving twice as much mail as all the rest of the world postal systems combined.

But unlike private industry, the Post Office must take on all comers; it can't reject or control the growing demands made upon it. It is confronting this crisis head-on, using modern technology to help speed 83 billion pieces of mail annually, up from 38 billion in 1945. Postmaster General Winton M. Blount is planning a complete structural reorganization so our Post Office will serve us most effectively.

But our mailing habits are failing to keep pace with these changes—they are often inadequate, sloppy, and downright incorrect. Huge corporations and Joe Smiths alike constantly make the same errors. A conservative estimate is that *one out of every two First Class letters mailed today is mailed incorrectly.* Yet when a letter arrives too late or not at all, we shrilly play the national game called "Blame it on the Post Office."

Each of the following cases illustrates at least one major mailing error committed daily by thousands of Americans.

Case I. "Bundling's Great." One of this country's major mailers sent a number of highly important letters clearly marked "Airmail" and "Special Delivery" and correctly metered. Yet all arrived from 24 to 48 hours too late. *Blame it on the Post Office?*

No. The facts are these: Like most large firms, this one bundles its mail into canvas sacks, directly dispatching them to the Post Office. In this case, its mailroom clerks bundled in reverse: they put the Airmail Specials in first, then the regular First Class mail, then finally Third Class advertising matter which filled the sack's top two-thirds. On opening the sacks, the postal worker assumed that it contained all Third Class mail. Since First Class mail is always handled first, some time elapsed before the contents were processed and the error discovered.

Moral: No matter how large or small your mailing, *always bundle the most important letters on top.* Specials are always processed first, followed by Airmail and then First Class mail. Completely separate your First Class mail from other classes. Table workers at the Post Office toss bundled mail into the different bins in split seconds. They judge by the top letter. No one has the time to rifle through bundles.

Case II. "Ounces and Cents." A nonprofit club mailed several hundred routine monthly meeting reminders. The surprised local members got theirs Special Delivery, and the "out-of towners" were Airmailed. *Was the Post Office playing Santa Claus?*

Hardly. A common metered mail snafu occurred. The meter's prior setting had been for 48 cents. Failing to check, the club's mailer ran these reminders through at the same amount. He then threw the letters untied into the mailbox. The loose letters were dispersed into numerous trays worked by various clerks. Where the mailer's intention is not stated and the mailing is small, the Post Office matches service to postage. Had this mailing been bundled, the Post Office would have phoned the mailer to make sure of its intention. A postage refund could have been arranged. Instead, the club lost over $100.

Moral: *Watch your postage.* American mailers, large and small, are losing money by overpaid mail and losing good will by underpaid mail. Underpaid mail is sent directly to the mailee, who pays on receipt. Overpayments occur mostly in metered mail—and more than half of all First Class letters are metered. The meter operator forgets to check the setting or reverses the number. The routine First Class 0.06 zooms to 0.60, or the Airmail 0.10 skyrockets to 1.00.

One of the greatest underpayment culprits is the First Class heavy letter weighing over an ounce. Some senders just naturally put 6 cents on everything. Another culprit is the foreign Airmail letter whose sender forgets that these rates are in *half ounces.*

Case III. "Dead or Alive?" A woman invited her niece, who was visiting a cousin in a nearby city, to visit her. Her niece failed to get the invitation and soon returned to her far-off home. A family feud erupted with the aunt accusing the cousin of withholding the letter. Angrily, the cousin retorted she never saw it. *Letter lost in the Post Office?*

No. The letter was sent from a suburban private home to a big city high-rise apartment house. The aunt sent her letter directly to the niece, whose name differed from the cousin's. She also failed to include her own return address. Marked "Undeliverable," the letter was sent to the Regional Dead Letter office where it was opened for a possible clue to the sender or mailee. (*Note:* this is the *sole* exception to the rule forbidding the Post Office to open First Class mail.) The letter bore no clues, and was destroyed.

Moral: *Never omit your return address.* It's a vital part of your letter, and keeps it "alive." In order for a dead letter to become deliverable these steps are required: (1) letter returned to local Post Office; (2) letter sent to regional Dead Letter office; (3) letter opened; (4) clue searched for; (5) letter readdressed; (6) letter completely reprocessed. And all this for a mere 6 cents an ounce!

Case IV. "Dough Re Mi." A loving grandmother mailed her grandson a gift of money. Eventually he got an envelope marked "Damaged in Handling" containing no money. Wails the grandmother, *"It must've been stolen in the Post Office."*

It wasn't. Grandma sent several dollars in loose coins. Not caught in time, the envelope jammed up the stamp-canceling machine; coins flew in all directions, and her letter plus several others got mangled. A machinist had to repair the disabled canceler, the mangled mail had to be mended, the loose money (which letter did it come from?) wound up at the U.S. Treasury after endless paper work. All told, grandma's letter cost the Post Office considerably more than it contained.

Moral: *Never send loose coins in the mails.* This constant Post Office warning falls on many deaf ears.

Related is another moral: *Mark your slugs.* A slug is a bulky letter. You should print "Hand Stamp" on the front and back of the envelope in large red letters. The table worker will then immediately toss it into the slug bin. Unmarked slugs aren't always readily seen. Our Post Office constantly contends with unmarked mail containing lipsticks and other cosmetics, pens, pencils, calendars, material swatches, combs, bottle caps, razor blades. *Always tie your slugs together* to reduce the number of table-to-bin tosses.

Case V. "Time is Money." A rising firm sent a large national mailing announcing a new merchandise line. All the letters were delivered in A–I condition within 24 to 48 hours. That same day a competing firm in the same city put out a similar mailing, which arrived from one to three days after its rival's, and in poor condition. *Post Office efficient in one case, inefficient in another?*

Hardly. The first firm mailed its properly bundled letters early in the day. All its letters were Zip Coded.

The second firm committed almost every possible error. It sent its loosely tied mail out after 5 P.M. to attract attention, it used outsized envelopes, and these were poorly sealed. To save time and money, this firm used a window-type envelope. But since the letters were sloppily inserted, the last line of each address wasn't visible. Finally, not one letter was Zip Coded.

The first mailing arrived when the Post Office could give it maximum care, the second at a peak period. Harrassed clerks had to tear apart many letters which were glued together; then they had to shake each letter to see the address. Many had to be returned to their sender for better addressing. With no Zip Code, the mailable letters had to be sorted one by one. And the outsized envelopes got bent as the clerks tried to fit them into the pigeon holes.

Morals: *Mail early in the day.* Avoid the avalanche. *Seal your mail right.* Unsealed, partially sealed, and oversealed wet envelopes (which stick together) constantly eat up time and manpower. *Use standard envelopes.* Using today's mass methods and equipment—canceling machines, mail trays, pigeon holes—the Post Office is geared to standard-size mail. Thus undersized mail may get lost, while the outsized get bent and tattered. *Zip it!* No letter is correctly mailed without a Zip Code.

The Zip Code is the most radical change in Post Office history. It's the major solution to our mail deluge and our major hope for speedier delivery.

Zipping means mail will get faster transportation.

The word Zip stands for Zone Improvement Plan which is the extension, on national lines, of the local zoning idea. Each number in the Zip Code is vital. The first digit stands for one of our country's ten major geographical areas. The second and third digits narrow it down to a sectional center. The fourth and fifth digits pinpoint your local Post Office. Thus a Zip Code for Washington, D.C. is 20037; 2 is the specific geographical region, 00 means it's inside Washington, 37 is the local station that delivers the mail.

The Zip Code plus mechanization will bring speedy delivery. Fantastic new machines—handling 36,000 letters an hour—are gradually replacing present outmoded hand-sorting methods. But these machines can work best only with correctly Zip Coded mail. The machines can't read the Zip Code that isn't there, or appears in the wrong place (it should be on the last line, two to six spaces after the state name).

Unless we drastically reform our mailing habits today, we'll find our Post Office in trouble tomorrow—even with mechanization. For as helpful as our new machines are, they can't decipher illegible or incomplete addresses, or look through an envelope to see if its contents are fragile, or separate stuck-together mail, or rescue lost contents.

The solution is simple: let's start helping our Post Office now. We aren't doing all we can when one out of every five First Class letters mailed has no Zip Code, and 30,000,000 letters end up in the Dead Letter Office every

year. Let's weigh, mark, and bundle our mail carefully, correctly, and *early*, to allow the mechanical improvements to speed mail safely.

Let's stop playing "Blame it on the Post Office," and start playing by the rules.

A COMMON FRONTIER

(Mr. MORSE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MORSE. Mr. Speaker, throughout the hours of July 20 and July 21, most of the world watched what is probably one of the most spectacular events in the history of mankind—the lunar landing of the crew of Apollo 11. Scientists from all nations will benefit from the information they bring back with them. The entire world waited with shared anticipation and common hope for their safe return. For one moment in a world of divisiveness, on an earth marked by boundaries, natural and man made, separated into societies which differ by language, culture, race, and customs, and rent by rivalries and mistrust, we have been able to join together to thrill in the realization of a centuries-old dream.

The world beyond our world has for hundreds of years provoked the curiosity and stirred the imagination of men from all walks of life, from all nations, of all beliefs. Symbolically, we have all looked upward as we have joined together in spirit to share the anxiety, the hope and the joy of the Apollo 11 journey.

Although we bring our eyes downward as it returns to earth, we should not let this spirit, and the hope it can hold for the future of all mankind both on this earth and beyond, diminish. I am pleased, therefore, to join my colleague from Massachusetts, HASTINGS KEITH, in calling for steps which will allow and encourage the joint effort of all nations in the future exploration of space frontiers.

Not only will the combined knowledge and capabilities for the technologically advanced nations in a comprehensive space program allow greater progress in facing the problems of space, but the process of sharing the burden as well as the glory of the conquest of space will also create a basis of communication and cooperation which could be applied to the more earthly problems of our world.

The moon was a common goal. It, and the vastness of space beyond, are a common frontier as yet untouched by national rivalries, and we should make every effort to keep it that way. House Concurrent Resolution 305 is a vital and significant step in this direction.

THE COLEBROOK, N.H., NEWSPAPER BACKS SAFEGUARD ABM SYSTEM

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to incude extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, my friend, Judge Frederick J. Harrigan of Colebrook publishes the weekly newspaper, the Colebrook News and Sentinel. It is the northernmost newspaper in my district and, therefore, one of the northernmost papers in the country. It reflects the thinking of a broad area. It is published under the motto: "Independent, But Not Neutral," which I personally assure the House is an accurate description.

Publisher Harrigan, in common with all thoughtful citizens, has been wrestling with the troubling ABM issue. His editorial for July 16 states his conclusion. He recognizes the state of international politics for what it is: a balance of terror maintaining the peace, and nuclear terror at that. He feels it is sensible, at the very least, to keep the balance—and the peace—by constructing the Safeguard.

The editorial is well reasoned and well written. I draw it respectfully to the attention of my colleagues in the Congress as a very good indication of what thoughtful persons in the north country are thinking about the ABM decision, which is coming rapidly to a fateful climax.

The article follows:

RELUCTANT "YES" ON ABM

Perhaps by the time this reaches print, the Congress will have decided on the burning question of the A.B.M. "Safeguard" or, as Senator Aiken suggests, some workable compromise will have been reached. Along with just about everybody else (including, undoubtedly, Congressmen and Senators, themselves), we have been much troubled by this particular question.

Finally, trying to think it through as logically as possible, we have reached the conclusion that this limited anti-missile system, designed solely to protect our "second strike" potential, is justified. Justified, that is, if you can justify anything which contemplates the unleashing of forces more than sufficient to cause millions of deaths if not destroy the earth itself.

In fact, right there lies the heart of the dilemma. Bacteriological warfare, strikes with nuclear warheads—it's all terrible. But so is war itself, and where do you draw the line? To us, the parallel keeps occurring that both sides had poison gas during the World War II, but not even the German madmen in their final Gotterdammerung dared to use it. Along the same lines, given the pre-Hiroshima days all over again, one wonders whether our own authorities would ever have fired the first atomic bomb.

Treaties and diplomatic niceties don't seem to mean much any more, and neither does disarmament unless and until we reach that utopian age when not just one power, but all of them, will scrap their arms and forget about national boundaries. That day is far away, and in the meantime we have reluctantly concluded that the A.B.M. system is a necessary adjunct to preserving the nuclear stand-off which is the only thing keeping the big powers from each other's throats right now.

TAX BREAK FOR GI'S IN KOREA

(Mr. WOLFF asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WOLFF. Mr. Speaker, I am pleased to be able to report to the 205 Members who have sponsored companions to H.R. 9636—to provide hazardous duty tax exemptions for American servicemen in Korea—that a companion bill with a number of cosponsors has been introduced in the other body by the distinguished junior Senator from Hawaii, Mr. INOUYE.

This support in the other body is deeply appreciated, especially by the American servicemen who are constantly facing dangerous assignments in Korea. There can be no questioning of the basic fact that service in Korea is truly dangerous—witness the *Pueblo* and EC–121 incidents, along with the steady pattern of encounters with North Korean violators of the demilitarized zone.

This legislation is consistent with the precedent and would provide our GI's with the same tax advantage enjoyed by their counterparts in Vietnam. Enlisted men's pay and officers' pay up to $500 a month earned in the hostile area would be exempt from Federal taxation.

There is overwhelming support for this measure, as evidenced by the more than 200 Members cosponsoring the House bills. Now, with a companion introduced in the Senate, I respectfully urge the distinguished chairman of the Ways and Means Committee to give this matter his active attention just as soon as the current work on tax reform is completed.

Finally, Mr. Speaker, I want to express my appreciation and the appreciation of the cosponsors of this legislation, to the gentleman from Hawaii, Senator INOUYE, for taking the lead in introducing a similar measure in the other body.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. PETTIS (at the request of Mr. ARENDS), for today, on account of official business.

Mr. CAREY (at the request of Mr. DANIELS of New Jersey), for Monday, July 28, 1969, on account of official business.

Mr. YATES (at the request of Mr. PUCINSKI), for Monday, July 28, 1969, on account of death in family.

Mr. BOW for Tuesday, July 29, 1969, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PICKLE, for 30 minutes, on July 29, to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. GIAIMO), to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 10 minutes, today.

Mr. FARBSTEIN, for 20 minutes, today.

(The following Members (at the request of Mr. WHALEN), to revise and extend their remarks and include extraneous matter:)

Mr. STEIGER of Wisconsin, for 15 minutes, today.

Mr. BROCK, for 15 minutes, today.
Mr. HALPERN, for 10 minutes, today.
Mr. CÓRDOVA, for 5 minutes, today.
Mr. BRAY, for 10 minutes, today.
Mr. BRAY, for 10 minutes, on July 29.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MICHEL in two instances and to include extraneous material.
Mr. EDMONDSON in two instances.
Mr. MCMILLAN, to extend his remarks in the RECORD prior to the passage of H.R. 9551.
Mr. DOWDY, to extend his remarks in the RECORD prior to the passage of H.R. 6947 and H.R. 9553.
Mr. GUDE, to insert his own remarks and the remarks of Mr. HOGAN, of Maryland, and Mr. BROYHILL, of Virginia, immediately prior to the passage of H.R. 8868.

(The following Members (at the request of Mr. WHALEN) and to include extraneous matter:)

Mr. KEITH in two instances.
Mr. HALPERN.
Mr. FULTON of Pennsylvania in five instances.
Mr. RIEGLE.
Mr. TEAGUE of California.
Mr. MORSE.
Mr. POFF.
Mr. SHRIVER in two instances.
Mr. POLLOCK.
Mr. FOREMAN.
Mr. WYMAN in three instances.
Mr. WYATT.
Mr. SCHWENGEL.
Mr. WATSON.
Mr. CHAMBERLAIN.
Mr. ZWACH.
Mr. SEBELIUS.
Mr. MIZE.
Mr. MCDADE.
Mr. BRAY in three instances.
Mr. STEIGER of Wisconsin.
Mr. COUGHLIN in two instances.
Mr. DERWINSKI.
Mr. ROBISON.

(The following Members (at the request of Mr. GIAIMO) and to include extraneous matter:)

Mr. ROONEY of Pennsylvania in two instances.
Mr. DINGELL.
Mr. CORMAN.
Mr. CONYERS in two instances.
Mr. BARING.
Mr. BROWN of California in two instances.
Mr. MINISH.
Mrs. GRIFFITHS.
Mr. KARTH in two instances.
Mr. PICKLE.
Mr. GONZALEZ in two instances.
Mr. DONOHUE in five instances.
Mr. EILBERG in two instances.
Mr. JACOBS in four instances.
Mr. MIKVA in six instances.
Mr. RODINO.
Mr. WILLIAM D. FORD.
Mr. GALIFIANAKIS in two instances.
Mr. HELSTOSKI.
Mr. ANDERSON of California.
Mr. FASCELL in two instances.
Mrs. GREEN of Oregon in four instances.
Mr. HUNGATE in two instances.
Mr. WOLFF.
Mr. OTTINGER.
Mr. EVINS of Tennessee in two instances.
Mr. ECKHARDT.
Mr. O'HARA in two instances.
Mr. BIAGGI.
Mr. ZABLOCKI in three instances.
Mr. KYROS in two instances.

ADJOURNMENT

Mr. GIAIMO. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 44 minutes p.m.), the House adjourned until tomorrow, Tuesday, July 29, 1969, at 12 o'clock noon.

COMMITTEE EMPLOYEES

JULY 16, 1969.

COMMITTEE ON AGRICULTURE

To the CLERK OF THE HOUSE:

The above-mentioned committee or subcommittee, pursuant to section 134(b) of the Legislative Reorganization Act of 1946, Public Law 601, 79th Congress, approved August 2, 1946, as amended, submits the following report showing the name, profession, and total salary of each person employed by it during the 6-month period from January 1, 1969, to June 30, 1969, inclusive, together with total funds authorized or appropriated and expended by it:

Name of employee	Profession	Total gross salary during 6-month period
Christine S. Gallagher	Clerk	$12,943.38
William C. Black	General counsel	12,943.38
Hyde H. Murray	Associate counsel	5,752.61
George F. Missibeck	Printing editor	7,498.44
Betty M. Prezioso	Staff assistant	6,921.18
Lydia Vacin	do	6,921.18
Martha S. Hannah	do	6,921.18
Catherine L. Bernhardt	do	6,921.18
Marjorie B. Johnson	do	6,921.18
Louis T. Easley	Staff consultant	10,239.00
Investigative staff:		
John A. Knebel	Assistant counsel	9,157.81
Fred T. Ward	Assistant staff consultant.	5,828.35
Nancy McQueen	Staff assistant	2,692.15
Mildred P. Baxley	do	6,921.18
Doris Lucile Farmarco	do	4,981.38
Mary Perry Shaw	do	4,882.40

Funds authorized or appropriated for committee expenditures	$100,000.00
Amount of expenditures previously reported	0
Amount expended from Jan. 1 to June 30, 1969	33,367.70
Total amount expended from Jan. 1 to June 30, 1969	0
Balance unexpended as of June 30, 1969	66,632.30

W. R. POAGE,
Chairman.

JULY 15, 1969.

COMMITTEE ON APPROPRIATIONS

To the CLERK OF THE HOUSE:

The above-mentioned committee or subcommittee, pursuant to section 134(b) of the Legislative Reorganization Act of 1946, Public Law 601, 79th Congress, approved August 2, 1946, as amended, submits the following report showing the name, profession, and total salary of each person employed by it during the 6-month period from January 1, 1969, to June 30, 1969, inclusive, together with total funds authorized or appropriated and expended by it:

Name of employee	Profession	Total gross salary during 6-month period
Kenneth Sprankle	Clerk and staff director	$14,194.26
Paul M. Wilson	Assistant clerk and staff director.	14,194.26
Jay B. Howe	Staff Assistant	14,100.50
Robert L. Michaels	do	14,100.50
Robert M. Moyer	do	14,100.50
Ross P. Pope	do	14,100.50
Frank Sanders	do	3,033.33
G. Homer Skarin	do	14,100.50
Eugene B. Wilhelm	do	14,100.50
Hunter L. Spillan	do	13,346.04
Aubrey A. Gunnels	do	13,137.78
Samuel R. Preston	do	12,972.67
Henry A. Neil	do	4,233.28
Francis G. Merrill	do	12,489.82
Keith F. Mainland	do	12,030.82
George E. Evans	do	11,674.82
Earl C. Silsby	do	11,674.82
Carl W. Schafer	do	8,630.15
Peter J. Murphy	do	10,900.02
John M. Garrity	do	9,326.09
Robert Foster	do	2,420.20
Milton B. Meredith	do	7,776.96
George A. Urian	do	6,930.75
Dempsey B. Mizelle	do	6,690.90
Robert C. Nicholas	do	6,488.19
Thomas Kingfield	do	6,488.19
Donald E. Richbourg	do	6,194.64
Gary C. Michalak	do	4,372.02
Samuel W. Crosby	Special assistant	14,100.50
Lawrence C. Miller	Editor	10,054.61
Paul V. Farmer	Assistant editor	6,786.80
Howard E. Knox	Administrative assistant.	2,780.45
Austin G. Smith	Clerical assistant	5,592.83
Francis W. Sady	Administrative assistant.	5,386.11
Naomi A. Rich	Clerical assistant	5,150.76
Gerard J. Chouinard	do	5,073.04
Dale M. Shulaw	do	4,264.74
Daniel V. Gun Shows	do	3,327.84
Randolph Thomas	Messenger	4,241.43
Robert C. Gresham	Clerk to minority	13,939.86
Enid Morrison	Staff assistant to minority.	7,776.96
Patrick M. Hayes	Clerk-stenographer	5,433.18
Mary L. Moore	do	4,195.62
William J. Neary	do	5,433.18
Mary H. Smallwood	do	5,433.18
Catherine M. Voytko	do	5,433.18
Lorraine G. Inman	do	4,527.65
John F. Walsh	do	5,433.18

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

993. A letter from the Director of Civil Defense, Department of the Army, transmitting a report on property acquisitions of emergency supplies and equipment for the quarter ended June 30, 1969, pursuant to the provisions of subsection 201(h) of the Federal Civil Defense Act of 1950, as amended; to the Committee on Armed Services.

994. A letter from the Secretary of the Treasury, transmitting a draft of proposed legislation to carry out the recommendations of the Joint Commission on the Coinage, and for other purposes; to the Committee on Banking and Currency.

995. A letter from the Assistant Secretary of the Interior, transmitting a copy of a proposed concession contract authorizing continuation of the operation of Cedar Pass Lodge, Badlands National Monument, S. Dak., for a 5-year period from January 1, 1969, through December 31, 1973, pursuant to the provisions of the act of July 31, 1953 (67 Stat. 271), as amended by the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

996. A letter from the Assistant Secretary of the Interior, transmitting a copy of a proposed concession contract authorizing continuation of the operation of El Portal Market, El Portal administrative site, Yosemite National Park, Calif., for a 10-year term from January 1, 1969, through December 31, 1978, pursuant to the provisions of the act of July 31, 1953 (67 Stat. 271), as amended by the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

997. A letter from the Assistant Secretary of the Interior, transmitting a copy of a proposed concession contract authorizing continuation of ferry service and related facilities and services for the public at the Hall's Crossing site within Glen Canyon National Recreation Area, Utah, for a 5-year period from January 1, 1969, through December 31, 1973, pursuant to the provisions of the act of July 31, 1953 (67 Stat. 271), as amended by the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

998. A letter from the Secretary of Health, Education, and Welfare, transmitting a report concerning current information on the health consequences of smoking, pursuant to the provisions of section 59(d)(1) of the Federal Cigarette Labeling and Advertising Act; to the Committee on Interstate and Foreign Commerce.

999. A letter from the Chief Commissioner, U.S. Court of Claims, transmitting copies of the opinion and findings of fact by the court in the case of *Mrs. Zdenka Ruchwarger, et al.* v. *The United States*, referred to the court by House Resolution 493, 90th Congress; to the Committee on the Judiciary.

1000. A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to establish a Commission on Population Growth and the American Future; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of July 24, 1969, the following bill was reported on July 25, 1969:

Mr. GARMATZ: Committee on Merchant Marine and Fisheries. H.R. 4813. A bill to extend the provisions of the U.S. Fishing Fleet Improvement Act, as amended, and for other purposes; with amendment (Rept. No. 91-394). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted July 28, 1969*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PERKINS: Committee on Education and Labor. S. 1611. An act to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes; with amendment (Rept. No. 91-395). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. House Joint Resolution 764. Joint resolution to authorize appropriations for expenses of the President's Council on Youth Opportunity (Rept. No. 91-396). Referred to the Committee of the Whole House on the State of the Union.

Mr. RODINO: Committee on the Judiciary. H.R. 4249. A bill to extend the Voting Rights Act of 1965 with respect to the discriminatory use of tests and devices (Rept. No. 91-397). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 13112. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia:

H.R. 13113. A bill to designate the bridge authorized by the act of October 4, 1966, as the "Light Horse Harry Lee Bridge," and for other purposes; to the Committee on the District of Columbia.

By Mrs. CHISHOLM:

H.R. 13114. A bill to provide Federal financial assistance to help cities and communities of the United States develop and carry out intensive local programs to eliminate the causes of lead-based paint poisoning; to the Committee on Banking and Currency.

H.R. 13115. A bill to amend the Federal Aviation Act of 1958 to authorize reduced-rate transportation for certain additional persons on a space-available basis; to the Committee on Interstate and Foreign Commerce.

H.R. 13116. A bill to provide Federal financial assistance to help cities and communities of the United States develop and carry out intensive local programs to detect and treat incidents of lead-based paint poisoning; to the Committee on Interstate and Foreign Commerce.

H.R. 13117. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. DUNCAN:

H.R. 13118. A bill to provide for public disclosure by Members of the House of Representatives, Members of the U.S. Senate, justices and judges of the U.S. courts, and policymaking officials of the executive branch as designated by the Civil Service Commission, but including the President, Vice President, and Cabinet members; and by candidates for the House of Representatives and the Senate, the Presidency, and the Vice-Presidency; and to give the House Commit-

tee on Standards of Conduct, the Senate Select Committee on Standards of Conduct, the Director of the Administrative Office of the U.S. Courts, and the Attorney General of the United States appropriate jurisdiction; to the Committee on the Judiciary.

H.R. 13119. A bill to amend title 39, United States Code, to provide career status to qualified substitute rural carriers with 5 years of satisfactory service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. FASCELL (for himself, Mr. MONAGAN, Mr. ROYBAL, Mr. ROSENTHAL, Mr. CULVER, Mr. MORSE, and Mr. FULTON of Pennsylvania):

H.R. 13120. A bill to promote the foreign policy of the United States and to provide for the establishment of the Inter-American Development Institute to promote developmental activities in the Western Hemisphere, and for other purposes; to the Committee on Foreign Affairs.

By Mr. GERALD R. FORD:

H.R. 13121. A bill to authorize the disposal of nickel from the national stockpile; to the Committee on Armed Services.

By Mr. GARMATZ:

H.R. 13122. A bill to amend the Social Security Act to provide that a State's medical assistance program under title XIX of such act may include benefits in the form of institutional services in intermediate-care facilities; to the Committee on Ways and Means.

By Mr. GIAIMO:

H.R. 13123. A bill to provide more efficient and convenient passport services to citizens of the United States of America; to the Committee on Foreign Affairs.

By Mr. HANLEY:

H.R. 13124. A bill to modernize the U.S. Postal Establishment, to provide for efficient and economical postal service to the public, and for other purposes; to the Committee on Post Office and Civil Service.

By Mrs. HANSEN of Washington (for herself, Mrs. MAY, Mr. MEEDS, Mr. PELLY, Mr. HICKS, Mr. ADAMS, Mr. BERRY, Mr. OLSEN, Mr. MELCHER, and Mr. REIFEL):

H.R. 13125. A bill to amend section 11 of the act approved February 22, 1889 (25 Stat. 676), as amended by the act of May 7, 1932 (47 Stat. 150), and as amended by the act of April 13, 1948 (62 Stat. 170), relating to the admission to the Union of the States of North Dakota, South Dakota, Montana, and Washington, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HARVEY:

H.R. 13126. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mrs. HECKLER of Massachusetts:

H.R. 13127. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. OLSEN (for himself, Mr. POLLOCK, Mr. CLARK, Mr. DENNEY, Mr. DORN, Mr. HOWARD, Mr. JOHNSON of California, Mr. KLUCZYNSKI, Mr. MELCHER, Mr. ROBERTS, and Mr. WRIGHT):

H.R. 13128. A bill to amend title 23, United States Code, to designate the Alaska Highway, and to authorize construction, reconstruction, and improvement of part of such highway, including a connecting highway; to the Committee on Public Works.

By Mr. PATMAN:

H.R. 13129. A bill to amend title 38 of the United States Code so as to entitle veterans of World War I and their widows and children to pension on the same basis as veterans of the Spanish-American War and their widows and children, respectively; to the Committee on Veterans' Affairs.

By Mr. POLLOCK:

H.R. 13130. A bill to amend title 5, United States Code, to authorize the retirement of employees upon completion of 30 years of service regardless of age; to the Committee on Post Office and Civil Service.

By Mr. QUILLEN:

H.R. 13131. A bill to amend the Internal Revenue Code of 1954 to provide that the first $5,000 of an individual's civil service retirement annuity shall be exempt from income tax; to the Committee on Ways and Means.

By Mr. RARICK:

H.R. 13132. A bill to continue for 11 months the existing rates of withholding of income tax, to provide for the application of surtax payments toward the purchase of U.S. obligations, and for other purposes; to the Committee on Ways and Means.

By Mr. STEIGER of Wisconsin (for himself, Mr. BIESTER, Mr. BRADEMAS, Mr. BROCK, Mr. BURTON of California, Mr. BUSH, Mr. COUGHLIN, Mr. ESHLEMAN, Mr. FREY, Mr. HATHAWAY, Mr. HAWKINS, Mr. HOGAN, Mr. LUJAN, Mr. MCCLOSKEY, Mr. MEEDS, Mr. REID of New York, Mr. RIEGLE, Mr. RUPPE, Mr. SCHEUER, Mr. VANDER JAGT, and Mr. WHITEHURST):

H.R. 13133. A bill to provide for support by the Teacher Corps of programs in which volunteers serve as part-time tutors or full-time instructional assistants; to the Committee on Education and Labor.

By Mr. WEICKER:

H.R. 13134. A bill to provide more efficient and convenient passport services to citizens of the United States of America; to the Committee on Foreign Affairs.

By Mr. WHITEHURST:

H.R. 13135. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. CHARLES H. WILSON (for himself, Mr. ANDERSON of California, Mr. ADDABBO, Mr. BROWN of California, Mr. BYRNE of Pennsylvania, Mr. DONOHUE, Mr. FRIEDEL, Mr. EDWARDS of California, Mr. GIAIMO, Mr. HAWKINS, Mr. JOHNSON of California, Mr. LEGGETT, Mr. MIKVA, Mr. MOORHEAD, Mr. NIX, Mr. PATTEN, Mr. POWELL, Mr. REES, Mr. ROSENTHAL, Mr. THOMPSON of New Jersey, Mr. VIGORITO, Mr. WHALEN, and Mr. WRIGHT):

H.R. 13136. A bill to provide for a comprehensive and coordinated attack on the narcotic addiction and drug abuse problem, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. BLACKBURN:

H.R. 13137. A bill to amend the Elementary and Secondary Education Act of 1965, with respect to the denial of Federal assistance in certain cases; to the Committee on Education and Labor.

By Mr. FARBSTEIN:

H.R. 13138 A bill to amend Public Law 87-849, approved October 23, 1962, to strengthen provisions relating to disqualification of former Federal officers and employees in matters connected with former duties and official responsibilities, and for other purposes; to the Committee on the Judiciary.

By Mr. GILBERT (for himself, Mr. ADDABBO, Mr. BARRETT, Mr. BIAGGI, Mr. BINGHAM, Mr. BUTTON, Mrs. CHISHOLM, Mr. CLARK, Mr. DENT, Mr. FULTON of Pennsylvania, Mr. NIX, Mr. PATTEN, Mr. POWELL, Mr. ROONEY of Pennsylvania, Mr. ROSENTHAL, and Mr. SCHEUER):

H.R. 13139. A bill to amend title XVIII of the Social Security Act to authorize payment under the program of health insurance for the aged for services furnished an individual by a home maintenance worker (in such individual's home) as part of a home health services plan; to the Committee on Ways and Means.

By Mr. JOELSON:

H.R. 13140. A bill to implement the Federal employee pay comparability system; to establish a Federal Employee Salary Commission and a Board of Arbitration, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. McCLURE:

H.R. 13141. A bill to establish the Idaho Star Garnet National Recreation Area in the State of Idaho, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. POLLOCK (by request):

H.R. 13142. A bill to provide for the settlement of certain land claims of Alaska natives, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ROSENTHAL:

H.R. 13143. A bill to amend the Fair Labor Standards Act of 1938 to repeal the exemption for certain retail commission salesmen from the overtime compensation requirements of the act; to the Committee on Education and Labor.

By Mr. ROSTENKOWSKI:

H.R. 13144. A bill to extend benefits under section 8191 of title 5, United States Code, to law enforcement officers and firemen not employed by the United States who are killed or totally disabled in the line of duty; to the Committee on the Judiciary.

By Mr. ROYBAL:

H.R. 13145. A bill to amend the Fair Labor Standards Act of 1938, as amended, to extend its protection to additional employees, to raise the minimum wage to $2 an hour, to provide for an 8-hour workday, and for other purposes; to the Commitee on Education and Labor.

By Mr. WIDNALL:

H.R. 13146. A bill to amend the Small Business Investment Act of 1958; to the Committee on Banking and Currency.

By Mr. BROTZMAN:

H.J. Res. 839. Joint resolution providing for the display in the Capitol Building of a portion of the moon; to the Committee on House Administration.

By Mr. BROWN of California:

H.J. Res. 840. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. KUYKENDALL:

H.J. Res. 841. Joint resolution to provide that World Day shall be a legal public holiday which shall be celebrated on July 20; to the Committee on the Judiciary.

By Mr. REES:

H.J. Res. 842. Joint resolution providing for the designation of a week in September of each year as "Industrial Security Week"; to the Committee on the Judiciary.

By Mr. WYLIE:

H.J. Res. 843. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. ANNUNZIO (for himself, Mr. KLUCZYNSKI, Mr. MIKVA, Mr. PRICE of Illinois, Mr. MURPHY of Illinois, Mr. RONAN, Mr. SHIPLEY, Mr. DAWSON, Mr. PUCINSKI, Mr. NIX, Mr. HAYS, Mr. HICKS, Mr. MCCLORY, Mr. DERWINSKI, Mr. MATSUNAGA, and Mr. GRAY):

H. Con. Res. 307. Concurrent resolution expressing the sense of Congress relating to films and broadcasts which defame, stereotype, ridicule, demean, or degrade ethnic, racial, and religious groups; to the Committee on Interstate and Foreign Commerce.

Mr. RODINO (for himself, Mr. BARRETT, Mr. BYRNE of Pennsylvania, Mr. EILBERG, Mr. GARMATZ, Mr. GROVER, Mr. HELSTOSKI, Mr. HOWARD, Mr. MILLER of California, Mr. MINISH, and Mr. NEDZI):

H. Con. Res. 308. Concurrent resolution expressing the sense of Congress relating to films and broadcasts which defame, stereotype, ridicule, demean, or degrade ethnic, racial, and religious groups; to the Committee on Interstate and Foreign Commerce.

By Mrs. DWYER:

By Mr. RARICK:

H. Res. 497. Resolution to create a select committee to conduct a full and complete study of the demography of the United States with the view toward providing relief from racial tensions by more equal distribution of underprivileged racial groups throughout the several States and in the political subdivisions of each State; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII,

246. The SPEAKER presented a memorial of the Legislature of the State of Alabama, relative to discontinuances of passenger trains, which was referred to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of California:

H.R. 13147. A bill for the relief of Armando Neri Vila and Erlinda Sevilla Vila; to the Committee on the Judiciary.

By Mr. RODINO (by request):

H.R. 13148. A bill to provide compensation to certain industrial end-users claimants by authorizing the sale of silver bullion; to the Committee on the Judiciary.

By Mr. ROSTENKOWSKI:

H.R. 13149. A bill for the relief of Ofelia Manrique; to the Committee on the Judiciary.

By Mr. DONOHUE:

H. Res. 498. A resolution to refer the bill (H.R. 4498), entitled "a bill for the relief of Branka Mardessich and Sonia S. Silvani," to the Chief Commissioner of the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

189. By the SPEAKER: Petition of Allan Feinblum, New York, N.Y., relative to establishment of a Department of Peace; to the Committee on Government Operations..

190. Also, petition of the Congress of Micronesia, Trust Territory of the Pacific Islands, relative to the future political status of Micronesia; to the Committee on Interior and Insular Affairs.

191. Also, petition of Clarence Martion, Sr., Washington, D.C., relative to redress of grievances; to the Committee on the Judiciary.

192. Also, petition of Khafre H. Sellers, Baltimore, Md., relative to redress of grievances; to the Committee on the Judiciary.

193. Also, petition of Henry Stoner, York, Pa., relative to commemorating the birth of the 400 millionth American; to the Committee on Post Office and Civil Service.

194. Also, petition of Allen Feinblum, New York, N.Y., relative to various proposed investigations; to the Committee on Rules.

195. Also, petition of the City Council, Greenville, S.C., relative to taxation of State and local government securities; to the Committee on Ways and Means.

196. Also, petition of the Niagara County Legislature, New York, relative to taxation of State and local government securities; to the Committee on Ways and Means.

197. Also, petition of the Board of Supervisors, Rockland County, N.Y., relative to taxation of State and local government securities; to the Committee on Ways and Means.

SENATE—*Monday, July 28, 1969*

The Senate met at 11 o'clock a.m. and was called to order by the Acting President pro tempore (Mr. METCALF).

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven.—Matthew 5: 16.

O God, our Father, to whom all hearts are open, all desires known, and from whom no secrets are hid, give us the cleansing and the strength of Thy presence. Help us all through this day that we may honor the office we hold, serve the Nation we love, bring credit to the name we bear and hope to those who trust us. Give us grace to persevere when things are difficult, to be cheerful when things go wrong, to be clear when things are confused, and to remain serene when things are turbulent. Make our lives beacons of goodness, truth and justice, and keep us so faithful to Thee that when the day is done we may know the peace which the world cannot give nor take away. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, July 25, 1969, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WAIVER OF CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the legislative calendar under rule VIII be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the speeches by the distinguished Senator from Hawaii (Mr. FONG) and the distinguished Senator from New Hampshire (Mr. MCINTYRE) there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The Senator from Hawaii (Mr. FONG) is recognized at this time for not to exceed 50 minutes.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. FONG. I yield to the distinguished Senator from Illinois without losing my right to the floor.

DECLASSIFICATION OF DOCUMENTS

Mr. DIRKSEN. Mr. President, the matter of declassification of additional documents that have been used from time to time in the hearings has come up. Actually, no procedure has been devised that formalizes it, and I suggested to the majority leader this morning that I thought in every case where declassification is sought by any Senator, if the Pentagon is willing to do so, it ought to be formalized through the Senate and that the Senate leaders ought to ask for unanimous consent to so declassify, on the recommendation of the Pentagon. If these requests arise, I believe that is the way they should be handled.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. The Senator does not refer to the use of classified documents being declassified so far as committees are concerned, only so far as the Senate is concerned.

Mr. DIRKSEN. That is right.

Mr. MANSFIELD. Mr. President, if my understanding of this matter is correct, if there is a secret or otherwise classified document under the jurisdiction and re-

sponsibility of the Pentagon or the Department of Defense and it is willing to declassify that document and will take the responsibility for so doing—because that is where it should lie with the origination of the document—I see no objection in the Senate indicating its approval, and I would go along with what the distinguished minority leader has said.

Mr. STENNIS. Mr. President, will the Senator yield on this point?

Mr. DIRKSEN. I yield.

Mr. STENNIS. I am a member of a committee that hears a good deal of this. I think any Senator is entitled to anything he wants to know, but I do not think it is our responsibility to say what is classified or unclassified. It can get us into serious trouble. The executive branch will have to take that responsibility. They have the experts.

Mr. MANSFIELD. The primary responsibility would have to be with them; what we would do, in effect, would be just to give an indication of approval to a decision which has been made by them, based on the responsibility which is theirs.

Mr. STENNIS. Yes. My position has been that a Senator is entitled to information on which he has to make a judgment.

Mr. DIRKSEN. If the Pentagon is willing, then ours is only a ministerial function, and that formalizes it as such.

FURTHER DEBATE AND HEARINGS ON PENDING BUSINESS

Mr. DIRKSEN. Mr. President there is another question I think I should raise, in view of the statements made on the floor of the Senate on Friday with respect to the possibility of further hearings by the Committee on Foreign Relations, and I thought the distinguished senior Senator from Tennessee also was thinking in terms of still another closed session.

We had planned—or we had hoped, shall I say—that perhaps a vote could come on the first amendment as early as Tuesday of this week. But in view of those circumstances, I wonder what that situation is now. That is the reason why I properly address this question to the majority leader.

Mr. MANSFIELD. If the Senator will yield to me, I may say that I can only speak indirectly on the matter, because the distinguished Senator from Mississippi (Mr. STENNIS), the manager of the bill which is the unfinished business, the distinguished Senator from Kentucky (Mr. COOPER), and the distinguished Senator from Michigan (Mr. HART) are directly concerned and they did have a colloquy on this matter. It is my recollection that so far as those three Senators are concerned, they want to get to a vote on the Cooper-Hart amendment as expeditiously as possible. However, it is my understanding that there is at least one Member of this body who feels that the vote should not be taken while the President is away on a very important voyage. Another Member has indicated that he intends to hold an executive meeting of his subcommittee on Wednesday, at which time he expects that some pertinent secret information will be made available. I do not know what is contained in that information. I must confess my ignorance.

It would appear that on that basis it might not be possible to get to a vote, let us say, before Thursday. So far as I am concerned, I am ready to vote today. So far as the Senators from Mississippi, Kentucky, and Michigan are concerned, they are ready to vote today, or at least tomorrow. But we are in a bind on this matter.

I would hope that this hearing would be held, and I hope it would be possible on Thursday or Friday to get to the first vote on this important measure. While many other amendments are piled up behind the one having to do with the ABM, I believe the icejam would be broken by such a vote and that the measure could be proceeded with more expeditiously. If we do not, then I think we had better get ready to stay with this bill through August 13, and be prepared to resume its consideration when we return after Labor Day.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. DIRKSEN. Let me make one observation.

I find it rather difficult, Mr. President, to counsel our Members that they have to stay here—and that means, of course, that they have to break engagements at home and elsewhere which they regard as quite important.

The Vice President, himself, is in something of a bind, in a sense. A conference of Governors is being held on the Pacific coast, and he would like to go. I think he has a meeting in Seattle, another meeting elsewhere out there, and meetings back here. In my latest discussion with him, I said, "I presume you will have to keep yourself rather fluid."

I say that to all our Members. But then nothing eventuates, and we continue with the discussions, and it puts the leadership in a difficult and somewhat awkward position. That is the reason why I raised the question. If this vote is going to be projected into the future—let us say until the President returns—then I think we should know it now, and we should give them liberty and say that insofar as these pressing engagements are concerned, they are fully ready to accept and should try to fulfill them if they can.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. FONG. I yield.

Mr. STENNIS. Mr. President, I think the Senator from Montana expressed the situation entirely correctly as to the willingness to make an agreement to vote by the authors of the amendment and the chairman of the committee.

There is one addendum. We are ready to agree to a vote but we had in mind that 48 hours would be the minimum notice; the time to vote would come no sooner than 48 hours later.

Mr. MANSFIELD. That is plenty of time.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. COOPER. Mr. President, as the majority leader said, we had quite a discussion on this question. The Senator from Mississippi, the Senator from Texas, the Senator from Michigan, and I were here. The Senator from Michigan (Mr. HART) and I stated that as far as we were concerned, as the sponsors of the amendment together with a number of other sponsors, we were ready to proceed as quickly as we could to a vote. I did say I had been informed that the Senator from Tennessee expected to hold an executive hearing in his committee on Wednesday regarding some reports concerning ABM. I am not fully informed as to what they concluded. I assume he would not be willing to agree to a vote until after the meeting was held.

We agreed that this afternoon the Senate would attempt to agree on an hour certain; that we would meet here and we would expect all of those who are interested in this amendment, both those who are for it and those who are against it, to be here to determine whether or not we can arrive at a time.

The Senator from Michigan and I have brought the matter up with the Senator from Mississippi, and as far as I am concerned, I hope we can meet here at 3 o'clock or thereabouts and discuss the matter.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. TOWER. It would appear that the Senator from Arkansas is the key to this question. He indicated he would like to delay the vote until after the President's return.

Mr. MANSFIELD. The Senator is correct. But there are two keys to the matter. The distinguished Senator from Tennessee is also to be considered. Unfortunately, he is detained on official business at this time. I feel as a matter of courtesy and to assure the protection of all interests that we should have both of those Senators on the floor when this matter is proposed and, hopefully, that we are able to arrive at a solution as to when the vote on the amendment will take place.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. DIRKSEN. Mr. President, there is still another matter I am constrained to address myself to.

DECLASSIFICATION OF DOCUMENTS

The ACTING PRESIDENT pro tempore. If the Senator will yield, the Chair was not sure if the Senator was propounding a question to the Senate on the first proposition as to the declassification of secret documents.

Mr. DIRKSEN. Yes, I think I should do so; and I would ask unanimous consent, if that is necessary, that in every case where documents are declassified at the request of a Member of the Senate, and they are declassified by the Pentagon and the Senate is so advised, that it ought to formally approve the kind of declassification just as a matter of course.

The ACTING PRESIDENT pro tempore. That is the general rule. Without objection——

Mr. MANSFIELD. Mr. President, I wish to make it very plain that this would not apply to the declassification of documents for any committee or to the right of any Senator to go to the committee and see such documents; and it would apply only to matters that may appear on the floor of the Senate.

Mr. STENNIS. Mr. President, will the Senator state his unanimous consent request?

Mr. DIRKSEN. Where there is a request by a Senator to the appropriate authorities, which could be the pending one, that a document be declassified so it can be used publicly and used on the floor of the Senate, that it be so reported and that the Senate give its approval; and that case may not apply in any documents in the care of other committees as indicated by the majority leader.

Mr. STENNIS. Mr. President, reserving the right to object, and I am not objecting now, the Senator does have in mind that it is the responsibility of the executive branch of Government, through the Pentagon or otherwise, to pass on whether or not documents be declassified.

Mr. DIRKSEN. Yes.

Mr. MANSFIELD. Absolutely and without question.

Mr. DIRKSEN. But they send that to a committee, and committees are creatures of the Senate. I think the Senate as a body should be aware of it and it ought to have its approval.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears no objection, and it is so ordered.

TAX LEGISLATION

Mr. DIRKSEN. Mr. President, I should address myself to still another matter. In view of the fact that we are at something of an impasse with respect to the ABM and a vote on the first amendment, there is before us this very urgent matter of the tax bill. I am wondering, under those circumstances, whether we cannot lay the ABM matter aside for a little bit and proceed on the question of the surtax because it is so vital to the economy and interests of the country.

The majority leader and I have discussed the matter in a most friendly fashion, but I still feel that sense of urgency.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. MANSFIELD. Mr. President, I would point out that the Democratic policy committee met with the Democratic members of the Committee on Finance, as the Senator and the Senate well know. We spent 7 hours last week trying to arrive at an accommodation with the expressed interests of the Republican leadership and the administration; and we came up with the best solution that we could, which we did present to the distinguished minority leader, the Secretary of the Treasury, and the White House. To date no word has been received in the form of an answer.

I would point out that the House of Representatives today is considering a 15-day extension; and what will happen to that extension is anybody's guess, either in that body or over here.

If it comes over here it would be my intention to permit it to be referred under normal procedures to the Committee on Finance; I intend to discuss the matter with the chairman of that committee, the distinguished Senator from Louisiana (Mr. LONG). I would point out that we are approaching the deadline; that at midnight this coming Thursday, if no accommodation is reached, the surtax will automatically go out of existence. If that unfortunate time comes it means that the current withholding levels which have determined the tax revenues held back from the wage earners and the salaried employees would expire and that that revenue would have to be returned at an appropriate time. The revenues to the Government would be lost. It would appear to me also that if the surtax is allowed to die that it would be most difficult to revive it, if I read the sentiments of the Members on this side of the aisle correctly.

As the distinguished minority leader has said, we are faced with an impasse. I feel as if I am approaching the guillotine. We have tried to go as far as we could to reach an accommodation with the administration. I wish to assure the distinguished minority leader that as far as the Senator from Montana is concerned that he, figuratively speaking, almost shed some of his blood to get this extension for as long as was possible. I personally would have been willing to go along with the chairman of the Committee on Finance to the first of the year but overwhelming sentiment was against that; some Senators only wanted to go to the end of September and some to the end of October. This was the best we could get and I think it is the only accommodation available to us at this time. If there is any possibility to bring about a change I would have no hesitancy in so stating publicly at this time, but I cannot make such an assertion.

(At this point, Mr. INOUYE assumed the chair.)

Mr. DIRKSEN. Mr. President, will the Senator yield further?

Mr. FONG. I yield.

Mr. DIRKSEN. Mr. President, we have discussed it and I know that the majority leader has done his very best. But I point out in connection with the resolution that there is another specific; namely, that the date of April 18 is thoroughly nailed down so far as repeal of the dividend tax credit or the investment tax credit is concerned. Then it is committed to the hands of the administration and the minority leadership to accept. Frankly, it would put the minority leader in a very awkward position because I certainly cannot bind 43 Members on this side of the aisle. They share equal privileges and prerogatives in the Senate, and if any one of them would undertake to get up and offer and amendment when the bill comes before us, that would be his proper right to do so and I could not constrain him not to do it. I might talk to him and ask him not to do so. Whether he would so do, that would be the privilege he has. That is equally true on the majority side of the aisle.

Thus, in trying to assess the responsibility of the leadership and to talk for everyone, that becomes virtually an impossible undertaking.

Now I can recite, from the standpoint of the administration, that before he left, the Presdent made it crystal clear that he wanted that surtax bill because of the impact upon the country and upon all its commercial and industrial undertakings; and because, further, the withholding, of course, is still in effect, and if the surtax dies, as the majority leader points out, obviously those are withheld funds which will have to be restored to the taxpayers.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Hawaii yield?

Mr. FONG. I yield.

Mr. WILLIAMS of Delaware. I wonder whether the majority leader would not agree, since there seems to be a difference of opinion as to how long the surtax should be extended or whether it should be extended at all, that we should make it the pending business and let the Senate work its will. We could get unanimous consent for a limitation on time of debate so that it would not disrupt the ABM discussion, which I understand will be postponed for a few days anyway. Let the Senate work its will, and if a majority of the Senate wants the surtax to be extended only 2 months, 3 months, or 5 months, let it so take action, or if the Senate should decide to defeat it entirely, then so be it. But vote.

Mr. President, the point I make is that we should clear up this uncertainty as to whether we will or will not act. I am wondering whether we could not get agreement and proceed to a consideration of the tax bill.

The Finance Committee has completed the hearings and they are part of the bill which is on the Senate calendar. Therefore, could we not proceed and let the Senate work its will, as is customary with legislation before this body?

Mr. MANSFIELD. I could recognize the argument of the distinguished Senator from Delaware (Mr. WILLIAMS). I, of course, could not agree that hearings have been held on the bill now on the calendar. It was my understanding, subject to correction, that there really were no hearings and no witnesses——

Mr. WILLIAMS of Delaware. The able Senator from Montana is in error on that. Hearings were held and have been printed. We had, I think it was, 3 days of hearings. Anyway, they were completed and all the witnesses, both administration and public witnesses, who wished to testify were heard on the surtax extension and the investment credit, the phase of the bill as reported by the House. All the hearings have been completed in their entirety.

The parts of the hearings which were not held and to which the Senator from Montana refers were those which concerned the tax reform amendments that would be offered at a later date by some Members. But so far as the bill that came over from the House was concerned, the hearings have been completed. They are printed and have been available a couple weeks.

Mr. FULBRIGHT. Mr. President, will the Senator from Hawaii yield?

Mr. FONG. I yield.

Mr. FULBRIGHT. With regard to the investment credit, there certainly were not any completed hearings on that.

Mr. WILLIAMS of Delaware. Oh, yes, there were.

Mr. FULBRIGHT. There were a number of people interested in that aspect of the particular phasing out provisions, which they expected to be part of the hearings.

Mr. WILLIAMS of Delaware. I was present throughout the hearings, and the chairman specifically made the inquiry of whether there were any additional witnesses who wished to be heard, and there were no other witnesses. To my knowledge there has been no request for any additional witnesses since. The completed hearings are printed and available on the bill as it was reported to the Senate Calendar.

Mr. FULBRIGHT. Does not the Senator recall when it was voted out, that the Senator from Georgia (Mr. TALMADGE) was sitting there, ready, willing, and able to offer an amendment and all of a sudden the Senator made a motion, which motion carried, and he did not even get to present his amendments addressed to the phasing out? I also had a constituent placed in the same situation. As a matter of fact, I had thought there would be some further hearings——

Mr. WILLIAMS of Delaware. No. The hearings were held. The Senator from Georgia did have an amendment, but testimony was also heard on the Talmadge proposal to phase out the investment credit.

Mr. FULBRIGHT. The hearings were held and the committee took action without getting any action on any amendments——

Mr. MANSFIELD. On the basis of what the distinguished Senator has just said, I stand corrected; but in response to the specific question of the Senator from Delaware, the Senator from Montana just happens to be the lightning rod for the policy committee——

Mr. WILLIAMS of Delaware. I appreciate that.

Mr. MANSFIELD. On this side, and I act under the direction of that committee and in this instance not only that committee, which is charged with the scheduling of legislation, but also the Democratic members of the Senate Finance Committee; thus in view of their joint proposal of last week to extend the surtax for 5 months while we await the tax reform package, I would have to respectfully decline to accede to what the Senator from Delaware has requested at this time.

Mr. WILLIAMS of Delaware. I thank the Senator.

Mr. MANSFIELD. I wish to thank the Senator from Hawaii (Mr. FONG) for his kindness and patience during this colloquy.

ORDER OF BUSINESS

Mr. FONG. Mr. President, in view of the long colloquy which has just taken place, which has consumed approximately 20 minutes, I ask unanimous consent that my time begin as of now.

The PRESIDING OFFICER. Without objection, it is so ordered.

SAFEGUARD—DECISION FOR PEACE

Mr. FONG. Mr. President, I have been closely following the debate on the President's proposed Safeguard anti-ballistic-missile system. I have studied and analyzed much of the information, testimonies, and other relevant material that are in my possession, and I have carefully listened to the classified information presented in the closed session of the Senate. I have found that this is one of the most difficult issues to face the Senate this year, for a great many complex facts, assumptions, and policy considerations are involved.

We are all peering into the unknown future and trying to assess the possible threat to our Nation's security that may exist in the 1970's and what we, as a nation, should do to protect our people from that threat. Human judgments are required, and here is where knowledgeable and informed men do indeed differ.

At this juncture in the debate, which has been extensive and enlightening, yet at times contradictory, it occurred to me it might be helpful at the start of my statement to recite exactly what we in the Senate are asked to vote on at this time.

I. THE 1970 SAFEGUARD PROPOSAL

Before us is the bill (S. 2546) to authorize military procurement funds and military research and development funds for fiscal year 1970, plus funds for construction of missile test facilities at Kwajalein Missile Range. The total amount contained in this authorization bill for various defense needs is $20,059,500,000, plus $12,700,000 for constructing a missile test facility at Kwajalein.

Included in this figure is a total of $759.1 million for phase I of the proposed Safeguard anti-ballistic-missile system. Of this total, $400.9 million is for research and development; $345.5 million for procurement of elements in the Safeguard program; and $12.7 million for the Kwajalein missile test facility.

The record should show that in regard to Safeguard, the Senate Armed Services Committee unanimously recommended the research and development fund of $400.9 million and the test facility at Kwajalein fund of $12.7 million and by 10 to 7 recommended the procurement fund of $345.5 million.

II. NO COMMITMENT TO MORE SAFEGUARD SITES

Deployment of the Safeguard ABM at two sites, as authorized by the pending bill, is most emphatically not an automatic trigger for additional sites.

Last March, in announcing the Safeguard proposal, President Nixon made very clear that he intends to review the entire ABM question annually in the light of technological developments, in the light of the threat to America evaluated at the time of the review, and in the light of international events, such as arms limitation talks.

If the annual review discloses good and sufficient reasons to indicate America should proceed no further on an ABM system, I am confident President Nixon will so recommend.

Although the Nixon administration views the Safeguard ABM as a possible 12-site—with two optional sites additional—system, the President has made plain he is recommending now only a two-site deployment, at North Dakota and Montana, reserving judgment on the remaining sites until his annual review.

The Congress, in approving this bill, would likewise be reserving judgment on other ABM sites until we look at the entire matter again next year.

In this military authorization bill that is before us, we are not voting to authorize $10.3 billion, the administration estimate for the 12-site Safeguard system. Nor are we voting to authorize $40 billion, or $100 billion, as Safeguard opponents estimate the total system could cost.

The amount of Safeguard funds we would authorize if we approve this bill is $759.1 million. Of this sum, $413.6 million carries the unanimous recommendation of the Senate Armed Services Committee. The balance of $345.5 million was supported by a 10-to-7 vote of that committee. These funds will permit research and development of the ABM to go forward, so we can find out what technical bugs there are in the system and so we can begin to approach the knowledge the Russians have accumulated since 1962, when they began work on their ABM, which is now deployed.

The $759.1 million will also permit construction of a missile test facility at Kwajalein and will permit procurement of radars, computers, ground equipment, and hardware for long-leadtime components of the Sprint and Spartan missiles. These items are required to move ahead with deployment of the Safeguard ABM at two sites.

I want to make very clear my understanding that a vote for the $759.1 million to be used in fiscal year 1970, which ends next June 30, does not commit either the Senate or the Nixon administration to finance the entire Safeguard ABM system of 12 sites on the mainland of the United States, plus two optional sites in Alaska and Hawaii.

I repeat. A vote for the $759.1 million authorization for a start on deployment of Safeguard does not commit the President, does not commit his administration, does not commit the Senate, and does not commit any Senator to additional Safeguard sites.

There is just no validity to the contention that by voting for the limited Safeguard program in the pending bill we are thereby committing ourselves to any larger ABM program.

The decision we make at this time is not irrevocable.

It can be changed—and I am sure it will be changed if changed circumstances permit.

III. BOTH DEFENSE AND DOMESTIC PRIORITIES CAN BE MET

Now let us look at the priority aspect of the Safeguard proposal before us.

What we are talking about is the priority of our Nation's survival.

I believe any decision on deployment

of the Safeguard ABM at two sites should hinge on whether this is necessary to insure the survival of America as a Nation.

Certainly, America's survival as a Nation is top priority. For unless we survive as a Nation, we are not going to be able to take care of all the other high-priority programs we need.

I do not believe that the Senate today is faced with the "either-or" proposition that: either we must have Safeguard or we must have poverty programs, education programs, health programs, social security programs, aid for our cities, and all our other high-priority needs.

I believe that this Nation, this administration, and this Congress will find the ways to provide the wherewithal to finance the limited Safeguard ABM proposal before us and to finance education, poverty, health, social security, transportation, and many, many other programs.

I do not believe that a vote for the limited Safeguard program forecloses other high-priority domestic programs.

Nor would a vote for the limited Safeguard program contained in the pending bill be construed as evidence that we in Congress attach a far lower priority to urgent domestic problems crying out for solution.

To say that our national security has top priority in no way diminishes my concern or the concern of other Members of Congress regarding our pressing domestic problems. There are so many crucial problems, we would be hard pressed to assign any order of priority. We might as well be asked which of our children we love most. The fact is, we love each of them and we are concerned about each of them.

The fact that the limited Safeguard proposal was pending did not deter many Senators from voting to exclude education programs from the expenditure ceiling we approved in the second supplemental appropriations bill on June 18. Nor did it deter many Senators from voting to exclude health programs under the Department of Health, Education, and Welfare from the spending ceiling. I voted to exclude both education and health programs from the expenditure ceiling, thus insuring that no cuts are made in these two vital areas.

The fact that I support these programs does not preclude support for the Safeguard proposal before us today. My view is that if a program is essential to our Nation, we should authorize it.

With this as a prelude, let me now discuss the Safeguard ABM proposal and my position on it.

IV. AMERICA'S SUPREME GOAL IS TO DETER WAR; ABM WILL HELP

It is no secret that the only real defense against a strategic nuclear attack on the United States is deterring any would-be attacker from initiating such a conflict or from pursuing policies that might produce such a result.

Given present and foreseeable weapons technology—both offensive and defensive—and the calculations that have been made on gain and losses to be anticipated, deliberate recourse to strategic nuclear attack—first strike—seems unlikely.

But even if one assumes that the Soviet strategic forces are being built up not for a first-strike capability, but as a second-strike deterrent, the cold fact remains that this essentially second-strike force could be used in a first-strike role.

Moreover, the evolving character of the Soviet offensive forces, especially the SS–9 missiles, are well suited for a counterforce strike against our ICBM force if such a decision were ever made by the Russians. It is against this possible reality that the President has proposed to move ahead on providing additional protection for our Minuteman missiles.

Without adequate protection for our retaliatory ICBM's, America might well face a "deterrent gap" somewhere in the mid-1970's. The credibility of our nuclear deterrence would then no longer exist.

By influencing the attacker's calculation of his losses and prospective gains, an ABM deployment can contribute to deterring a strategic nuclear attack. It lends credibility to our nuclear deterrent forces.

The Cuban missile crisis was a vivid and real example where the strength and credibility of our strategic forces deterred war.

Why do you think the Soviet Union backed down in that nuclear confrontation?

Was it because President Kennedy used some persuasive and idealistic arguments? No.

What stopped the Russians was one basic factor—fear of, and respect for, the military might of the United States. The Soviets knew we had the ability and the capability to call their hand.

Today, since the Soviet Union has approximate nuclear parity with the United States and in addition has deployed an ABM system for her defense, the absence of a comparable U.S. defense capability could very well impair the effectiveness of our strategic deterrent force.

Beyond their mission as a deterrent to nuclear attack, our strategic forces play a very important role in our overall defense policy and posture. The capacity to deter lesser conflicts, or to limit conflict where it occurs, as in the Middle East, is significantly influenced by the balance of strategic forces. Consequently, this balance of nuclear terror tends to operate as a restraint upon conflicts at lower levels of intensity out of fear of unlimited escalation.

Unfortunately, this function of strategic forces has received little attention in the current ABM discussions.

Any weakening of our strategic capabilities would lessen our ability to control conflicts at lower levels of intensity and could also encourage the Soviet Union to pursue more adventurist policies, including the potential for "nuclear blackmail."

In the past, our strategic superiority was largely attributable to our offensive strategic forces. For the future, however, the defensive component of the overall U.S. strategic posture may become increasingly significant, vis-a-vis an enemy's calculations as to our likely response when American interests are challenged. An improved defensive component of our strategic forces could well contribute, in certain situations, the crucially important margin of strategic superiority necessary to deter war.

V. PRESIDENT'S SAFEGUARD PROPOSAL A DETERRENT TO WAR

On March 14, 1969, President Nixon announced to the American people that he had made a decision which he believes is "vital for the security and defense of the United States and also in the interests of peace, throughout the world."

The President disclosed his decision to recommend moving ahead with a limited deployment of a modified "thin" ABM system designed to preserve enough U.S. missiles to provide a credible deterrent against nuclear attack.

The President's Safeguard anti-ballistic-missile system is designed primarily to protect our offensive missile sites and will initially provide protection for only two of these sites.

It is the two-site proposal that is before the Senate now.

A. FOUR BASIC OPTIONS

Before the Nixon administration decided to go forward with the Safeguard plan, four major alternatives were seriously considered.

First. A thick deployment designed to defend U.S. cities against a massive Soviet attack.

Second. No deployment at all, but a continuation of research and development.

Third. The continuation of the thin Sentinel program approved by the preceding administration.

Fourth. The deployment of a modified system which would fulfill three objectives: Defense of our land-based strategic offensive forces against a first strike by the Soviet Union; protection of our major cities against a Chinese attack in the 1970's; and defense of our country against an accidental or small attack from any source.

The first alternative—heavy deployment—was rejected because such thick defense "still could not prevent a catastrophic level of U.S. fatalities from a deliberate, all-out Soviet attack." In addition, such a heavy deployment might be interpreted by the Soviet Union as a prelude to an offensive strategy threatening their deterrent.

The second alternative—no deployment—was also rejected because it does not leave the United States with any option to provide a defense for our deterrent on a realistic schedule that might be required by the Soviet threat, nor does it provide a defense against a Chinese threat or an accidental attack.

The third alternative—deployment of the Sentinel system approved by the preceding administration— was likewise rejected, because it would be inadequate to meet the emerging Soviet threat to our strategic offensive missiles. This third alternative could also be misinterpreted as—and could in fact have been—a first step toward the construction of a heavy system for the defense of our cities. Such a deployment could be interpreted as provocative by the Soviet Union.

After examining all the available alternatives, the Nixon Administration selected the fourth—a combination of approaches which the President felt provided the most realistic means of safeguarding our retaliatory capability. This system calls for a measured deployment

of an active defense of our retaliatory forces, structured to expand or contract as circumstances may dictate.

B. THE SAFEGUARD ANTIBALLISTIC MISSILE—FIRST PHASE

President Nixon has proposed for the current 1970 fiscal year that Congress approve a start on deployment of Safeguard ABM's at 2 ICBM sites, Grand Forks, N. Dak., and Malmstrom, Mont.

The sum requested for authorization is $759.1 million, being the first installment for the construction of two prototype installations to include:

The sum of $345.5 million for procurement of one missile site radar—Grand Forks; one missile site radar data processor—Grand Forks; training equipment; advance procurement for one other perimeter acquisition radar and one other missile site radar—Malmstrom; and leadtime missile parts—$600,000—which includes funds for the construction of missile test facilities at Kwajalein for the Safeguard system totaling $12.7 million, and funds for research and development for the Safeguard system in the amount of $400.9 million.

It will not be implemented according to some fixed, theoretical schedule. It will be deployed in a manner clearly related to our periodic analysis of the threat. The first deployment will cover only the two missile sites of Malmstrom and Grand Forks Air Force Bases. These two bases will include both the Spartan and Sprint missiles and are expected to be operational by 1974.

Additional congressional approval will be necessary if work is to proceed beyond these first two installations in the years ahead. Action of the Senate on this pending bill in no way commits either the administration or the Congress to construct any additional ABM sites.

President Nixon said on March 14:

Each phase of the deployment will be reviewed (by the Executive and Legislative Branches) to insure that we are doing as much as necessary but no more than that required by the threat existing at that time.

The President emphasized:

This program will be reviewed annually from the point of view of (A) technical developments, (B) the threat, (C) the diplomatic context, including any talks on arms limitations.

The entire system need never be built if Washington and Moscow can agree to freeze or limit deployment of offensive and defensive missiles.

VI. THREAT TO AMERICA'S DETERRENCE

A. THE RUSSIAN THREAT

The potential threat from Russia lies in its growing force of missiles which could destroy a substantial portion of our own nuclear deterrent. Since we cannot stop a massive Soviet attack on our cities, we are dependent on deterrence to insure that nuclear war does not start in the first place.

Unfortunately, the Soviet Union today is building at a rapid rate the kinds of weapons which could be used to erode our deterrent force.

According to our intelligence reports, "the Soviet ICBM force has more than quadrupled in the last 2¾ years from 250 operational launchres in June 1966, to more than 1,000 as of the end of March 1969." If the Russians continue to deploy ICBM's at the rate they did in 1967–68, they could have as many as 2,500 by the mid-1970's—two and a half times our present number.

At the present time, the greatest threat to our ICBM force is the large SS–9 ICBM which, with a warhead yield of up to 25 megatons and its presently estimated accuracy, could destroy a Minuteman in its hardened silo. The Soviets now have more than 230 of these missiles in operation or under construction.

A real concern is the prospect that the Russians might install highly accurate MIRV's—multiple independently targetable reentry vehicles—on their SS–9's. If this happens, and if their accuracy is improved to a quarter of a mile, the SS–9's "could probably destroy 95 percent of our Minuteman force."

Russia has tested and developed nuclear bombs that are 60 megatons in magnitude. The United States has not.

Russia has taken the initiative to develop a fractional orbital bombardment system. The United States has not.

To make matters worse, the Russians are going ahead with a massive program to build Polaris-type submarines, each carrying 16 nuclear missiles—SLBM. Secretary Laird has stated that the Russians could, by the mid-70's, pass the United States in Polaris-type submarines. At present, we plan to convert 31 of our 41 Polaris submarines to the Poseidon missile, which is capable of carrying 10 independently targetable reentery vehicles—MIRV. And there is no reason why the Soviet Polaris-type missiles could not have MIRV's just as we are planning for our own Polaris submarines.

In addition, these current developments in Soviet ballistic missile submarines are quite apart from the continuing growth of the Russian attack submarine force, which it is also feared might come to present a serious threat to our Polaris force.

This possibility was expressed by Defense Secretary Laird before the House Committee on Appropriations. On May 22, he testified:

The United States cannot preclude the possibility that the Soviets in the next few years may devise some weapon, technique, or tactic which might increase the vulnerability of our Polaris-Poseidon submarines. In that event, our strategic deterrent could be dangerously eroded, with all the consequences which would follow such a development.

The seriousness of these Russian buildups was confirmed by Gen. Earl Wheeler, Chairman of the Joint Chiefs of Staff. In testifying before the House Appropriations Committee this year, General Wheeler said:

In the light of these developments and after review by the National Security Council, the President announced his decision to modify the Sentinel and to deploy instead the phased Safeguard system. At the outset, let me affirm that the Joint Chiefs of Staff support this decision because it will add to the overall strategic posture of the United States and to our ability to deter nuclear war.

The Joint Chiefs of Staff believe that in light of the rapidly expanding Soviet ICBM and SLBM capabilities, it is prudent now to provide protection for a portion of the U.S. retaliatory force and that the phased Safeguard deployment meets this requirement.

B. THE CHINESE COMMUNIST THREAT

Mr. President, in addition to providing a significant margin of strategic superiority, the Safeguard system would provide adequate protection against the possibility of an irrational, accidental, or miscalculated nuclear attack by Communist China during the 1970's.

Former Defense Secretary Clark Clifford testified last January before the Senate Armed Services Committee on the Chinese Communist threat, saying in part:

We now believe that an initial operating capability with an ICBM will not be achieved until 1972 at the earliest, and more likely later.

Assuming that political and economic stability will be re-established within the next year or so, China could probably generate enough resources to support a moderate and growing ICBM deployment through 1975.

In May this year, Defense Secretary Laird told the House Appropriations Subcommittee on Defense:

By the latter part of the decade of the 1970's, the Chinese can have the capability of destroying tens of millions of people here in the United States with a force of less than 100 IBCM's.

The President's Safeguard proposal also includes a meaningful defense against a Chinese Communist attack in recognition of the danger that Red China's leaders may act irrationally. A thin defense could be effective against a light Chinese attack in the mid-1970's.

C. PRESERVING OUR DETERRENT FORCES

Although our deterrent forces and their protection are adequate today, Russia's current buildup of her first-strike capability compels the United States to further hedges against a possible unacceptable erosion of our deterrent in the future. To accomplish this, we can do one of several things.

First, we could remove the potential vulnerability of our ICBM's by planning to beat the Soviet SS–9 to the punch; that is, to launch our retaliatory force the minute we know an ICBM has been fired from the Soviet Union.

However, the firing may have been accidental, or the missile or missiles may not be aimed at the United States, or the warheads may be disarmed. If we launch our ICBM's at the first warning that a missile has been fired by the Soviet Union, we are irrevocably committed to nuclear holocaust. We need a response geared to accidental ICBM firings from whatever source.

Second, we could further increase our Minuteman, Polaris, and bomber forces to compensate for the increase of Soviet first-strike capability. Such a move, while providing some improvement of our deterrent, could easily be misinterpreted by Russia as an attempt to threaten its deterrent.

Third, we could further harden our ICBM's by putting them in more strongly reinforced underground sites. Unfortunately, studies show that hardening by itself is not adequate protection against foreseeable advances in the accuracy and size of Russian offensive forces.

Fourth, we could begin limited con-

struction on a defense for our retaliatory forces.

In selecting the fourth option, President Nixon clearly demonstrated that while providing for our country's security he did not want to provoke the Russians into another nuclear arms race.

In addition, we must not forget that the Russians have been deploying an ABM system around Moscow—the so-called Galosh system. It is estimated that this system calls for the deployment of some 100 missile sites around Moscow. Russia has a 4- to 5-year lead on the United States in developing an ABM system.

At the present stage of development, approximately 65 such sites are deployed, but it is believed that further construction has been held up. Although the real cause for this slowdown is not known, it is widely believed that the reason is to introduce a more sophisticated radar network. If this should prove to be true, then the modified Galosh system would obviously acquire a capability significantly greater than that with which it is now credited.

In light of these circumstances, why is it wrong for the United States to take steps to deploy two ABM installations to bolster our defensive posture and to preserve our deterrence?

D. CAPABILITIES AND LIMITATIONS OF THE SAFEGUARD SYSTEM

Supporters of the Safeguard system do not expect it, or any other system, ever to provide a perfect defense. The real question is whether deployment of the system would strengthen our national security either by enhancing deterrence or by reducing damage in the event of an attack.

At its present stage of research and development, it seems clear that the developers of the Safeguard missile system have high confidence that it will provide a substantial measure of protection against an accidental or irrational light attack. Although I share this view, I realize that there is a wide divergence of opinion as to its technological prospects.

There is even greater disagreement as to what level of effectiveness would prove meaningful, either as a deterrent or in limiting damage to our retaliatory forces in the event of a massive nuclear attack.

Mr. President, at just what level the degree of anticipated effectiveness is sufficient to warrant a deployment decision is a highly subjective matter. No one expects a perfect defense—but how good does the system have to be to be good enough?

There is an old Chinese saying, "The best is always the enemy of the good." What this simply means is that in the pursuit of the best solution, the attainable is often sacrificed.

The fact that the ABM, at its present stage of development, cannot provide an assured defense against a sophisticated missile attack is not a conclusive argument against deployment. An imperfect defense may be better than none and can be meaningful both in terms of lives saved and as a contribution to our overall strategic posture.

But, most important, an ABM system will give the President another crucial option in terms of having to choose between "humiliation and holocaust." At the present time, the only alternative courses of action that a President could take in response to an irrational or accidental nuclear attack would be, first, to release our massive retaliatory forces or, second, to do nothing.

However, with the Safeguard system the President would have the additional option of activating only those missiles that are designed to intercept and destroy the few incoming missiles. Thus, the President could handle an irrational or accidental attack without a great loss of lives and avoid the catastrophic consequences of a full nuclear retaliation.

If for no other reason than this—providing the President with an additional alternative to save lives—I think the Safeguard system is a worthwhile investment.

VII. MAJOR ARGUMENTS OVER SAFEGUARD

The major arguments advanced by the opponents of the ABM system have centered around the following:

Argument No. 1: The Safeguard components were designed for the protection of our major cities and not our ICBM sites. Therefore, opponents say that the design is inadequate or unsuitable to protect our missile sites. Consequently, they seek to delay deployment until further research and development will produce the desired design to protect our ICBM's.

The truth of the matter is, Mr. President, that the Safeguard components were selected from the Nike X development program which from the beginning had as a design objective hard-point defense. Several studies conducted in the last 2 years have verified that Sprint-class missiles and radars like the MSR are the preferred type of system components for the defense of our hardened ICBM forces.

Unlike the conceptually simple defense systems that are favored by some critics, the Safeguard components are designed with the possibility of growth in mind. This enables them to operate effectively against a growth in sophistication by the enemy's offensive threat.

Mr. President, those favoring delay want the research and development to be made at Kwajalein, away from the two proposed sites. It is difficult to see how research and development at Kwajalein, in a system of this nature, to be effective, would not necessarily embody deployment.

If we are to expend the necessary funds to deploy at Kwajalein, why not deploy at the two proposed sites and save the cost at Kwajalein?

There is no reason why our scientists and engineers at the two proposed sites could not work out the technical bugs and shortcomings that would be expected to show up before going ahead, if necessary, with total deployment. In this phased-deployment plan, the two missile sites are still in the experimental category—an extension of research and development. They will provide conditions which will not be present in a research and development environment.

Argument No. 2: The ABM is technologically too complex to work.

In this regard, Secretary Laird testified:

I am sure that on the basis of our present testing of the Spartan and the Sprint, the successful testing of the Missile Site Radar, the assurances that we have had from the Atomic Energy Commission, as far as the warheads are concerned, that this system will work.

Mr. President, have we already forgotten the amazing technological and scientific achievement of the past week? The ability of our scientists and technicians to send Americans to the moon and to return them safely to earth clearly demonstrated their technical and scientific prowess. If they can accomplish such an intricate and complex feat, I, for one, have faith that our country has the scientific, technological, and industrial resources to develop a Safeguard system that will work, critics notwithstanding.

I am reminded of similar divisions of scientific opinion in the development of the hydrogen bomb and the Polaris submarine.

Radars and computers were indispensable to the success of the Apollo moon-landing program, just as radars and computers are essential to the ABM. I am confident radars and computers can be modified to adequately service our Sprint and Spartan missiles in the defense of our ICBM's.

Argument No. 3: It would not increase security, because any defensive advantage can be negated by an increase in the offensive capability of the enemy.

This argument is based on the fallacious assumption that Safeguard equipment cannot be improved to meet a growing ICBM offensive threat. The ABM critics err in their arguments by assuming that we would not upgrade our Safeguard protection while the Russian offense grows.

If the Soviet threat continues to grow, even beyond the mid-1970's, then Safeguard installations can be improved on terms that are favorable to our defense. For example, adding an additional MSR at each Minuteman site would force the Soviets to double the size of their attack if they hoped to exhaust our ABM defense.

Likewise, if we were to double both the number of our interceptors and radars, the Soviets would have to quadruple the number of their offensive missiles required to exhaust our defense.

Argument No. 4: Safeguard deployment might prejudice arms control and arms-limitation negotiations.

I fail to see any inherent reason why deployment of a purely defensive system such as the proposed ABM system should imperil progress in arms control if the Soviets are seriously interested in reaching agreement on such measures. At the very least, it would appear that the Soviets do not see an incompatibility between deploying an ABM and attaining their objectives in arms-control negotiations.

In fact, Safeguard may give the Russians another incentive to negotiate. It should persuade them that any effort on their part to achieve a successful first strike is fruitless—that we will continue to protect our retaliatory forces effectively.

The Soviet Union, as we all know, had already constructed a limited ABM system around Moscow; it had also agreed

to strategic arms talks following the previous administration's decision to deploy the Sentinel system.

In fact, the Soviet Union agreed to strategic arms limitations talks a week after President Johnson announced his decision to deploy the Sentinel.

On June 27 of last year, 3 days after the Senate refused to delay deployment of the Sentinel ABM, Soviet Foreign Minister Gromyko announced that Russia was "ready for an exchange of opinions" on "mutual restrictions and subsequent restriction of strategic vehicles for the delivery of nuclear weapons—offensive and defensive including anti-missiles."

In addition, the Soviet press quoted President Nixon's favorable references to arms talks when he announced his decision on the Safeguard system and Premier Kosygin recently referred affirmatively to limitations on strategic arms in his message to the 18-Nation Disarmament Committee.

In other words, Premier Kosygin's message was delivered after President Nixon's decision was announced. There was no sign from Kosygin that the Safeguard system would interfere with the success of the talks on the limitation of strategic arms.

The receptive Soviet response leads me to conclude that if the Russians are truly sincere in their desire to reach an agreement on arms limitation, some type of arms limitation agreement can be reached.

Argument No. 5. Deployment of Safeguard would revive the nuclear arms race and would inevitably lead to war. However, there is no historical evidence to substantiate this conclusion. More frequently, it has been the unwillingness to match the growing military strength of a potential enemy that has invited aggression.

The Safeguard deployment away from our cities should convince the Soviets that we are not trying to gain a first-strike capability against them. It should reassure them that a negotiated arms control agreement that protects deterrence while limiting first-strike use of long-range nuclear weapons is possible.

Mr. President, this issue is so complex and involved that it is not possible to determine with certainty whether an "ABM race" or any other arms race is or is not likely to result from our decision to deploy the Safeguard system.

Likewise, and equally important, it does not necessarily follow that an arms race in strategic forces will be avoided if we refrain from the deployment of our Safeguard system. For the buildup of strategic offensive forces may occur independently of a defensive buildup.

In actuality, an arms race in offensive weapons is likely to prove far more provocative and destabilizing than a defensive arms race.

Argument No. 6: Money for ABM should be diverted to alleviate our domestic problems.

The $759.1 million authorization for Safeguard in the pending bill is about 1 percent of our total defense budget for fiscal year 1970. The $345.5 million of procurement for deployment represents about 4 days' cost in Vietnam. Surely, to bolster our Nation's defense and to give our President another option in case of accidental or irrational nuclear attack against America, we can afford to devote 1 percent of our defense budget to the ABM.

Many of those who object to the Safeguard ABM system on cost grounds say we should instead devote these funds to domestic programs. Yet, the Hart-Cooper modified amendment makes no such diversion. It would cost $759.1 million, the same amount as S. 2546 as recommended by the Committee on Armed Services. There is no diversion of any of these funds under the Hart-Cooper amendment to America's pressing domestic problems.

Insofar as funds for high priority domestic needs are concerned, as I have already stated I voted to exempt education and health programs from the expenditure ceiling for fiscal year 1970 approved by the Senate last month. I regard education and health as very high priority programs.

As a member of the Senate Appropriations Subcommittee on Labor, Health, Education, and Welfare, I expect I shall be voting to increase funds for libraries, impacted areas, and other education programs and for various important health programs.

As a member of the Senate Appropriations Subcommittee, a few weeks ago I supported an increase in food-stamp funds, bringing the total to $750 million, the full amount authorized by the Senate. I believe hunger is a high-priority program, and I am willing to provide the funds to alleviate hunger.

I am concerned about the plight of the millions of Americans on social security. I have introduced legislation to provide automatic increases in social security benefits as the cost of living rises 3 percent or more. I believe a social security increase is imperative for the millions of Americans who see their monthly checks eroded by inflation.

I am concerned about the millions of Americans living in poverty. I shall support President Nixon's proposal to make sure no one in poverty is required to pay Federal income taxes.

As a member of the Senate Appropriations Subcommittee on Labor, Health, Education, and Welfare, I shall have an opportunity to examine the antipoverty program in detail and see how it can be strengthened.

I cite these examples to illustrate that money is being applied to our urgent domestic problems and to show that authorizing $759.1 million for Safeguard will not prevent the Senate from voting additional funds for domestic problems.

As I said before, I believe we can do both—vote for the Safeguard funds and vote funds for domestic programs. We can do it by cutting waste and by insisting on prudent management.

VIII. CONCLUSION

Mr. President, to safeguard our Nation's security I strongly feel that the limited deployment of the Safeguard system at this time is mandatory.

I have come to this conclusion after heavily weighing the following reasons:

First. America's supreme goal is to deter war. To achieve this basic objective, America must maintain the credibility of her retaliatory force.

Second. The President's Safeguard system is a limited program designed to preserve the integrity of our deterrence. It will be flexible enough to expand or contract as circumstances may dictate.

Third. Congress is being asked to authorize $757.1 million for the deployment of only two prototype installations. This approval does not mean that we have made an open-ended commitment to the Safeguard system for future years.

Fourth. Our intelligence reports show that the Russians are developing a real threat to our ICBM's. If the Soviets install highly accurate MIRV's on their SS–9's and improve their accuracy, they could probably destroy 95 percent of our Minuteman force.

Fifth. The Chinese Communist are on the threshold of developing an ICBM threat in the mid-1970's. The President's Safeguard system could provide a meaningful defense against such a threat.

Sixth. The possibility of an irrational or accidental attack must always be considered. Safeguard could provide the United States with the protection against such an attack.

Seventh. At the present time, the only alternative courses of action that our President could take in response to an irrational or accidental attack would be to release our massive retaliatory forces or to do nothing. Safeguard would allow the President to cope with this type of attack without a great loss of lives and avoid the catastrophic consequences of a full nuclear retaliation.

Eighth. Safeguard in my opinion, would not be detrimental to arms control negotiations. The Soviet Union has shown no indication that the deployment of the Safeguard system would jeopardize meaningful arms negotiation.

Ninth. As I have indicated earlier, Congress and the President are well aware of our pressing domestic needs and they are not about to ignore them. I shall not ignore them. Funds for this year's Safeguard deployment will not compromise our efforts to meet the urgent problems—poverty, health, education, pollution, housing, and others—of the American people.

IX. A DECISION FOR PEACE AND SECURITY

Mr. President, prudence would seem to indicate a policy of limited action in the field of ABMs. When one considers what the Soviet Union is developing and deploying, the burden of proof on those who are contrary minded is very great.

I believe that there should be no compromise with our country's security and defense. As President Kennedy expressed in his March 28, 1961, message to Congress:

> Our strategic arms and defenses must be adequate to deter any deliberate nuclear attack on the United States or our allies. . . . Moreover we will not strike first in any conflict. But what we have and must continue to have is the ability to survive the first blow and respond with devastating power. This deterrent power depends not only on the number of our missiles and bombers, but on their state of readiness, their ability to survive attack and the flexibility and sureness with which we can control them to achieve our national purpose and strategic objectives.

I believe there is no cost or sacrifice too great to bear if it will insure peace through the deterrence of war.

At the same time, and equally important, I believe we must move toward talks with the Soviet Union in an effort to achieve some degree of stability in the arms race. This is why I was pleased by President's Nixon's statement that the Safeguard program will be under constant review to take into account the status of talks on arms limitation and reduction.

As for me, just as long as there is any chance that the President's decision could make the margin of difference as to whether or not this country is ever subjected to nuclear attack, I will support it. If the administration's projection of the nuclear threat to our national security does not materialize, we would have only expended about 1 percent of our 1970 defense budget.

On the other hand, if the opponents of ABM are wrong and we do not deploy Safeguard, then the United States faces the possibility of outright destruction or nuclear confrontation. And it is because I can conceive of circumstances in which this deployment could represent that margin of difference in insuring our national security that I support the Safeguard system.

Critics should realize that any decision on the ABM—even a decision to defer a decision—involves risks. Under present circumstances, I firmly believe that President Nixon has made a wise choice.

Mr. STENNIS. Mr. President, will the Senator from Hawaii yield?

Mr. FONG. I am happy to yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I have listened with great interest to the Senator's speech——

The PRESIDING OFFICER. The time of the Senator from Hawaii has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Hawaii may proceed for an additional 5 minutes, and that immediately following that the distinguished Senator from New Hampshire (Mr. McINTYRE) be recognized, according to the previous agreement.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I think the Senate owes a great deal to the Senator from Hawaii for the well-thought-out and carefully prepared speech which he has delivered with emphasis.

I agree with his major conclusions. I think they are sound. It is the only position left to take at this stage.

I particularly wish to point out the clarity with which the Senator expressed himself on point eight, that this step by us certainly would not—I repeat, would not—influence adversely the President's position and his power to negotiate with a chance of success in trying to work out some kind of arms limitation agreement with the Soviets. His facts are so clear. I am glad the Senator brought them out in such a fine way.

I believe that it will hurt the President's chances if we do not approve this program.

Again I commend the Senator from Hawaii for his fine speech.

Mr. FONG. I thank the distinguished Senator from Mississippi for his fine remarks. I agree with him 100 percent that if the President does not have this system to protect our deterrent, it would hurt us, and that this does not preclude the President from negotiating with the Soviets. I think that the Soviets have indicated that they are willing to negotiate even after we had announced the decision to deploy Safeguard.

Mr. MURPHY. Mr. President, will the Senator from Hawaii yield?

Mr. FONG. I am happy to yield to the Senator from California.

Mr. MURPHY. Mr. President, I should like to congratulate my colleague from Hawaii for a most scholarly presentation. Quite obviously, he has listened closely and carefully to all the debate, all the discussion, he has read the records, and he has put together, I think, as clear, as concise and as logical a basic presentation of this most important matter as could possibly be done.

He has touched on all the important considerations, including most importantly, the constant review so that at any moment, if the ABM Safeguard system is not needed, it can be discontinued.

He has also touched on the cost. I believe my colleague would agree with me that all the opponents and the expert witnesses agreed, one, that while the system may not be perfect, it is the only available system under the state of the art at the present time and, two, that we can never be certain until we build one. That is all the President is asking, that we build two. If they are built and turn out to be a success, as we hope they will be, then we will have set up a most important defense for this country. But then, with the agreement of all that there should be a continuation of research and development, I congratulate my colleague for pointing out that the only financial difference between the cost of research and development and the cost of actually constructing the two sites which the President has asked for, is a matter of less than $400 million—I believe it is $345 million.

I agree with my colleague that this is a very small price to pay for what may be the deciding defensive strength in the contest between this country and the Soviet Union until such time as we can come to a sane, sensible, and hopeful agreement whereby there will be arms limitation.

I think that my colleague has done a perfectly magnificent job in speaking for deployment. He makes the point very well that, after all is said and done, those who have access to all the information, after many hours of study, have decided it is in the best interests of the security of this Nation that they want the ABM Safeguard system, and that it is badly needed. It may be the best investment of any that has ever been made from our defense standpoint.

Accordingly, I heartily congratulate my colleague from Hawaii and thank him most sincerely. I join him enthusiastically in his endorsement of the ABM system and in the hope that it will be voted on affirmatively by the Senate.

Mr. FONG. Mr. President, I want to thank the distinguished Senator from California for his very laudatory remarks and to point out that the opponents of Safeguard do not ask that the money be cut, they propose to spend the same amount of money and deploy this system at Kwajalein. If they are going to ask that it be deployed at Kwajalein, we should deploy it at the two proposed sites.

ORDER OF BUSINESS

Mr. McINTYRE. Mr. President, I ask unanimous consent to proceed for 15 minutes.

Mr. JAVITS. Mr. President, reserving the right to object—and I shall not object—I am waiting for the morning hour and I would like to get a little idea of the time——

Mr. MANSFIELD. I think the request of the Senator from New Hampshire is a feasible one, which I am sure the distinguished Senator from New York will recognize. There was extended colloquy as soon as the Senate convened and it has made everything late——

Mr. JAVITS. I am not quarreling with anything.

Mr. MANSFIELD. No. I am just explaining. The Senator from New Hampshire is asking for 15 minutes.

Mr. McINTYRE. Mr. President, I ask unanimous consent to proceed for 15 minutes, to allow for the distinguished chairman of the committee and others to speak.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

ABM: TO SEEK A COMMON GROUND

Mr. McINTYRE. Mr. President, in recent years this Nation has been ripped with divisiveness. From turmoil in our cities to campus violence to the most unpopular war in history, the issues of the times have torn at our national unity with relentless savagery.

And now—in the very month when Apollo 11 brought us together again—we are confronted with the hour of decision on one of the most divisive issues of our time—the fate of the administration's Safeguard anti-ballistic-missile system.

Rarely if ever has a single issue—other than war itself—provoked such a public outcry or so sharply divided the Senate of the United States.

In truth, Safeguard has become a monumental new symbol of national disunity.

Yet this need not be.

If only the proponents and the opponents of Safeguard would agree to seek a common ground, we could resolve this issue, and it could become a symbol of unity at a time when we desperately need such symbols.

I am not asking either faction to compromise its principles on this issue, I am merely asking them to seek areas of agreement, and I sincerely believe there is a common ground which satisfies the basic concerns of both sides.

The critics of Safeguard fear that any action in which Congress does not clearly withhold authority to deploy the system could escalate the arms race, jeopardize strategic arms limitation talks, commit

us to massive expenditures for an untried system of questionable feasibility.

Mr. President, I agree.

Proponents of the Safeguard system argue that we must have the capability to meet any clear threat to our deterrent power and that we must act now in order to assure that capability by the mid-1970's.

Mr. President, I also agree to that.

And I am firmly convinced that those two viewpoints are reconcilable.

I contend that my alternative to Safeguard accommodates both convictions.

On the one hand it makes it absolutely clear that Congress is withholding authority to deploy the system, and it therefore prohibits construction of any operational ABM missiles or parts thereof; and it freezes money and authority which the Pentagon now has to build missile sites and to acquire land other than the two locations needed to conduct research and development in place.

And on the other hand it authorizes research and development in place, at Grand Forks, N. Dak., and Malmstrom, Mont. By so doing it retains the option of deploying the system with minimal delay and at minimal cost should the Congress later decide to deploy on the strength of new evidence of a clear threat to our deterrent. And so, Mr. President, there is common ground waiting for those who seek practical resolution—for those who want to avoid a direct rebuff of the President—for those who want unity instead of division.

In the 2 months that have passed since I first described this common ground in my alternative to Safeguard, I have been heartened by the widespread expression of support of my position.

The McIntyre amendment has been endorsed by the Washington Post and by the Christian Science Monitor as well as by two of the leading dailies in my home State, the Concord Monitor and the Portsmouth Herald.

Moreover, there is evidence that there are counselors within this administration who also feel that the Nation would best be served by our moving to this common ground.

I have hoped, indeed prayed, that these counselors would prevail. But so far they apparently have not.

The leaders of the administration have seemingly turned a deaf ear to the wise words of the Republican Senator from Vermont, GEORGE AIKEN, who on July 10 warned that it was "essential that the legislation now before us be modified" if the President was to receive the strong support from the Senate that he needed before entering into arms limitations talks with the Soviet Union.

So I am distressed by the adamant, no-compromise posture of the administration.

In contrast, I feel critics of Safeguard have been more willing to seek a common ground. I know there are members of this body who sincerely believe that there should be no move whatsoever toward an ABM system. Yet they have been willing to authorize a concentrated research and development program with no reduction in the request for funds. I sincerely hope that eventually they will be willing to authorize research and development in place so that neither time nor money will be lost if a later decision to deploy is made by the Congress.

Yet all I have is a hope. So far I have no firm evidence that many of the critics of the system would be willing to compromise further. And on the other hand, I have had no real encouragement that those friends and counselors of the administration who see the wisdom of the Nation uniting will prevail.

In this case how does a Senator vote when he deeply believes in the need for our seeking a common ground consistent with the principles of both sides?

I have concluded that the cause of accommodation would best be served if I voted for the Cooper-Hart amendment. I have decided that I cannot vote for the President's proposal unless it is modified. Whether the Cooper-Hart amendment prevails or not, I want to make it absolutely clear that I fully intend to offer my amendment.

If the Cooper-Hart amendment prevails, then the basic issue of congressional control of the decision to deploy will be resolved.

Once the Senate's desire to retain that control is made clear, then, hopefully, those counseling accommodation within the administration and among the critics will prevail and the administration, the Senate—and the Nation—can move to a common ground.

Let us bring this Nation together.

Mr. President, I ask unanimous consent that the four editorials I have referred to in my remarks be included at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, July 22, 1969]

ABM: WHAT KIND OF COMPROMISE?

It is not for us ordinary mortals to know what went on behind closed doors in the Senate on Thursday, when the ABM was debated in secret session. Such accounts of the proceedings as have become available indicate only that Senator Symington presented evidence in support of the assertion that the Safeguard system could be overcome with comparative ease by the Soviets and that Senator Jackson presented evidence that it could not be. Apparently there was also some controversy over the character and meaning of intelligence reports on the build-up of Soviet offensive strength as it relates to the proposed ABM. The direction in which the argument over the ABM has been moving in the past few months gives plausibility to reports that the secret session saw the lines drawn between two very stark positions: that which holds the deployment of the Safeguard system to be absolutely useless and that which holds it to be urgent and essential. It is not easy to remember any more that this is not what the debate was supposed to be about.

Necessarily, speculation and interpretation have loomed large in both sides' arguments. But increasingly these have been presented as certainties, whether they concern Soviet intentions, technological progress, or similar matters that cannot be asserted but only projected in a conditional way. Thus it is that the Senate (and the Administration) are now arguing an unprovable and even irrelevant case, namely whether a deployed Safeguard system is both necessary and efficient or neither of these, and the truth is that no one knows. Still, these positions are to a very great extent embodied in the two principal proposals before the Senate, and what has been lost to view for the moment is what the President originally asked for: authority to proceed in such a way as to preserve the ABM option.

By its sweep and harshness, the Hart-Cooper Amendment before the Senate, which is supported by the ABM opponents, would have the effect of denying the President that option by too severely limiting the kind of testing and development the Administration could pursue. Similarly, the bill containing the Administration program authorizes more than is required to meet Mr. Nixon's previously stated and relatively modest aims, so that it appears to incorporate a commitment to the program that is anything but tentative or reversible in nature. A proper ABM compromise could hardly find middle ground between the position that the Safeguard is a farce and the position that it is a national imperative. But it surely is possible to work out language which does not deprive the Administration of flexibility sufficient to preserve its option, yet which also does not give it a sort of latter-day Tonkin Resolution on the ABM. That is in fact what Senator McIntyre's substitute measure has been about.

The guessing in the past week has had it that the Administration is now a few votes ahead of its opposition in any Senate test. So the President may decide to go for a close, total win in the Senate. The alternative would be for him to give the signal that he is prepared to take enough of the McIntyre language to broaden his support by a dozen or more votes. The size of his majority and the backing it would imply could be of considerable use to him. Mr. Nixon is acutely aware of the importance of domestic support in prosecuting his foreign policy with a degree of success—at least he is aware of it in other contexts. The question of plausibility with those with whom we are bargaining is no less crucial in relation to the coming arms talks than it has proved to be in Paris on the question of Vietnam. Mr. Nixon stands to gain nothing by trying for a tight majority at the expense of the broader political support he will need when the arms control talks get underway.

[From the Christian Science Monitor, July 16, 1969]

WORKABLE COMPROMISE NEEDED

Nothing better illustrates the staggering burdens which rest upon the heads, hearts, and shoulders of government officials than the present national uncertainty and division over what to do about the deployment of the ABM (the Safeguard anti-ballistic-missile system). This question has split party lines. Most of those on each side have reached their decisions for or against such deployment after agonizing heartsearching. Each side presents strong and sincerely held arguments.

Thus the proponents, led by President Nixon himself and bolstered by the Defense Department, hold that the ABM system (a) is, plain and simply, necessary for the defense of the United States against present and future Russian missile developments, (b) cannot be deferred without surrendering to Russia a dangerous "lead time" in missile development, (c) will permit America to enter arms limitation talks with the Russians in a stronger position, and (d) is needed because Russia has begun positioning its own ABM system.

The opponents, on the other hand, say that (a) the system is highly vulnerable and it is unproven that it can protect America's "second-strike" capability by guarding the country's missile sites, (b) deployment risks triggering an even heavier arms race, (c) the ABM could put the Russians off arms talks, and (d) the money could be better spent on homeside civilian problems.

Each side believes that its position will best serve the cause of peace and the future interest of the United States. Neither side has lacked for technically competent experts to quote. Each has elicited a heavy amount of passionate public support.

Support in the Senate has been a hairline affair. As this is written, the proponents are thought not to have enough votes to ensure ABM's passage. On the other hand, it is also thought that last-minute all-out pressure from the White House might swing enough votes for success.

Under such circumstances, we believe that there is no other feasible procedure than to explore a compromise. That suggested by New Hampshire's Sen. Thomas J. McIntyre has much merit. It would permit the Army to build the first two ABM sites in Montana and North Dakota and deploy radio and electronic gear, but would withhold leave to produce and deploy the actual missiles. The problem here is how long a delay this would eventually produce in setting up a complete system if American-Russian arms talks broke down. Some have said up to two years. But the Senator's office insists that the Pentagon has told him that only four or five months would be involved.

We recommend that the Senate turn its thought to some such compromise. And, second, we repeat our own earlier suggestion that the first point of business when the Americans and Russians meet be an informal agreement by both sides to suspend all development and deployment of such weapons until and unless it becomes apparent that no general arms limitation between the two can be reached.

[From the Concord (N.H.) Monitor, June 3, 1969]

MCINTYRE PROPOSAL IS REASONABLE

Sen. Thomas J. McIntyre, D-N.H., has proposed a compromise in the development of the so-called Safeguard antiballistic missile system that is sure to satisfy neither the proponents nor the opponents.

Facts and mature considerations in the heated ABM controversy fast are becoming irrelevant. It has become a symbol of conflict between the liberal and conservative elements in our society.

Generally speaking, the liberals are opposed to deployment of the system President Nixon has proposed, which would cost somewhere between $8 billion and $13 billion, while the conservatives favor it.

Deeply tangled in this controversy is the question of exploding government spending and subsequent increased taxation, and growing public concern and suspicion over the unholy alliance between the nation's military establishment and the industries that furnish its hardware.

What Sen. McIntyre proposed was a delay in deployment of the missiles themselves, while research and development is pushed on the complicated radar and computer systems that would control the ABM.

One of the most telling arguments against the Nixon administration ABM proposal is that there is no assurance it will work. The McIntyre proposal says, simply, that we won't put the missiles in place until we know the other components will work.

The Senator estimates first-year spending on his plan would be less than $2 billion, but it's not clear how much this would be less than.

He told the New Hampshire Council on World Affairs last week that his alternative "could save us billions in misspent funds."

Sen. McIntyre, chairman of the Research and Development Subcommittee of the House Armed Services Committee, was under intense pressure to leap into one camp or the other.

His committee, heavily laced with and under the control of conservative southerners and right-wing Republicans, sought to get him to join the pro-ABM faction.

But liberal Democrats in New Hampshire, from whom he derives his support in the Granite State, threatened to turn against him and even turn off campaign money if he backed President Nixon's ABM proposal.

Thus from a political standpoint, the McIntyre alternative was a neat dance down the middle. Speculation still is rife on which side he would join if called upon to vote tomorrow "yes" or "no" on the Safeguard system.

Our view is that the McIntyre suggestion deserves concentrated study under congressional control. The military won't like it, so can't be trusted to give it a fair reading. Industries concerned will view it as a cutback in fat contract possibilities, so they can be expected to object.

We think slamming headlong into the ABM system now, with low-level certainty of success, would be foolhardy.

The cost is exorbitant; domestic crises too pressing; and we are not convinced the threat of Soviet attack at this time is all that imminent.

In addition, neither are we convinced that every avenue of an arms reduction agreement with the Soviets has been explored fully.

It is clear that we cannot dismantle our nuclear strike retaliation capability, nor allow ourselves to fall behind in the terrible reality of an escalating arms race.

But our government's crash program should be directed at the cause of the arms race, and not solely at reducing its possible effect.

[From the Portsmouth (N.H.) Herald, June 2, 1969]

SENATOR MCINTYRE DESERVES PRAISE FOR MODERATE APPROACH TO SAFEGUARD

From the Old Man of the Mountains to the Old Man of Seabrook, the state should be echoing the praises of Sen. Tom McIntyre, but we're afraid that it isn't.

Which simply goes to prove that people are inconsistent, a fact that was established as early as Adam and Eve and reestablished today.

McIntyre apparently has let the other shoe drop and has come out in opposition to the war lord's newest military toy, the Safeguard missile scheme. This is the gadgetry you'll remember which started out as a defense against Chinese aggression and wound up as a much modified protection for our Minuteman missiles.

No one can even verify that it will work, but it will cost a lot of money and does make the hate-Russia element in Congress and the nation happy; therefore, it must be worthwhile.

In New Hampshire Safeguard appeals to the same crew that has spent the last five months trying to wreck the state's budget, block any attempt at straightening out a messy, century-old tax structure.

So you'd think that McIntyre's opposition to a costly toy like Safeguard would immediately endear him to these thrifty souls. But not so. If there's one thing that some of them enjoy more than crippling the state economically, it's looking under their beds every night to make sure that the Politburo isn't hiding there.

This "Ax-the-Tax" crowd in New Hampshire would rather see billions blown on military hardware than a few billions spent in making this an even better nation in which to live.

McIntyre, and the other senators who are trying to withstand the raid by the military on the public treasury to finance Safeguard deserve our thanks. Whether or not they'll prevail against Nixon's profligate militarists is a question but the effort is based on good sense.

Safeguard has all the earmarks of another of the multi-billion-dollar weapons systems which can't even be credited as workable, simply because no one knows.

McIntyre, although he won't get any credit for this, is not burying his head in the sand. He does have a viable alternative to the all-out Safeguard scheme.

What the senator wants is further research, no immediate deployment of Safeguard, but development of the ability to put into effect without delay should need arise.

McIntyre believes that the very fact that the United States could deploy a Safeguard would serve as notice to Russians that we're far from defenseless and wrong moves by them will prove expensive.

This isn't what the warhawks want, but it is a prudent approach.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield to the chairman of my committee.

Mr. STENNIS. As usual, Mr. President, the Senator has thoroughly considered this matter. He is thorough by nature, and active by nature, too, and our committee in the Senate is indebted to him for some very hard, long work that he has done since January on many matters that are involved in this bill.

I note, if I may say so to the Senator from New Hampshire, that he recognizes a threat here and he wants to do something about it. The only difference between his position and mine, as I see it, is the question of when we should move forward. I think this matter has been in the process of research and development, trial and error, far longer already than have most major missiles; that it has shown reasonable progress and continues to do so; and that we are just needlessly burning some daylight, which might be extremely important, if we do not move on now.

I do not see that the Safeguard has become a monumental new system of national disunity. I respect the Senator's opinion, but, as I understand it, there is a strong, basic feeling among the people, as far as they have had a chance to think about it. They say, "Well, we may need this thing and we had better move along." I believe that sums up, the best I can express it, the way people feel generally. I do know, as I understand the President, that he feels he has limited this matter to the rock bottom that the lowest, bottom level of necessity will allow. As it is in the bill, it is a reduction and a compromise, in a way.

So I greaty appreciate the Senator's fine work. As he knows, I always encourage him to keep working with reference to his thoughts. I am sorry we are divided on this matter. Again, let me say I think he has made a contribution.

Mr. McINTYRE. I thank my distinguished chairman, who led our committee during the entire time we were considering the matter which was before us. I appreciate his remarks concerning my feelings in this matter. I would point to 1 or 2 aspects. First, I do feel, Mr. Chairman, that the important thing that is not in the bill is the absolute, specific control of the Congress over this weapon system, so that its deployment would, if it is ever employed, involve another vote by the Congress. Second, when I look at the count of Senators on this question, who are divided 50–50, or 49–49, that looks like a quite solid division in this august body.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. McINTYRE. I am happy to yield.

Mr. MUSKIE. I also would like to

compliment the distinguished Senator, first of all, on his decision to support the Hart-Cooper amendment, but, even more importantly, because, as a neighbor, I take pride in the quality of his performance in the consideration of this issue and his work on the bill before us over the weeks and months behind us. He has shown a capacity to work hard and thoroughly, a capacity to understand and analyze the complexity of this issue, and then a good, old Northern New England persistence in pursuing his own point of view. Even as he endorses the Hart-Cooper amendment, he demonstrates that persistence in continuing the effort to sell his own compromise. I compliment the Senator indeed.

Mr. McINTYRE. I thank my friend from Maine very much for those kind remarks.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. McINTYRE. I am happy to yield to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, I join the distinguished chairman of our committee in congratulating the Senator on his typically analytical and concise position as expressed on the floor of the Senate today.

I, too, sympathize with his apprehensions about the degree of importance this ABM discussion has achieved, not only as to Congress and the relationship of Congress with the Defense Department, but also with respect to our position in the country itself, as well as what other people think all around the world.

I would hope, that just as the Senator has worked so long and so well on the technical facts of research and development in the subcommittee of which he is chairman, we will try, as we develop discussion of this matter on the floor, to stick to facts.

There have been many inaccuracies, not only in all the various pamphlets we and others have received about this matter, but also in debate on this floor. I have now had declassified a page of information which I will read into the RECORD behind the statesmanlike talk of the Senator from New Hampshire.

The statement has been made that: "All the components have been tested."

The facts are that the PAR has not even been built, let alone tested; and the PAR computer is scheduled for completion in the first quarter of 1971.

The MSR at Kwajalein has had some preliminary tests, and is scheduled to track an ICBM for the first time in November 1969; but the MSR computer does not yet have its necessary software.

A second inaccurate statement was: "Both the radars have been built in model form at Bell Laboratories."

The facts are that there are no PAR models at the Bell Laboratories or anywhere else.

The statement was made that the interceptor missiles of Safeguard have been used successfully against missiles sent from Vandenberg Air Force Base.

The facts are that the Spartan and Sprint have not been tested against targets. The first Spartan intercept at Kwajalein is scheduled for 1970. The first Sprint firing at Kwajalein is scheduled for September 1970. The Sprint is being developed at the White Sands Proving Ground.

Finally, a statement was made that the Safeguard system has been tested as an integrated unit in the area of Kwajalein.

The facts are that there is no intention to build the system as an integrated unit in Kwajalein. The only components which will be built at Kwajalein are the MSR, its computer, and Spartan and Sprint launch cells. Some of these have not yet been built, much less tested.

Mr. President, at the end of last week I received an extraordinary document. It came from the Committee to Maintain a Prudent Defense Policy.

The title of the document is, "Does the Supposed Softness of the Radars Render Safeguard Vulnerable?"

It is written by Mr. Clifford J. Hynning, who I find is a lawyer here in Washington. He is also the treasurer of that committee.

After reading this pamphlet, I honestly did not believe Mr. Hynning understands how the proposed system would work. I asked if he was a patent lawyer, or a lawyer with technical training qualifications, and found he is a lawyer in the international field. I shall not take further the time of the Senate today, but will comment tomorrow on the various statements in this latest brochure.

The PRESIDING OFFICER. The time of the Senator from New Hampshire has expired.

Mr. McINTYRE. Mr. President, I ask unanimous consent to continue for 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SYMINGTON. I again commend the Senator for the way he has approached this problem, reasoned and not in any emotional manner. His position today is typical of his work in the Senate.

Mr. McINTYRE. I thank the Senator.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, I, too, would like to join my fellow Senators in expressing my satisfaction and gratification that the Senator from New Hampshire has adopted this view. I know it was a matter of long and difficult concern to him, and it is characteristic of his honesty and his dedication that he should have announced his conclusion in this very forthright way.

I should like to ask this question of the Senator: Is it not implicit—and the Senator has certainly heard everything that can be heard on this subject—in the Senator's statement that agreeing to the Cooper-Hart amendment will assert the paramountcy of Congress over this decision, inasmuch as we would have to vote again before there could be actual deployment? Is there not implicit in that idea the concept that until we do vote deployment, and until we deploy, there is a world of difference between everything that the Cooper-Hart amendment and the McIntyre amendment try to do, and deployment? It is only upon deployment that, like the men on the moon, we really step out on the new plateau which puts further away from us than ever an arms limitation agreement; do I correctly gather that, based on the Senator's knowledge, expertise, and study? Is that implicit in the Senator's position, and would he care to express his views on it?

Mr. McINTYRE. I am happy to. I think the controlling thought, with me, was that as to this ABM system—and I am now thinking of it in operation, with all its components—the reins on the whole issue should be held right here in Congress.

It should not be handed over to the Pentagon, or handed over to the administration, particularly given our costly experience with premature deployment, in the year 1969.

I was talking with someone the other day who said, "You think the C–5–9 overrun was bad; wait until you see this one." I think this was a central consideration for me.

I also expect the considerations the Senator from Mississippi is talking about. My amendment seeks to lose no time, but to give us at least a year to weigh the evidence on intelligence estimated about the Soviet threat and to pursue strategic arms limitation talks.

So, in sum, insofar as the question of the Senator from New York is concerned, the essence of my decision to support the Cooper-Hart amendment, though I find some things wrong with it, is on that basis of congressional control.

Mr. JAVITS. I thank the Senator.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. CHURCH. I am very highly impressed by the well reasoned and analytical address that the Senator has made, and I compliment him.

Mr. McINTYRE. I thank the Senator.

Mr. HART. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. HART. Mr. President, though there is no need to state it on the record, let me express formally my appreciation to the Senator from New Hampshire. In addition to all else that has been said in reaction to his statement, he has perhaps more graphically than any of us been able to dramatize the fact that the key to the debate, the fulcrum of the discussion, and the heart of our concern is whether this year, this Congress is going to permit deployment of a system. That is the thing that has given rise to what the Senator from New Hampshire described as a very deep division across the country.

I would hope that the adoption of the Cooper-Hart amendment will make it very clear that this Congress does not wish to repeat what I think was a mistake of the last Congress: the mistake of agreeing to deploy Sentinel. Let us not make the same mistake in deploying Safeguard. Let us go forward with research, to make sure that if the decision later shall be to deploy, we will be deploying a machine that has greater probability of working.

I thank my friend for yielding.

Mr. McINTYRE. I thank the Senator.

I yield one-half minute to the Senator from Kentucky.

Mr. COOPER. Mr. President, I join with other Senators in paying tribute to the Senator from New Hampshire. As a member of the Committee on Armed Services, the Senator from New Hampshire has addressed himself to the issue with knowledge and deep concern to find a reasonable solution to the problem.

The conscientious effort of the Senator is another testament to his integrity and concern for the security and best interests of our country.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. McINTYRE. Mr. President, I ask unanimous consent that I may have 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McINTYRE. Mr. President, I yield to the distinguished Senator from California.

The PRESIDING OFFICER. The Senator from California is recognized.

Mr. MURPHY. Mr. President, I congratulate the distinguished Senator for the magnificent job he did as chairman of the Subcommittee on Research and Development and also for the obvious study and time that has gone into his speech.

I want to ask a direct question concerning his proposal that the control of military and armaments be maintained in Congress. Is it not a fact that this control is exactly what the debate is all about? And is it not true also that the actual appropriation of the money is still under the control of Congress and not under the control of the Department of Defense or the executive branch?

Mr. McINTYRE. Mr. President, in the debate here, I think it is so important that we specifically, in whatever part of the bill becomes law, spell out that the control will remain in Congress.

I take it from the remarks of the Senator he is implying that we could let the matter go and that the option should be with the President and with the Pentagon. If that happens, then Congress would have to come in the back door by denying authorizations or appropriations in order to maintain some influence at a later date.

I think that we should now spell out specifically what can and cannot be done.

Mr. MURPHY. That is the basis of the debate; is it not? The debate is on the authorization for military procurement and research. This is what the entire debate has been about, as to whether we in the Senate—having talked with the experts, having listened to the requests of the Defense Department and having listened to the requests of the executive branch—have to make a decision as to whether we think this is a proper request and whether it is necessary in our belief for the security of the country.

We will decide here whether we think the amount of money should be provided for the procurement or not. Is that not the basis of the debate?

Mr. McINTYRE. All of the amendments and the bill itself contain the funding requested. So, there is no question about anything in the debate on the floor. The amounts are in the bill.

Mr. MURPHY. Mr. President, the Senator missed my point. The Senator stressed the point that control should be maintained or retained in Congress. And I agree with him. However, I point out that the control is actually in Congress at the present time. And while it does not need any strengthening as far as I am concerned, more than a determination of the vote of the individual Senators as to whether they believe the request of the Department of Defense, backed up by the request of the President and their judgment after listening to the debate on the pros and cons of whether the program is needed and is capable of doing the job and is within the price range, the decision actually does rest in Congress at the present time. Is that not correct?

Mr. McINTYRE. That is where the Senator from California and the Senator from New Hampshire disagree. I say that the decision rests with the Senate and the House of Representatives, and that the bill should specifically contain a provision as to what can and cannot be done by the Pentagon.

Mr. MURPHY. I think then we are in agreement. I pointed out that we have control of the appropriations and, therefore, the determination does rest in the Senate and the House of Representatives at the present time. I see no particular purpose at the moment in stressing the fact that we are going to take more control because we think perhaps the Department of Defense and the executive branch ought to have less control.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. McINTYRE. Mr. President, I ask unanimous consent that I be permitted to continue for an additional 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MURPHY. Mr. President, I agree that many times in the past mistakes have been made here and that we wished we had a chance to redo a lot of the things that had been done. However, my point is that the control does rest here. That is what we are talking about.

The entire matter hinges on the authorization for military procurement, and the decision rests here as to whether we think it is proper and necessary and whether we should go along with the experts we have heard in secret as well as the public testimony and go along with the majority opinion of the Committee on Armed Services.

I thank the distinguished Senator.

Mr. McINTYRE. I thank the distinguished Senator from California.

Mr. President, I yield to the distinguished senior Senator from Vermont.

The PRESIDING OFFICER. The Senator from Vermont is recognized.

Mr. AIKEN. Mr. President, I know that the Senator from New Hampshire has been working long and hard to try to get the administration to see the absolute necessity of agreeing to a modification of the proposal now before the Senate. It is a modification which will not in the least impair the national security of the United States, but will make it possible for us to get an authorization bill at a reasonable time and get on with our other work.

It has been pointed out that the issue may be whether Congress has the final say or whether it should leave the matter up to the administration or the Defense Department to decide. I believe that Congress should have the final and ultimate say. Congress is the branch of Government which is elected by the people at home and close to the grassroots feeling.

I certainly hope that the administration will see the necessity of reaching a satisfactory and workable agreement with the Senate. Otherwise, I suppose it is thought that after the bill goes to conference, the House might go along with the administration and the administration might win a victory.

If the administration does win a victory in this manner, it means that we will have to go all through this again in the conference report and the defense appropriations bill. Therefore, we ought to be getting to work at the earliest possible moment.

The administration can agree to a modification which will meet the approval of a large majority of the Senate. I think it would be most unwise of the administration to try to hold out for all it wants or nothing at all. If it does do that, the administration will get nothing—before the first of next year, anyway.

Mr. McINTYRE. Mr. President, I thank the distinguished Senator from Vermont. I agree with him thoroughly.

Mr. President, I yield the floor.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. Two hours having elapsed, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein missile range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous unanimous-consent order, there will be a brief period for the transaction of routine morning business.

Mr. EAGLETON. Mr. President, I ask unanimous consent that I be recognized for 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE WAR IN VIETNAM

Mr. EAGLETON. Mr. President, as President Nixon tours Asia, he has dis-

cussed very candidly two subjects which will affect Asians and Americans for a long time to come.

The first deals with America's reappraisal of its role in Asia, a topic which will be discussed and debated in the months ahead. The second deals with the reason for the soul searching reappraisal, the tragedy of Vietnam.

The war in Vietnam continues to be America's No. 1 national agony and preoccupation.

Some individuals with great expertise and knowledge have set forth plans for extricating the United States from this tragedy; and surely the public craves the certainty of such plans.

I personally despair of spelling out any precise plan. In a sensitive and terribly complicated matter such as Vietnam, any plan must have innumerable contingencies and imponderables which are inevitably affected by a reaction from the opposite side.

The best one can hope to do is to choose those interim objectives and courses of action which seem to offer the best hope of advancing the cause of peace—and to abandon those which do not.

In the next 3 days, President Nixon will be engaged in such a process with some of his Vietnamese advisers in Bangkok. He has indicated that he may order a change in military tactics, a change opposed by many of the military in Vietnam. I would like to commend the President for considering a change, and express my hope that such a move is forthcoming.

What I am about to suggest here today is not meant to be construed as a magical panacea. I simply wish to spell out my thinking with respect to three interim objectives we might legitimately pursue in the present Vietnamese context: First, a cease-fire; second, broadening the base of the Saigon government; and third, elections.

Of these three, I believe two can contribute to a viable strategy for peace, and the third cannot.

CEASE-FIRE

Many months ago, on June 15, 1968, I initially addressed myself to the question of a cease-fire.

I said, "The first matter of business, above all others, must be to seek a cease-fire."

Mr. President, I feel more strongly today than I did on June 15, 1968. Since then, nearly 13,000 Americans have been killed in Vietnam and another 88,000 have been wounded.

The killing in Vietnam must be stopped, and the United States must take every reasonable risk to accomplish this.

A phased withdrawal, whether the Clifford formula, the Nixon formula, or some other formula—even though a step in the right direction—does not stop the killing soon enough. American casualties, although reduced now from 450 per week to 160 per week, continue.

In my judgment, a cease-fire is a necessary and reasonable interim objective which we must adopt in the pursuit of this goal. I believe we can today direct our diplomatic and military efforts toward achievement of a cease-fire with some hope of success.

There is currently a lull in enemy action in Vietnam. In General Wheeler's opinion, this lull represents nothing more than a tactical prelude to a further assault, and is not a response to President Nixon's peaceful gesture of troop withdrawal.

General Wheeler may be right. Whether he is or not, his prophecy is sure to fulfill itself if, as Secretary Laird has indicated, the United States continues a policy of "maximum military pressure."

But suppose we now interpret the lull, however the enemy conceives it, as the signal for a guarded scaling-down of our own efforts? Suppose we now welcome it as the enemy's first statesmanlike step in a mutual deescalation leading ultimately to a cease-fire? One cannot help recalling how President John F. Kennedy created the opportunity for peace during the Cuban missile crisis by choosing to acknowledge Nikita Khrushchev's first, emotional letter rather than the much more bellicose official policy communication which followed it.

The risk is high in this kind of action, especially in a hot-war situation. But there is high risk as well in being too inflexible, too unimaginative, too timid in the search for peace—the risk of killing thousands of young Americans and Vietnamese whom a cease-fire could save.

Mr. President, I say abandon the policy of "maximum military pressure." It is both futile and discredited—all the more so if General Wheeler's pessimistic predictions about enemy intentions are correct. Instead, let us seek and create every possible opportunity to achieve a cease-fire on the battlefield.

We have seen all too many missions like General Wheeler's produce optimistic predictions about U.S. military progress, Vietnamization of the war, and the enemy's crumbling morale.

"Time, just a little more time, and the enemy will feel the crunch and quit," we are told.

But time in Vietnam is not measured by minutes and hours—it is measured in American lives and dollars, and that kind of time has now run out.

I believe the risks inherent in undertaking a major unilateral deescalation at this time in hopes of drawing the enemy into a mutual cease-fire are far less than the elusive certainties of continued maximum military pressure.

BROADENING THE BASE OF THE SAIGON GOVERNMENT

Second, Mr. President, we are constantly told that, if the United States withdraws from Vietnam too rapidly, South Vietnam will fall. There will be no negotiated settlement, only capitulation.

Without belaboring history, I believe it is time to ask, "Why is this so?"

The preeminent reason is that today, as before, the Government of South Vietnam remains unrepresentative and unresponsive to the aspirations, both national and personal, of the vast majority of the Vietnamese people. It is composed of a military and social elite—an elite all too often engaged in the pursuit of personal gain and advantage, rather in the quest for social justice and reform. It is a government of Catholics, in a land of Buddhists—of emigres from the North in a land of strong regional loyalties—of military men in a land where the military has not been held in high regard—of men who fought for the French against their own people in a land where anticolonialism prevailed—and of men once again dependent on the force of arms of a foreign government in a land engulfed by the ferment of nationalism.

For over 14 years, the United States has bought time for the governments of Diem, Minh, Tho, Khanh, Huong, Oanh, Quat, Ky, and Thieu. Time has not been purchased on the cheap. The cost is over $100 billion, nearly 40,000 American lives, over 200,000 wounded or maimed, and a cost in human suffering to the Vietnamese themselves which is unmeasurable.

And yet these successive governments have failed to afford political representation to the many diverse elements that make up South Vietnam's population; more importantly, they have failed to respond to the needs of the people. Past governments as well as the present have made numerous and grandiose promises and proposed a myriad of programs. Yet in land reform, in refugee relief, in rural development, in curbing corruption and inflation, the record is clear. The challenges are unmet.

Of all these deficiencies, none is more glaring than the failure of the Thieu government to broaden its base of support to include various neutralists who are not pro-Communist, but pro peace.

We cannot continue to pin American hopes for a free Vietnam on the narrow, restricted base of President Thieu and Vice President Ky. To do so is to prolong the killing and to insure, ultimately, that Vietnam will become Communist. If the neutralists are continually frozen out and their leaders jailed, we are signing in advance the death warrant for any type of non-Communists government in South Vietnam.

We must face the fact, Mr. President, that it is power—mainly American power—and not legitimacy derived from the consent of the governed, that makes public policy in South Vietnam. We have great power in South Vietnam to grant or to withhold, and Messrs. Thieu and Ky know it.

I think we have the right to insist that the thousands of neutralists confined in jail be released, and that the censored press be unshackled—now.

This strategy is not new. President Eisenhower recognized the legitimacy of withholding support if reforms were not instituted.

So did President Kennedy and Johnson.

As President Eisenhower stated on October 23, 1954, in his original commitment of aid to South Vietnam:

> The purpose of this offer is to assist the Government of Vietnam in developing and maintaining a strong, viable state, capable of resisting attempted subversion or aggression through military means. The Government of the United States expects that this aid will be met by performance on the part of the Government of Vietnam in undertaking needed reforms. It hopes that such aid, combined with your own continuing efforts, will contribute effectively toward an

independent Vietnam endowed with a strong government. Such a government would, I hope, be so responsive to the nationalist aspirations of its people, so enlightened in purpose and effective in performance, that it will be respected both at home and abroad and discourage any who might wish to impose a foreign ideology on your free people.

Unfortunately, to be effective a threat requires a willingness to act. We have been tested and found unwilling.

Unless and until we are willing to take the final step of withdrawal if reforms are not instituted, the small, elite group of Vietnamese running a government distinguished primarily by its corruption, repression, and inefficiency will continue to exercise great control over American lives, American wealth, and American destiny.

ELECTIONS

This brings me to point three: Elections and how they hold little hope as an instrument for securing peace in Vietnam in the foreseeable future.

Our great Nation came into being close to 200 years ago. As a democracy, we labored long and hard at the process of developing a broadly-based method of conducting elections.

Indeed, we in the United States are still struggling with the problem. Three of the key issues before this session of Congress are the questions of the electoral college, the right of 18-year-olds to vote, and the extension of the Voting Rights Act of 1965.

Thus, Mr. President, if we—with close to 200 years of experience and sophistication in the free electoral process—still struggle with this concept, can we expect that the South Vietnamese will successfully develop such a process instantaneously? Can we ask the American people to wait that long?

Mr. President, I believe that we in this country have become so impressed with our own method of government and its various processes—and I agree that we have much to be proud of—that our hopes and habits blind us to the fact that other peoples may not readily conform to our way of doing things.

While working toward the ultimate goal of free elections in South Vietnam, we must recognize that they are not in the immediate offing. We can neither afford to pin our hopes for peace on President Thieu's offer of elections—which he admits would take 2 years to set up—nor permit Hanoi's denunciation of that offer to deter us from seeking peace through other avenues.

Thus, I think it all the more important that we insist—and insist now—that the Thieu-Ky regime broaden its base. Then we should urge that this broadened regime negotiate in depth with the NLF and that whatever mutual accommodation is effectuated constitute the interim government of South Vietnam.

This interim regime might in due time call for some kind of referendum election to test popular feeling. It is a more representative regime, however—not elections—that should be our immediate objective. We must not be philosophically "hung up" on the election concept when, if we stop and think, we will realize that full-blown national elections with an unrestricted franchise are not in the offing.

CONCLUSION

Mr. President, I return to where I began. What I have said here today is not a magical, instant cureall. I hope it has been a realistic appraisal of three key elements in the search for a way out of the Vietnam nightmare.

While American soldiers continue to die, we cannot afford the security of great caution nor the luxury of utopian thinking in the quest for peace.

(At this point Mr. GRAVEL assumed the chair.)

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. EAGLETON. I yield.

Mr. MANSFIELD. Mr. President, thanks to the distinguished Senator from Missouri I had an opportunity to glance over the text of the speech he has just concluded. It appears to me that the distinguished Senator from Missouri has done a lot of research, a lot of delving, soul searching and thinking on what is the most important question before this Nation today. It is a question which is important in our relations with other countries. It is a question which is tied implicitly to the domestic problems which confront us at home, and a question which in one way or another must be faced up to in such a manner that a reasonable solution can be found.

The distinguished Senator from Missouri has given his views and they are worth the consideration of this body and the administration.

I would like to comment on only one aspect of the Senator's speech and that is the question of elections by the Saigon Government and the National Liberation Front on a comprehensive and broad basis, which the Senator emphasized.

The Senator will recall that a year ago last September elections were held. Those elections were received with a great deal of skepticism in this country, but I would point out that at that time there were two elements excluded from participation. One element was the so-called neutralists and the other was, of course, the NLF.

Now, what the Senator is advocating is an all South Vietnamese election process by which all the people in South Vietnam would be given the opportunity to participate and to make their choice or choices known.

I agree wholeheartedly with the Senator in that respect, and I would point out, as he has, that those in control in South Vietnam are in reality northerners. What he is advocating is an all-South Vietnamese election. I think it is mandatory that in some manner, somehow, it will have to come to pass because the citizens of South Vietnam, regardless of ideology or orientation are the ones in the long run who will have to settle their own affairs, come to agreement among themselves, and plan their future. It is not the responsibility of this country; it is the responsibility of the people who live in South Vietnam.

Mr. President, I commend the distinguished Senator from Missouri and compliment him for his candor. I commend him for the research and thought which went into the speech. I hope this is not his last speech on this subject or any other subject.

Mr. EAGLETON. Mr. President, I appreciate the remarks of the distinguished majority leader and the kind sentiments expressed in his statement.

Mr. YOUNG of Ohio. Mr. President, would the Senator yield?

Mr. EAGLETON. I yield.

Mr. YOUNG of Ohio. Mr. President, I also wish to congratulate the distinguished junior Senator from Missouri on his outstanding speech today. I am in complete accord with the statements he made.

Very definitely the Senator is correct in his views that the government of South Vietnam is unrepresentative of and unresponsive to the aspirations of the vast majority of the Vietnamese people.

The fact is that Thieu and Ky, who head the militarist regime in Saigon, could not remain in power more than a few days were we to withdraw our Armed Forces from Vietnam. The Johnson administration and now the Nixon administration imposed the Thieu government on the people of South Vietnam. The Saigon militarist regime has the support, it seems to me, of fewer than 20 percent of the people of South Vietnam.

During the 2 weeks from July 5 to July 19, despite the lull, so-called, in large-scale ground action in South Vietnam, 3,347 men of our Armed Forces were killed and wounded in combat. During that same period, only 2,658 men of the too-friendly armed forces of South Vietnam were killed and wounded. Unfortunately, in that same period 84 additional American GIs lost their lives in what the Pentagon terms "accidents and incidents." In World War II, when there was no credibility gap, so-called, and no effort on the part of the Defense Department to minimize casualties, most of such deaths would have been termed combat deaths.

This has become an American war to maintain in office General Thieu and Air Marshal Ky, whose military Saigon regime, as I have stated, lacks the support of at least 80 percent of the people of South Vietnam. When our troops leave South Vietnam, Air Marshal Ky and other ARVN leaders, our friendly allies, will be out of office. It will be safe to predict that almost before our last GI leaves they will rendezvous in Hong Kong and Switzerland with their unlisted millions.

Clearly, disengagement depends upon finding a political solution to the war. A political solution requires a coalition government in Saigon to serve during the period of foreign troop withdrawal and to conduct elections for a permanent government.

The Thieu government is a product of a rigged election in which Communists, neutralists, and many Buddhists were forbidden to vote. South Vietnamese soldiers paid with American funds were herded to the polls and often voted twice—at their bases and in their home villages.

It is ironic that when he returned to Saigon from the Midway Conference Thieu promptly threatened to throw in jail anybody who advocated a coalition. This is hardly in keeping with "the principle of self-determination" to which President Nixon and Thieu piously dedi-

cated themselves. Today, Thieu and Ky hold nearly 60,000 of their political opponents behind bars in jails in Saigon and elsewhere in Vietnam. Many of them are sympathetic to a coalition government.

The fact is for many years the tail has been wagging the dog in Vietnam. The United States has been the virtual prisoner of the Saigon militarist regime which is the principal obstacle to a political settlement of the war. So long as President Nixon remains its prisoner, the war will go on.

President Nixon should immediately order the withdrawal of 200,000 of our GI's and Marines from South Vietnam. The rest of our forces there should then be assigned to our coastal enclaves until they are returned home the same way they were sent to Vietnam—by ships and planes. It is obvious that only through making it clear to Thieu and Ky that the United States no longer intends to maintain their regime in power will they then take the steps necessary to help bring about a cease-fire and armistice in Vietnam.

Again, I express my admiration to the distinguished Senator from Missouri for his speech.

Mr. EAGLETON. I thank the Senator from Ohio.

Mr. HART. Mr. President, will the Senator from Missouri yield?

Mr. EAGLETON. I am happy to yield to the Senator from Michigan.

Mr. HART. I was fortunate in having the opportunity to read the remarks of the able Senator from Missouri and then, except for the brief time when I was called from the Chamber, to hear the delivery of his speech.

I rise to thank him for again compelling each of us to pause in whatever other assignments may be ours, to think about the overriding problem of Vietnam. I associate myself with the recommendations he makes. Most particularly, I think the Senator's reference to reducing field activity is of overriding importance. Until we have done that, I think we will continue to fall while the casualty lists mount.

I thank the Senator from Missouri very much for a very fine speech.

Mr. EAGLETON. I am very grateful to the Senator from Michigan for his comments.

I am pleased now to yield to the Senator from Idaho (Mr. CHURCH).

Mr. CHURCH. Mr. President, I want to compliment the distinguished Senator from Missouri for having spoken up on the subject of Vietnam in such a forthright way.

I commend him particularly for speaking out with such frankness about the issue of the proposed elections in Vietnam.

He says in his remarkable address:

> Thus, I think it all the more important that we insist—and insist now—that the Thieu-Ky regime broaden its base. Then we should urge that this broadened regime negotiate in depth with the N.L.F. and that whatever mutual accommodation is effectuated constitute the interim government of South Vietnam.

This, it seems to me, is wholly realistic and very likely constitutes the essential ingredient of any negotiated settlement.

From the beginning, the matter of elections has seemed to me to be not very realistic. The Senator puts his finger on the nub of the matter when he says:

> We must not be philosophically "hung up" on the election concept when, if we stop and think, we will realize that full-blown national elections with an unrestricted franchise are not in the offing.

I must agree with the Senator. It is a hard thing to say, but it is true. It is also a hard thing to say, but true, that we did not put much emphasis on the need for elections in the early phases of our involvement in Vietnam. It was only after it became clear that no military decision could be reached there, that we began to emphasize the importance of elections as a prime objective of American policy. But this is, indeed, a novel objective. It is not consistent with the pattern of our relations elsewhere in the world.

For a long while, we have embraced the regime of Chiang Kai-shek on Formosa, but never have we called for elections there. Never have we indicated that it was vital to consider that the people of Formosa be given the right of self-determination.

For many years we have extended generous amounts of military aid to Franco in Spain, yet I have heard no one in this Chamber stand up and assert the principle of self-determination for the Spaniards.

One could go on and cite many other examples.

I think that the call for elections in Vietnam has been a way to give a moral purpose to the massive involvement of the United States in the Vietnamese war, an effort, if you please, to find an exit from the war that would be acceptable to the American people.

Elections, Western style, so familiar to us in this country, unfamiliar to Vietnam, a country which has no prior experience in Western democracy.

Therefore, I think that the Senator is absolutely right in pointing out the extreme difficulty in ever getting unrigged elections in Vietnam. His emphasis upon the necessity to work toward a settlement there on the basis of some kind of interim government representative of the various political factions that exist in South Vietnam, in my mind still represents the most realistic approach holding much promise or hope for an eventual negotiated settlement of the war.

I commend the Senator for taking hold of such a hard and emotional issue, which is naturally close to the hearts of the American people who believe in, and are accustomed to, the election process, by pointing out the weakness of that posture in connection with bringing the war to a close in Vietnam.

Mr. EAGLETON. I thank the Senator from Idaho. I only wish that in my remarks I had used his words and possessed the eloquence of his delivery. I believe that he has hit the point even more directly and with greater depth than I did in my comments. He has summarized what I so inadequately tried to convey.

Mr. TYDINGS. Mr. President, will the Senator from Missouri yield?

Mr. EAGLETON. I am happy to yield to the Senator from Maryland.

Mr. TYDINGS. Mr. President, I join my colleagues in commending the junior Senator from Missouri on his excellent speech on the present posture of the United States with relation to the South Vietnamese Government.

The Senator from Missouri, to use a familiar phrase, is off to a very fast start in Congress. His contributions to the various committees on which he serves are adding great stature not only to himself but also to the State which he represents.

The three points he makes in his address today are points which could well be studied and reviewed by every concerned American citizen.

I am particularly pleased that the Senator has commented upon the actual conditions in the South Vietnamese Government today.

I would like to ask him a few questions. The first question is: Is it not a fact that the present government in South Vietnam is and has been riddled with corruption and black marketing, even to the point where corporal stripes are sold for a price?

Mr. EAGLETON. I think that is not only unqualifiedly true, but is the history of the South Vietnamese Government since 1954, beginning with the Diem regime.

Mr. TYDINGS. The Senator points out, in concise and clear language, the failure of the government to make any effort to broaden the basis of the government to represent any element of its populace other than those representing the top governmental leaders. I should like to ask the distinguished Senator from Missouri where the principal neutralist leaders, anti-Communist neutralist leaders, in South Vietnam are.

Mr. EAGLETON. Some of them are in jail, such as the person who ran second in the so-called elections of a year ago, as referred to by the Senator from Montana, elections in which only a token percentage of the total populace in South Vietnam participated. They are either shackled abroad or confined in jail. Even those who are afoot in Saigon are in the most restricted of circumstances in the expression of their philosophies and politics.

Mr. TYDINGS. Would it be a fair statement to say that any reference to the Ky government as a popular government, as democratic government, as a government representing the people of South Vietnam, as we know it in our country, is a complete myth; and that the government is maintained by virtue of the U.S. military power in Vietnam?

Mr. EAGLETON. I can think of even stronger words to respond to the Senator's question. I think not only is it a myth, but it is a gruesome distortion to refer to the Ky-Thieu government as a representative government or as freely elected.

Mr. TYDINGS. Let me commend the Senator from Missouri on his remarkably lucid portrayal of the U.S. posture, unhappy as it is, in South Vietnam. I think he has made a significant contribution to the dialog. I hope the President of the United States and his advisers

will read the distinguished Senator's speech.

Mr. EAGLETON. I thank the Senator from Maryland.

Mr. President, I yield the floor.

Mr. JAVITS. Mr. President, I have read the speech of the Senator from Missouri (Mr. EAGLETON) with great interest. I, also, am intending to speak on Vietnam today. I found much that was instructive in the presentation of the Senator from Missouri, but it deals essentially with the other aspect of the problem of Vietnam; that is, the Government of South Vietnam. I feel that the need for America to withdraw from the combat role is very real and so that this is the time when it can be done with the least risk to our security and also to the security of our allies.

NEW STEPS TOWARD PEACE IN VIETNAM

Mr. JAVITS. Mr. President, in the 2½ months since President Nixon's May 14 speech to the Nation the administration has effected a number of constructive and realistic changes in the Vietnam policy it inherited from the previous administration. In my judgment, these changes have not been accorded sufficient recognition and support. As a Senator who sharply criticized the absence of any apparent Vietnam policy changes in a speech just 5 days preceding the President's May 14 address, and while recognizing that much remains to be done to end our combat involvement in Vietnam, I wish to use this opportunity to commend the President for his constructive movement away from the dead-end policies of the past.

Specifically, I commend the President for the following four basic, substantive changes in Vietnam policy which I regard as highly constructive and realistic steps toward peace:

First, a decisive moving away from the concept of terminating the war through a battlefield victory.

Second, the initiation of a definite program to de-Americanize the war and phase U.S. troops out of the main combat role.

Third, recognition of the NLF as an indigenous factor with a base of material political support.

Fourth, efforts to end the veto over U.S. policy in Vietnam given, in effect, to the South Vietnam Government by the previous administration, and the beginning of efforts to end the link between the national interest and prestige of the United States and the political fortunes of the particular regime in Saigon.

These are all highly significant steps which deserve the support and approval of all Americans. In relative terms, the Nixon administration has certainly moved farther away from the rigid position of the previous administration than the Communist negotiators in Paris have moved from their own rigid positions of the past. It would be well for the Communist side to realize that this discrepancy in adjustment of negotiating positions—so marked in the U.S. flavor—has not gone unrecognized by people like myself who have been outspoken critics of U.S. policy in Vietnam.

One of the grave dangers still latent in the Vietnam situation is the possible persistence in Hanoi of the delusion that it can inflict a "defeat" and a "humiliation" upon the United States. Pursuit of any such ill advised goals by the Vietcong, the NLF, and North Vietnam would be a dangerous illusion. It could be one of the few things that would have the precisely contrary result of rallying opinion and support in this country behind those who would initiate new and major U.S. military determination to win on the battlefield in Vietnam.

It is no secret—at least here in the Senate—that the administration is disappointed by what it considers to be a lack of adequate recognition and support for the new realism, adjustment, and flexibility it has shown in Vietnam policy. But, in my judgment, a good part of the basis for this lack of proper recognition and support rests with the administration itself.

The overwhelming mandate given to President Nixon in November 1968 was to end the war in Vietnam. Against this background, the administration's timing was too slow for its critics in demonstrating to the American people that it really did have the intention and the plans to move the Nation on a course away from the sterile, military escalation policies of the past. Second, the administration decided to be low-keyed; hence it tended to make less dramatic the changes it has made in Vietnam policy.

By playing down the sharpness of difference between the policy innovations in Vietnam policy it has introduced and those of its predecessor, the administration made the least instead of the most of an important opportunity to win the support and acclaim among the American people—assets which the Administration now recognizes as crucial to the success of our diplomacy in Paris.

The Nixon administration's Vietnam policy has been much better than the rhetoric it has used to express it. Administration spokesmen have persisted—quite needlessly and counterproductively—in using many of the most sterile and discredited of the phrases and concepts of the previous administration.

In my judgment additional adjustments, beyond those introduced thus far by the Nixon administration, and additional evolution, are necessary if the goals of the President's Vietnam policy are to be achieved. The administration's "two track" approach—reducing the U.S. combat role on the battlefield and seeking a political settlement through the Paris negotiations—is wise and has already produced some results. But both of these "tracks," as being pursued by the administration, appear to have built-in limitations and the Paris talks have reached an apparent stalemate.

In order to reduce our involvement in Vietnam to proportions which are commensurate with our national interest and acceptable to the American people, the administration must have a policy which depends essentially on measures which are within our power to effect unilaterally. These steps cannot be subject to the veto of the Thieu government and must not rely upon step-by-step "concessions" and "reciprocity" from Hanoi.

That is the reason why I stated, in the hearings, to the Senator from Missouri (Mr. EAGLETON), that there was nothing inconsistent between the unilateral decisions required by the United States and what we very much wanted Saigon to do. They may not do it, Mr. President, and hence we also have to make our decisions based upon the theory that they may not.

The President has started the withdrawal of U.S. combat troops and has expressed his intention to proceed in this direction in a substantial way.

The central core of my presentation today, Mr. President, is that what is needed now is a definite timetable for the withdrawal of all U.S. combat troops by the end of 1970. This timetable for complete U.S. withdrawal from the combat role should be communicated to the Saigon government in clear and unmistakable terms. The fact of its existence—but not necessarily its details—should also be known to the world.

By proceeding in this way, the administration can make the process of U.S. combat disengagement serve as an incentive to both Saigon and Hanoi to reach a political settlement through negotiation.

The U.S. withdrawal timetable would be coordinated with a timetable for phasing equipped and trained ARVN forces into the combat role. The United States would continue to provide full logistic support to the ARVN forces as well as large-scale support including tactical air, naval, and artillery support.

Persons who have worked closely on this problem believe that the ARVN could have the capability to hold its own in combat against the Vietcong and North Vietnamese forces by the end of 1970—if a definite timetable, and requisite implementing plans, were decided upon now.

In my judgment, a clearly timetabled program for U.S. combat disengagement of the sort I have outlined above would be a much more effective inducement on Hanoi to negotiate politically than the kind of "threats" of U.S. military re-escalation which are sometimes heard from the diehards still among us.

A program of timetabled U.S. combat disengagement should disabuse Hanoi of the idea that it need only wait for U.S. public opinion to bring about a total and unconditional U.S. withdrawal from Vietnam—and a consequent realization of all of Hanoi's ambitions.

To be faced in the field by a viable South Vietnamese combat force would also undercut the Vietnamese Communists' now skillfully exploited argument that it is a native force locked in combat against the world's most powerful foreign army. In this context, there is an aura of glamor and heroism in the self-depicted Vietcong role which has helped it to gain political support within Vietnam, and which has helped it to recruit many of the bravest and most highly motivated young South Vietnamese.

If the Communist side continued to remain uncompromising in negotiations after the full combat role was taken up by the ARVN, then the psychological brunt of the war of attrition will have been shifted away from the American people and squarely onto the Vietnamese themselves.

As regards the Paris negotiations, in my judgment it is very important not to delude ourselves into thinking that every move we make to readjust our negotiating position is a concession to the other side. We are not—and should not be—making gratuitous "goodwill" concessions designed to appeal to the higher motives of our opponents. Efforts to describe our policy in such terms, and expressions of dismay over Hanoi's failure to respond in "good faith," are naive and lack credibility. This long and bitter struggle will not be ended on the basis of mutual good will.

The key to further progress along the Paris negotiating track, in my judgment, lies in the further delinking of U.S. policy from the fate of the particular government now in power in Saigon—the military regime of Thieu and Ky. It is essential that the United States make it clear to Saigon as well as Hanoi that our commitment to political self-determination in South Vietnam is not synonymous with the self-perpetuation of the political status quo.

This is the crucial point so far as the Paris negotiations are concerned. Hanoi has asked for a coalition government to hold elections. We have prodded Saigon into counter-offering—a coalition electoral commission to conduct elections.

The Saigon government has a strong incentive in sticking to its offer of a mixed electoral commission, as opposed to a coalition government. If the NLF accepted the Government of Vietnam's position it would be conceding the legitimacy of the Thieu government and accepting for itself the status of an "illegal" insurgency.

It seems unlikely that the NLF will accept these conditions, in view of the long fight it has put up, its near defeat of the Saigon government in 1965 prior to the U.S. involvement on the ground, and its bitter memories of the failure of the Diem regime to hold elections in 1956 as prescribed by the Geneva agreements of 1954.

The U.S. interest lies in seeing that a fair election is conducted to allow the people of South Vietnam to choose a government of their own volition. The U.S. interest does not lie in trying to force the NLF to bend its knee—in a symbolic but important way—to the Thieu government. Thirty-six thousand American lives have not been sacrificed for that. Our Nation's prestige and honor are in no way tied to this; nor is the credibility of our word as a nation nor is the bravery of our soldiers.

The ability of the ARVN to hold its own against the Communist forces after it has assumed the full combat role might tempt the Thieu government to stiffen its own resistance to a negotiated political compromise. However, the ARVN's dependence upon U.S. logistic and tactical air support would retain in President Nixon's hands powerful leverage to deal with any such possible Government of Vietnam stonewalling tactics—in other words, resisting absolutely any effort to really make a peace.

In his speech of July 11—which President Nixon has described as "a comprehensive, statesmanlike and eminently fair proposal for a political settlement"—President Thieu asserts he has "made relentless efforts and repeated acts of good will." Thieu cites his government's agreement to join and continue the Paris peace talks three times as "another important gesture of good will on the part of the Government of Vietnam."

In addition, President Thieu criticizes the Communists for "maintaining their absurd demands for the overthrow of the legal Government of the Republic of Vietnam."

He offers elections on the following terms:

> All parties and groups, including the "NLF" which is now bearing arms against us, can participate in the elections if they renounce violence and pledge themselves to accept the results of the elections.

Rhetorical sparring between Saigon and the NLF can continue indefinitely, unless we insist upon bypassing this stage and moving directly to a vote. Against the background as seen through the eyes of North Vietnam, of Diem's renege on the 1956 elections, and the irregularities of the 1967 elections—with even Big Minh barred from running and runner-up Dzu still languishing in political prison—the reluctance of the NLF to accept elections under the conditions offered by Saigon should not be surprising.

If the United States continues to allow its own freedom of action to be controlled by the details of procedural maneuvering and rhetorical posturing by the contending parties of Vietnamese, we will deprive ourselves of the chance to move forward to a creative new policy in Asia as a whole—based on the new realities of the 1970's rather than upon the obsolete echoes of the 1940's French colonial war.

The President has signaled this intent, and I ask very strongly that he go through with his intention in the best interests of our Nation and the people of the world.

There are urgent domestic problems which demand the attention and the resources of our Nation which are still being squandered in Vietnam. President Nixon is keenly aware of the need to redress the serious imbalance in national priorities which is so heavily attributable to President Johnson's ill-conceived Vietnam war policy. I urge him to move more swiftly and more decisively down the very paths he has now mapped out for the Nation. As a student of history, and as an admirer of General de Gaulle, he should take heart in the realization that de Gaulle's greatest achievement for France was his termination of the Algerian war.

I ask unanimous consent that the editorial from today's New York Times, entitled "The Withdrawal Strategy," be printed at the conclusion of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WITHDRAWAL STRATEGY

The continuing delay by Hanoi and the National Liberation Front in opening serious private peace negotiations in Paris leaves the United States with no choice but to proceed with an alternative strategy, Vietnamization of the war.

The Paris talks of course will go on. The United States halted the bombing of North Vietnam on assurances—from the Russians, among others—that there would be serious negotiations. But if negotiations remain stalled, if forward-looking peace proposals from Washington and Saigon are unanswered, then other means of achieving American disengagement must be pursued.

The withdrawal of 25,000 American troops and President Nixon's statement that he hoped to bring home most of the remaining ground combat forces before the end of next year marked the first stage of this alternative strategy. It is a strategy based on strengthening and modernizing the South Vietnamese army and, starting immediately, turning over to it progressively the major combat responsibilities.

The rate of American withdrawal naturally will also be affected by the degree of North Vietnamese withdrawal. If the slowdown in reinforcement of North Vietnamese forces continues—leading to a gradual reduction of Hanoi's troops in South Vietnam—American troops can be brought home at a relatively rapid pace. A continuation of the present military lull, which increasingly calls for a reciprocal American gesture of de-escalation, might even permit the withdrawal of American troops to be speeded up. Most military men agree that the South Vietnamese can be prepared to take over all but helicopter combat operations—with, perhaps, some American logistical and continuing air support—in less than eighteen months.

There is always the possibility that South Vietnam's army will be defeated in battle. But that would force the United States to remain longer and it is unlikely that Hanoi would want to run that risk by testing Saigon's military prowess at this time—although there might well be such a test after a unilateal American withdrawal was completed.

Does unilateral American withdrawal encourage Hanoi to block negotiations in Paris and keep its troops in South Vietnam? The reverse is probably true. Hanoi's refusal to negotiate means continued warfare with the South Vietnamese armed forces of a million men—aided by American logistical and air support, which would still have to be negotiated out of the country one day. And that negotiation, at a time when American ground combat forces and casualties had been reduced to a minimum, would take place under conditions more favorable to the Administration in Washington.

Hanoi's choice is between a negotiated peace—which means early, speedy and complete American withdrawal, plus an important political role in South Vietnam for the N.L.F.—and a continued war with unforeseeable consequences. But whether Hanoi chooses peace or war, the American disengagement policy now is unlikely to be altered except as to the withdrawal rate.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. TOWER. Mr. President, I concur with the Senator. I hope we can move in that direction as quickly as possible. I think we are moving in that direction.

Mr. JAVITS. I said in the beginning of my speech that I thought the President was moving in that direction and that I thought he had the answer to the argument which many people make.

I am gratified to know that the Senator from Texas thinks as I do. I thank the Senator.

The Senator and I are as far apart on the ABM as we could be. However, we are together on this. Our judgment coincides. I would not refrain from agreeing with the Senator on this matter any more than he would refrain from agreeing with me.

I am delighted that the Senator asked me to yield.

Mr. TOWER. There is a growing feeling in the ARVN that they can do it themselves, given adequate resources. They think they can handle the problem. I say that based on my conversations with some of them.

I think we can expect the administration to continue to move in this direction.

I appreciate what the Senator has said. What the President is doing in that direction should not be interpreted as bugging out on our part.

We can yield to them more of the combat responsibility and will continue to do so.

Mr. JAVITS. Mr. President, I thank the Senator for his remarks.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. MANSFIELD. Mr. President, I have had the distinct privilege of listening to two excellent speeches today on the question of Vietnam.

The distinguished Senators who have spoken, the junior Senator from Missouri (Mr. EAGLETON) and the senior Senator from New York (Mr. JAVITS), have not been in accord in what they have had to say. But I would say that there is a good deal of comity between the two if we really go into the details.

The speeches seem to be to indicate the tremendously difficult problem which the President has in trying to find a reasonable solution to the conflict in Vietnam.

It would be my hope that the suggestions made by the distinguished Senator from New York, as well as those made by the distinguished Senator from Missouri, will be taken to heart by the administration, as I am sure they both will be, and will be studied in detail to see what if anything—and I am sure that something can come forth—could be derived from the speeches which would be of benefit in finding an end to this barbaric, tragic, and brutal war in which we are so unnecessarily engaged.

I noted that the distinguished Senator said in effect that the time for rhetoric is past, the time for sparring is past, and the time to get down to bedrock is here.

The Senator uses as one of his illustrations an effort made by President Thieu a few weeks ago by means of which he said he was prepared to hold an election for all South Vietnamese.

I was encouraged by that statement until I found out a few days later that what he meant was that these elections would not even be called until 2 years after a peace agreement had been reached.

I was hopeful that what he meant was that within a minimum of 3 months and a maximum of 6 months, an election could be held by all South Vietnamese, of all factions, to the end that the South Vietnamese themselves could settle their own problems and decide on their own future and chart the course for their own country.

Let us hope that on the basis of the speech made by the distinguished Senator from New York, as well as the speech made by the distinguished Senator from Missouri, the advice seriously given is taken to heart not only in our own administration, as I am sure it will be, but also in Southeast Asia as well.

I commend the distinguished Senator for his well-thought-out remarks.

Mr. JAVITS. Mr. President, I think it is very kind of the majority leader to have been so gracious. I do not know of any praise that I would value more in the Senate than that of the majority leader.

I think we are finally embarking on the right doctrine, the two-track doctrine. I urge the President to bring home the fact that when President Thieu, or any government leader then in power in Saigon, feels that we are not underwriting or guaranteeing his continuation in power, he will be a lot more amenable to the arrangements and the compromises and the freedoms which we would urge on him or induce him to institute.

I noted with the greatest of interest—and I do not know whether the majority leader noted it—the appraisal yesterday in the New York Times that the administration had better listen more and more to the majority leader.

I think this discussion has lent added weight to that admonition.

I thank the distinguished majority leader.

PRESIDENT NIXON'S TRIP ABROAD

Mr. MANSFIELD. Mr. President, I have had the opportunity to read the excerpts from the unofficial account of President Nixon's meeting with reporters in Guam as published in the New York Times on Saturday, July 26, 1969. I must say that this unofficial account, allied with the evangelistic fervor the President displayed in explaining the purposes of his trip to Asia and Europe to the joint leadership last Tuesday, gave me cause for hope and good prospects for the future of our foreign policy in Asia. What the President is seeking to achieve, I believe, is time to reassess U.S. foreign policy, to do so on a long-range basis, and not to become captive to the shifts and turns of the moment.

The President is moving with caution and consideration but also with a sense of reality based on the changes which have occurred on this globe. He is not advocating isolationism, nor is he advocating the abandonment of Asia.

In his candid statements, both in this country and in Guam, he has emphasized that the United States is a Pacific power with peripheral interests on the Asian mainland.

The first two steps on the journey of understanding were in the Philippines and Indonesia, two nations which are primarily Pacific powers but with greater interests on the Asian mainland than the United States. What the President has done, in short, is to signal the less likelihood of American participation in wars on the Asian mainland in the future. The President has also encouraged the Asian nations to depend more on themselves in both internal security and military defense which, to me, seems to be a sound long-range policy. In short, what the President has stated broadly and plainly is continued support for the nations of Asia but with greater Asian participation and responsibility.

He has outlined a lessening in military aid programs and a greater emphasis on economic cooperation. His intent, I believe, is to avoid future Vietnams but, at the same time, to render what assistance is feasible and possible to the nations of Asia so that they can achieve economic and political stability and thereby be able to look after their own interests in a more strengthened fashion. The key words in our relations with these countries would be equality, understanding, and mutual cooperation. U.S. influence in the Pacific would be, if I understand the President's remarks correctly, one of balance throughout the area and not of primary responsibility, except in our own territorial areas. Perhaps the President's position—and he speaks for all of us—can best be stated in the remarks he made in Manila on July 28, when he said:

> The United States will play its part and provide its fair share, but peace in Asia cannot come from the United States. It must come from Asia. The people of Asia, the governments of Asia, they are the ones who must lead the way to peace in Asia.

The President has been candid and forthright in recognizing that changes have occurred in the world, that old line policies may well have lost their effectiveness, and that as the world changes, we must change with it.

On his trip the President is visiting old friends and renewing visits to countries which he has visited many times before. We wish him well on his visits to Thailand, India, Pakistan, and Romania; and we want him to know that he has our full support on the basis of what he has said in Guam and restated in the Philippines and Indonesia.

We are very pleased with the turnouts which have come out to greet him as the Chief of State of this Nation, and we look forward with anticipation to his report to the American people on his return.

Mr. President, I ask unanimous consent that the article previously referred to be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 26, 1969]

EXCERPTS FROM UNOFFICIAL ACCOUNT OF PRESIDENT NIXON'S MEETING WITH REPORTERS

(NOTE.—Excerpts from an unofficial account of President Nixon's informal news conference today during his stopover on Guam. Mr. Nixon spoke for publication but stipulated that he not be quoted directly.)

MANILA, July 25.—The President said he had seen some speculation about changes in his itinerary and added that he had no present plans to go to Vietnam. But, he said, Ambassador Ellsworth Bunker will be coming to Bangkok along with the ambassadors from the other Asian countries that he will not be visiting, and he intends to have a conversation with him there, which will be apart from the conversation he will have with the other ambassadors.

There is also a possibility that Gen. Creighton W. Abrams will be able to go with the Ambassador Bunker to Bangkok for that meeting, Mr. Nixon said.

Now, insofar as this phase of the trip was concerned, and he said he would speak first to the Asian phase and then later and briefly to the Rumanian phase, he thought that the backgrounders and the general statements that have been made from the State Depart-

ment had covered it pretty well. He thought what would be of greatest interest before questions is to give the perspective that he has with regard to Asia and America's role in Asia.

VISIT OF 1953 NOTED

He said his background here goes back a few years. It was in 1953 that he first visited this area. That trip was very, very extensive, with the usual four days in each country, a so-called state visit in each country. It provided an opportunity to meet the leaders, but more than that to know the countries in a very effective way.

In the 16 years that have passed, however, since that time, the changes have been very dramatic. He has returned to Asia on a number of occasions since then, and particularly to the countries that he will be visiting on this trip. Consequently, he has kept up with later developments and also, with the exception of President Agha Mohammed Yahya Khan in Pakistan, he knows each of the Asian leaders that he will be meeting and will be able to speak to them from that background.

Insofar as the general purpose of a trip like this is concerned, the President said he can understand some of the speculation to the effect that "why does a President of the United States think he learns anything by spending one day each in an Asian country?" Or, for that matter, as he did earlier, in a European country.

The answer is, and he might indicate what will be his general policy for the balance of his service in the White House, that he thinks a one-day trip is just as valuable as four days. In other words, if you take a one-day trip, and concentrate, as he does, on very little protocol, and a great deal of face-to-face conversation, an individual, in meeting the leader of the other country, will gain as much as if he stretched it out over a period of four days. He has been through both experiences, and, therefore, is somewhat knowledgeable in that respect, Mr. Nixon said.

SHORT PERIOD OF TIME

He feels, too, that when one considers the time that is available to a President in these periods, it is essential in order to cover all the ground that needs to be covered to limit, first, the amount of travel and the amount of time that is taken for each one of the stops. He mentioned that only as some of the reasoning that has gone into his decision with regard to covering a great deal of ground in a very short period of time: In this case, going around the world and, in the space of about eight days, after the moon shot, covering a number of countries.

Now, insofar as the individuals are concerned, having met all of these leaders previously, Mr. Nixon supposed the question could be raised, and with good reason, that once you know a leader, the contact with ambassadors would be sufficient. However, he has found in previous travels in Asia and in Europe as well, that as the situations change, it is vitally important to have a renewed contact with the leader in each of the countries involved, a renewed contact because his attitudes may change and in that way when the President reads, as he reads day after day, the cables that come in from all over the world, he can have a much better understanding of what those cables mean—the nuances—if he has more recently had a direct contact, face-to-face with the individual involved, the individual leader involved.

That is one of the reasons why he is a great believer in visits of this sort, where they are consistent with and can be taken at a time that will fit in with other very demanding parts of his schedule.

Now, a word about what is a very consuming interest in Asia, the President continued, a consuming interest because it is one he has had for a number of years, and one that now, as he looks at the perspective of history, is even more imperative.

ROLE IN ASIA

The United States is going to be facing, he hoped before too long—no one can say how long, but before too long—a major decision. What will be its role in Asia and in the Pacific after the end of the war in Vietnam? We will be facing that decision, but also the Asian nations will be wondering about what that decision is, Mr. Nixon said.

When he talked to Prime Minister John G. Gorton, for example, he indicated that in the conversations he had with a number of Asian leaders, they all wondered whether the United States, because of its frustration over the war in Vietnam, because of its earlier frustration over the war in Korea—whether the United States would continue to play a significant role in Asia or whether the United States, like the French before, and then the British, and, of course, the Dutch—whether it would withdraw from the Pacific and play a minor role.

This is a decision that will have to be made, of course, as the war comes to an end. But the time to develop the thinking that will go into that decision is now. Mr. Nixon said he thinks that one of the weaknesses in American foreign policy is that too often we react rather precipitously to events as they occur. We fail to have the perspective and the long range view that is essential for a policy that will be viable.

As he sees it, even though the war in Vietnam has been, as we all know, a terribly frustrating one, and, as a result of that frustration, even though there would be a tendency for many Americans to say, "After we are through with that, let's not become involved in Asia," he is convinced that the way to avoid becoming involved in another war in Asia is for the United States to continue to play a significant role, the President said.

UNITED STATES A PACIFIC POWER

He said that whether we like it or not, geography makes us a Pacific power and when we consider, for example, that Indonesia and its closest point is only 14 miles from the Philippines, when we consider that Guam, where he was presently standing, of course, is in the heart of Asia, when we consider the interests of the whole Pacific as they relate to Alaska and Hawaii, we can all realize this.

Also, as we look over the historical perspective, while World War II began in Europe, for the United States it began in the Pacific. It came from Asia. The Korean War came from Asia. The Vietnamese war came from Asia.

So, as we consider our past history, Mr. Nixon said, the United States involvement in war so often has been tied to Pacific policy or lack of Pacific policy, as the case might be.

As we look at Asia today, the President observed, we see that the major world power that adopts a very aggressive attitude and a belligerent attitude in its foreign policy, Communist China, of course, is in Asia, and we find that the two minor world powers—minor, although they do have significant strength as we have learned—that most greatly threaten the peace of the world, that adopt the most belligerent foreign policy, are in Asia—North Korea and, of course, North Vietnam.

When we consider those factors, we realize that if we are thinking down the road, down the long road—not just four years or five years, but 10, 15 or 20—that if we are going to have peace in the world, that potentially the greatest threat to that peace will be in the Pacific, the President said.

OTHER THREATS TO PEACE

He did not mean to suggest that the Mideast is not a potential threat to the peace of the world and that there are not problems in Latin America that concern us, or in Africa and, of course, over it all, we see the great potential conflict between the United States and the Soviet Union, the East-West conflict between the two superpowers.

But as far as those other areas are concerned, he said, the possibility of finding some kind of solution is potentially greater than it was in the Asian area.

Pursuing that line of reasoning a bit further, he said he would like to put it in a more positive sense: When he looked at the problems in Asia, he said the threat to peace presented by the growing power of Communist China, the belligerence of North Korea and North Vietnam, should not obscure the great promise that was here.

Mr. Nixon declared that the fastest rate of growth in the world is occurring in non-Communist Asia, Japan, in the last ten years, had tripled its G.N.P., South Korea had doubled its G.N.P., Taiwan had doubled its G.N.P., Thailand had doubled its G.N.P. The same was true of Singapore and of Malaysia.

The record in some of the other countries was not as impressive. But consider the Philippines, he said. The Philippines in 1953 was a major importer of rice. Today, as a result of miracle rice, it no longer had to import it. Some progress was being made in areas like that.

INDIA AND PAKISTAN CITED

The President mentioned India and Pakistan and the terribly difficult and traumatic experience they have had. Because of their conflict with each other, more than with the problems they have had from the outside, that picture tends to be rather black.

But India's rate of growth as a result of two good crop years, and a reasonably good one this year, has been at 6 per cent, he said.

As far as Pakistan is concerned, Mr. Nixon said, they are emphasizing growth in manufacturing. They are growing at the rate of 10 per cent per year in manufacturing and from 1965 to 1970, their agricultural production will go up 21 per cent.

The poverty in these two countries, he said, strikes one with tremendous impact. But having seen what it was in 1953 and seeing what it was again in 1957, the amount of progress that has taken place, even in those countries where the rate has not been as high as others, was a very, very formidable thing to see, he asserted.

ASIA'S THREAT AND HOPE

So, what he is trying to suggest is this, the President said: Look at Asia. It poses, in his view, over the long haul, looking down to the end of the century, the greatest threat to peace of the world, and, for that reason, the United States should continue to play a significant role.

It also poses, he said, the greatest hope for progress in the world because of the ability, the resources, the ability of the people, the resources physically that are available in this part of the world, and for these reasons, we need policies that will see that we play a part and a part that is appropriate to the condition that we will find.

One other point he made very briefly was that in terms of this situation we must recognize that there are two great new factors which you will see, incidentally, particularly, when you arrive in the Philippines—something you will see there that we didn't see in 1953, to show you how quickly things change—a very great growth of nationalism, nationalism even in the Philippines, vis-a-vis the United States, as well as other countries in the world. And, also, at the same time that national pride is becoming a major factor, regional pride is becoming a major factor.

The second factor, he went on, is one that is going to have a major impact on the future of Asia, and it is something that we must take into account. Asians will say in every country that we visit that they do not want to be dictated from the outside. Asia for Asians. And that is what we want and that is the role we should play. We should assist it, but we should not dictate.

At this time, he said, the political and economic plans that they are gradually developing are very hopeful, we will give assistance to those plans. We, of course, will keep the treaty commitments we have.

VISIT TO RUMANIA

But as far as our role is concerned, he said we must avoid that kind of policy that will make countries in Asia so dependent upon us that we are dragged into conflicts such as the one that we have in Vietnam.

This is going to be a difficult line to follow. It is one, however, that he thinks, with proper planning, we can develop, he went on.

He said he would just answer some of the speculation about Rumania by pointing out that this trip to Rumania is not directed toward the Chinese or toward the Russians, but toward the Rumanians, Mr. Nixon said.

He said he did not believe that the President of the United States should be able to accept an invitation to visit a Western European country, but should automatically have to decline an invitation to visit an Eastern European country.

Mr. Nixon said that this was an era of negotiation rather than confrontation. It would be more difficult, of course, to develop the communication with Eastern European Communist countries than with Western European countries, but he thought it was time that a beginning be made.

He said he would have discussions of bilateral issues with President Nicolae Ceausescu, the problems of Europe, East-West relations.

But this trip under no circumstances, he said, should be interpreted as an affront to the Soviet Union or as a move toward China.

The President said he hoped that if the trip worked out it would set the stage for more openings of this type with countries in Eastern Europe where it would be mutually beneficial to the United States and the other countries involved.

The President was asked, on the question of United States military relationships in Asia, a hypothetical question: If a leader of one of the countries with which we have had close military relationships, either through SEATO or in Vietnam, should say, "Well, you are pulling out of Vietnam with your troops. We can read the newspapers. How can we know you will remain to play a significant role as you say you wish to do in the security arrangements in Europe?" What kind of approach would he take to that question?

The President replied that he had indicated that the answer to that question was not an easy one—not easy because we would be greatly tempted when that question is put to us to indicate that if any nation desires the assistance of the United States militarily in order to meet an internal or external threat we will provide it.

ON COMMITMENTS, TWO POINTS

However, he said he believed that the time had come when the United States, in its relations with all of its Asian friends, should be quite emphatic on two points: one, that we would keep our treaty commitments; our treaty commitments, for example, with Thailand under SEATO. And, two, that as far as the problems of international security are concerned, as far as the problems of military defense, except for the threat of a major power involving nuclear weapons, that the United States was going to encourage and had a right to expect that this problem would be increasingly handled by, and the responsibility for it taken by, the Asian nations themselves.

He said he believed, from his preliminary conversations with several Asian leaders over the last few months, that they were going to be willing to undertake this responsibility. He said it would not be easy. But if the United States just continued down the road of responding to requests for assistance, of assuming the primary responsibility for defending these countries when they have international problems or external problems, they were never going to take care of themselves.

He added that, when he talked about collective security for Asia, he realized that at this time it looks like a weak reed. It actually was. But looking down the road—he said he was speaking now of five years from now, 10 years from now—he thought collective security, insofar as it deals with internal threats to any one of the countries, or insofar as it deals with a threat other than that posed by a nuclear power, was an objecive that free Asian nations could see and which the United States should support.

The President was asked whether, when speaking of internal threats, he included threats internally assisted by a country from the outside, such as we have in Vietnam?

INTERNAL THREAT IN THAILAND

The President replied, that generally speaking, it was the kind of internal threat that we do have in the Asian countries. For example, in Thailand the threat was one that was indigenous to a certain extent to the northeast and the north, but that would not be too serious if it were not getting the assistance that it was from the outside. The same was true in several of the other Asian countries, he said.

The President was reminded of his hope that his meetings in Rumania would open the way to other meetings involving Eastern Europe. Was it his hope that he would eventually be invited to Moscow to talk with the Russians, perhaps within the next six months of so?

The President replied that as far as any meeting with the Soviet Union was concerned, summit meeting, he had stated his position previously. He thought it would be well to restate it.

He did not believe that any summit meeting with the Soviet Union was useful unless a subject of major interest to both powers was to be discussed with some promise of finding a solution or at least making progress on that particular problem.

He said he believed, for example, as he looked over the history of summitry with the Soviet Union, that while, in all administrations, we had had the best of intentions, summitry had not been particularly helpful. He said this with regard to the spirit of Geneva, the spirit of Camp David, the spirit of Vienna and the spirit of Glassboro.

MEETINGS WITH SOVIET UNION

He felt that where the Soviet Union was concerned, for example today, there were three major areas where a summit meeting could be useful. If, for example, the time had come when we could make a breakthrough in the Mideast, and a summit meeting with the Soviet Union would play a significant part, he thought that could be considered.

The second area, Mr. Nixon said, is in the field of arms control. He said he had a long discussion with Mr. Smith just a few days ago, just before leaving, the day before leaving. As far as arms controls are concerned, at this time, the place and the forum in which the discussion should take place is at the ambassador level. There may come a time when a summit meeting may be the device that will make the breakthrough that we need to make in arms control.

Then at the top of the list he placed the problem of Vietnam where, if a summit meeting would serve a useful purpose insofar as Vietnam is concerned, naturally we would welcome that opportunity. That poses, however, Mr. Nixon said, a very significant problem because, whether the Soviet Union can be of assistance in Vietnam is somewhat dependent on its evaluation of whether such assistance should be so publicly provided as a summit, of course, would indicate.

The President was asked, as a background to his thinking on Vietnam, even though it is not to be a major subject of discussion, whether he could tell what sort of reports he had received from Gen. Earle G. Wheeler about the prospects for additional replacement of American troops, and on the question of whether the fighting had eased to the point where we can make some de-escalation move ourselves.

The President replied that he would rather not comment on that at this time. If, after his conversations with Ambassador Bunker and possibly with General Abrams, he feels that some comment would be appropriate, he will make it then. But he should correct one impression that he should not have left, and that is that Vietnam will not be a major topic for discussion. In each of the Asian countries he is going to raise with the Asian leaders the question of the extent to which they would be willing to participate in the international supervisory bodies for elections in South Vietnam and for the policing of ceasefires, provided we are able to get any kind of acceptance on the part of the North Vietnamese and the Vietcong on his proposal of May 14.

He believes, for example, Mr. Nixon said, that the international supervisory bodies, which Mr. Thieu has also agreed to, should primarily be made up of and come from Asian nations and the Asian nations that he visits will all be interested in this subject. He wants to get their views on that.

ISSUE OF WITHDRAWAL

The President was asked whether he anticipates in that connection that during his talks with the Asian leaders he is going to have to spend any significant amount of time perhaps convincing them that his plan for withdrawal of American forces from Vietnam will pose no threat to their security.

The President replied that one of the reasons for this trip is to leave no doubt in the minds of the leaders of non-Communist Asia that the United States is committed to a policy in the Pacific—a policy not of intervention but one that certainly rules out withdrawal, and regardless of what happens in Vietnam that we intend to continue to play a role in Asia to the extent that Asian nations, bilaterally and collectively, desire us to play a role.

He said he thought that some reassurance was needed because Vietnam is on the minds of all the Asian leaders. He believes, incidentally, that he will not have difficulty in providing that reassurance because, from the report that he did get from General Wheeler, he was told that the troop withdrawals have been accepted by the Thieu government and by the military in South Vietnam with not only very good grace, but that they have responded very effectively in meeting their own requirements, in handling their own defense. He thinks that he can give some reassuring comments to those Asian leaders who might raise the question, Mr. Nixon said.

DECLINES TO SPECULATE

The President was reminded that he mentioned that he felt that perhaps five years or ten years from now the Asian nations could collectively take care of their regional security problems. What is our policy to be in the meantime, he was asked, if a Vietnam type situation does occur?

The President replied that he would rather not speculate about one occurring. Each of these countries poses an entirely different question. He would simply say we are going to handle each country on a case-by-case basis.

But attempting to avoid that creeping involvement that eventually simply submerges you, he knows that we can learn from past experience and we must avoid that kind of involvement in the future.

The President said he could put it this

way: he recalled in 1964 some advice that he got from Mohammad Ayub Khan, who was then the President of Pakistan. This was before the United States had any significant troop commitment in Vietnam. Mr. Nixon asked him what his view was as to what our role should be. He said: "Well, the role of the United States in Vietnam or the Philippines, or Thailand or any of these countries which have internal subversion, is to help them fight the war but not fight the war for them." That, of course, is a good general principle, one which we would hope would be our policy generally throughout the world, the President said.

The President was reminded that the last time he met with reporters he mentioned that it was his hope that we might be able to withdraw all our combat troops, ground combat troops, in South Vietnam by the end of next year. In the light of that, he was asked if he had any plans for withdrawing the troops that we now have, or some percentage of them, from Thailand, and could he tell what he is going to tell the Thais about that?

WILL TELL THAIS FIRST

The President replied that he would tell the Thais first. But it is, of course, a proper question, he said.

He is reviewing not only our civilian personnel abroad, where he announced a cut a few weeks ago, but our military personnel abroad, including Thailand.

This is a matter, however, which will be discussed with the Thais, but it would not be appropriate to make any announcement as to what we were going to do until we have discussed it.

The President was asked whether in looking at the situation in post-Vietnam, and in countries other than Vietnam, it seemed to him that in terms of our military strength, the military men that we put into these other countries to help them, or military assistance or economic assistance, that in Asia, generally, we would have more or less of this type of assistance and aid in the years down the road than we have now.

The President replied less, if he got the question correctly, would there be more or less of military type of assistance.

He was asked about both in military and nonmilitary, since there are really two parts to this assistance problem, the economic part and the military part. Did he see us having a greater expenditure and a greater involvement in those respects or a lessened involvement as we look down the road?

The President replied that the military involvement, the military assistance, the military aid program and the rest, and particularly the commitments of military personnel, that that type of program would recede.

ECONOMIC AID STRESSED

However, as far as economic programs are concerned, and particularly those of a multilateral character—and here he had some new ideas that he will be expanding on in the months ahead—he would say that the level of United States activity would be adequate to meet the challenge as it develops, because it is very much in our interest in terms of economic assistance, economic assistance through loans and other programs, to help build the economies of free Asia, Mr. Nixon said.

For example, the President pointed to what has happened to South Korea, what has happened to Taiwan, what has happened to Thailand, what has happened to Japan. All of them now, or virtually all, are on their own feet, at least from an economic standpoint and are very good customers of ours.

PACT WITH THAILAND

The President was asked about quite a bit of speculation in the papers lately—both here and in Washington and in Thailand—as to whether or not there exists some sort of secret defense arrangement between the United States and Thailand.

Could he shed any light on the existence or nonexistence of such a thing and whether we have any similar arrangements with any other countries that might commit us beyond what his hopes might be?

The President replied that there is no secret defense agreement with Thailand. We, of course, have the SEATO treaty. We will keep our commitments under that treaty. We had the Rusk-Thanat communiqué, which simply spelled out the treaty.

We will, of course, keep our commitments set forth there as well, Mr. Nixon said.

But as far as any secret commitments are concerned, we not only have none in any of these nations, he will make none—and incidentally, he told Senator J. W. Fulbright that the other day, too.

The President was asked to give an evaluation of Red China's economic-political capability of inspiring further wars of liberation in the Asian nations. Are they able to continue that?

The President replied that Red China's capacity in this respect is much less than it was five years ago, even ten years ago. Because of its internal problems, Red China is not nearly as effective in exporting revolution as it was then. He thinks a pretty good indication of that is the minimal role that Red China is playing in Vietnam as compared with the Soviet Union, the President remarked.

Three years ago, Red China was furnishing over 50 per cent of the military equipment, the hardware, for the North Vietnamese. Now it is approximately 80–20 the other way around, he said.

PROBLEMS WITHIN CHINA

There may be other reasons for that coming about, and part of it is that Red China has enough problems within.

Another point he would make in that respect that bears on this: How things have changed since 1953, in country after country that he visited—and he was in every one that we are visiting here and all the others as well. The ones that Secretary William P. Rogers is going to visit on his trip—among most of the intellectual leaders and among many Government leaders, there was a real question as to what was the best path for progress, a question as to whether Communism, as it was developing in Red China, a Communist system was a better way to progress, or whether a non-Communist system was the better way.

Now, Mr. Nixon said, one of the significant developments that has occurred over these last 16 years, with all the bad things that have occurred, including the war in Vietnam, has been that that situation has reversed itself. The appeal of the Communist philosophy, for example, in Pakistan, in India, in Indonesia, in Japan, in any one of these countries, is less today than it was 16 years ago, 10 years ago, 5 years ago.

On the other hand, he would have to say that the effectiveness of subversive activities in many of these countries has not abated to the same extent. It can be on the upsurge. But as we look at the whole of Asia today, it is significant to note that what we have going for us more than anything else is this enormous rate of growth in non-Communist Asia as compared to Communist Asia. You compare Hong Kong with Communist China, you compare Taiwan with Communist China, you look at Japan with 100 million people, with a greater G.N.P. than China with 700 million people. Looking clear around the perimeter, from Japan through India, we find that free Asia's record of growth is a very significant factor in affecting the thinking of those who have to make the determination as to which path they are going to take, Mr. Nixon said.

NO MORE VIETNAMS?

The President was asked, when he said that the United States was going to continue to play a major role in Asia and that this was one message that he intended to take with him on this trip, whether another message was that there would be no more Vietnams.

The President replied that certainly the objective of any American administration would be to avoid another war like Vietnam any place in the world. He recalled he had said it and so had his opponent, Mr. Humphrey, during the campaign—that we should develop a policy that would avoid other Vietnams.

Mr. Nixon said it was very easy to say that. But he said that to develop the policies to avoid that was taking an enormous amount of his time and that of his associates.

But what he said he could do was to learn from the mistakes of the past. He believed that we have, if we examine what happened in Vietnam, how we became so deeply involved—that we have a good chance of avoiding that kind of involvement in the future, he said.

TROOP WITHDRAWALS DISCUSSED

Mr. Nixon was asked whether he intended to make it clear to the Asian leaders that if the lull in Vietnam continues, he would announce a substantial withdrawal of United States forces in August.

The President replied that he would not make any announcement, and no decision on, troop withdrawals on this trip, and, of course, he would not make any disclosures of plans in that respect to Asian leaders prior to the time that he had discussed it with the government of South Vietnam and then made the announcement jointly.

That is one of the matters, he said, that he still had under study, under consideration, that he would be discussing with Ambassador Bunker, that he did discuss with General Wheeler and that he might discuss with General Abrams.

TACTICS IN VIETNAM

The President was asked whether there is also a pending question as to whether his administration will change its policy of maintaining maximum military pressure on the enemy in Vietnam?

The President replied that he had been re-examining, since the time his administration came into office, our military tactics in Vietnam, and one of the subjects that he has discussed at great length with General Wheeler and General Abrams has been the character of our commitment and the tactics that should be used. He defers, naturally, to military men as to the conduct of a war because they are more expert than he is in this field, he said.

However, when we are in the process of negotiations, then military tactics become part of the negotiations and, therefore, we are re-evaluating our tactics in Vietnam, having in mind the fact that we have a parallel action going along in the negotiating field, the President said.

If we have any changes in this respect, he will, of course, announce them, he added.

EXECUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

PROPOSED LEGISLATION CARRYING OUT THE RECOMMENDATIONS OF THE JOINT COMMISSION ON THE COINAGE

A letter from the Secretary of the Treasury transmitting a draft of proposed legislation to carry out the recommendations of the Joint Committee on the Coinage and for other purposes (with an accompanying paper); to the Committee on Banking and Currency.

REPORT ON HEALTH CONSEQUENCES OF SMOKING

A letter from the Secretary of Health, Education, and Welfare, transmitting pursuant to law, a report concerning current information on the health consequences of smoking, dated July 1, 1969 (with an accompanying report); to the Committee on Commerce.

PROPOSED CONCESSION CONTRACT FOR THE EL PORTAL ADMINISTRATION SITE OF YOSEMITE NATIONAL PARK

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract to operate the El Portal Market, a general merchandising service for the public, at the El Portal Administrative site of Yosemite National Park, Calif. (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROPOSED CONCESSION CONTRACT TO OPERATE CEDAR PASS LODGE, BADLANDS NATIONAL MONUMENT, S. DAK.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract to operate Cedar Pass Lodge and provide related facilities and services for the public within Badlands National Monument, S. Dak. (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROPOSED CONCESSION CONTRACT TO PROVIDE FERRY SERVICE AT THE HALL'S CROSSING SITE WITHIN GLEN CANYON NATIONAL RECREATION AREA, UTAH

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract to provide ferry service and related facilities and services for the public at the Hall's Crossing site within Glen Canyon National Recreation Area, Utah (with accompanying papers); to the Committee on Interior and Insular Affairs.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the ACTING PRESIDENT pro tempore:

A joint resolution of the Congress of Micronesia; to the Committee on Interior and Insular Affairs:

"SENATE JOINT RESOLUTION 31

"A Senate joint resolution requesting the President and the Congress of the United States to consider seriously the future political status of Micronesia

"Whereas, by virture of the Trusteeship Agreement between the United States and the Security Council of the United Nations, the United States has undertaken in Micronesia to foster the development of such political institutions as are suited to the trust territory and . . . to promote the development of the inhabitants of the trust territory toward self-government or independence as may be appropriate to the particular circumstances of the trust territory and its peoples and the freely expressed wishes of the peoples concerned; and

"Whereas, the Future Political Status Commission of the Congress of Micronesia has for the past two years conducted a study of political alternatives which may be open to Micronesians with respect to their future political status, and has submitted its final report to this session of the Congress in accordance with law; and

"Whereas, proposals have been advanced by the President of the United States and considered by the United States Congress for the creation of a United States Commission to consider the future status of the Micronesian people but these proposals have not yet led to the actual creation of such a Commission by the United States Government; and

"Whereas, the Micronesian people are today ever more desirous than ever before of seeing a decision on their future status but believe sincerely that such a decision must be reached by the joint efforts of their representatives and those of the United States; now, therefore,

"Be it resolved by the Senate of the Third Congress of Micronesia, Second Regular Session, 1969, the House of Representatives concurring that the President and the Congress of the United States are urgently requested to give serious consideration to the future political status of Micronesia and the ways in which this status should be finally resolved; and

"Be it further resolved that certified copies of this Joint Resolution be transmitted to the President of the United States and the President of the United States Senate and the Speaker of the United States House of Representatives.

"Adopted: July 24, 1969.

"We hereby certify that the foregoing Joint Resolution was adopted by the Senate of the Congress of Micronesia, Third Congress, Second Regular Session in July, 1969, on the 22nd day of July, 1969.

"AMATA KABUA,
"President of the Senate.
"VICTORIO UHERBELAU,
"Clerk of the Senate.

"The House of Representatives of the Congress of Micronesia

"We hereby certify that the foregoing Joint Resolution was adopted by the House of Representatives of the Congress of Micronesia, Third Congress, Second Regular Session in July, 1969, on the 24th day of July, 1969.

"BETHWELL HENRY,
"Speaker, House of Representatives.
"CARL HEINE,
"Clerk, House of Representatives."

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to hunger in America; to the Committee on Agriculture and Forestry.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to the Selective Service System; to the Committee on Armed Services.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to Presidential Nominees; to the Committee on Commerce.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to consumer protection; to the Committee on Commerce.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to automobile insurance; to the Committee on Commerce.

A resolution adopted by the Niagara County Legislature, Lockport, N.Y., remonstrating against the adoption of any tax reform measure which would reduce the attractiveness of municipal bonds to private investors; to the Committee on Finance.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to social unrest in America; to the Committee on the Judiciary.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to electoral reform; to the Committee on the Judiciary.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to minimum wage; to the Committee on Labor and Public Welfare.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to farm labor; to the Committee on Labor and Public Welfare.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to national education policy; to the Committee on Labor and Public Welfare.

A resolution adopted by the Communications Workers of America, Washington, D.C., relating to uniform voting laws; to the Committee on Rules and Administration.

A telegram, in the nature of a petition, from G. L. Pucci, M.D., of Kansas City, Mo., urging the resignation of Senator Edward Kennedy; to the Committee on Rules and Administration.

The petition of Allan Feinblum, founder, World Peace Appeal, New York, N.Y., protesting the actions of the United States in the war in Vietnam; to the Committee on Foreign Relations.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. SPARKMAN, from the Committee on Banking and Currency:

Carter L. Burgess, of New York, to be an incorporator of the corporation authorized by section 902(a) of the Housing and Urban Development Act of 1968; and

Thomas Hal Clarke, of Georgia, to be a member of the Federal Home Loan Bank Board.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. FANNIN:

S. 2705. A bill to provide for medical and hospital care through a system of voluntary health insurance, and for other purposes; to the Committee on Finance.

(The remarks of Mr. FANNIN when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. METCALF (for himself and Mr. MANSFIELD):

S. 2706. A bill to provide for Federal participation in the cost of improvements to streets and appurtenant facilities at the Army Reserve facilities in Helena, Mont.; to the Committee on Armed Services.

By Mr. RANDOLPH:

S. 2707. A bill to consent to the Interstate Compact on Air Pollution between the States of Ohio and West Virginia; to the Committee on the Judiciary.

By Mr. EAGLETON:

S. 2708. A bill for the relief of Kunihiro Yamamoto; to the Committee on the Judiciary.

By Mr. TOWER:

S. 2709. A bill to authorize the erection of a statue to commemorate the manned lunar landing and the placing of the U.S. flag on the moon; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. TOWER when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. GURNEY:

S. 2710. A bill to provide for the awarding of Congressional Space Medals to Edwin E. Aldrin, Jr., Neil A. Armstrong, and Michael Collins; and

S. 2711. A bill to provide for the awarding of Congressional Space Medals to persons who contribute to the exploration of outer space; to the Committee on Aeronautical and Space Sciences.

(The remarks of Mr. GURNEY when he introduced the bills appear later in the RECORD under the appropriate heading.)

By Mr. COTTON (for himself and Mr. Prouty):

S. 2712. A bill to regulate interstate commerce by strengthening and improving consumer protection under the Federal Food, Drug, and Cosmetic Act with respect to fish

and fishery products, including provision for assistance to and cooperation with the States in the administration of their related programs and assistance by them in the carrying out of the Federal program, and for other purposes; to the Committee on Commerce.

(The remarks of Mr. COTTON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. RANDOLPH (by request):

S. 2713. A bill to provide for the expansion and improvement of the Federal Airway System, for the imposition of airway user charges, and for other purposes; to the Committee on Commerce.

By Mr. MATHIAS:

S. 2714. A bill for the relief of Staff Sergeant Lawrence F. Payne, U.S. Army (retired); to the Committee on the Judiciary.

By Mr. MURPHY:

S.J. Res. 142. A joint resolution for the establishment of a Drug Commission between the United States, Mexico, and Canada; to the Committee on Foreign Relations.

(The remarks of Mr. MURPHY when he introduced the joint resolution appear later in the RECORD under the appropriate heading.)

S. 2705—INTRODUCTION OF A BILL PROVIDING FOR MEDICAL AND HOSPITAL CARE THROUGH A SYSTEM OF VOLUNTARY HEALTH INSURANCE

Mr. FANNIN. Mr. President, I introduce for appropriate reference a bill to provide for medical and hospital care through a system of voluntary health insurance.

The object of the bill is a simple one—to help all our citizens protect themselves against the cost of illness. The proposal would adopt the voluntary approach and would utilize our private insurance industry rather than an ever-increasingly expensive Government program. The system would be based on income tax credits.

Mr. President, I want to emphasize that this bill does not in any way affect the medicare program but it is aimed at offering at least one alternative to the expensive and cumbersome medicaid program. Certainly a proposal embodying this approach should be looked into before we expand any Federal program. I do not know the cost of this proposal—it will not be cheap—but it will, I submit, be less expensive and healthier than adding to our Federal bureaucracy.

Here is how the system would work. Tax credits would be provided to individuals and families for the purchase of hospitalization and medical care. The amount of credit would be equal to the applicable percentage of the aggregate of allowable premiums paid during the year for medical insurance policies. For married persons filing joint returns or unmarried individuals with dependents, the tax credit would be as follows:

If the taxpayer's adjusted gross income is:	(Applicable percentage)
Not over $5,000	100
Over $5,000 but not over $7,500	75
Over $7,500 but not over $10,000	50
Over $10,000	25

For persons filing separate returns and unmarried individuals the tax credit would be as follows:

If the taxpayer's adjusted gross income is:	(Applicable percentage)
Not over $2,500	100
Over $2,500 but not over $5,000	75
Over $5,000 but not over $7,500	50
Over $7,500	25

The bill provides that persons with low incomes who do not qualify for the tax credit be provided with a Government voucher that can be exchanged for medical care and hospitalization insurance up to the maximum dollar limitation applicable to credits.

Under the bill the allowable premium upon which the credit may be applied is the aggregate amount of premiums paid during the taxable year by the taxpayer under one or more qualified medical care insurance policies. Such aggregate amount may not exceed:

First, $150, in the case of a taxpayer who is not married and is not entitled to one or more exemptions under section 151(e) of the Internal Revenue Code—relating to additional exemption for dependents—for the taxable year;

Second, $200 in the case of a taxpayer who is married and who files a separate return; and

Third, $400, in the case of a joint return filed by husband and wife or in the case of a taxpayer who is not married and who is entitled to one or more exemptions under section 151(e) of the Internal Revenue Code.

Mr. President, I hope that the Finance Committee will give consideration to this proposal. It is not the only answer to the problem but it is one avenue of approach which deserves examination in any review of the medicaid program. This is my purpose in introducing this proposal.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2705) to provide for medical and hospital care through a system of voluntary health insurance, and for other purposes, introduced by Mr. FANNIN, was received, read twice by its title, and referred to the Committee on Finance.

S. 2707—INTRODUCTION OF A BILL CONSENTING TO THE WEST VIRGINIA-OHIO AIR POLLUTION COMPACT

Mr. RANDOLPH. Mr. President, I introduce today a bill which calls for consent by Congress, pursuant to section 102 of the Clean Air Act of 1963, to an Interstate Compact on Air Pollution between the States of West Virginia and Ohio, with provision that the Commonwealths of Kentucky and Pennsylvania may join at some future date.

Congress has long been aware of the dire consequences of polluted air. Beginning with the Clean Air Act of 1963, we have made it clear that our mandate from the people is to turn the tide against the increasing air contamination that imperils the health of our citizens, particularly the young and the elderly, and fouls property at costs ranging into the billions of dollars each year.

The West Virginia-Ohio compact is a major step in the direction of controlling air pollution across this Nation, regardless of arbitrary territorial boundaries. This compact should serve as a model for other areas of the country with overlapping air pollution problems.

It should be underscored that the original West Virginia-Ohio Interstate Compact was passed by the separate State legislatures in line with the Clean Air Act of 1963 and prior to passage of the Federal Air Quality Act of 1967. The Clean Air Act was substantially revised and strengthened during the 90th Congress, although the purposes of the legislation have remained as they were originally stated.

Last year, the chairman of the Committee on the Judiciary referred the original compact to the Committee on Public Works for review in light of the 1967 act and the latter committee's jurisdiction over air pollution matters. After extensive study, the Public Works Committee recommended several changes and conditions to bring the compact into line with more recent enactments and administrative guidelines.

The new compact has been reviewed by our Public Works Committee staff and found to comply in every respect with our recommendations and those of the Judiciary Committee. I commend the legislators of West Virginia and Ohio for taking time from other important matters to debate and pass—for the second time—a comprehensive air quality compact consistent with Federal laws and regulations.

Senator MUSKIE, chairman of the Air and Water Pollution Subcommittee, agrees that, because of the willingness of the States to meet the letter and intent of the Air Quality Act, there is no need for referral of this bill to the Committee on Public Works this year.

I hope the Committee on the Judiciary will be able to proceed expeditiously on this very important bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2707) to consent to the interstate compact on air pollution between the States of Ohio and West Virginia, introduced by Mr. RANDOLPH, was received, read twice by its title, and referred to the Committee on Judiciary.

S. 2709—INTRODUCTION OF A BILL AUTHORIZING THE COMMISSIONING OF A STATUE IN COMMEMORATION OF THE RAISING OF THE AMERICAN FLAG ON THE MOON

Mr. TOWER. Mr. President, all Americans shared a feeling of elation and achievement as a result of our recent successful epic voyage to the moon. This feat constituted a landmark in the history of man.

Since man first crawled out of the primeval ooze, he has progressed over the latitudes of time and space to this high-water mark of his striving. Now man has crossed the second threshold of human history.

We can all feel a great sense of pride that our technology has caused us to accomplish what few thought possible such a short time ago.

The high point of our accomplishment came late in the evening of July 20th when astronauts Neil Armstrong and "Buzz" Aldrin stepped onto the surface of the moon and erected there the flag of the United States of America.

I believe that an appropriate reminder of that historic achievement should find its place among our other reminders of past achievements, many of which were much less significant.

For this reason, I introduce for appropriate reference a bill to authorize the erection of a statue to commemorate the manned lunar landing and the placing of the U.S. flag on the moon.

I believe an appropriate reminder should take the form of a statue much like the Marine Memorial in Arlington Cemetery which depicts the raising of the American flag on Iwo Jima during World War II. The statue should depict, in my opinion, our astronauts raising the American flag on the moon.

In contrast to the Marine Memorial, which appropriately symbolizes American military victory, the statue which I propose would symbolize an American victory of another nature. It would symbolize a victory in the name of peace. Along with the American flag, our astronauts placed on the moon a plaque with these words:

Here men from the planet Earth first set foot upon the Moon, July, 1969, A.D. They came in peace for all mankind.

I would like to emphasize that this momentous achievement in the name of peace was made possible by the advanced technology we have reached through cooperation between Government and private industry, cooperation between business management and industrial labor, cooperation provided through what some have termed the military-industrial complex.

An appropriate site for a statue commemorating the lunar landing would, in my opinion, be at or near the Manned Spacecraft Center in Houston. However, I would not like to see this bill delayed because of any possible legislative wrangling over the location for the statue to be erected. I would not like to see it become the subject of political maneuverings aimed at getting the statue for one part of America over another.

For this reason, my bill states that the statue should be erected "at an appropriate place" and I leave the decision regarding its location to the Congress as a whole.

The important thing is, that an American achievement of such great significance as this be appropriately marked for posterity. My bill provides for that recognition.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2709) to authorize the erection of a statue to commemorate the manned lunar landing and the placing of the U.S. flag on the moon, introduced by Mr. TOWER, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

S. 2710, S. 2711, AND SENATE RESOLUTION 225—INTRODUCTION OF BILLS AND RESOLUTION RELATING TO FLIGHT OF APOLLO 11

Mr. GURNEY. Mr. President, I am introducing legislation today to commemorate the crew of Apollo 11 and all the persons who paved the way for their heroic and historic mission to the moon.

The first bill provides that congressional space medals shall be awarded by the President of the United States, in the name of the Congress, to Neil A. Armstrong, Michael Collins, and Edwin A. Aldrin in recognition of their contribution to the exploration of outer space.

The outstanding performance of these three men and the spectacular success of the Apollo mission is something in which not only all Americans, but all mankind can take pride. Without question, it represents the most enormous single scientific feat ever attempted and achieved by man.

The simple words, "The Eagle has landed" spoke eloquently for many things left unsaid. At once, we know they paid tribute to the tremendous abilities of our scientific, engineering, and technical abilities. But we also recognize and acknowledge that they spoke just as clearly for what can be done under our representative form of government and its system of free political expression, and most especially our wonderful system of free and private enterprise. Most of all, these words testify to what man's courage and ingenuity can and will accomplish.

The feat of Apollo 11 represents the culmination of centuries of painstaking acquisition of knowledge in man's drive to conquer his environment. He has taken the first giant step in reaching beyond his own earth world. History will mark this epic journey as the turning point in man's continuing quest to extend his physical boundaries to his spiritual vision.

Without the pioneering spirit, competence, and bravery of the astronauts who came before, or the efforts of the men and women associated with the space program, this dramatic lunar landing would have been impossible. Each in his way contributed as much to the success of this historic mission.

I am, therefore, also introducing a broader bill to award a Congressional Space Medal, to be presented by the President of the United States, in the name of the Congress to each person designated by concurrent resolution in recognition of his contribution to space.

Mr. President, at present there is no appropriate means of conferring congressional recognition for past, present, and future achievements in the space program of the United States. The purpose of this bill is to provide such an award. It is only proper that the astronauts and men and women who made their accomplishment a reality should be recognized for their achievements by the Congress of the United States.

The PRESIDING OFFICER. The bills will be received and appropriately referred.

The bills, introduced by Mr. GURNEY, were received, read twice by their titles, and referred to the Committee on Aeronautical and Space Sciences, as follows:

S. 2710. A bill to provide for the awarding of Congressional Space Medals to Edwin E. Aldrin, Junior, Neil A. Armstrong, and Michael Collins; and

S. 2711. A bill to provide for the awarding of Congressional Space Medals to persons who contribute to the exploration of outer space.

Mr. GURNEY. Mr. President, in addition, I am submitting a resolution to express the appreciation and congratulations of the Congress for the magnificent contribution of the entire industry-NASA team associated with the space program.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

The resolution (S. Res. 225), which reads as follows, was referred to the Committee on Aeronautical and Space Sciences:

"S. RES. 225

"Whereas the United States has completed its first decade in space, with the combined talents of Government, industry, and education having been effectively employed in the space program to open a new frontier; and

"Whereas in the development of the space program science and technology have been brought to new levels of achievement, and inspiration and intellectual stimulation have been generated not only for the people of the United States but for the entire world; and

"Whereas the mission of Apollo 11, representing as it does the first real step by mankind into the universe beyond the planet on which we live, is not only a great adventure but demonstrates substantial progress toward the achievement of the objectives originally expressed in the National Aeronautics and Space Act of 1958; and

"Whereas the achievement of these objectives—the expansion of human knowledge, the improvement of aeronautical and space vehicles, the development of information useful to our national defense, and the preservation of the United States' role as a leader in space science and technology and its application for peaceful purposes, with international cooperation in the peaceful application of the program's results—has importance for our Nation far beyond the specific areas of science and technology to which the program directly relates; and

"Whereas this mission provides a uniquely appropriate occasion for expressing public appreciation of the past achievements of the space program and public recognition of the potential of such program for benefits to mankind in the future: Now, therefore, be it

Resolved, That the Senate commends the magnificent team of men and women throughout the United States and the world at large, in Government, industry, and education, who have contributed so much to the accomplishments of our national space program; and expresses gratitude and appreciation, for itself and on behalf of the American people, for the outstanding dedication and tireless effort of all those who have been associated with the Apollo program in general and the Apollo mission in particular.

S. 2712—INTRODUCTION OF THE WHOLESOME FISH AND FISHERY PRODUCTS ACT

Mr. COTTON. Mr. President, believing that the U.S. Senate should not be entirely precluded from doing some business during these months while we have this constant repetitious debate on matters that could be voted on tomorrow morning, I had planned to make a 9-

minute speech and introduce a bill which does not concern the defense of this country nor the tax situation, nor attempt to scuttle the administration by immobilizing the Senate.

It does concern a matter of deep interest to the consumers and housewives and those interested in the health of this country. It has to be taken care of by the Committee on Commerce, of which I am a member.

Mr. President, earlier this month the Consumer Subcommittee of our Committee on Commerce held hearings on legislation which would provide for the inspection of fish and fishery products.

Two weeks ago on July 14, witnesses for the administration appeared before the subcommittee to testify on the pending measure and to propose alternate legislation. Unfortunately, this alternate legislation was not before the subcommittee at that time since it was not received by the Senate until the following day, July 15. It is this legislative proposal by the administration which I shall, at the close of these remarks, introduce on behalf of myself and Senator PROUTY.

This legislative proposal by the administration is, I believe, a meritorious one and I hope that, not withstanding its introduction subsequent to the hearing, that it will be given every consideration by our Committee on Commerce including, if need be, an additional opportunity for administration witnesses to appear once more and testify on the bill.

Federal inspection of food products is not a new concept. There has been some sort of such inspection since shortly before the turn of the century. More recently, we have had the Wholesome Meat Act and the Wholesome Poultry Products Act of the 90th Congress. Generally, the level of inspection has been dependent upon the complexity of the processing operation itself, the opportunities for adulteration, and the volume of production. The administration bill, I believe, takes these factors into account and meets the consumer protection needs in a direct manner with effective use of manpower and other resources. The estimated cost of the administration's bill, for example, under its concept of a continuous surveillance system would be $26 million, as compared with an estimated cost of $70 million under the measure now before our Committee on Commerce, S. 1092.

Quite frankly, I feel we should recognize the distinctions which do exist with respect to the inspection of fish and fishery products. Unlike meat and poultry, for example, and this is important, there is no plantsite slaughtering. This process takes place aboard the numerous fishing vessels which make the catch, and in the United States alone there are more than 80,000 such vessels. The inspection procedure for fish and fishery products, therefore, of necessity must commence at dockside with the arrival of the fishing vessel and accordingly is directed principally at processing.

In addition, there are approximately 4,000 fish processing plants in the United States—2,000 doing business in interstate commerce and 2,000 intrastate plants, the latter being under the supervision of State and local agencies. The administration's bill would propose to strengthen the State and local capability and authority for improving conditions in the fishing industry where such is found to be necessary.

We should also bear in mind that fishing and fish processing is a seasonal occupation. For example, as Mr. Lowell Wakefield, president of the Alaska King Crab Institute, pointed out in testimony earlier this month:

> There is, however, considerable merit in the argument of adequate vs, continuous inspection. Our Port Wakefield plant is one of about 30 fish plants on Kodiak Island. To carry out the provisions of this bill as now written would require about 20 full-time, year-round inspectors and about 10 additional seasonal ones. Yet, my town is an isolated village of some 400, and the plant has run only a couple of days a week for the last six months. To recruit a qualified man for such a job is not easy and to justify keeping him there all the time, difficult.

Finally, we also must recognize that the United States imports from foreign sources approximately 60 percent of its fish and fishery products. This bill makes no distinction between foreign and domestic products. It contemplates that the inspection procedures of such foreign sources will be at least equal to those imposed upon our own fishing industry.

Mr. President, the bill I introduce endeavors to take all of these sundry factors into account so as to establish a meaningful and a realistic fish and fishery products inspection program by vesting such authority in an appropriate regulatory agency, the Food and Drug Administration of the Department of Health, Education, and Welfare. It would accomplish this by appropriately amending and expanding the Federal Food, Drug, and Cosmetic Act so as to automatically retain all the existing authority and definition contained therein; by providing for a system of continuous surveillance with authority for continuous in-plant inspection where the Secretary of the Department of Health, Education, and Welfare deems such to be necessary; by establishing a National Advisory Committee for the inspection program with a majority of its membership drawn from the public sector so as to give the consumer interests a direct role in policymaking and in the evaluation of the adequacy of the inspection program; by providing the Secretary with authority to develop research and technical systems related to the inspection program; and by recognizing the personnel needs of the inspection program for additional qualified career personnel and by directing the Secretary of the Department of Health, Education, and Welfare to provide necessary or appropriate training for such personnel.

These are but some of the more salient features of this legislation.

Most importantly, however, Mr. President, this legislation has been drafted in an attempt to meet the specific problems associated with fish and fishery product inspection at a cost commensurate with such need. It also would seem to be in consonance with the declared congressional policy set forth in the Fish and Wildlife Act of 1956 which notes in part the following:

> SEC. 2 * * * The Congress further declares that the fishing industry . . . can prosper and thus fulfill its proper function in national life only if certain fundamental needs are satisfied by means that are consistent with the public interest and in accord with constitutional functions of governments. Among these needs are:
>
> (1) Freedom of enterprise * * * as well as freedom from unnecessary administrative or legal restrictions that unreasonably conflict with or ignore economic needs; * * *

Perhaps the President's Special Assistant for Consumer Affairs, Mrs. Virginia Knauer, best summed up the approach of this legislation in the following manner:

> But if the American public thinks they are getting continual inspection of the processing of meat, they are not. Because there is a patrol system, which I think you probably are aware of Mr. Chairman, in small establishments with a limited volume of production—this is meat products—which according to the Department, do not require constant supervision, and they are grouped together on a patrol assignment.
>
> This includes the boning and cutting of meat and poultry, preparation of fresh cuts for our hotels, slicing and packaging of bacon and ham and labeling the findings, preparation of pork skins and the curing of one item, beef brisquets, and of course, certification of products for export.
>
> They do not have mandatory, continuous inspection. They are grouped together. It would be like a visit as part of a patrol. This is an exercise in semantics, and I feel that the Administration bill, in the inspection of this fish processing, is stronger, actually, because it provides a great flexibility to the Secretary that he can institute continuous, intense inspection where he deems it necessary.
>
> And that can be as six men around the clock, if necessary, or more, as he deems necessary.
>
> May I ask from the housewife's point of view that any housewife in America would, I think, agree with me that if she has a clean kitchen and a clean back yard, that she doesn't need a continuous inspector from the city halls, Department of Health on her doorstep. Whereas her neighbor down the street, who may be a very slovenly housekeeper who has a dirty lawn piled high with garbage, which is, shall we say, a menace to the health of the neighborhood, would naturally need someone there at all times inspecting and certainly once that situation was cleaned up, a casual continuing inspection would solve the problem. I think most housewives would agree on this.
>
> So it is with processing plants, whether they are for beef or chickens or fish. There will be those that will have rather high standards which, after the initial intense inspection, probably will not need an inspection continually twenty-four hours a day but will continue that high inspection.
>
> But I think that the flexibility of the Administration bill would insure to the American consumers the real healthy produce.

Mr. President, while seeking to assure the American consumer of wholesome fish products, this bill also exemplifies appropriate fiscal responsibility to the American taxpayer. It is geared to meet the specific problem without undue cost. I would hope that others interested in maintaining such a proper balance between the tripartite interests and equities of the consumer, the taxpayer and the industry will be similarly so inclined to agree with the approach proposed to be taken in this legislation submitted by the administration which I now introduce for appropriate reference.

Mr. President, I send to the desk a bill

introduced on behalf of myself and the Senator from Vermont (Mr. PROUTY) for appropriate reference.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2712) to regulate interstate commerce by strengthening and improving consumer protection under the Federal Food, Drug, and Cosmetic Act with respect to fish and fishery products, including provision for assistance to and cooperation with the States in the administration of their related programs and assistance by them in the carrying out of the Federal program, and for other purposes, introduced by Mr. COTTON (for himself and Mr. PROUTY), was received, read twice by its title, and referred to the Committee on Commerce.

SENATE JOINT RESOLUTION 142—INTRODUCTION OF A JOINT RESOLUTION TO ESTABLISH A DRUG COMMISSION BETWEEN THE UNITED STATES, MEXICO, AND CANADA

Mr. MURPHY. Mr. President, I introduce a joint resolution which urges the President to seek and work for the establishment of a permanent International Drug Commission between the United States, Mexico, and Canada.

The drug problem is a clear and present danger to the health and morals of our Nation and our people.

President Nixon recognized this grave danger and has sent to the Congress a strong cure for this national menace. Along with Congressman BOB WILSON, DON CLAUSEN, and BOB MATHIAS of California, I wrote President Nixon making various recommendations for action in this field. I ask unanimous consent that our letter to the President be printed in full at the conclusion of my remarks. Naturally, I was pleased that the administration's recommended legislation incorporates some of the suggestions that we made.

Prior to that time I had also written to Assistant Secretary Charles A. Meyer, who also serves as a chairman and U.S. representative on the United States-Mexico Commission for Border Development and Friendship, after I discovered, upon reviewing the brochure of the Border Commission, that the drug problem was not even on the agenda of the U.S.-Mexico Border Commission. In my June 26 letter to Mr. Meyer, I urged not only that the drug problem be placed on the agenda, but that it be placed in a priority position.

On July 9, Secretary Meyer wrote to me saying that he had decided against my suggestion. I ask unanimous consent that my letter to Secretary Meyer and his response be printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JUNE 26, 1969.

Hon. CHARLES A. MEYERS,
Assistant Secretary for Inter-American Affairs, Department of State, Washington, D.C.

DEAR MR. SECRETARY: I am writing you because of your chairmanship of the U.S.-Mexico Commission for Border Development and Friendship. I was pleased that Mr. Frank B. Dean stopped by my office to discuss Senate Joint Resolution 119, which would authorize an appropriation for expenses of the Commission.

Naturally as a representative of a state which shares a border with Mexico, I will be pleased to support the resolution. Certainly I applaud joint efforts to foster friendship and improve relations between our countries and our people.

In examining your brochure, "A New Pattern for Borderland Development," I observed that after studies and conferences, the Commission decided to work in the following eleven areas: housing, manpower, community centers and services, libraries, industrial and economic development, health and sanitation, transportation, recreation, planning and technical assistance, education and joint disaster relief. I was, however, concerned with what I regard as a most serious omission. I am referring to the fact that the drug problem does not appear to be on the agenda.

The drug problem, as you well know, is already serious and seems to be growing daily. This year, the Senate Health Subcommitte, on which I serve, heard testimony that the drug problem was spreading to the elementary school. Frankly, citizens in my state as well as in other parts of the country are rightfully getting angry over the continuous and apparently growing quantities of drugs coming into the United States. There is a feeling that Mexico is not doing everything it can to prevent the illicit and illegal traffic in drugs. Indicative of this feeling is the fact that over one hundred cities in my state have separately passed resolutions urging Congress to close the border to minors unless they are accompanied by a parent or a responsible adult. I have urged the Senate Labor and Public Welfare Committee to hold hearings in Southern California to examine the drug abuse problem in general and the border question in particular, and I am hopeful that the Committee will be coming to California in the near future.

In summary, the alarming increase in drug traffic and drug use is not only harmful to its victims, but it also is harmful to the good relations between Mexico and the United States, I would, therefore, urge that drugs be added to your agenda and that it be a first order of business of this most important Commission.

With best wishes, I am,
Sincerely,

GEORGE MURPHY.

UNITED STATES-MEXICO COMMISSION FOR BORDER DEVELOPMENT AND FRIENDSHIP,
Washington, D.C., July 9, 1969.

Hon. GEORGE MURPHY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MURPHY: Thank you for your letter of June 26, 1969 concerning the role of the U.S.-Mexico Commission for Border Development and Friendship. I am delighted that we can count on your support of Senate Joint Resolution 119 which would authorize an appropriation for the Commission.

In your letter you outline your great concern about the increasing problem of narcotics, dangerous drugs and marihuana trafficking, and you urge that this problem be added to the agenda of the Commission. I have given full consideration to this proposal and have decided against it, for three reasons:

First, we are attempting to limit the scope of the Commission to problems within the immediate geographic area of the border. The narcotics problem transcends such a geographic area, and as such, lends itself more readily to treatment through regular diplomatic channels, as well as through the arrangement of informal cooperation which already exists between the enforcement authorities of both countries.

Second, the Mexican Government has on repeated occasions resisted suggestions to have narcotics enforcement problems placed under a joint U.S.-Mexico commission. We estimate that a proposal to place narcotics problems on the CODAF agenda would be opposed by the Mexican Government.

Third, narcotics enforcement in Mexico is highly centralized under the Federal police. One of the principal aims of the Commission is to stimulate action on the local level in border communities. There appears to be little likelihood that meaningful local action on narcotics enforcement in Mexico is possible under present conditions.

While I oppose the inclusion of the narcotics problem as a separate item on the agenda of CODAF, I most certainly feel that it can and should be a part of certain other activities conducted by CODAF. For example, educational programs developed for primary and secondary-level schools should include information on narcotics and drug abuse. Similarly, there may be good possibilities of including rehabilitation of drug users and traffickers in certain community action programs. In any case, you may be assured that we will be alert to exploit any appropriate opportunity to emphasize to our Mexican counterparts our deep interest in eliminating the narcotics, dangerous drugs and marihuana problem from our border area.

In the meantime, I can assure you that efforts to solicit more effective Mexican assistance on enforcement are not being overlooked. A high level meeting of enforcement officials of both countries was held in June, and we are very hopeful this will be the basis of greatly increased cooperation in combatting the present situation.

I appreciate your taking the time to write to me on this matter, and I hope that I will continue to receive your guidance and suggestions whenever you deem it appropriate.

Sincerely yours,

CHARLES A. MEYER,
Chairman.

Mr. MURPHY. Mr. President, for some time, I have been deeply concerned about the drug problem, and in my capacity as a member of the Subcommittee on Health I supported last year, the Drug Abuse and Control Act. In addition to making the possession of stimulant, depressant, or hallucinogenic drugs a crime, the bill also increased the penalties for those who push and traffic in illegal drugs. Yet it is obvious, Mr. President, that additional steps are needed and new strategies need to be devised to deal with the alarming use of drugs. For, as President Nixon warned—

> It is doubtful that an American parent can send a son or daughter to college without exposing the young man or woman to drug abuse.

The National Institute of Mental Health estimated that one-third of our college and high school students have used marihuana or dangerous drugs. Surgeon General Williams Stewart told the Subcommittee on Health that drug use has spread to the elementary grades.

On July 17, the San Diego Union in a lead editorial pointed out the need for action now in the drug battle. The cartoon on the editorial page depicts the drug and dope problem as "the fifth horseman" galloping destructively across our country with a hypodermic gun labeled "dope." This is an apt description as evidenced by the frightening possibility raised in the editorial's conclusion which states:

And time as well as vigor is of the essence. Unless something is done quickly parents may not be able to send their children to playgrounds without exposing them to narcotics.

I ask unanimous consent that the editorial be printed at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MURPHY. Mr. President, during the past 6 years, customs officials have increased the seizure of drugs by 2,000 percent. While undoubtedly these increased seizures result from increased surveillance and controls, they also, I am certain, result from increased traffic in drugs. For drugs seized might be compared with the tip of the iceberg, allowing us to see the dangers, but not its size, real danger, or magnitude.

Mr. President, there is no doubt about it. The production of drugs in Mexico has become big business, and we must do all we can to stem this flood of narcotics which is entering our country. To be successful, we must have greater cooperation with the Mexican Government. For that reason, I am today submitting a resolution which urges the President of the United States to "seek of the President of Mexico and the Prime Minister of Canada the formation of a permanent commission to investigate ways and means of reducing the illicit traffic of narcotics and dangerous drugs within and between the United States, Mexico and Canada." Representative GONZALES, of Texas, introduced this measure on the House side on July 23.

Although in the past, there have been indications that the Mexican Government has not been receptive to this approach, I believe that the growing concern in both countries and the great danger posed by the alarming drug increase will result in the Mexican Government being more agreeable to cooperative action. In any event, it is incumbent upon this Nation to emphasize to Mexico the growing concern in the Nation about the rising use of drugs. The drug problem clearly has the potential of harming the good relationships we have enjoyed with our neighbors. This can be seen from the fact that over 100 cities in California have passed resolutions urging Congress to close the United States-Mexican border to minors unless accompanied by an adult.

In short, Americans are rightfully angry over the problem and are demanding that action be taken to stop the big drug business and traffic which is big profit to those who do not care how they make a buck.

I ask unanimous consent that an article written by veteran correspondent Francis B. Kent, published in last Sunday's Los Angeles Times, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the San Diego Union, July 17, 1969]

PRESIDENT WRITES PRESCRIPTION: DRUG ABUSE NEEDS LEGAL CURE

The most sobering part of President Nixon's message which urged a massive, concerted attack on the runaway narcotics problem in the United States of America was the paragraph relating to youth.

"It is doubtful," Mr. Nixon said, "that an American parent can send a son or daughter to college today without exposing the young man or woman to drug abuse."

Reams of statistics are available to support the President's inference that the national drug problem already has a strong grip on the emerging generation.

The National Institute of Mental Health estimates that more than one-third of all college and high school students today have used marijuana or a dangerous drug. It is estimated the number will nearly double before this decade ends.

Clearly this is a menace that will require a strong prescription. The days of molly-coddling an overt danger and exploring its social implications instead of taking strong legal cures must end. Otherwise the problem will be so immense that it may not be susceptible to either doses of law or of reason.

Mr. Nixon's prescription for control of the narcotics problem is both strong and timely medicine.

He recommends for approval of Congress a comprehensive program that will bring together for the first time all federal and state laws dealing with sale, possession, manufacturing and distribution of narcotics.

Especially pertinent, Mr. Nixon classes marijuana in the same general category as LSD, cocaine or heroin—which is realistic. The comprehensive approach should focus the energies of the federal establishment against the narcotics cancer which is eroding individual character and the national moral fiber.

Certainly the President's clear labeling of marijuana as a great danger should serve to halt a swelling attitude of permissiveness to this insidious threat.

It is ironic, but essential, that part of the fight against dangerous drugs has to be directed against decisions of the Supreme Court, which struck down sections of registration acts last year. Mr. Nixon's proposal to pattern laws requiring licensing and registration of persons possessing dangerous drugs is patterned after New York State law and should serve this purpose.

But implicit throughout the President's vigorous attack upon the dangerous drugs is the thought that it is a road that the federal government should not travel alone.

The visible part of the narcotics cancer is but a fraction of the total. The problem is so immense that it will require the full effort and cooperation of the federal government, states, institutions and families.

And time as well as vigor is of the essence. Unless something is done quickly parents may not be able to send their children to playgrounds without exposing them to narcotics.

[From the Los Angeles Times, July 27, 1969]

DRUGS SEIZED AT BORDER UP 2,000 PERCENT IN 6 YEARS; RISE REFLECTS NOT ONLY TIGHTER CONTROLS BUT MORE DEMAND FOR MEXICO'S NARCOTICS

(By Francis B. Kent)

MEXICO CITY.—The body in the coffin looked ordinary enough but there was something about the men accompanying it across the border into the United States that bothered the customs agents.

An informal autopsy revealed extraordinary contents: a fortune in heroin.

Not everyone connected with the illicit drug traffic goes to such bizarre lengths. Simpler techniques have been far more successful. Yet the incident serves to illustrate what U.S. customs men are up against and their task gets more difficult all the time.

In the past six years, according to customs officials in Washington, the quantity of narcotic drugs seized at border points has increased by 2,000%. Joseph Jenkins, the Customs Bureau's director of investigations, said this increase reflects not only intensified control efforts but a sharp rise in the dope traffic as well.

As a result of the growing demand among U.S. users, the production of illicit drugs has become a big business in Mexico. Just how big, no one knows, but the figures are sizeable.

CUSTOMS AGENTS

For example, U.S. customs agents along the 1,500 miles of border between Mexico and California, Arizona, New Mexico and Texas seized more than 32 tons of marijuana last year, plus more than 50 pounds of heroin, morphine and cocaine.

Mexican authorities, meanwhile, destroyed more than 7,500 fields of poppies, the source of opium and its derivatives, and burned off hundreds of acres of marijuana.

How much managed to get across the border and into the hands of users is anybody's guess. The consensus: considerable.

Illicit drugs cross the border in every conceivable manner. The young, long-haired marijuana smoker may smuggle it over concealed in his surfboard. The professionals are more likely to use trucks with false bottoms, boats or airplanes. Unpoliced coastal landings and airstrips proliferate on both sides of the border.

Arrests and stiff prison sentences appear to be no more than a minor factor in slowing the traffic. Border arrests for trafficking in marijuana alone numbered 945 in 1965, and by last year had risen to 2,273. Conviction, under the Narcotics Control Act of 1956, brings a mandatory 5- to 20-year prison sentence with no hope of probation or parole. A second offense means 10 to 40 years.

On the Mexican side the law is even tougher and Mexican jails are not renowned for their luxurious facilities.

Until relatively recently, narcotics had not been much of a criminal problem in Mexico. Indians had smoked what is now called marijuana and munched on hallucinatory mushrooms long before the Spanish arrived in the early 16th century. Marijuana came into more popular usage about 100 years ago when the peasant took it up to ease his hunger pangs.

Now its use has been noted among secondary-school students, and an occasional homicide has been attributed to organized crime's efforts to control distribution, not only of marijuana but the so-called hard narcotics such as heroin as well.

Just one thing keeps the international traffic alive: money. And, according to agents of the U.S. Treasury Department's Bureau of Narcotics, not all of it flows into the hands of that sinister organization known as the Mafia.

"Dope smuggling," one agent told The Times, "is about as exclusive as betting on the ponies."

LARGE PROFITS

Profits are enormous. The 2-pound brick of marijuana that nets its grower about $4 in Mexico sells for as much as $300 in the United States. The usual price in, say, Los Angeles or New York, is $150. Much more profitable are the hard drugs: morphine, heroin, cocaine. They come in smaller quantities and provide vastly more effective results.

Calculating the profit margin on hard drugs is next to impossible, since they are invariably diluted at every stage of processing and handling and the price varies not only geographically but according to the balance between supply and demand. Almost any illicit narcotic, though, is worth at least twice as much on the U.S. side of the border.

Controlling the production and processing of drugs in Mexico is no easy task. Much of the interior is virtually inaccessable except by Jeep or burro. Yet the authorities here have mounted what is generally considered to be the most effective grassroots campaign in Latin America.

Under the supervision of Asst. Atty. Gen. David Franco Rodriguez, federal agents work

closely with the army and with local and state police departments. Each spring, when the opium poppy is ripe for milking, mixed teams move out into the eight-state area where cultivation of the poppy is concentrated. Traveling by whatever means is necessary, often on foot, they descend on illegal plantations that have been spotted from the air, destroy the growth and arrest the grower.

Equally tough measures are directed against those in Mexico who serve as links in the narcotics traffic that originates in South America, the Middle East and the Orient. The South American countries of Bolivia and Peru are a major source of cocaine, a derivative of the cocoa leaf that is chewed by Indians. The Mideast and the Far East produce heroin.

TURKISH HEROIN

Heroin is a particularly nettlesome problem because it is manufactured legally, under government license, in Turkey and India. U.S. officials estimate that up to 15% of the Turkish heroin finds its way into the contraband market.

Getting narcotics across the border into the United States, despite increasingly strict controls, presents no great challenge. Literally millions of U.S. and Mexican nationals cross the border every year and to search every one would be physically impossible.

"If we did," a customs agent observed, "cars would be lined up for miles and the congestion at airports would be outrageous."

Still, the number of U.S. agents along the border has almost doubled, to a total of 92 since 1965, and the combined efforts of U.S. and Mexican authorities have produced results, as can be seen by the increase in seizures and arrests.

MEETINGS HELPFUL

Jenkins, the bureau's investigations chief, is convinced that further cooperation will pay even greater dividends in the future. Joint meetings such as the recent roundtable conducted here between U.S. and Mexican experts have been particularly helpful, he said.

What the authorities on both sides hope for and expect is a change of attitude on the part of young people, especially in the United States, where marijuana has acquired widespread acceptance.

Medically, according to a Narcotics Bureau agent, it has yet to be established that marijuana is harmless or not habit-forming, and the evidence indicates that its use often leads to hard narcotics.

"About 80% of our confirmed addicts," he said, "started with marijuana."

Jenkins, who was with the Customs Bureau in Los Angeles for 10 years before his transfer to Washington in January, recalls a grim courtroom scene in which a 37-year-old offender had just been sentenced to 40 years in prison.

"I don't think I'm going to make it," the defendant said.

"Son, you just do the best you can," the judge replied.

JULY 10, 1969.

The PRESIDENT,
The White House,

DEAR MR. PRESIDENT: We, the undersigned members of the California Congressional Delegation, having read the news accounts appearing in yesterday's Washington Post, wish to compliment and commend you for your bold and forthright proposals with regard to combatting the nation's drug problem.

Of particular significance, we believe, are the reported measures calling for stiffer penalties for habitual offenders and those involved in the illegal traffic and sale of drugs; and tighter restrictions, to include Federal licensing, of U.S. manufacturers of drugs, stimulants, and depressants.

As Californians, each of us has been actively involved for some time in trying to find a solution to our State's common and unique problems of drug abuse. As such, we wish to bring to your attention and urge you to consider the following additional recommendations which we believe should be included in the Administration's position on this critical subject:

1. *Border Surveillance:* As you know, California and other states bordering on Mexico have a unique and compelling narcotics problem as it applies to the illegal traffic in dangerous drugs and narcotics into and out of Mexico. We believe a concerted effort must be made to expand and strengthen our border surveillance activities so that a more effective program of "reducing the supply" can be waged.

2. *Relations with Mexico:* Since full cooperation and continued friendship between the U.S. and Mexico is seriously affected by the situation which exists, we urge that our mutual narcotics problems be included as a priority item of discussion at the up-coming meetings of the U.S.-Mexico Border Commission for Friendship and Development. At present, it is our understanding that this matter is not included on the proposed agenda for these meetings.

3. *Drug Abuse Education:* It is our common view, as well as your own, that any all-out effort to combat the spreading menace of drug addiction and "experimentation" cannot rely on law enforcement alone. Therefore, we strongly support and join you in emphasizing the dire national need for more effective drug abuse education. The 1962 White House Conference on Narcotics and Drug Abuse reported the "failure of schools to recognize the problem and provide instruction of equal quantity and quality as that provided for other health hazards". In our collective judgment, no significant or meaningful role has been assumed by the Federal Government to assist our schools in providing effective drug abuse education and the need for such education for students and adults alike has now become acute.

Please be assured, Mr. President, that we speak for a vast majority of the Members of Congress in saying that we stand ready and willing to assist you and your Administration in any way possible in helping combat this growing menace to the young people of America, their parents, and to the very moral fiber of our society.

Respectfully,

GEORGE MURPHY,
U.S. Senator, California.
ROBERT B. MATHIAS,
18th Congressional District, California.
BOB WILSON,
36th Congressional District, California.
DON H. CLAUSEN,
1st Congressional District, California.

Mr. MURPHY. Mr. President, I ask unanimous consent that the text of the joint resolution be printed in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 142) for the establishment of a Drug Commission between the United States, Mexico, and Canada, introduced by Mr. MURPHY, was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD as follows:

S.J. RES. 142

Whereas the illicit traffic in narcotics and dangerous drugs exists; and

Whereas this problem is of international consequence; and

Whereas despite the border efforts of the United States, Mexico, and Canada the flow the illicit drug traffic continues at a dangerously high rate; and

Whereas this illicit traffic adversely affects the lives of young people who use barbiturates, marihuana and other dangerous drugs: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is authorized, requested, and directed to seek with the President of Mexico and the Prime Minister of Canada the formation of a permanent commission to investigate ways and means of reducing the illicit traffic in narcotics and dangerous drugs within and between the United States, Mexico, and Canada.

ADDITIONAL COSPONSORS OF BILLS

S. 2523

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from New York (Mr. JAVITS) be added as a cosponsor of S. 2523, to amend, extend, and improve certain public health laws related to mental health.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2608

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Minnesota (Mr. MCCARTHY) and the Senator from Maine (Mr. MUSKIE) be added as cosponsors of S. 2608, to provide for comprehensive control of narcotic addiction and drug abuse.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF AN AMENDMENT

NO. 107

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Wisconsin (Mr. PROXMIRE), I ask unanimous consent that, at the next printing, the name of the senior Senator from Tennessee (Mr. GORE) be added as a cosponsor of amendment No. 107 to the military procurement bill.

The amendment requires annual disclosures by former high-ranking civilians and military Pentagon employees who leave the Government and go to work for major defense contractors.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 225—RESOLUTION EXPRESSING THE COMMENDATION AND GRATITUDE OF THE SENATE TO THE MEN AND WOMEN OF THE NATIONAL SPACE PROGRAM ON THE OCCASION OF THE APOLLO 11 MISSION

Mr. GURNEY submitted a resolution (S. Res. 225) expressing the commendation and gratitude of the Senate to the men and women of the national space program on the occasion of the Apollo 11 mission, which was referred to the Committee on Aeronautical and Space Sciences.

(The remarks of Mr. GURNEY when he submitted the resolution appear earlier in the RECORD under an appropriate heading.)

NOTICE OF HEARINGS ON S. 2624

Mr. TYDINGS. Mr. President, as chairman of the Judiciary Committee's Subcommittee on Improvements in Judiciary Machinery, I announce hearings on S. 2624, a bill to improve the judicial machinery in customs courts by amending the statutory provisions relating to judicial actions and administrative proceedings in customs matters, and for other purposes. The hearings will be held at 10 a.m., on August 4, and 5, 1969, in room 6226, New Senate Office Building.

Any person who wishes to testify or submit a statement for inclusion in the RECORD should communicate as soon as possible with the Subcommittee on Improvements in Judicial Machinery, room 6306, New Senate Office Building.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. ERVIN. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

H. Kenneth Schroeder, Jr., of New York, to be U.S. attorney for the western district of New York for the term of 4 years, vice John T. Curtin, resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Monday, August 4, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

ANTITRUST ENFORCEMENT

Mr. HART. Mr. President, not long ago, I authored a magazine article on the enticing temptations to violate the antitrust laws. Among the attractions I listed were the great potential returns balanced against the very low odds for being caught.

Thankfully, antitrust enforcement is being resurrected, and there is reason to hope that the traditional "crime does not pay" warning once more may be valid in the antitrust field.

Two items tend to substantiate this hope.

The first is the report from Brussels—as contained in a story published in the Washington Post last Friday—that the Common Market has for the first time fined companies for antitrust violations.

One-half a million dollars in fines were levied on six European companies for operating a secret quinine cartel.

My pleasure over this action is mixed, I confess, with some pride, for the Common Market officials graciously pointed out that they had learned of the cartel through the work of the Senate Subcommittee on Antitrust and Monopoly.

The subcommittee uncovered the cartel, and in hearings in 1967 laid out its operation through the actual working papers of the members. Those documents were one of the most remarkable sights any antitrust lawyer might ever hope to see, for they spelled out just how the companies conspired to acquire the American stockpile of quinine and how they raised world prices after—with the cooperation of the State Department and General Services Administration—obtaining it.

Last fall criminal indictments were returned by a Federal grand jury against 15 companies and eight executives involved in the price fixing and other antitrust violations.

According to the subcommittee information, during the operation of the cartel, prices had gone up as much as 700 percent on quinine and similarly on quinidine—a lifesaving heart drug.

In addition to the action by the Common Market and the Department of Justice, private suits have been filed claiming millions of dollars in damages.

These private suits are in the nature of class actions. Under a class action, individuals who have suffered a loss too small to warrant hiring a lawyer join together to recover their damages jointly.

The growing popularity of these class actions justifies, I think, the hope the antitrust violations will become increasingly expensive. This, in turn, means that the congressional intent that private suits to collect treble damages would be a powerful deterrent to antitrust violations will carry new weight.

The class action has been brought to public attention most recently by the $120 million settlement to reimburse consumers who were forced to buy antibiotics when they were price fixed by the pharmaceutical companies.

This is the largest settlement in antitrust history, and it carried considerably more clout against a corporation than the $50,000 penalty accessable under the antitrust laws.

I would be remiss, I think, if I did not point out the role the Subcommittee on Antitrust and Monopoly also played in spotlighting the antibiotic case. This was first brought to general public attention by the drug extensive hearings and report carried out under the direction of Senator Kefauver.

In sum, all I am really saying is that so much of the time we grind our gears around here, and the temptation is great to think much of it is for naught.

In these two cases, I am sure the American consumer—and the European, with quinine—would say our efforts had been worth a great deal.

Mr. President, I ask unanimous consent that the Washington Post article on quinine and one on class actions, published in the July 26 issue of the New Republic, be printed in the RECORD.

I also ask unanimous consent for the printing of a boxed story, captioned "Deductible Wrongdoing," which appeared on one page of the New Republic, giving the consumer class story. It, too, has relevancy.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EUROMART FINES FIRMS FOR RUNNING SECRET DRUG CARTEL

(By Richard Norton-Taylor)

BRUSSELS, July 24.—Six European companies have been fined a total of $500,000 by the Common Market Executive Commission for establishing a secret quinine cartel, it was announced here today.

This marked the first time the Commission has imposed a fine for an infringement of the Market's antitrust regulations. The same six companies have been accused of forcing up U.S. prices on quinine by 700 per cent.

The drug companies concerned are Nedchem of the Netherlands, Boehringer and Buchler, both of West Germany, and three French companies, Pointet-Girard, Norgentaise (a Bristol-Myer subsidiary) and Pharmacie Centrale.

Together they control at least 50 per cent of the world quinine market. Nedchem of Amsterdam, the largest of the firms, has been fined $210,000, Boehringer $190,000, and the others considerably less.

Quinine, the traditional cure for malaria, is being used heavily in Vietnam, where new types of the disease have broken out. Quinidine, its derivative, is a drug used to combat heart ailments.

The European cartel was first spotlighted by the U.S. Senate Subcommittee on Antitrusts and Monopolies. The cartel's key objective was to eliminate competition among the various producers in 1959 in buying a U.S. stockpile of 14 million ounces of quinine, enough for 1½ to 2 year's world supply.

This stockpile was shared among the six companies. When new sources of supply emerged, the firms prolonged the market-sharing and price-fixing agreements they had established. Within the Common Market, the companies agreed to reserve home markets for each partner, and reserved the manufacture of quinidine to the German and Dutch firms.

This directly conflicts with principles laid down in the Common Market's Treaty of Rome. "The infringement was knowingly committed," said the Commission in a note released today.

"Despite expert legal advice the companies continued their practices, deliberately filed no notification, and took what they believed to be adequate steps to keep the agreement secret. Among other things, they instructed all members to destroy compromising documents," it said.

But this was not fully followed and some documents first came to light in the U.S. Senate Subcommittee in 1967.

The quinine cartel led to a 700 per cent rise in the price of quinine between 1960 and 1966. In the latter half of this period, prices skyrocketed by as much as five times when U.S. military authorities, having disposed of most of their earlier strategic reserves of quinine, reappeared on the market as large-scale purchasers because of the Vietnam war. This led to the Senate investigation.

The Common Market decision on the quinine cartel signifies a new determination in the European Commission's competition directorate to look into other fields, notably the European electric-lighting industry, where a series of market-sharing agreements have been in force for some time.

Some of the same European drug firms involved in today's announcement were included in a Federal grand jury indictment last October of 15 drug companies for fixing the U.S. price of quinidine.

The fines announced today followed antitrust charges brought yesterday by the U.S. Justice Department against two British and three U.S. drug manufacturers for an alleged restrictive patent-licensing agreement of a drug, iron dextran, used in the treatment of iron-deficiency anemia.

GIVING THE CONSUMER "CLASS"

(By David Sanford)

It is in the nature of consumer fraud cases that victims almost never recover their losses, since claims generally are smaller than the cost of paying a lawyer to go to court. A consumer can complain to the Federal Trade Commission, but even if the FTC is interested, investigates and finds fraud, the most it can do is order a merchant or finance company to stop defrauding its customers; com-

pelling restitution is not within the FTC's limited powers. Better Business Bureaus, Bess Myerson, Action Line, Consumers Union, and Ralph Nader all receive complaints, but they offer only cathartic relief.

There are signs, however, that Congress, the courts and other agenices are becoming interested in consumer class actions—suits by one or a few consumers in behalf of all consumers similarly abused. A lawyer is rarely interested in representing a poor client who has been done out of $400 by a finance company operating illegally, but if he can represent thousands of consumers identically defrauded, he has an interesting and potentially lucrative case.

All states and federal law provide for class actions by litigants who can establish a "unity of interest," but the laws are variously interpreted and, in most states inhospitable to class actions. In New York, according to Philip Schrag, a lawyer for the NAACP Legal Defense Fund, the courts go in for "metaphysical nitpicking," interpreting "unity of interest" to mean "that if 10,000 people sign the same contract—physically the same piece of paper—one person can sue in behalf of all of them. But if they sign 10,000 separate, identical, contracts then they don't have a 'unity of interest.'" The effect in New York and elsewhere is to discourage class actions. (Ironically, California, which has the same statute as New York, interprets it liberally and is a congenial place for class actions. In a recent Yellow Cab case a judgment required refund of overcharges to Los Angeles taxi users.)

Class actions may soon be more common across the country. In the antitrust field, for instance, lawyers representing 43 states have arranged an out-of-court settlement with five huge drug companies providing for refunds of $120 million in overcharges for antibiotic drugs sold between 1954 and 1966. A New York City federal court in December 1967 convicted Charles Pfizer & Co., Inc., American Cyanimid Co. and Bristol Myers Co., Inc., of conspiring to fix prices of tetracycline and related broad-spectrum antibiotics and of conspiring to monopolize the market in these drugs. (Olin Mathieson Chemical Corp. and Upjohn Co. were named as co-conspirators.) The conviction laid the companies open to civil antitrust suits by states, cities, hospitals, insurance companies, and individuals who had been overcharged. To avoid suits and conceivable judgments of as much as $500 million the companies, all the while denying liability, have offered to settle claims out of court for $120 million. [Last week the government filed a $25 million damage suit against Pfizer and Cyanimid alleging they obtained their patents for tetracycline fraudulently.]

The tetracycline settlement is the largest in antitrust history—an accomplishment for which David Shapiro, one of the lawyers retained by New York, deserves major credit, since he chose to sue not in behalf of New York alone but for New York "on behalf of all that state's ultimate consumers." The individual purchaser of the involved drugs—if he can locate his records or signs a notarized statement detailing his expenditures—will be compensated for the overcharge. (On Tuesday, July 1, the drug firms placed ads in daily newspapers throughout the United States explaining the procedure for refunds. The ads reportedly cost more than $200,000.) Consumers will thus benefit from a settlement that would never have been practicable had they sued as individuals with small claims.

The drug case was not, strictly speaking, a consumer class action, since it was brought by government in behalf of itself and its affected citizens rather by *a consumer* in behalf of all consumers.

In New York and elsewhere state laws allow groups with common interests to bring damage suits in the area of consumer frauds. Thus, the New York court of appeals early this month agreed to hear a suit brought by Edna Hall and William Russell, two low-income consumers, against the Coburn Corporation, a large finance company. The two contend that they are among thousands of persons who purchased furniture and appliances under installment contracts sold by stores to the Coburn Corporation. The contracts, it is alleged, were printed in type smaller than the eight-point type required by state law. On this technicality the two hope to recover for themselves several hundred dollars in service charges paid on the "illegally drawn" contracts, as well as refunds to thousands of other persons who signed identical documents. The $200 that Edna Hall hopes to recover is not enough to interest any lawyer, since thousands of dollars have been expended fighting her case, exclusive of lawyers' fees. But by fighting the case as a consumer class action, her lawyers hope to recover hundreds of thousands of dollars.

The Coburn case was dismissed in two lower courts as an improper class action and it now remains for the appeals court to determine whether that judgment is to be sustained; whether, that is, there is a true "unity of interest."

Philip Schrag has filed a second case in the U.S. District Court to recover damages for a group of students allegedly bilked by a ski-tour organizer. Schrag is basing his argument on a law (the Lanhan Act) under which businesses often sue competitors for false statements made in the interstate sale of goods and services. Schrag wishes to apply the law to *individual consumers* as well and in so doing open the federal courts to consumer class actions under the Lanham Act.

Paul Lurie, a Chicago attorney, is suing Montgomery Ward in behalf of about 6,000,000 Ward customers who last year were mailed unsolicited credit-life and disability insurance policies covering their Ward charge accounts. The policies were accompanied by a letter informing charge customers that they should notify Ward's if they did not wish to pay for such policies but that otherwise they would be billed. Lurie charges that the solicitation was a deceptive merchandising scheme, contrary to accepted merchandising techniques in which a customer's specific acceptance rather than his mere silence is required to consummate a purchase. Were Lurie representing a single client the suit would not be worth trying. Representing millions of clients, he stands to collect several million dollars for them if he is successful.

Mayor Lindsay's energetic Commissioner of Consumer Affairs in New York City, Bess Myerson Grant, has proposed to the City Council a consumer protection act which for the first time provides for restitution of money to victims of consumer frauds. The bill, which Mrs. Grant expects will be passed after hearings this fall, would give her agency power to bring suits on behalf of the citizens of New York. It would establish in her department an office of consumer's advocate, which would investigate and litigate complaints of fraud and when successful in court, arrange for money to be returned to those defrauded. Simon Lazarus, executive director of the City's Department of Consumer Affairs, says he anticipates that law will be copied by other cities and serve as a model for a federal consumer's advocate program.

Finally, at the federal level, Senator Joseph Tydings of Maryland will hold hearings of his subcommittee on judicial machinery July 28 and 29 to consider his bill to give the federal courts jurisdiction in consumer class action cases. It is Tydings' view that despite new laws and court decisions favorable to consumers, there is still no effective way under state laws for victims of fraud to recover losses. Because most states have laws hostile to class actions, Tydings would shift to the federal courts authority over all class actions nominally involving interstate commerce and the possible violation of state or federal law. Lawyers who represent a class of consumers would be eligible under Tydings' bill to collect as fees up to 10 percent of damages and financial penalties won in court.

A lawyer familiar with Tydings' thinking, says his strategy so far has been "to keep his bill very quiet, very private, very small and try to get it through the judiciary committee before the finance companies find out what's going on." He didn't send out a press release when he introduced the bill—a very rare thing. The reason for the secrecy, of course, is that if enacted, Tydings' "Class Action Jurisdiction Act" would give the individual consumer immense leverage. One consumer bilked of $20 has never been much of a threat. But a million consumers each similarly defrauded and represented in a single suit constitute a potential $20 million headache for a finance company or retailer. Such judgments would make the practice of consumer law very profitable for attorneys, and redress the balance of power in favor of the consumer.

TOO MUCH CRITICISM OF OUR WAY OF LIFE

Mr. MUNDT. Mr. President, in this day and age, when far too many editors and commentators seem to feel it is the sophisticated or "in thing" to do to fire broadsides of criticism at everything American, it is refreshing and reassuring to read an occasional editorial written by an outstanding editor which enthusiastically speaks up for what is right about America. I take pleasure in calling to the attention of Congress and the country to just such an editorial recently published in the Daily Argus Leader of Sioux Falls, S. Dak., the largest newspaper in the largest city of a contiguous five-State area in the Upper Midwest.

Widely known because of his extensive travels abroad and his regular attendance at international meetings of editors and publishers, as well as because he is a former officer of the American Society of Newspaper Editors, Fred C. Christopherson, the author of this editorial, has his editorials quoted frequently throughout the country. I sincerely hope this will be true of his editorial, "Too Much Criticism of Our Way of Life," which I ask unanimous consent to have printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOO MUCH CRITICISM OF OUR WAY OF LIFE

Perhaps it is the function of those who comment on the passing scene to scold, nag and find fault, seeking thereby to effect an improvement in our way of life.

But it can be overdone. And I am very much of the opinion that it is being overdone now in the United States—overdone so much that the impression is being created that we, the people, are a miserable lot and that the world might be better off if we were to vanish from the face of the earth.

Almost from every side, the fusillade of the critics is being drummed into our ears and placed before our eyes. We are told that we have made a dismal failure in about every field—in the field of human relations in this country and in the field of international affairs.

If we are to believe the critics, we have done everything wrong and nothing right. We have polluted the earth, the sea and the

skies by our presence. We have despoiled our resources and utilized our talents to pillage, destroy and corrupt.

IMPROPER BLAME

An impressive array of statistics can be presented to demonstrate otherwise and the time has come, it seems, to point out with force and vigor the fact that man—the American man—isn't as despicable as the faultfinders say he is.

It has been said, for example, that adult Americans have made a mess of things. This is a common criticism voiced by youngsters. Reference is made to the wars of this country.

But who started World War I? We didn't, but we—the Americans—stopped it. Who started World War II? We didn't. We stopped it. And we didn't start the wars in Korea and Vietnam.

We entered these wars, all four of them, as a matter of principle and simple justice—to aid the oppressed and repulse the aggressors. That wasn't a bad motive. That wasn't uncivilized. That was, in fact, national nobility—a nobility of a type never before demonstrated on such a massive scale in the world's history.

The story could go on and on. The resources of our land and the fruits of our labors have been spread widely throughout the world—into almost every nook and cranny of all countries.

Within the United States, our aims and benefactions have been more generous than those of any other nation—so generous that they may be defeating the very purpose we had in the foreground. Those who were productive and self-reliant have sought to help those who weren't. It now appears that the good work may have been overdone—so much overdone that the yield has been worthless.

WHAT HAS BEEN DONE

Students have been aided in their apparent desire for a college education. But many of them have responded by seeking to destroy the institutions set up for their guidance. In countless incidents, the recipients of welfare have come to believe that their grants are something to which they are entitled.

Let us stress the fact that we have provided in the United States the highest standard of living in the world.

Let us also take note of the fact that we have in this country the finest spirit of democracy that exists—a people without the class distinctions that are so common in many other nations.

Note, too, that this is a country where the man of humble origin can rise to the top in industry, government and the professions—a fact evidenced by numerous examples all about you in Sioux Falls, in South Dakota, in Washington and in the nation as a whole.

REASON FOR PRIDE

Yes, we have been imperfect. We haven't done what we might or should do. We have lagged at times in doing what should be done.

But what nation has done more? And in what period of American history was there a better record?

Let's continue to point out possible improvements. As we do so, however, let us take pride in the tremendous accomplishment of America, of our true exemplification of the better principles of the brotherhood of man, of our conservation and practical use of natural resources, of the many instances where we have made the once sterile desert bloom with the fragrance and the beauty of a rose.

Recognize our shortcomings? Yes. Be mindful of our achievements? Yes. Above all, though, keep the scoreboard in balance and realize that as an American you have a strong reason for being proud of what you and your fellow countrymen have done.

OIL LEAKAGE IN SANTA BARBARA CHANNEL

Mr. CRANSTON. Mr. President, on July 28, Santa Barbara, Calif., will observe a day of infamy in its history. On that day 6 months ago an oil well on Federal tidelands 5½ miles offshore in the Santa Barbara Channel blew out and went out of control, pouring thousands of barrels of oil into the sea and onto the beaches of southern California.

Today, oil is still leaking from the sea bottom, still fouling the sea and the beaches, and there is no end in sight.

Secretary of the Interior, Walter J. Hickel, termed the oil spill "a disaster."

The former Secretary of the Interior, Stewart Udall, said it was "a conservation Bay of Pigs."

People from all over the Nation and the world are asking why this disaster happened and what, if anything, Congress and the Government will do to prevent future disasters like this one which threatens one of the most beautiful coastal and marine areas in the world, enjoyed every year by millions of Americans and foreign visitors.

People are asking if the despoilation of this area by pollution of the waters by leaks, blowouts, and spills and pollution of the seascape by the erection of enormous drilling platforms in the channel waters truly is in the national interest.

They are asking what values justify the risk of potential destruction of an environment cherished by millions.

They are asking if it is really necessary to continue to drill for oil in the Santa Barbara Channel.

I ask these same questions.

Clearly, in Santa Barbara as in other parts of our country and this planet we live on, it is time to ask what we are doing to our environment and whether the slow destruction of our air, our water, and our land may not threaten man's own demise.

The national policy issues of the use of our natural resources—our land, water, and air—have once again been brought into focus by the Santa Barbara disaster.

Once again we have an opportunity to study the effects of national policy on our environment and review that policy in light of our experience at Santa Barbara and other parts of the Nation.

For 300 years we have exploited our land—too often with few safeguards for the environment, too often with no thought for conserving our resources or properly utilizing them.

The lands that lie along the great coastal regions of our Nation contain trillions of dollars of national treasure, encompass great scenic and recreational areas, provide employment and a special environment for millions of shore residents, and sustain the rich and varied marine life which supplies us with food and sport.

They are indeed vast, measuring 805,300 square statute miles under the usual Federal claim of jurisdiction and an additional 478,700 square statute miles measured by international standards which the United States might be expected to invoke. The combined areas are about 35 percent as large as the total land of the United States and its territories.

The amount of proven reserves of oil and gas alone on the shelf is 2.9 billion barrels of oil and natural gas liquids, and 30.3 trillion cubic feet of gas. Sulfur reserves are estimated at 37 million tons, and there are an estimated 100 million tons of phosphorite deposits off California alone.

What has happened at Santa Barbara, and what is happening in other parts of our country both onshore and offshore, suggests that this national treasure, which is both our economic and defense security, is in danger of being squandered in a way that may permanently impair our environment and future security.

All of us in Congress have heard this story of depredation and neglect many times. We have seen it at firsthand right here in Washington where a once beautiful river has been defiled by actions of man along its banks. We see it in the strip mining in Appalachia, in the destruction of rich farmland by suburban sprawl, in the denuding of our forests and the alteration of our streams by dams and powerplants.

Each passing day and year sees the spread of this careless growth and exploitation.

Then one day an oil well blows out in the Santa Barbara channel or a Great Lake is found polluted, and we once again call into question our values, our national priorities and the policies which effect those values and priorities.

In Santa Barbara our values and priorities are clearly out of focus.

It is time that we asked how this happened and whether the national policies which guide development of our resources are adequate for the times we live in.

The question posed by the Santa Barbara experience is whether drilling for oil in the Santa Barbara channel is safe, given the geological conditions existing there and the current state of the technology of offshore oil production.

California is known as earthquake country, and Santa Barbara is very much in the geological center of earth movements.

In the last 150 years there have been at least 10 major earthquake occurrences in the Santa Barbara area. By way of illustration, in 1812 a huge tremor generated a tsunami tidal wave 30 to 50 feet high. Another major quake in 1925 caused $20 million damage in Santa Barbara, and in the summer of 1968 a so-called "swarm" of 66 small quakes centered right in the channel.

Today, although drilling is going on right now and the oil companies are planning to build huge platforms and drill hundreds of wells in the waters above the earthquake area, we still do not have an authoritative analysis of what might happen if a major quake or submarine landslide strikes the area.

And we are told by the Nation's most competent earthquake experts that there is almost a 100-percent certainty that California will be rocked by quakes at some time in the future. Charles Richter of the California Institute of Technology, a world authority on earthquakes,

points out that because geologically California is still young, quakes and earth movements certainly can be expected in the future.

What would be the effect of a major earthquake on the wells and on the drilling and pumping platforms? What would happen if a large tsunami or tidal wave struck the platforms and wells? What effect would a submarine landslide have?

We have no definitive answers to those questions.

Furthermore, all the expert testimony I have heard suggests that there is a good chance of another blowout, spill or accident of some kind that will produce another disaster at Santa Barbara in coastal drilling and producing operations.

The technology of offshore drilling and producing still is too new to provide assurance that there will be no future major pollution events.

In Santa Barbara, where there has been a tremendous amount of faulting, producing uncertain geological formations, we can certainly expect numerous technical problems that almost certainly will result in "accidents" of one kind or another.

Yet, in his testimony before Senator MUSKIE's subcommittee, former Secretary of Interior Stewart Udall, reviewing the decision of his office to drill for oil in Santa Barbara, said:

> The idea of a massive blowout that couldn't be controlled was not a fear that anyone raised and therefore never became a major policy consideration.

This failure to consider the major environmental threat from off-shore drilling illustrates a point I have made many times before: We cannot reasonably expect that people who profit from a program will give adequate consideration to the possible environmental dangers of the program. The demand for environmental safety and sanity will always come from the general public. Therefore, it is critically important that all governmental policy affecting the environment includes public hearings and participation as a mandatory part of the decisionmaking process.

At Santa Barbara, the Department of the Interior clearly evaded the environmental issue by proceeding with the leasing program in the channel without adequate hearings.

In a memorandum dated February 15, 1968, while the leases still were being discussed, an aide to the Assistant Secretary of Interior said:

> The department should not go the public hearing route—that we had tried to warn the Los Angeles district engineer of the Corps of what he faced and we preferred not to stir the natives up any more than possible.

I say to you, Mr. President, and to the American people, it is time to begin listening to the natives. They are telling us that our values and priorities are out of whack, and that the disaster off the coast of Santa Barbara is the latest stunning example of our folly.

The Federal Government has a special and overriding responsibility to States and local communities.

Santa Barbarans historically have fought the development of oil onshore and offshore in the area.

Santa Barbara is one small city of 70,000 citizens who are proud of their community and their long record of preserving it against commercial depredation. The citizens see themselves now as the victims of an all-powerful Federal establishment against which they have no recourse.

Under our system of government there will continue to be clashes between the interests of one group or one community against the wishes and needs of all of the Federal system. But if our system is to be wholly effective and representative, the wishes of one State and one community must somehow be given proper consideration and weight.

I raise these points because the Nation is confronted with serious problems that involve our resources, our environment, and the clash of technology with the desires of our people.

For too long the interests of technology, industrial development, and exploitation of resources have been paramount over environmental interests.

The balance may already have tipped too far, if we are to believe the warnings of some scientists that our atmosphere already has been changed so radically that it may alter the climate, our polar icecaps, and, eventually, the depth and character of our oceans.

It is not too late to reverse the process of destruction and change at Santa Barbara and elsewhere.

The Subcommittee on Minerals, Materials, and Fuels, under the judicious and concerned leadership of its distinguished chairman, the Senator from Utah (Mr. Moss), is now considering an amended version of my bill, S. 1219, to ban drilling in the Santa Barbara channel. The amendments would suspend drilling temporarily and instruct the Secretary of the Interior to report to Congress on various environmental, legal, economic, and technical aspects of further drilling versus no further drilling.

To the oil-drenched swimmers of our California beaches, and to the angry and disillusioned property owners of the Santa Barbara coastline, such a temporary suspension would be viewed as a very small step toward ending the oil disaster.

Yet, I believe, such legislation would be a giant step for all of our Nation. Congress would in effect be declaring that environmental concerns in Santa Barbara are preeminent over the business-as-usual demands of our economy. Now, after 6 months of the oil leak below flatform A, we cannot deceive ourselves that there is any other issue in the Santa Barbara channel.

MOVING EXPENSES OF EX-PRESIDENTS

Mr. WILLIAMS of Delaware. Mr. President, an article entitled "Preserving L. B. J. Records Is Major Task," written by Robert Walters, and published in the Washington Evening Star of June 16, 1969, points out a series of unnecessary expenditures in connection with the transfer of the Presidential files from Washington to Texas.

We all recognize the responsibility of the Government to assist in moving expenses of ex-Presidents, and there are certain necessary charges which are properly assumed by the taxpayers, but this article calls attention to what appears to be a series of unnecessary costs. There are a $10,000 typewriter, a $445 wastebasket, $159 stapling machine, and a $245 envelope opener to be used by $100-a-day consultants who are assisting in writing the former President's memoirs which in turn will be sold. These appear to be uncalled for expenditures charged to the taxpayers.

In reviewing the history of this legislation, it is clear that the appropriations did not cover expenditures during the transition period beyond the 6-months period after the election. While I recognize that the Comptroller General has ruled otherwise, nevertheless I do not think his ruling can be supported by the law as passed by the Congress.

I ask unanimous consent that the article outlining this extravaganza be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN OVAL ROOM IN TEXAS—PRESERVING L. B. J. RECORDS IS MAJOR TASK

(By Robert Walters)

Former President Lyndon B. Johnson has carried to the central Texas hill country many of the accoutrements of the presidency, including a reproduction of the White House Oval Office.

Making full use of two relatively recent laws which authorize extraordinary retirement benefits for former presidents, Johnson has:

Acquired three separate Texas offices, with two others under construction, one of which will be part of a new $440,000 federal building for his tiny (population 385) hometown of Johnson City.

Retained on the federal payroll as a $100-a-day consultant Walt W. Rostow, former special assistant to the President for international security affairs.

Purchased with government funds more than $200,000 worth of office equipment, including a $10,000 IBM typewriter, almost $6,000 worth of dictating and transcribing equipment and a $445 Destroyit" waste basket which electrically shreds paper for security purposes.

Most of those expenditures are authorized under the 1964 Presidential Transition Act which provides for the payment of "transition" expenses to incoming and outgoing presidents.

The statute limits such payments to six months prior to inauguration day for the new President and six months after the inaugural for the retiring President.

However, the House Appropriations Committee, chaired by Rep. George H. Mahon, D-Tex., a longtime Johnson political ally, requested—and received on April 29—an "advisory opinion" from Comptroller General Elmer B. Staats extending from six months to 18 months the time in which Johnson can draw from the fund.

Under Staats' interpretation of the law, Johnson will be able to make purchases with "transition" funds until July 20, 1970. The period approved by Congress would have expired next month.

The General Accounting Office, which Staats heads, has acknowledged the existence of the unusual "advisory opinion," but has refused to make public a copy of the Staats letter or to explain the justification for changing the effective period of the law from six to 18 months.

The transition law authorizes the expenditure of a maximum of $900,000, to be divided into equal $450,000 portions between the

incoming and outgoing administrations. A total of $75,000 is allocated for use by the vice president of each administration, leaving $375,000 for each president.

Even after that law, providing for "the orderly transfer of executive responsibilities," becomes inapplicable to Johnson, he will qualify for the rest of his life for additional—but somewhat reduced—benefits under the 1958 Former Presidents Act.

That law authorizes the rental of "suitable office space, appropriately furnished and equipped," free mailing privileges and an annual allotment of $80,000 for staff salaries, printing expenses, office supplies, communications equipment and similar expenses.

Under that statute, Johnson also will receive a $25,000 yearly pension. In addition, he receives an annual pension, based on his own contributions, of about $22,000 from Congress as the result of his service in the House and Senate.

Confidential documents prepared by officials of the General Services Administration show that only a few months after leaving office Johnson's employes and consultants were receiving $454,981.

Included in that figure were $28,000 yearly salaries for an executive assistant and two special assistants. The executive assistant is Wyatt T. (Tom) Johnson Jr., who served as deputy White House press secretary during the Johnson administration. He is not related to the former President.

The special assistants are Robert Hardesty and Harry Middleton, both former White House speech writers, now engaged in helping Johnson process his papers and write his memoirs.

Rostow, also aiding in that task, is on Johnson's government payroll as a $100-a-day consultant working six days a week. He would thus receive $28,800 annually, in addition to his salary as a member of the faculty at the University of Texas.

Yoichi R. Okamoto, the White House photographer who took thousands of pictures of Johnson during the White House days, also is carried on the Johnson payroll as a $100-a-day government consultant, working a five-day week. His yearly salary on that basis would be $24,000.

Most of the government-paid staff—funded separately from the transition and former president legislation—is formally assigned to the Lyndon Baines Johnson Library, a $12 million complex being constructed on the University of Texas campus in Austin. Informal planning for the library began in 1966, and construction got under way in 1967.

A total of 29 government employes have been assigned to the library, on loan from other agencies. Some are expected to return later to their permanent assignments. In addition, there is a transition staff of 14 persons.

The library complex, scheduled to be completed next April, includes:

A 100-seat auditorium, a 205-seat lecture hall, and archives designed to hold 8,000 filing cabinet drawers filled with Johnson papers as well as more than 500,000 photographs taken by Okamoto.

A 100,000-square-foot presidential library, larger than any similar facility, and a 20,000-square-foot museum to recapture the Johnson story from his earliest days in politics.

An oral history project which will include the tape-recorded recollections of 500 public figures, a large audio-visual collection of radio and television recordings, and a massive microfilming project involving the copying of more than 2 million pages of documents.

A School of Public Affairs at the university, administering a two-year master's degree program for 200 students as well as fellowships for prominent government officials and public figures.

Funds for those programs are being raised by the federal government, the university and private donors, but the bulk of the money is expected to come from Washington.

It is at the library that the reproduction of the Oval Office traditionally the President's principal working quarters in the West Wing of the White House—is being built directly under the 50-foot helicopter landing pad on the roof of the structure.

The military helicopter which will ferry Johnson into Austin from his ranch 65 miles northwest of the city is held for him on a standby basis at an Air Force base outside San Antonio. It is authorized under an agreement which calls for the Defense Department to provide transportation for persons receiving Secret Service protection—which Johnson also receives for the rest of his life.

A detail of approximately a dozen Secret Service agents is assigned to the LBJ Ranch, where Johnson also has the benefit of a 6,300-foot blacktop airstrip constructed during his presidential days by the Air Force.

Until Johnson's eighth-floor office in the library is completed next year, he will be working from a variety of other quarters. The most lavishly equipped is a teak-paneled suite on the top floor of the new 10-story federal office building in downtown Austin.

Johnson and aides occupy about 20 offices on the 10th floor. On the second floor, there is a mail room whose multi-lingual staff handles sacks of correspondence daily.

The confidential documents Johnson accumulated during his presidency are stored in offices on the top floor, while another 22 million pages of documents accumulated during his 38 years of political life are stored in a 13,000-square-foot room on the building's ground floor.

Of the $208,400 worth of office equipment purchased for Johnson thus far, $148,550 is intended for the Austin offices—in the federal building, the library, and the Commodore Perry and Driskill Hotels.

Included in that total are a $10,155 IBM typewriter, two smaller models $7,210 apiece, $5,890 worth of dictating and transcribing equipment, the $445 waste basket, a $159 stapling machine and a $245 envelope opener.

While waiting for completion of the new facilities, Johnson also has access to an office in the basement of the Johnson City Bank. The government, which pays the bank $1 a year in rent, spent $10,418 to refurbish the quarters for the former President's use and paid an additional $59,850 for office equipment.

Those quarters will be abandoned when the government completes work on the $440,000, two-story-air-conditioned federal building and post office for Johnson. Among its features is a fall-out shelter.

The federal government currently spends only $1,860 a year to rent space occupied by both the Post Office and Agriculture Department in Johnson City, a small rural community whose principal industry is agriculture.

Last September, while Johnson was still in office, the government provided this justification for the new Johnson City federal building:

"The principal requirement for the building is to meet the growing needs of the postal service in the postal area served by the Johnson City post office, now located in inadequate leased facilities.

"In addition, the boyhood home of President Lyndon B. Johnson, located in the community, has been included in the National Register of Historic Places . . . The community thus attracts numerous visitors.

"It is appropriate, therefore, that federal activities serving the community and its environs be housed in a federal building which reflects the full dignity of its location."

OUR BEST DEFENSE IS PEACE

Mr. PROXMIRE. Mr. President, a nation's future rests on the experience of its citizens and the vision and goals of its youth. I cannot help wondering what the vision of our youth will be considering the experiences we face today. A child growing up now sees a society where violence and war is an everyday occurrence. News films of Vietnam flash across the television screen as casually as the commercial for the latest toy—which also is an item of the war in miniature.

Rightfully so, average Americans are now vitally concerned and openly debate the relativity of our military weapons systems. The era of the sacrosanct military is ending. This is all to the good. But it is disturbing that the overkill grows; and unless positive actions are taken, such as disarmament agreements and a Soviet-United States detente in the arms race, this growth will proceed.

Add to the controversies surrounding our weapons systems chemical and biological warfare. The 1925 Geneva Protocol would prohibit first-strike with chemical and bacteriological weapons. Why cannot the Senate of the United States lend ratification to this agreement. It would commit us to development on a defensive basis. Our pledge to the world is not to use these agents as offensive weapons.

Mr. President, empty words and empty phrases make robots of a nation and leave us in a position of reaction only—not action. We must give credence to our words lest our children be left as robots only to react to the mistakes we make today. Our best defense is peace. And we must make every attempt to bring peace to the world to give credence to our national dialog and to leave dreams for our children.

A NEWSMAN RETIRES

Mr. NELSON. Mr. President, there is something special about the newspaper profession in what it has given to this country and its importance to a democracy.

It is a profession that draws a special kind of man who spurns the normal monetary considerations that motivate other men and devotes himself to newsgathering and commenting on the issues of the day.

In Fond du Lac, Wis., the Commonwealth Reporter is losing one such man. Carl H. Keyser, its editor, and a veteran of 49 years in the newspaper profession, has retired.

It is sad that he is leaving, but Fond du Lac can be grateful that he gave so much. Hopefully he will find time in his retirement to write an occasional guest column or editorial for the paper.

Nothing I could say could be said better than the editorial published in the Commonwealth Reporter on July 7, 1969. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN EDITOR RETIRES

Carl H. Keyser retired Saturday as editor of the Fond du Lac Commonwealth Reporter.

He was a man who disdained pretense.

He had no use for cluttered desks.

He wrote best about taxes and government and he drew on years of experience with city, county, state and federal prob-

lems—problems and issues which arose year after year, administration after administration—whether Democrats or Republicans were in office.

He disliked vacations or anything that kept him away from the flurry of events in the newsroom and the daily press run.

He felt comfortable with Republicans in office but he ripped into ineffective lawmakers regardless of their party.

He hit hard when he had to hit hard but he also could be gentle, and some of his best editorial writing described what he saw from the windows of his home on The Ledge . . . the first violets of spring, the first red leaves of autumn, deer tracks in the snow.

He had many friends at all levels of government. Early on election night last November when an entire editorial staff was straining to get the first report, an obscure township official got in touch with him to report Presidential totals and the news thus went winging into News Election Service headquarters, one of the first to be reported.

A decade ago when terrorists fired shots from the gallery of the House of Representatives in Washington, D.C., wounding several legislators, he got a call minutes later from Congressman William K. Van Pelt describing the scene.

He became so irked and irritated with the inefficiencies of three-man commission government, that he suggested in a series of editorials a change to the more modern council-manager form and within two years the City of Fond du Lac had a change in government.

He campaigned endlessly and tirelessly against the evils of the day as he saw them—incompetent government officials, federal waste and debts, death on the highway, pollution of air and water, rising taxes and the little demagogues of officialdom.

Carl H. Keyser started work for the old Fond du Lac Reporter in 1920 and was only the second editor of the merged papers, the present Commonwealth Reporter. He did everything a newspaperman is required to do to learn his trade in almost a half century of work. He was a general assignment reporter, sports editor, city editor, telegraph editor, managing editor and editor.

When he started newspapering as a young man, Harold Lloyd was starring in a two-reel comedy at the Idea Theatre and adult ticket prices were 35 cents, prohibition was being debated at the Democratic national convention in San Francisco, the county fair was to feature "a grand salute to aerial guns and an opening salvo of six World War I signal rockets," and Mertz, Zabel and Klevenow were the heroes of the Rueping baseball team.

In his 49 years with the Reporter Printing Co., Carl H. Keyser trained more than 150 men and women in news writing and editing. Among graduates of the Commonwealth Reporter editorial department today are three university professors, four editors of weekly newspapers, one of the state's top advertising agency executives, a physician, an Associated Press world services division writer, an AP bureau assistant manager, two managing editors, city editors and others in positions of responsibility in the newspaper business.

In the last month more than 40 former employes have written to their former boss and editor extending "best wishes" and congratulations on his 49 years wtih the Commonwealth Reporter.

Tom Masterson, for 30 years a top Associated Press foreign correspondent, put it well when he wrote to his former newsroom mentor: "Above all, your frequent admonition to write the story clearly and simply so the reader will understand it, served me well in writing about those complex happenings from countries far remote from the readers at home.

"Through it all—a civil war in China, riots in Singapore, the complexities of international summit conferences in Paris and the Arab-Israeli conflicts—you don't forget your first city editor, not if he was of the caliber of a Carl H. Keyser."

A newsman could prize no compliment more highly.

THE ABM

Mr. JAVITS. Mr. President, I ask unanimous consent that the text of my remarks, titled "ABM: The Stakes," delivered to the Edward R. Morrow World Affairs Forum of the Overseas Press Club of New York on July 10, 1969, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ABM: THE STAKES

With the opening of debate in the Senate, the "moment of truth" has arrived on the ABM issue. For, the ABM issue has acquired a symbolic importance beyond even the intrinsic questions involved. Its symbolic importance is twofold. First, the fate of the ABM is likely to determine the success or failure of the Strategic Arms Limitation (SALT) Talks now pending with the USSR; and second, if Safeguard is approved, it would establish a framework for U.S. policy that would place much heavier emphasis in terms of expenditure and national priority on military defense and security than on diplomatic and domestic considerations—including the grave crisis of the cities. That is why the stakes on this issue are so high.

The political coloration of the Nixon Administration's first term is in the making right now. The "Knowles Affair," the change in school desegration guidelines, and the proposal to deploy Safeguard tend to come down heavily on the conservative side; while the expansion of food programs to cope with hunger and the impending decisions in the war on poverty, unemployment compensation and Federal underwriting of welfare standards come down on the liberal side. Thus, the decision on deployment of Safeguard stands out as a critical phase of the struggle for the soul of the Nixon Administration.

The decision on Safeguard represents not the "war" but rather an important "battle," which could have a decisive effect on how the Administration will go in terms of the future of our nation and the world. It is in this repsect that I find it deeply regrettable that some advisors of the President have construed as political weakness the private efforts of Senate Republican moderates such as myself to reach a compromise on Safeguard. This compromise would involve deferring deployment for a year and is aimed at removing the issues of Presidential prestige and party loyalty from the difference of view over the ABM.

The future of arms limitation talks with the USSR is closely related to what happens in the ABM decision. If Safeguard wins, it will be much harder to bring about meaningful arms limitation. The die will have been cast for another step-up in the arms race and the Soviet Union will feel obligated to meet it. This does not mean that some lesser agreement would not be possible—as for example on prohibiting the use of the seabed for atomic weaponry—but a major arms limitations agreement will again have been put beyond practicability until both the Soviet Union and ourselves reappraise the new strategic situation in nuclear weapons created by the beginning of the Safeguard deployment. Thus, a major deficiency in the Administration's justification for the Safeguard ABM is the diplomatic deficiency.

Interestingly enough, neither our own nor the USSR negotiators seem to be sufficiently conscious of the likely blocking effect of the ABM deployment on arms limitation discussions now scheduled to start this summer. I feel the world has a right to conclude that there is a vast difference between coming to the arms limitations discussions with the United States, through the Safeguard deployment, having its hands in the cookie jar as the Russians already have with MIRV and other nuclear weaponry—and a situation in which the United States comes to the negotiating table, having foregone an alleged negotiating advantage. Self-restraint of this nature for a limited time not endangering our security would escalate nuclear arms limitation to the high level on which it should rest and help toward reaching a stopping point in the arms race. There are only two players in the game, the United States and the Soviet Union, and we certainly ought to try to come to the nuclear arms limitation agreement before throwing another chip—estimated to cost at least $8- to $15-billion—on the table. These are the true implications of the ABM decision as I see them.

The routine attitude toward nuclear arms control and the SALT talks contained in Secretary Laird's testimony is clearly inadequate to these historic circumstances, in my judgment. The truly effective way to prevent a major escalation of the arms race and to nullify, through prevention, the development of threatening new Soviet weapons capabilities is by international agreement. Yet, in his discussion of possible U.S. reaction to Soviet weapons developments, Secretary Laird gave only *pro forma* attention to the prospects for an arms control agreement. He said:

"One possibility, of course, is an agreement with the Soviet Union on the limitation of strategic armaments. I wholeheartedly support that objective, and we should do everything in our power to achieve a suitable agreement. But we must recognize that the issues involved are extremely complex and, even with the best of good will on both sides, it will be very difficult to work out an arrangement which truly safeguards the security of both sides."

From other remarks of Secretary Laird it seems that the Pentagon is determined to get the camel's nose under the tent with respect to the ABM. For instance, in describing ABM plans, Secretary Laird says: "How we would proceed from there would depend upon the outcome of the forthcoming talks with the Soviet Union on strategic arms limitations . . ." He makes this more explicit in another place: "Thus, it is entirely possible that a Soviet-United States agreement on strategic arms limitations might provide for a limited ABM defense on both sides."

This view on ABM presented by Secretary Laird, together with the developments on MIRV testing, indicate that the Administration may believe that the U.S. and the USSR can both "MIRV" a little and "ABM" a little without getting swept up in the "action/reaction" cycle of a major new round of the arms race. In my judgment, any complacency on this score is dangerously misplaced.

The real questions in the ABM decision, therefore, are:

(1) What is required by the security of the U.S. against strategic nuclear attack;

(2) What will best contribute to the success of negotiations (SALT) with the USSR regarding nuclear arms limitation and control;

(3) Does the expected technical capability of the Safeguard system really meet the tests set for its deployment;

(4) Is the alternative of limited delay in deployment the wise course; or, is there a better alternative to Safeguard deployment.

The past successes of the Pentagon in selling weapons systems to Congress has rested heavily on the technological presentations. But something extraordinary has happened with respect to the ABM—both in its Sentinel and Safeguard forms. The technological

arguments put forward by the Pentagon have been systematically and relentlessly challenged by independent civilian scientific experts. This spontaneous "revolt" by the scientific community is unique in our post-war history.

I wish to pay my personal tribute here to the many eminent scientists who have voluntarily stepped forward to challenge and refute on technological grounds many of the claims and assertions of proponents of Safeguard and Sentinel. If Congress denies authority to deploy the Safeguard system this year, perhaps the single decisive factor in turning the tide of debate will have been the patriotic vigilance of our leading scientists who have just refused to permit Department of Defense and Administration technological appraisals to go unchallenged.

I do not propose to review in detail the technological arguments on this occasion. But, I have followed the arguments on both sides in some detail. In my judgment, the "Commentary on Secretary of Defense Melvin Laird's May 22 Defense of Safeguard," written by three eminent scientific authorities—Drs. George Rathjens, Jerome Wiesner and Steven Weinberg—is a persuasive rebuttal to the case made by Secretary Laird. I agree with their conclusion:

"In a sense we may get the worst of all worlds with Safeguard: a poor defense of Minuteman; no significant defense of our cities; and yet because Safeguard uses the same components as Nike X and because the production lines for those components will have been established the Russians may react to our decision by expanding their offense just as if we were deploying a large scale defense for our population."

The most disturbing element of the case which Secretary Laird has been making for Safeguard is the deficient calibre and thrust of its basic, unstated intellectual concepts and assumptions. Also, controversy has developed concerning the national intelligence estimate of the Soviet missile threat—between the Secretary of Defense and the Director of Central Intelligence. The development of a credibility gap in this field could be a most dangerous precedent.

Pentagon testimony also strains credulity by attributing to the Soviet Union only the single-minded motive of an implacable will for conquest combined with a technological infallibility which our Department of Defense does not even claim for itself. Notably absent from this assumption regarding the USSR is any allowance for such considerations as the self-interest of Soviet civilians, including their demand for a better standard of living or the genuineness of their desire for peace.

When carried to extremes this sort of rigid thinking becomes contradictory and self-defeating. For instance, in one place Secretary Laird suggests that our Polaris submarine force will become vulnerable to Soviet weapons technology advances in the 1970's, and cites this as a reason why Safeguard is needed. But at another point he suggests that the USSR is planning to build a major fleet of Polaris-like submarines of its own—during the very years when he suggests that our superior version of the same weapons system may be unreliable—and he uses this hypothetical "threat" as another justification for Safeguard!

In my judgment, those responsible for preparing Secretary Laird's testimony on behalf of Safeguard have a view of the Soviet Union which is static and one-dimensional. As such it is dangerously inadequate to the judgments which must be made in the nuclear weapons field.

The complexities of weapons-systems design and war-gaming are onerously demanding in themselves and I do not blame the technicians who work in this field if work they have to on the basis of static and incomplete assumptions concerning the political motivations and intentions of such a vast and enigmatic society as the Soviet Union. But for those who must make the final judgments on these life and death matters, it is not enough to accept without challenge the arbitrary assumptions of the war-gamers—to wit, that the adversary is free to pursue without restraint or distraction a single-minded drive for pre-emptive nuclear war capability, and that the U.S. response should be one of accumulating a limitless counter arsenal of military hardware. If the political authorities on both sides listen only to their war-game advisors there can be no brake on the nuclear arms race other than mutual bankruptcy—or worse.

In my judgment, any future Soviet decision to provoke a nuclear confrontation with the United States will stem as much from an adverse assessment of our national unity, will and morale as it will from an audit of warheads and megatonnage.

This hypothesis has direct pertinence to the question at hand because the ABM has become a symbol in the debate over national priorities. If the disaffected elements of our society—young rebels, anguished blacks, frustrated intellectuals, and the millions condemned to a deteriorating quality of life in our sprawling urban areas—are given to understand that technologically dubious military hardware is to have first claim on national resources, then we may well witness the kind of spiritual depression and national divisiveness which could tempt an adversary into thinking the U.S. could be faced down in a threatened nuclear confrontation. Conversely, I am confident that any potential aggressor would be deterred by the prospect of a revitalized and reunified America which was in the process of achieving breakthroughs on urban, racial and economic problems.

In reviewing the intellectual deficiencies of the Pentagon's justification for Safeguard, it is also necessary to comment on the strange revival of the "Chinese threat" argument. The President dismissed that argument in one of his earliest press conferences on the ABM issue, and on May 22, General Wheeler, appearing with Secretary Laird before the House Appropriations Committee said: "The principal feature of this Sentinel deployment upon which the Joint Chiefs of Staff had reservations was its primary orientation against the Chicom ICBM threat."

Nonetheless, we find in Secretary Laird's testimony such extraordinary statements as: "Therefore, it is reasonable to conclude that our ability to deter Communist China with our strategic offensive forces is considerably less certain than in the case of the Soviet Union."

The Secretary then proceeds to conjure the following frightening prospect:

"The President of the United States, no matter who he may be at the time, could find himself in an extremely difficult position in a serious confrontation with a Communist China armed with a force of even 25 relatively primitive ICBMs. Our cities would be hostage to the Chinese ICBM force, and the President would have no alternative but to back down or risk the destruction of several major cities and the death of millions of Americans."

Indeed, Secretary Laird's remarks about the Chinese suggest that the Pentagon has learned very little about Asia from the Vietnam war. For all its rhetoric, Peking has been very cautious militarily with respect to nuclear weapons and, with but a handful of missiles, any decision by Communist China to use them would be suicidal—and Peking would know this.

In my judgment, this kind of argument, designed to play upon deep fears of an alleged "Yellow Peril" is no more creditable, or credible, than former Secretary Rusk's attempt to conjure up the frightening image of "a billion Chinese on the Mainland, armed with nuclear weapons" as a rationale for the Vietnam War at a beleaguered moment when the earlier justifications had lost their credibility.

The present moment may well prove to be one of the most decisive in our history. The United States and the Soviet Union are poised on the brink of a major new escalation of the arms race, as both sides edge closer to deployment of a new generation of weapons systems which could upset the entire strategic "balance of terror" that has prevailed for the past decade.

All of our experience of the nuclear age argues that there can be no stopping halfway—once begun, the next round of the nuclear arms race will have to be played out to its logical conclusion. The dangerous strategic destabilization involved—and the staggering cost of the new weapons system—literally in the tens of billions—can bend the development of human society in truly nightmarish ways.

We have a chance now, using the pause of both sides on a stable strategic plateau, to assert rational human control over the arms race. It may be that the wit and will of man will prove inadequate to foraging an effective agreement to control the terror of nuclear war. But surely we would be bitterly condemned by future generations if we do not at least try—if we do not make every effort now to break the "action/reaction" cycle through a negotiated nuclear arms control agreement.

THE PESTICIDE PERIL—XXXIII

Mr. NELSON. Mr. President, New York is one of the many States alarmed about the effect of DDT on fish and wildlife and is currently considering proposals to ban the use of this persistent, toxic pesticide.

The State division of fish and game is concerned that the DDT residue levels in lake trout in the State have increased significantly since the 1963 samplings of trout revealed an average of 5.6 parts per million of DDT residues—already 0.6 parts per million above the maximum amount permitted for fish in interstate commerce by the Federal Food and Drug Administration.

Also, in trout eggs taken from Lake George, the department reported "100 percent mortality in the young fry as early as the late 1950's," according to an article in the Ithaca Journal.

The department is expanding its sampling program so that by the end of this summer it should have a complete picture of the extent of pesticide pollution in the waters of New York State.

I ask unanimous consent that an article published in the Ithaca, N.Y., Journal of July 2, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DDT RESIDUE LEVEL IN CAYUGA LAKE

(By Helen Mundell)

"I'm deadly sure the (DDT residue) level has gone up in lake trout from Cayuga Lake," William Bentley, assistant director of the State Division of Fish and Game in Albany, told the Journal this morning in an interview.

A 1963 analysis showed fish in Cayuga Lake had as much as .1 parts per million of DDT residue, which is more than the 5 ppm which the Federal Food and Drug Administration considers safe.

"We're pretty concerned with it, frankly," he added.

Bentley also said that the division has had "decreasing success in reproduction" of lake trout eggs taken from Cayuga and Seneca Lakes, because of the DDT residues in the eggs, although he declined to give a percentage.

Bentley said he had no data for DDT residue levels for Cayuga Lake trout for 1968 or 1969. Fish from last fall and this summer are being analyzed at the Rome Pollution Laboratory of the State Conservation Department, as part of an intensified pesticide identification program.

Pressed for data from earlier years, he said the department has some data, but he said the department has found errors in it. He refused to release it, saying:

"I don't like to give hazy or scare data."

He said some of the earlier data gives some "tremendous" levels, which he said he doesn't believe are correct.

"Within a relatively short time we'll have Cayuga Lake data," he said.

The last published data for Cayuga Lake was from fish collected in 1963 in the Taughannock area. It showed that of three trout, one contained 7.1 parts per million of DDT residue; a second contained 6.2 ppm and a third contained 3.6 ppm, for an average of 5.6.

The federal Food and Drug Administration has set five ppm as the maximum amount permitted for fish in interstate commerce. Fish with more than that amount are seized and destroyed.

Bentley said that of three fish caught in 1968 in Lake George one had 143 ppm of DDT residue, a second had 118 ppm and third had 41 ppm. The largest amount of DDT was found in the largest, oldest fish, he said, as DDT builds up year-after-year as the trout feed on smaller fish containing DDT.

In trout eggs taken from Lake George, he said the department had had up to 100 per cent mortality in the young fry as early as the late 1950s.

Bentley said the eggs hatch normally, but after they hatch the young fish live on the yolk sac attached to their bellies for up to 30 days. DDT is concentrated in the fat in the egg yolk and just as the young fish is ready to begin feeding, it absorbs the DDT in a massive enough dose to be lethal.

The same things now happening with eggs taken from Cayuga and Seneca Lakes, he indicates.

He considers the lack of success in reproducing trout to be very significant, not only to trout fishermen but to everyone, because it is an indicator of what DDT is doing to "our total environment."

Because of the department's concern with pesticide pollution, it has expanded its sampling program from 12 lakes to 100. During the summer it expects to analyze at least three fish from each of at least six species from the 100 lakes, including Cayuga.

"We expect to go on a two-shift basis" in analyzing the samples, Bentley said.

"By the end of the summer we'll have a pretty good picture from throughout the state," he concluded.

AMERICAN BUSINESS OPERATIONS IN FOREIGN COUNTRIES

Mr. MURPHY. Mr. President, too often these days we hear those who are ever anxious to criticize the United States, speaking of American business "exploitation" in foreign countries. We hear far too little of the progressive and constructive advances which our businessmen have made possible through their operations in foreign lands.

There are many shining examples of companies which have introduced their products in Latin American countries utilizing a policy of local ownership. In such instances these countries have received great benefits from the standpoint of financial gains, employment, and general all-round better economic conditions.

Donald M. Kendall, the dynamic president and chief executive officer of PepsiCo., Inc., has constantly insisted upon such policies in administering the companies under his supervision. Pepsi-Cola is a good example. Mr. Kendall, recently named by President Nixon as head of the National Alliance of Businessmen, came to this job well prepared by his broad background in business and international affairs. It is not surprising that he would administer the affairs of PepsiCo., Inc., with policies that benefit mankind as a whole.

Considering the above, I thought that Senators would be interested in reading the detailed and well-researched article by the prominent Latin American writer of the Evening Star, Jeremiah O'Leary, dated July 15, 1969, in the business section of this newspaper. The article, entitled "U.S. Companies Find Policy of Local Ownership Is Best," concerns Mr. Kendall's excellent work in carrying out such policies. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. COMPANIES FIND POLICY OF LOCAL OWNERSHIP IS BEST

(By Jeremiah O'Leary)

Nothing is more irritating to Latin American governments and peoples than the real or imagined spectre of a giant United States corporation extracting the national riches, drawing down enormous profits and generally functioning as if the locals were colonials.

The syndrome has caused, and still does, seriously strained governmental relations, expropriations with or without compensation and violence. The unfortunate collision of interest has affected fruit companies, mining firms, communications companies and oil interests.

When there is trouble it can range from a few broken windows at the U.S. company offices to the burning of department stores. Few Latin countries have not experienced the turmoil aroused by the symbolism of a powerful American company amid the grinding poverty that is the lot of a majority of Latin Americans today.

In this framework of company-government-people relationships, Pepsi-Cola has offered an example for nearly 35 years of the fact that local ownership can benefit Latin and North America alike and that multinational business practices can make both social and commercial contributions of importance.

OUTLOOK EXPLAINED

Donald M. Kendall, president and chief executive officer of PepsiCo., described the firm's philosophy this way: "We found out in the U.S. a long time ago that a local bottler, well known in his community and an integral part of it, made a lot more sense than absentee ownership. The same concept holds true in Latin America where for many years we have made the products and the personnel as indigenous as possible and the companies are not merely an extension of a North American business.

"Around the world, we are in 115 countries with 44 different languages and dialects. The only reference to the parent company is in the trademark. Only nine of 151 plants in 29 countries and territories in Latin America are company-owned. In all the others, the operation is locally-owned and controlled in all cases by nationals of the respective companies. These operations are totally autonomous and PepsiCo., exercises control only over product quality and trademarks."

Kendall said Pepsi-Cola plants now represent an investment in Latin America of more than $160 million, employing 23,000 individuals in all categories and earning approximately $36 million. The annual retail value of Pepsi-Cola products sold through 650,000 outlets in Latin America is more than $250 million. He said PepsiCo gives direct employment to 2,800 people in Latin America and only 14 of these are North Americans. Worldwide, there are 10,000 direct employes and only 35 Americans among them.

Nearly everything except the working of the formula for the soft-drink originates in the country where the product is made. The essence or concentrates, the sugar, the cases, the glass for bottles are all supplied from within Latin America—not shipped in from the United States. Kendall said the annual value of the raw materials involved in bottling and distribution is $100 million and all is purchased in the local economy.

The contribution by the 151 operations to government revenues is estimated to be $25 million in the form of income and sales taxes yearly. Related services such as advertising, travel, freight and insurance comes to $22 million.

The company owns and operates concentrate manufacturing plants in Mexico, Puerto Rico, Brazil, Argentina, Uruguay, Colombia and Chile as well as food plants in Mexico and Venezuela.

Pepsi-Cola emigrated to Latin America in 1935 when a bottling plant was opened in Havana. The company expanded rapidly in Latin America through local investors under the franchise system. During the 23 years from 1945 to 1968, the number of bottlers in the Latin American and Caribbean region increased from 23 to 151 existing today. Company officials point out that in much of Latin America soft-drinks have a nutritional value as well as the accepted refreshment concept of the U.S. The company's president for Latin operations today is a Mexican; his predecessor was an Argentine.

Kendall and the parent company are convinced they have a corporate commitment to community development programs. The company was a charter supporter of Accion, a private self-help program similar to the Peace Corps. Kendall was formerly president and is now chairman of the board.

JANESVILLE GAZETTE ENDORSES DDT BAN

Mr. NELSON. Mr. President, the Janesville, Wis., Gazette is joining the effort to inform the public of the dangers to our environment and to human health from the continued use of DDT through editorials endorsing proposals for a ban on this particular pesticide.

I ask unanimous consent to have printed in the RECORD the Gazette's July 23 editorial commending the Wisconsin State Assembly for the passage of a bill to ban the sale, use, and distribution of DDT in Wisconsin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASSEMBLY DOES A GOOD JOB

The Wisconsin Assembly showed it is in tune with public thinking last week when it

voted 99–0 to ban the sale, use and distribution of DDT in this state. The bill now goes to the Senate, which we hope will display a similar public consciousness and join the Assembly in banning the persistent pesticide.

As passed by the Assembly, the bill provides that DDT may be used only when an emergency board decrees that it is needed to combat "an outbreak of plant diseases of epidemic proportion" or the outbreak of an "epidemic disease of humans spread by insects which can only be controlled by DDT." That makes the ban pretty complete, and that's the way the Senate should leave it.

The lion's share of the credit for passage of the bill goes to Assemblyman Lew Mittness of Janesville, who is the bill's chief author and main sponsor.

When Mittness first introduced the bill, its chances for passage appeared slim. But hearings in Madison, coupled with alarming reports on fish and bird deaths caused by DDT, mobilized public opinion against the pesticide. The outcry became so widespread that legislators realized it was in their political interest to support the DDT ban.

Mittness, along with the bill's other supporters in the Assembly, pressed hard to get the measure out of committee. They also were instrumental in beating down several attempts to weaken the bill with amendments and steered it to successful passage.

Mittness, who was delighted by the unanimous passage of the DDT ban in the Assembly, pledged to use his influence for the measure in the Senate. "I'm going to talk to some of the senators," he said. The Janesville assemblyman said he thinks the 99–0 vote in the Assembly will induce the Senate to act favorably on the measure.

We hope Mittness is right, because Wisconsin sorely needs a ban on pesticides like DDT that are killing our fish and wildlife at an alarming rate. While the DDT ban bill does not extend to other pesticides, it is an important beginning because DDT is one of the most popular and one of the cheapest pesticides on the market.

Michigan already has banned the sale of DDT and other states are expected to follow. Let us hope that Wisconsin is one of the first to join in.

THE OLD FRONTIER STILL LIVES

Mr. HANSEN. Mr. President, the New York Times carried an interesting article about the State of Wyoming, its past and its present.

Wyoming is proud of her past. It was our ancestors who had the desire, the courage, and the strength to settle the wild, unsettled frontier. They fought against almost insurmountable odds, found in themselves the qualities necessary to settle, develop and stay in Wyoming. They battled Indians, produced the farms and ranches, and used them to provide a way of life for their families. They set the stage for the present. We are proud of our past.

We are proud of our present. Wyoming provides the beauty, the people, and an opportunity that is hard to find. Wyoming's citizens are the "now" people, the people who grow with the times. Their kindness and friendliness, throughout the State, is the topic of discussion for a number of our visitors. We have a real interest in tourists and in helping folks. It is a fine trait and motivates people to return again and again.

We are proud of our future. Now industry and growth is what they seek. The industry, the growing economy, the opportunity raising its head, and the youth are the factors. The fervor of our youth is symbolized in the Casper Troopers. The space of our land, the peaks of our mountains, the green of our forests, and the recreation we provide draws the tourists. All of these factors, coupled with the people—our very real power—helps point up that our opportunities are unlimited.

I ask unanimous consent that the article from the New York Times be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WYOMING IN THE SPACE AGE: THE OLD FRONTIER STILL LIVES

(By Martin Arnold)

CASPER, WYO.—North from the hills, black with Ponderosa pine, the plains stretch out as far as the eye can see, barren of all but the sun-dried sagebrush tumbling in the wind. This is a land that appears as serene and as orderly as the hills and steppes where 75 years ago there were badmen and later in the early 1900's, fortunes were made overnight in oil, and shootings to protect claims were not uncommon.

There remains a quality of the frontier about this city of 40,000. While people in the urban centers to the east and west are wrestling with the problems of housing and welfare, of muggings and demonstrations, Casper, several generations after the Indians and badmen, still has its feuds between the ranchers and the prospectors, still concerns itself with the problems of people who live for such basics as shelter and water.

Now in July, when the cattle and sheep have been driven to pasture high in the cool mountains 100 miles away, the plain is mostly yellow and brown, although here and there it is suddenly purple beneath a cloud or white where the wind is stirring a sand mound.

The big sky is desolate as the sea, but its blue is lighter, clear, with a trace of pink. And the big sky is still, as if, like the plain below, it had been scorched by the sun.

But if you stand on the top of the hills and look down you see a tight mass of steel and concrete, of wood and stone and brick, of pipes and wires and poles, of roads and highways. Casper is imposed upon the plain's edge, where once the Cheyenne, the Arapahoe, the Comanche, the Black Foot and Sioux roamed even before the Oregon Trail passed this way bringing, first, the pioneers headed westward and then the fur trappers and the cattle up from Texas.

Casper does not strike out boldly into the emptiness around it. It inches out timidly, street by street. In the midst of hundreds of thousands of acres, its houses, in architecture similar to those in any New York City suburb, are strung together as close as beads on an Indian embroidery. "It's the covered wagon complex. We all want to be together," a resident said. "Maybe it's to protect ourselves from the weather."

The automobile stickers say, "Wyoming: Oil Is Our Bread and Butter." Oil was first drilled in the state in 1888 three miles northwest of Casper—and ever since, the city has been a "boom and bust" town.

It brags of its economic vitality, but the picture is somewhat misleading. Up to five year ago, 50 major oil companies had administrative offices in the city, but now most have pulled out, leaving behind only a small number of field workers. Mobil Oil moved 150 families several years ago. That was a severe blow, and the immediate effect was the closing down of half the shops in one of the state's largest shopping centers.

Many young people are leaving. Fred Goodstein, who arrived here 46 years ago as a junk dealer and who made millions in oil, says, "If we can make Casper College a four year college and then get a graduate school we can hold some of our youth. But there's no substitute for smokestack industry and unless we can get a larger labor force we wouldn't have that."

The lustiness that the city has comes not from the life-style of its natives, who are conservative people, but from its oil families, who are transients, moving on to new oil areas every few years.

Still, the plains immediately around the city are largely cattle and sheep land, and the Old West's earlier war between the ranchers and the homesteaders is now between the ranchers and the mineral prospectors. Walter J. Reynolds, a rancher, complains that there are "hundreds of unplugged drill holes" on his land and that because of claim jumping many portions of his ranch have been staked and drilled for claim validation three times.

In recent years, there has been an invasion of uranium prospectors, a secretive bunch. Howard Arnett, president of the Wyoming Mining Association, said, "It's a favorite Western plot. A guy goes out on the plains in his black hat and then rushes back and files his claim. Thousands of uranium claims are filed every month in the courthouses."

"When a man sitting at a switchboard in Kansas City can start a well pumping here, you can see that the city has to change from oil to mining to keep going," Mr. Arnett said.

It is the frontier in many ways. The people of Casper wear cowboy boots and ten-gallon hats and have front lawns that are decorated with wagon wheels. Horses often graze in their small backyards, and the city's business streets, although paved, are wide enough to allow the old freight wagons pulled by 22-horse teams to make U-turns.

One of the first things visitors are told about is the Casper Troopers, a drum and bugle corps composed of local men and women, who have traveled around the world winning international and national drum and bugle contests.

Old timers are proud of Goose Egg and Medicine Bow, just to the southwest and south, where Owen Wister's Virginian fell in love with Molly Wood, the Bear Creek schoolteacher, and feuded with Trampus, the range bully. They brag of Caspar Collins, who was killed July 26, 1865, when his horse panicked as he went to rescue a fallen trooper and carried him into a horde of oncoming Indians. An Army clerk misspelled his first name, and the city became Casper rather than Caspar, although the old fort, reconstructed at the bend of the North Platte River, a few miles out of town, is correctly Fort Caspar.

The Old West exists, however, in deeper ways. To a startling degree, the law of the sheriff prevails in Casper. Partly this is because of the national concern with law and order. Mainly, it's a deep-grained tradition, that the sheriff of the police are ever on the alert to keep out the badmen who drift in from the plains.

Maybe in 1969 it's just a motorcycle gang. Robin Axlund, 18, who had set up a fireworks stand at the edge of the city, said, "It's bad news on the plains, with everything so flat and dry and lonely. I told the sheriff the motorcycle gang was trying to get my fireworks. He told me to sleep out here with a gun and shoot them. I've got my gun now."

The lawmen are tough. Their cruisers follow the cars of strangers and some residents at night, and a simple question asked by a stranger brings, often, a surly answer. James W. Fagan, 41, an iconoclastic criminal lawyer, who used to work for Senator Gale McGee, says, "After 100 years of the Constitution, it doesn't matter out here what the Supreme Court says. It's irrelevant. The attitude of the county attorneys is that our state courts will uphold anything they do."

The North Platte River, near the site where Brigham Young built a ferry in 1847, flows around and into Casper, and the city likes to boast that it is the only river in the country once polluted but now clean, the entire cost of the cleanup having been done by the Standard Oil Company.

The river intrudes into the city in an area called the Sand Bar, several blocks from the main business section, where Casper's blacks—estimates range from 500 to 1,500—live in dilapidated one-story wooden shacks, most of which used to be brothels. Several of the shacks are still brothels, run by the blacks for a white clientele.

As far as white Casper is concerned there is no black problem. Blacks work as janitors and the Sand Bar will be replaced by a reluctantly accepted urban renewal project.

A polygot of Irishmen and Baptists, of Jews and Mormons, with a handful of Lebanese thrown in, the city has 49 churches and one synagogue. Casper is proud that there is no racial tension. The blacks are on the Sand Bar and the Indians are on a reservation, 100 miles to the west.

"Our children know when they get out of school there'll be some jobs for the white kids, but none for the black kids," the black proprietor of a brothel said. "Black kids have no money in their pockets to circulate, so most of them leave town."

"It's a happy city," said A. Deryl Safford, a certified public accountant. "I've moved away six times and have come back. It's a friendly, compassionate, helpful city. There's no such thing as a stranger."

DELPHIAN STUDY CLUB OF PADUCAH, TEX., URGES ESTABLISHMENT OF 100,000-ACRE BIG THICKET NATIONAL PARK

Mr. YARBOROUGH. Mr. President, the Delphian Study Club of Paducah, Tex., has recently adopted a resolution urging the establishment of a 100,000-acre Big Thicket National Park in southeast Texas, as provided in my bill S. 4.

The Big Thicket has long been a paradise for the hunter. In spite of long abuse, small game still abounds. Alligators forage along the sluggish bayous; America's four varieties of poisonous snakes can be found in the dense brush; wild cats, foxes, raccoons, squirrels and opossum abound; and the deep woods still produce an abundant crop of white-tailed deer.

However, the big game and unusual animals face extinction. Jaguars and ocelots, which were once found within the Thicket have not been seen for many years. Local hunters heatedly dispute whether or not a few bears and panthers still roam the remote swamps. But, as these remote areas disappear, this dispute becomes increasingly pointless.

This beautiful and unique area with its rich and diverse plant and animal life is disappearing at a rate of 50 acres per day. It has already been reduced from its original size of 3.5 million acres to about 300,000 acres. We must act now if we are to save this invaluable resource.

Mr. President, I ask unanimous consent that the resolution adopted by the Delphian Study Club of Paducah, Tex., be printed in its entirety, including the name of its signer, at this point in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas, the Big Thicket of Texas is a meeting place for eastern, western and northern ecological elements; and

Whereas, this is the last stand in Texas of the nearly extinct Ivory-billed Woodpecker; and

Whereas, this beautiful and unique area is rapidly being destroyed by bulldozer and chain saw; therefore

Be it resolved that the Delphian Study Club of Paducah, Texas urges the preservation of at least 100,000 acres containing the most unique areas of the Big Thicket, these areas to be connected by environmental corridors; and

Be it further resolved that the Interior and Insular Affairs Committee of the Senate of the United States be requested to set immediate hearings on S4 which would create a Big Thicket National Area.

NELDA H. TYLER,
(Mrs. R. H.).
President.

THE JOINT ECONOMIC COMMITTEE

Mr. PROXMIRE. Mr. President, from time to time Senators have expressed interest about the present membership and structure of the Joint Economic Committee. I should like to discuss our present organization and membership, particularly since our chairmanship rotates every Congress and also because we have added two new members in this session.

As presently constituted, the committee is made up of 20 members, 10 from each House. Our chairman during this 91st Congress is the distinguished chairman of the House Banking and Currency Committee, Hon. WRIGHT PATMAN, of Texas, an excellent legislator and a dedicated public servant. It has been a pleasure and honor for me to work with him over the years. Mr. PATMAN was the floor manager of the original Employment Act at the end of World War II, and he has been steadfastly devoted to the great objectives of this act ever since. More than anyone in either House, he has served as a guiding spirit of the committee.

During the 90th Congress, it was my honor to serve as chairman of the Joint Economic Committee, and at the present time I am the vice chairman and the chairman of the committee's Subcommittee on Economy in Government.

The Subcommittee on Economy in Government has been making prolonged and extensive inquiry into national priorities and defense spending and I am most grateful to my associates on that subcommittee for their steadfast participation and support.

Chairman PATMAN heads the distinguished Subcommittee on Economic Progress, which over the years has contributed so much to our knowledge of economic growth, automation, and public investment. There are six other subcommittees covering Urban Affairs, Inter-American Economic Relationships, Foreign Economic Policy, Economic Statistics, International Exchange and Payments, and Fiscal Policy.

Mr. President, I ask unanimous consent to have printed in the RECORD a complete listing of our subcommittees and their members.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

THE 91ST CONGRESS OF THE UNITED STATES—
JOINT ECONOMIC COMMITTEE

HOUSE OF REPRESENTATIVES

Wright Patman, Texas, *Chairman.*
Richard Bolling, Missouri.
Hale Boggs, Louisiana.
Henry S. Reuss, Wisconsin.
Martha W. Griffiths, Michigan.
William S. Moorhead, Pennsylvania.
William B. Widnall, New Jersey.
W. E. Brock 3d, Tennessee.
Barber B. Conable, Jr., New York.
Clarence J. Brown, Ohio.

SENATE

William Proxmire, Wisconsin, *Vice Chairman.*
John Sparkman, Alabama.
J. W. Fulbright, Arkansas.
Herman E. Talmadge, Georgia.
Stuart Symington, Missouri.
Abraham Ribicoff, Connecticut.
Jacob K. Javits, New York.
Jack Miller, Iowa.
Len B. Jordan, Idaho.
Charles H. Percy, Illinois.

Committee staff

John R. Stark, *Executive Director.*
James W. Knowles, *Director of Research.*
Economist: Robert H. Haveman, Richard F. Kaufman, Loughlin F. McHugh, George D. Krumbhaar, (*Minority*), John R. Karlik, Frazier Kellogg, Douglas C. Frechtling (*Minority*).
Administrative: Esther S. Hickey, Hamilton D. Gewehr.
New Senate Office Building, G–133, Washington, D.C., 20510, Telephone: (202) 225–5171, Government Code: 180.

SUBCOMMITTEE MEMBERSHIP

Economic Progress

Representatives: Wright Patman, *Chairman;* Martha W. Griffiths, William S. Moorhead, W. E. Brock 3d, Clarence J. Brown.
Senators: William Proxmire, J. W. Fulbright, Herman E. Talmadge, Len B. Jordan, Charles H. Percy.

Economy in Government

Senators: William Proxmire, *Chairman;* John Sparkman, Stuart Symington, Len B. Jordan, Charles H. Percy.
Representatives: Wright Patman, Martha W. Griffiths, William S. Moorhead, Barber B. Conable, Jr., Clarence J. Brown.

Urban Affairs

Representatives: Richard Bolling, *Chairman;* Henry S. Reuss, Martha W. Griffiths, William S. Moorhead, William B. Widnall, W. E. Brock 3d, Clarence J. Brown.
Senators: Abraham Ribicoff, William Proxmire, Jacob K. Javits, Charles H. Percy.

Inter-American Economic Relationships

Senators: John Sparkman, *Chairman;* J. W. Fulbright, Abraham Ribicoff, Jacob K. Javits, Len B. Jordan.
Representatives: Richard Bolling, Hale Boggs, Martha W. Griffiths, Barber B. Conable, Jr., Clarence J. Brown.

Foreign Economic Policy

Representatives: Hale Boggs, *Chairman;* Henry S. Reuss; William S. Moorhead; William B. Widnall; W. E. Brock 3d; Barber B. Conable, Jr.
Senators: John Sparkman, J. W. Fulbright, Herman E. Talmadge, Stuart Symington, Abraham Ribicoff, Jacob K. Javits, Jack Miller.

Economic Statistics

Senators: Herman E. Talmadge, *Chairman;* J. W. Fulbright; Jack Miller.
Representatives: Richard Bolling, Martha W. Griffiths, Barber B. Conable, Jr., Clarence J. Brown.

International Exchange and Payments

Representatives: Henry S. Reuss, *Chairman;* Richard Bolling; Hale Boggs; William

S. Moorhead; William B. Widnall; W. E. Brock 3d.

Senators: William Proxmire, Stuart Symington, Jacob K. Javits, Charles H. Percy.

Fiscal Policy

Representatives: Martha W. Griffiths, *Chairman;* Hale Boggs; William S. Moorhead; William B. Widnall; Barber B. Conable, Jr.

Senators: William Proxmire, Herman E. Talmadge, Stuart Symington, Jacob K. Javits, Jack Miller, Charles H. Percy.

ESCALATING COSTS OF MEDICARE AND MEDICAID

Mr. WILLIAMS of Delaware. Mr. President, Congress has been concerned over the escalating costs of both the medicare and the medicaid programs, and the Finance Committee has been conducting a study to determine the basis of this escalation.

One point called to our attention was the manner in which nursing homes were having their cost basis substantially increased by changing hands at inflated figures or through reappraisals.

The increases resulting from this upward reevaluation feeds through in higher per bed and diem costs for medicare and medicaid patients.

A few weeks ago I visited the Department's Baltimore offices, and we discussed this point further, at which time specific cases were selected for more detailed examination.

I have just received a report from the Department of Health, Education, and Welfare with the results of one of these cases which was selceted for reauditing, and I ask unanimous consent that the report from Mr. Thomas M. Tierney, Director of the Bureau of Health Insurance, dated July 22, 1969, relating to this case be printed in the RECORD following my remarks.

This nursing home selected was a 48-bed institution, and as this report will indicate, its established book value was $342,020 with a per bed cost of $7,125.

This home was reappraised and given a new appraisal cost basis of $586,541, or an increase of 70 percent, with the result that the per bed cost was increased from the old basis of $7,125 to $12,220, or a corresponding increase of 70 percent.

It is significant to note that according to Mr. Tierney's report the intermediaries had approved without question this upward appraisal as the basis for determining increased medicare costs, and it is futher significant that HEW, with all of its audit force in Baltimore, had not discovered this discrepancy nor placed any objection to this higher determination until after it had been selected as a sample case.

The Department now confirms that this does represent an overcharge and advises that the intermediary has been instructed to reexamine the rate schedule and make the necessary adjustments recognizing the lower cost basis.

The most disturbing point, however, is the apparent lack of concern that we find in this Department in not having examined these cost factors prior to congressional action.

I ask unanimous consent to have printed in the RECORD a letter from Thomas M. Tierney, Director of the Bureau of Health Insurance, and an enclosure.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, SOCIAL SECURITY ADMINISTRATION,

Baltimore, Md., July 22, 1969.

Hon. JOHN WILLIAMS,
Senate Finance Committee,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILLIAMS: We have now compiled the information you requested regarding the —— Nursing Home in New York. I am enclosing copies of the institution's balance sheet, the auditor's work papers and the appraisal reports.

The appraisal report has apparently been prepared by a recognized and reputable appraisal firm. While we are not in a position to make an expert evaluation of the appraisal itself, we do have difficulty comprehending the large differences between the recorded capitalized costs of assets owned by this proprietary provider and the valuation determined as a result of the appraisal. For this 48-bed institution, the per bed cost is as follows:

Book value, $342,020; per bed cost, $7,125.

Appraisal cost, $586,541; per bed cost, $12,220.

The appraisal was initially agreed to by the Hamilton Life Insurance Company which was then intermediary for this extended care facility. When Hamilton Life was terminated as intermediary and Travelers took over responsibility for the former's providers, it simply went along with the initial decision by Hamilton Life. Presumably, the provider's basis for requesting the appraisal was that its property records did not adequately reflect the cost of the facility.

Our position on this issue, which we have communicated to Travelers, is that since this is a proprietary provider and undoubtedly files tax returns, its tax returns should be used to establish the cost basis for its assets. The result is that although the appraisal reflects a substantially greater cost basis for assets of the —— Nursing Home, it will not be recognized for purposes of Medicare reimbursement. Instead, the intermediary has been instructed to reverse the entry, recognize the cost basis shown for Federal tax purposes and make the necessary adjustments.

Sincerely yours,

THOMAS M. TIERNEY,
Director, Bureau of Health Insurance.

REPORT ON INCREASE IN DEPRECIABLE BASES OF ASSETS —— NURSING HOME, ——, N.Y.

The balance sheet for the reporting period ended December 31, 1967, (copy enclosed) reflects a substantial increase in the depreciable base of the prover's fixed assets. This increase was the result of an appraisal of the historical cost of the assets (copy of appraisal report enclosed). The appraisal was requested by the provider and approval granted by the intermediary on July 12, 1968, (copy of approval letter enclosed). The appraisal was approved by the intermediary because the provider apparently did not have adequate evidence to support the historical cost of the assets.

The effects of the appraisal on the basis of the provider's assets are as follows:

Increase in Asset Values:

	Value before appraisal	Value after appraisal	Change
Land	$6,340	$18,000	$11,660
Buildings	342,020	586,541	244,521
Major movable equipment	80,923	86,683	5,760
Subtotal	429,283	691,224	261,941
Accumulated depreciation	(73,707)	(122,908)	(49,201)
Book value	355,576	568,316	212,740

RURAL HOUSING—NEED AND NONRESPONSE

Mr. METCALF. Mr. President, last month the first National Rural Housing Conference was held at Airlie House, in Warrenton, Va. The distinguished junior Senator from South Dakota (Mr. McGOVERN) was the keynote speaker. It is my understanding that the report of that conference will be available in published form in the next few weeks.

It is a commentary that this, the first national conference on rural housing, received so little attention in the press. The fact is, as is known, but seldom acted upon, that the rural areas and small towns of America contain more bad housing than the urban areas—not only in proportion to population but in flat numbers. Yet our national attention tends to focus on the urban areas and to neglect rural and smalltown needs. Certainly our Federal programs have largely overlooked the larger needs for the more concentrated ones.

How much attention, for example, are we giving to one rural group—the Indians—who are the worst-housed single group in the Nation? For Indians living on reservations, the incidence of indecent housing is not 1 in 10, as it is for the Nation as a whole, or even 1 in 2, as it is for the general population of those below the poverty line; it is 2 out of 3. In fact, if one considers the crowding aspect of housing, it is probable that 3 out of 4 families on reservations live in inadequate housing.

How much attention do we pay to the fact that incomes are lower but the costs of adequate housing higher in rural areas and small towns? Thus, while the average income of people living outside metropolitan areas is more than one fifth lower than people living in metropolitan areas, the Kaiser Committee found that a family outside a metropolitan area required as much as one third more income to secure adequate housing.

Surely it is time that we gave the housing needs of our rural areas and small towns at least as much attention and as much in the way of assistance for low-income housing as we do our great metropolitan areas. I hope that the work of the National Rural Housing Conference and the actions it took will mark the beginning of a real effort to correct this long and shameful neglect and the imbalance which has been its result. Specifically, I invite the attention of Senators to a background paper that was prepared for that conference by George Rucker, of the staff of the Rural Housing Alliance. It attempts to bring together some of the available information

on housing needs—past, present, and future—in rural America; and to compare the size of the need with the magnitude of our present efforts to do something about them. I would note that Dr. Rucker thinks that the official goal, in terms of assisted housing, adopted by Congress last year, is far too modest. Whether or not we agree in detail with this and other conclusions reached in his paper, I think that it makes both informative and stimulating reading. I ask unanimous consent to have printed in the RECORD the major portion of the paper, which is aptly titled "Rural Housing—Need and Non-Response." I have taken the liberty of leaving out some of the more detailed statistical tables and the various footnotes indicating his specific page references to other sources, since most of these are indicated in the body of the paper, at least in a general way.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

RURAL HOUSING—NEED AND NON-RESPONSE

In 1949, when the Congress declared as a national objective, "the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family," more than one out of every three households was occupying a substandard unit. In rural America the proportion was more than one out of every two, and (depending on your definition of "rural"), 60 to 80 percent of the nation's substandard housing was to be found in those sections of the country. This paper represents an effort, utilizing a broad definition of rural and small town, to assess the situation as the 1960's end—to estimate the housing needs that exist and can be expected to develop during the decade ahead, to take cognizance of the Federal programs which are intended to meet those needs, and to attempt some indication of the degree to which they can be expected to do so.

First, some matters of definition need to be dealt with. The Census Bureau defines as "rural" all farms, and all non-farm places with populations of less than 2,500. The Congress, in defining the jurisdiction of its major rural credit agency, the Farmers Home Administration, has recognized that this Census definition is too restrictive and authorized the agency to serve places which are "rural in character" and do not exceed a population of 5,500. It is the contention of this paper that a more realistic division of the American society into "urban" and "rural" would set the dividing line still elsewhere by including in the latter category those communities of less than 25,000 population which are not part of a metropolitan area. (The Census Bureau in fact recognizes a division akin to this in its concept of Standard Metropolitan Statistical Areas—SMSA's. These are counties or groups of counties which are contiguous in character and include at least one "central city" with a population of 50,000 or more.) Thus, rural areas and small towns (R & ST) is defined in this paper as the combination of what the Census Bureau considers "rural" and other communities with populations of 2,500 to 25,000 which are outside of SMSA's.

Similarly, various definitions of substandard housing are available. In its 1960 Census of Housing, the Census Bureau attempted to classify units as "sound," "deteriorating," and "dilapidated," as well as noting the presence or absence of adequate plumbing facilities in the first two of these categories. This presented problems of comparability with earlier data, though, and most analysts have used a standard/substandard division in which the latter term is applied to units which are dilapidated and/or lack adequate plumbing facilities. This paper follows their lead, though recognizing that some understatement of housing needs probably results. In part, this has been offset by adding to "needs" those standard units which are overcrowded (i.e., occupied by more than one person per room).

Data on the quality of occupied housing as reported in the 1950 and 1960 Censuses of Housing are presented in Table 1, together with estimates of what next year's Census can be expected to find. What is initially most striking about the figures is the apparent substantial reduction in substandard housing over the two decades. It should be noted, however, that this stems primarily from the change in the number of units with inadequate plumbing. The number of dilapidated units was also reduced substantially between 1950 and 1960, but not between 1960 and 1970. Note also that the amount of crowding in standard units increased between 1950 and 1960 and is not thought to have decreased significantly since 1960.

* * * * *

TABLE 1.—QUALITY OF OCCUPIED HOUSING, UNITED STATES AND RURAL AREAS AND SMALL TOWNS, 1950, 1960 AND ESTIMATED FOR 1970

[Thousands of units]

	1950	1960	1970
United States:			
Households and occupied units	42,826	53,024	62,425
Standard units	27,570	44,550	56,500
Standard but crowded	(2,682)	(3,957)	(3,900)
Substandard units	15,256	8,474	5,900
Dilapidated	(3,903)	(2,268)	(2,400)
Nondilapidated but without adequate plumbing facilities	(11,353)	(6,200)	(3,500)
Rural areas and small towns:			
Households and occupied units	21,700	22,800	26,600
Standard units	8,900	17,100	22,400
Standard but crowded	(900)	(1,500)	(1,700)
Substandard units	12,800	5,700	4,200
Dilapidated	(3,100)	(1,500)	(1,500)
Nondilapidated but without adequate plumbing facilities	(9,700)	(4,200)	(2,700)
Share of totals accounted for by rural areas and small towns (percent):			
Occupied units	51	43	43
Standard but crowded units	(32)	(36)	(43)
Substandard units	80	67	71
Dilapidated units	(79)	(64)	(61)
Other substandard units	(86)	(68)	(78)

Sources: 1950 and 1960 data for United States from Census of Housing, 1950 and Census of Housing, 1960; for R. & S.T. estimated from census data on basis of population ratios.

1970 data for United States, from Census Bureau projection of 1970 households, Series 2 (see Current Population Reports, P-25, No. 360), and TEMPO projections of substandard housing (interpolating on basis of data in table 23, "United States Housing Needs, 1968–78," vol. 1 of Technical Studies for President's Committee on Urban Housing); for R. & S.T. adapted from U.S. estimates, assuming it included 43 percent of households, 61 percent of dilapidated and 78 percent of other substandard units (see below on basis of assumptions).

Data on standard but crowded units, throughout, from table 10, "Urban Housing Needs Through the 1970's," by Frank Kristof (with incidence assumed to be the same inside and outside metropolitan areas, as 1960 data indicate).

Households and occupied units identical by definition.

Components do not always add to totals because of rounding.

Basis for assumptions regarding R. & S.T. share of householdt and substandard housing: relationship to nonmetropolitan pars of the country extrapolated from 1950 and 1960 data, and R. & S.T. estimated as 116 percent of nonmetropolitan; nonmetropolitan portion of all population interpolated on Census Bureau's 1965–75 projection (Current Population Reports, P–25, No. 415); nonmetropolitan portion of dilapidated and other substandard housing interpolated on basis of projections in USDA, Economic Research Service, "Prospective Requirements for Housing in Areas Served by Farmers Home Administration."

In any event, the improvement in housing over the past twenty years should not be allowed to obscure the fact that an estimated ten million households occupy substandard or overcrowded quarters as the 1960's end. And, while the incidence of substandard housing in rural areas and small towns was apparently reduced at a rate somewhat better than the national average during the 1950's, it has lagged behind the rest of the country in the 1960's. Thus, these areas, while accounting for less than half the population, account for more than two-thirds of the substandard housing.

The correlation of substandard incomes and substandard housing is both obvious and recognized. Less well known perhaps is the degree to which incomes are both lower and more maldistributed outside metropolitan areas than within. The most recently published data on family income, which are for 1967, reveal that the median income in nonmetropolitan areas is 22% lower than in metropolitan areas. For the nonwhite family in a non-metropolitan area, the gap is even more appalling. Their median income is only 37% that of a white family living in a metropolitan area—$3,364 as compared with $8,994. The net result of these correlations—between low income and bad housing and low income and non-metropolitan areas—is a sort of "double-whammy" for the rural poor. The 1960 data on substandard housing and occupant-income, presented in Table 2, make this clear. For the country as a whole, 36% of the households with incomes below $3,000 lived in substandard units; but for rural areas and small towns, it was 45%. This higher incidence of substandard housing was characteristic of every income level—even the $10,000 and above category.

* * * * *

For those concerned with doing something about rural housing, the most striking statistics in Table 2 are probably those on the final three lines. Rural areas and small towns account for only 43% of the households, but for almost 60% of those in the bottom income group; they account for two-thirds of substandard housing and for *three-fourths* of the substandard housing occupied by those in that bottom income category.

TABLE 2.—OCCUPIED SUBSTANDARD HOUSING, 1960, BY OCCUPANT INCOME, UNITED STATES AND RURAL AREAS AND SMALL TOWNS

[In thousands of units]

	All occupied units	Occupant income			
		Under $3,000	$3,000 to $5,999	$6,000 to $9,999	$10,000 and over
United States:					
All occupied units	53,024	14,802	16,771	14,469	6,982
Dilapidated units	2,268	1,460	588	182	38
Other substandard units	6,206	3,841	1,778	491	96
Incidence of substandard units (percent)	16	36	14	5	2
Distribution of substandard units (percent)	100	63	28	8	2
Rural areas and small towns:					
All occupied units	22,810	8,680	7,600	4,820	1,710
Dilapidated units	1,460	1,070	300	70	10
Other substandard units	4,220	2,840	1,070	250	50
Incidence of substandard units (percent)	25	45	18	7	4
Distribution of substandard units (percent)	100	69	24	6	1

TABLE 2.—OCCUPIED SUBSTANDARD HOUSING, 1960, BY OCCUPANT INCOME, UNITED STATES AND RURAL AREAS AND SMALL TOWNS—Continued

[In thousands of units]

	All occupied units	Occupant income: Under $3,000	$3,000 to $5,999	$6,000 to $9,999	$10,000 and over
Share of totals accounted for by rural areas and small towns:					
Occupied units (percent)	43	59	45	33	24
Substandard units (percent)	67	74	58	48	47

Source: "Census of Housing," 1960 (U.S. data from table A-4, vol. HC (2), No. 1; data for R. & S.T. estimated from table 3, "Rural Housing," volume, and table C-4, vol. HC(2), No. 1).

Components do not always add to totals because of rounding.

Incidence of substandard units means the percentage of all occupied units in that category which are substandard. Thus, while 16 percent of all occupied units in the country are substandard, 25 percent of all those in rural areas and small towns are substandard; while 36 percent of the units in the country which were occupied by households with incomes under $3,000 were substandard, only 14 percent of those occupied by households with income between $3,000 and $6,000 were substandard; etc.

Distribution of substandard units refers to distribution by occupant-income; i.e., 63 percent of all substandard units were occupied by households with less than $3,000 income, and 69 percent of all substandard units in rural areas and small towns were occupied by households in that income class.

Most important, from a public policy standpoint, *more than 90 percent* of substandard housing in rural areas and small towns was occupied by households with incomes below $6,000. To expect these people to attain "a decent home and a suitable living environment" without massive public assistance is indeed what Michael Harrington has called "the great American housing hoax."

* * * * *

CURRENT PROGRAMS

Roughly three-fourths of the people in rural areas and small towns (as defined in this paper) live within the service area of the Farmers Home Administration. From the beginning, this agency's programs have been designed to help bridge the credit gap in rural areas—a gap reflected in the sources of credit as well as the amounts available. Studies by the Department of Agriculture's Economic Research Service have found, for example, that while 72% of metropolitan mortgage money comes from savings and loan associations, mutual savings banks, and life insurance companies, and only 28% from commercial banks, individuals, and other sources; in rural areas the pattern is almost reversed, with 64% coming from the commercial banks, individuals, and others, and only 36% from the savings and loan association, mutual savings banks, and life insurance companies. In part as a result of this very different pattern of credit, the terms available to rural borrowers tend to be significantly more restrictive. The ERS studies report repayment periods for rural borrowers averaging 5 to 10 years shorter and interest rates generally a quarter of a percent higher—and these are where the rural residents could find the credit. In short, the need for a supplemental source of credit in rural areas would be justified, even were incomes in those areas not lower and more maldistributed.

While the Housing Act of 1949 included a Rural Housing title, this was limited to farm housing until the early 1960's. In addition to this late entry into the field, FmHA has been consistently hampered by lack of funds and lack of staff. As an example of the former lack, consider the water and sewer grant program, essential to upgrading the environment for adequate rural housing. Not enacted until the mid-1960's the program has received less than half the funds which FmHA has estimated as required ($104 million of $220 million over the four fiscal years '66-'69). The dimension of Farmers Home's manpower gap was indicated in testimony last year. Over the 1960's the level of outstanding loans made and being serviced went up by more than 300%, while the number of man-years available to do the job went up only 41%.

* * * * *

FmHA's housing program began as a direct loan program, but since the mid-'60's it has been predominantly an insured loan program (93% of the FmHA housing program budget in FY '69.) It is also predominantly a homeownership program, with these loans accounting for 88% of the total, compared to 4% for farm labor housing and 5% for other rental housing, and the remaining 3% going to home repair loans. While it can certainly claim to reach lower in the income scale than the Federal Housing Administration, FmHA only makes about half of its regular homeownership loans to borrowers with incomes under $6,000, and only about one-seventh of them to families with incomes below $4,000. (It reaches lower in the income scale with its direct loans for home repair, but these average about $1,200 in size and, though certainly helpful, hardly have any real impact in terms of transforming substandard to standard units.)

The primary housing agency for the nation is, of course, the Department of Housing and Urban Development, successor to the Housing and Home Finance Agency and to prior governmental agencies. HUD's major housing activity is in the field of insured mortgage financing, but this has traditionally been a program focused on middle-income families. Thus, for the Federal Housing Administration's major sales housing program, nearly three-quarters of the borrowers have incomes of $8,000 and above and only 5% fall in the below-$6,000 income range. Rental housing utilizing FHA-insured mortgages presumably reach somewhat lower in the income range but it is only comparatively recently that programs—such as rent supplements and interest subsidies—have been developed which are aimed at those in the lower-middle income ranges and below. The traditional HUD program for lower-income people has been, and largely remains, public housing, a federally-financed, but locally-controlled program.

Whatever the program, however, HUD has not been distinguished by its ability to serve those in rural and small town America. During the 1960's, for example, the nonmetropoltian areas of the country, with 37% of the population, have received less than 20% of the FHA-insured home mortgages and have accounted for less than 10% of the units in projects with FHA-insured mortgages. The disparity becomes even more evident when one narrows the target to nonmetropolitan communities below 25,000 in population. Table 6 presents data on some major HUD multifamily programs indicating the degree to which they reach into rural areas and small towns, as defined in this paper. Even for elderly housing, only 15% of the units will serve that 43% of the population which lives in the rural areas, and for the other programs the impact is little short of ludicrous.

TABLE 6.—UNITS IN FHA-INSURED MULTIFAMILY PROJECTS, UNDER SELECTED PROGRAMS, END OF 1966, UNITED STATES AND RURAL AREAS AND SMALL TOWNS

	Total units in United States	Units in R. & S.T.	R. & S.T. as percent of all
Market rate rental programs (secs. 220 and 221)	71,854	1,373	2
Below-market-rate program (sec. 221(d)(3)BMIR)	52,939	791	1½
Elderly housing program (sec. 231)	37,817	5,697	15

Source: FHA table 68, HUD's Statistical Yearbook, 1966.

Public housing, the only HUD program which has any real impact in the lower portion of the income scale, fails to make any better showing. While data on this program which are adaptable to our special definition of rural areas and small towns are not readily available, a close approximation is. Congressman Wright Patman of Texas has done his own analysis of public housing statistics to determine what proportion of them went into the non-metropolitan small towns (defined as having less than 10,000 population and located outside of SMSA's). * * * Congressman Patman found that less than ten percent of the units were located in these areas, and that almost three-fourths of those that are, can be found in the South. Even in that region, which has specialized in small (and segregated?) local housing authorities, the small towns come out on the short end. With 53% of its population in non-metropolitan areas, the South has less than 20% of its public housing units in these small towns.

* * * * *

The programs of two other Federal agencies need to be noted, in connection with low income housing in rural and small town America. One of these is the Bureau of Indian Affairs, which has almost 77,000 housing units in the consolidated tribal areas under its jurisdiction. To characterize the housing situation in these areas as appalling is pallid understatement. The following was the situation as of mid-1968:

Standard units (29%)	22,127
Substandard units (71%)	54,739
Total (100%)	76,866

Moreover, these figures do not tell the whole story, since the 77 thousand existing units were occupied by more than 90 thousand families, for an average of 1.18 families per unit. Of the substandard units, an estimated 19,438 (or 36%) were regarded as suitable for rehabilitation. The remainder will require replacement. Total needs in these tribal areas then are for 48,900 new units and 19,400 rehabilitated units. *If* the Bureau achieves its revised level of activity in the current Fiscal Year, and *if* there is no further increase in the number of Indian households under its jurisdiction, and *if* there is no further deterioration in the currently existing units; it can theoretically eliminate at least what it classifies as "substandard" Indian housing in the next ten-to-eleven years. If, however, BIA does no better than it did in the past six fiscal years, it will require more than half a century to do the job.

The last of the agencies to be noted is the Office of Economic Opportunity, which, both by logic and Congressional mandate, has an interest in low-income housing. "In government," as I. F. Stone points out, "the budget is the message." By that measure, OEO's interest in housing has tended to be peripheral. Of $6,833 million in appropriated funds, it has expended an estimated $35 million—or a half of one percent—on housing and housing related projects. Despite these limited re-

sources, however, OEO has made at least three important contributions to the current low-income housing scene. First, on the Rosebud Reservation in South Dakota, OEO, working with BIA, HUD, and the Public Health Service, initiated what, as far as this writer knows, is to date the only large-scale attack on the abysmal housing of a segment of our Indian population. During its 23-month duration, the project brought about the construction of 375 low-cost transitional houses for Rosebud-Sioux families.

Second, OEO has played a key role in the development of the housing development corporation as a new technique for securing low-income housing. It has funded, at least in part, about a dozen HDC's, including one in Appalachia and another specifically to work in the rural areas of a state. These OEO-funded HDC's have completed more than a thousand units of housing (both new construction and rehabilitation). The number is not staggering but none of the production statistics in the field of low-income housing are very impressive as yet.

Finally, OEO can justifiably claim to be a parent of the revived self-help housing movement in the United States. Building on the pilot project of the American Friends Service Committee in the San Joaquin Valley, OEO's Migrant Division has encouraged and supported the creation of other projects across the country, bringing the magic of homeownership to rural people at income levels that had never before been reached. Through April of this year, Farmers Home Administration, virtually the only source of mortgage credit for self-help housing in the United States, reported approval of more than 1,500 self-help loans. OEO cannot claim direct responsibility for all of these, but in its absence it is certain that the numbers would be small indeed, and the legislative base which the program achieved in the 1968 Housing Act highly unlikely.

ESTIMATING THE NEEDS OF THE 1970'S

Last year might well have been termed "the year of the housing goal." The Congress adopted, as part of the 1968 Act, the specific goal of securing "the construction or rehabilitation of twenty-six million housing units [within the next decade], six million of these for low and moderate income families." The figures adopted were taken from estimates presented in the Spring of 1968 by the Department of Housing and Urban Development. These HUD estimates, revised only slightly (in terms of annual production targets), remained the basis for the *First Annual Report on National Housing Goals* filed (as is required by the '68 Act) in January of this year. That report takes some pride in noting that, "the needs estimate has been endorsed by the National Advisory Commission on Civil Disorders, the National Commission on Urban Problems, and the President's Committee on Urban Housing." The unanimity is, in fact, a good deal less complete than that. The Advisory Commission on Civil Disorders (the Kerner Commission) did call for six million "assisted" units for low and moderate income families, but it called for them in the next five years, not the next ten. Moreover, the fact that the projections utilized by the Commission on Urban Problems (the Douglas Commission) and the Committee on Urban Housing (the Kaiser Committee) were within a million units of each other and of the HUD estimates obscures the fact that they each utilized different assumptions and, to some extent, different definitions of need.

Table 9 attempts a comparison of the three projections, utilizing summary data from each. (The projections utilized by the Douglas Commission were prepared by Frank Kristof, those used by the Kaiser Committee were prepared by General Electric's "think-tank," TEMPO.) As can readily be seen, there are substantial variances in the component parts of the three projections. Both HUD and TEMPO assume relatively high rates of houshold formation, while Kristof found the Census Bureau's lower projection more credible. HUD assumed a rather rapid increase in the vacancy rate, and then added a million more units "abandoned because of population shifts," while Kristof and TEMPO assume substantially lower vacancy rates. A similarly wide spread is found in the estimates of net losses of standard units. HUD assumed a decreasing number of losses over the decade, while Kristof assumed increasing yearly losses. TEMPO, like Kristof, assumed an increasing rate of losses, and also assumed that 2 million standard units would become substandard during the period, while Kristof expects much less *net* deterioration in the inventory of standard units. Finally, of the three sets of projections, only Kristof deals with the problem of overcrowding in standard units.

TABLE 9.—HOUSING NEEDS IN THE NEXT DECADE—A COMPARISON OF 3 ESTIMATES

[In thousands of units]

	1st annual report	Kristof study	TEMPO study
UNITED STATES			
New and rehabilitated units needed for:			
Additional households	13,100	12,300	13,400
Increase in vacancies	[1] 5,400	1,800	1,600
Replacement of net losses in standard units, including standard units which become substandard	[2] 1,800	2,400	5,000
Replacement of substandard units existing at beginning of decade	6,200	6,900	6,700
Elimination of crowding in existing standard units	([3])	3,900	([3])
Total, estimated needs	26,500	27,300	26,700
RURAL AREAS AND SMALL TOWNS [4]			
New and rehabilitated units needed for:			
Additional households	5,400	5,100	5,500
Increases in vacancies	[5] 1,800	700	700
Replacement of net losses in standard units	700	1,000	2,100
Replacement of existing substandard units	4,400	4,900	4,800
Elimination of crowding in standard units	([3])	1,700	([3])
Total, estimated needs	12,200	13,400	13,100

[1] Includes 1,000,000 units "To compensate for units abandoned because of population shifts," a category not separately estimated in the Kristof and TEMPO studies.
[2] Not shown separately in 1st annual report; figure used here is computed as a residual.
[3] No estimate of crowding in standard units in 1st annual report or TEMPO study.
[4] Assuming that R. & S.T. makes up 41 percent of population increase and the same proportion of needs developing during the decade, but makes up 71 percent of existing substandard units (as in table 1 estimates).
[5] Excludes any portion of the 1,000,000 units mentioned in footnote 1 above, on assumption that this is intended to reflect population shifts out of rather than in to rural areas and small towns.

Note that the data on existing substandard units in this table are not comparable to those in table 1 since these refer to all substandard units, table 1 to occupied substandard units only.

Sources: 1st annual report fron H. Doc. 91-63, "First Annual Report on National Housing Goals"; Kristof study from "Urban Housing Needs Through the 1980's," by Frank Kristof; TEMPO study from "United States Housing Needs, 1968-1978."

Thus, while a look only at the total in Table 9 would indicate a national need of 26.5 million to 27.3 million units in the next ten years and a need in rural areas and small towns of 12.2 million to 13.4 million units, differing combinations of assumptions provide a much wider range of needs. If one uses the "lowest" assumption for each component in the projections and excludes crowding as a need, the result is a national requirement of 22 million units and a rural and small town requirement of 11 million units. If, on the other hand, one takes the "highest" assumption for each component, and accepts Kristof's estimate on crowding in standard units, the national need for the decade goes to almost 35 million units and that for rural areas and small towns to 16 million units.

* * * * *

For the purposes of this paper, the Kristof estimates are accepted as *minimal* figures on housing needs in the 1970's. Any consistent estimate at a lower level than his would among other things—have to ignore crowding in standard houses, which means ignoring a major aspect of the problem.

Before proceeding to a comparison of current public program levels and the estimated needs, it is necessary to look at the concept of "assisted" starts and the level of need for them. "Assisted" is another way of saying "subsidized" and is used to refer to units built with mortgage financing which is at below-market-interest-rates (either because they are direct loans at less than market rates or the actual interest paid is reduced through some other mechanism), as well as low-rent public housing units. It is such "assisted" starts that the Congress had in mind for its "six million . . . for low and moderate income families." But here, as in the estimates of need, the agreement of the authorities implied by the *First Annual Report* is less than real.

Again, the Act's figure originated with HUD. A look at the method by which it was "arrived at" in instructive. It was estimated that a minimum income of $5,000 for nonelderly and 4,000 for elderly households, was the minimum required for adequate housing without assistance. The number of such households was projected to be 18.9 million by 1976. If one stops at this point it might appear that the number of assisted starts would be that rather than 6 million, but HUD didn't stop there. First it eliminated 6.1 million one-person households in the non-elderly group on the grounds that they "are assumed not to participate in the demand for traditional kinds of housing units." Then it dropped 3.9 million elderly households because it estimated that they already "own standing housing units, lowering their housing expenditures considerably. This is still further reduced by the estimated 900,000 "assisted units" already in existence.

This leaves 8 million households needing assistance, but HUD assumes that 2 million of these may get assistance by way of "increased social security and welfare payments, or through a loosening of the housing supply."

The Kaiser Committee did endorse the HUD figures, but it was apparently less confident in the chances of that last 2 million households, so it recommended "six to eight million Federally subsidized dwellings" in the next ten years. This is also in line with the TEMPO projections of "non-effective demand" for housing, which totaled 7.5 mil-

lion households in 1978. This presumably compares with HUD's 8 million households in need of assistance, but since TEMPO considered 20% of income as the appropriate budget share for housing and HUD used 25%, the fact that TEMPO came up with a *lower* total leads to one to conclude that they were working with substantially different estimates of income distribution.

In his study for the Douglas Commission, Kristof does not attempt to estimate "non-effective" demand or the need for assisted starts in any direct way. It might be noted that his projection of the components of inventory change during the 1970's concludes that there will be 18.4 million new standard units built and 1.2 million substandard units upgraded to standard status. When this is compared with his estimates of need, it reflects a "shortfall" of 7.7 million units. This "shortfall" is, in a sense, one measure of the gap which public policy may have to fill. Since Kristof's projection of almost 2 million units a year in construction and rehabilitation is about 1½ times what the nation has accomplished in any year since 1950. It is likely that his projection understates the "shortfall" by a fair amount.

It is true that the Douglas Commission called for "at least 500,000 units a year exclusive of housing for the elderly . . . [for] poor and moderate income families," and that Kristof's study itself discusses adding ".5 million aided units per year." But the latter goes on to say, not that this would eliminate substandard housing in a decade, but that it would "reduce urban housing needs to *negligible* proportions by *1980* [italics added]."

The $5,000 income level for estimated need for assistance (used by HUD for non-elderly households), strikes the present writer as a reasonable, if arbitrary yardstick. TEMPO's analysis of the 1960 Census data concluded that the minimum income required for adequate housing ranged from $3,400 for a white individual to $6,500 for a nonwhite family of six or more living in a non-metropolitan area. The fact that this is a minimum figure means that while smaller households may secure adequate housing on less than $5,000 a year, many households—and especially larger ones—actually require more than the minimum. Thus, $5,000 is utilized as an across-the-board figure, representing an *average* measure of need. If it is applied to those already occupying substandard housing, it means that 84% of them will require assistance to secure replacement of their current substandard housing with standard housing. This implies, on the basis of the 6.9 million substandard units in 1970 estimated by Kristof, a need for 5.8 million assisted units for the nation as a whole and 4.1 million assisted units for rural areas and small towns, *merely to replace already existing substandard units.*

To estimate the proportion of assisted units required to eliminate crowding in existing standard units and to meet the need for standard units developing during the decade, use of the general pattern of income distribution is probably more logical. The most recent data here, indicate that 35% of all households fall in the below-$5,000 income category. Applying this percentage to the remainder of the needs (including that represented by crowded standard units), as estimated by Kristof gives a figure of 7.2 million assisted units for the nation as a whole and 3 million for rural areas and small towns. Combining these estimates with those arrived at in the preceding paragraph gives totals of 13 million and 7 million, respectively, for the nation and for rural areas and small towns. While these estimates of the assisted units required for the coming decade are dramatically above those officially endorsed by Congress, as well as those used by the Douglas Commission and the Kaiser Committee, it should be noted that the National Housing Conference, in its 1969 annual meeting, called for "at least 1,000,000 units annually for these [low and moderate] income groups." It is also worth stressing that the need for assisted units in rural areas and small towns is almost certainly larger rather than proportional to the need in the rest of the country. Thus, Farmer's Home Administration . . . estimates that 56% of the required units in its service area will need public assistance. If this percentage is applied . . . to the estimate of needs for rural areas and small towns adapted for this paper from the Kristof estimates, the result is 7.5 million assisted units, a level even higher than that arrived at above.

CURRENT PROGRAM LEVELS

Federal programs in the field of low-income housing may best be seen in the perspective of a pair of ironies. The first of these is, as Michael Harrington has said, "the magnificent irony that the stated purpose of the 1968 housing legislation was to fulfill the stated purpose of the 1949 act." The second, and more telling irony is implied by a report of the Department of Health, Education and Welfare on the housing of public assistance recipients. It concludes that more than $1 billion a year in government funds is spent by welfare recipients on housing and that at least half of them are in quarters that are "considerably below accepted standards." When one compares this statistic with the fact that the annual cost of its low-income housing programs has been estimated by HUD at about $321 million, it becomes clear that the government is spending more money on bad housing than on good.

TABLE 10.—FEDERALLY ASSISTED HOUSING UNITS, FISCAL YEAR 1968, FISCAL YEAR 1969, AND PROPOSED FOR FISCAL YEAR 1970

[Thousands of units]

	Fiscal years—		
	1968	1969	1970
Public housing	51	69	130
Other HUD rental programs	62	64	142
HUD ownership programs	9	13	129
All HUD programs	122	[1]146	401
FmHA ownership programs	33	43	147
FmHA rental programs	2	3	3
All FmHA programs	35	[2]46	150
All programs	157	192	551
Estimated portion in rural areas and small towns	53	67	210

[1] Original target (in initial fiscal year 1970 budget) was 186,000 units; estimated slippage thus 21 percent.
[2] Original target (in initial fiscal year 1970 budget) was 47,000 units; estimated slippage thus 2 percent.

Sources: fiscal year 1968 data from May 12, 1969, statement of Secretary Romney before House Banking and Currency Committee (see table 2 appended to statement); fiscal year 1969 data estimated on basis of same source, projecting 9-month figures to a 12-month basis; fiscal year 1970 target figures for HUD programs from "Summary of HUD Budget, fiscal year 1970, "p. I–7; fiscal year 1970 target figures for FmHA from unpublished May 16, 1969, "Program Attainment Report." Estimates for R. & S.T. portion assumed that all FmHA units and 15 percent of HUD units are located in those areas.

We turn now to how likely our current program levels are to meet our estimated needs and eliminate those twin ironies at last. Table 10 presents consolidated data on the number of assisted starts and rehabilitations produced by HUD and FmHA programs in FY 1968, expected in the current fiscal year, and proposed for the coming one. Based on the assumption that 15% of HUD-assisted units are located in rural areas and small towns (as defined in this paper), it also indicates the level for that target area. It should be remembered that the 551 thousand units proposed for the coming fiscal year are related to the planned achievement of the ten-year total of 6 million units called for in the 1968 Act. . . . If the "slippage" that seems to have been experienced in the current fiscal year were to be characteristic of the next, the number of assisted starts would fall from 551 thousand to 464 thousand for the country as a whole, and from 210 thousand to 195 thousand for rural areas and small towns. Given the fact that the targets for FY '70 are so much more ambitious than were those for the current fiscal year, the chances for slippage are, in fact, larger.

The comparison of current program levels with estimated needs is a depressing business. We have estimated 7 to 7½ million assisted starts will be required in rural areas and small towns over the next decade. If this is the case, it would take a hundred years and more to do the job at existing levels of activity. Even if the current targets for next year are achieved, we would require nearly four decades to meet one decade's needs—hardly a winning proposition. It is the contention of this paper that it will not be enough to double or triple the current (i.e., FY '69) level of Federal housing activity in rural areas and small towns. That level must be increased more than tenfold if the stated goal of eliminating substandard housing in the next ten years is to be realized.

* * * * *

HEALTH OF CIGARETTE SMOKERS ENDANGERED BY PESTICIDE RESIDUES IN TOBACCO

Mr. NELSON. Mr. President, high levels of DDT and other pesticides are being found in cigarettes and are increasing the health hazards already facing smokers.

Research findings on pesticide residues in tobacco and cigarette smoke indicate the probability of additional health hazards to smokers and add to the massively accumulating evidence of the pervasiveness of persistent pesticides in the world environment.

The presence of these pesticides again demonstrates the urgent necessity of setting national standards to prevent the indiscriminate and uncontrolled use of these pesticides to protect the environment. It is already clear that such standards must include a ban on DDT.

I believe that the Department of Agriculture and the Department of Health, Education, and Welfare should take immediate action to set regulations limiting the amount of pesticide residues in tobacco and avoid compounding the health hazards already facing the smoker.

Recent studies have measured up to 38 parts per million of DDT residues in cigarette tobacco and up to 53 parts per million in cigars. The studies were conducted by North Carolina State University researchers and other laboratories.

Tobacco is the only consumable agricultural crop that does not have a tolerance level specifying when the pesticide residue is hazardous. Furthermore, no significant Government research has been done to determine the effect of the residues on the smoker's health.

It is of great concern that the existence of toxic pesticide residues in cigarette smoke entering the human body has been virtually ignored by both the Agriculture Department and the Department of Health, Education, and Welfare.

The Surgeon General has already identified certain substances in tobacco that can cause cancer, chronic bronchitis and pulmonary emphysema. Now there is evidence that the smoker's health is also besieged by poisonous pesticide residues flowing into his throat and lungs with cigarette smoke.

West Germany has recently set tolerance levels on a wide range of farm crops for 80 pesticides, including a zero tolerance for 14 persistent pesticides such as aldrin, dieldrin and endrin.

Under reported pressure from tobacco interests, the tolerance level for tobacco has been delayed until 1973.

According to North Carolina tobacco experts, if the present West German standards covered tobacco, virtually no American tobacco would be permitted on the German market.

Potential loss of the West German tobacco market has raised considerable concern among American tobacco interests. More than 700 million cigarettes and 88 million pounds of unmanufactured tobacco, worth $74 million, were exported last year from the United States to West Germany.

The tobacco industry knows that its products cannot even come close to the residue tolerance levels that West Germany has set for similar farm crops. Unless some drastic changes in pesticide use are made, American producers might as well forget about selling to that market or any other that follows West Germany's lead in establishing tolerance standards for tobacco.

This entire episode is causing the greatest repercussions throughout the tobacco empire since the Surgeon General's report on smoking and health.

In addition to finding DDT residues of up to 38 parts per million in cigarettes and up to 53 parts per million in cigars, the North Carolina studies have found up to 100 parts per million on the green tobacco leaf after harvesting.

By comparison, the tolerance level for DDT established by the Food and Drug Administration for similar leafy products, such as cabbage, lettuce, and spinach, is seven parts per million.

Under current food and drug laws, tobacco is not considered as food in the United States and no tolerance level for residues has been set. Tobacco growers and processors are free to use as much pesticide as they want.

In contrast, fruit and vegetable producers must carefully watch the pesticide residue level or risk having their crop banned from commercial markets.

The frightening thing is that insects feeding on tobacco are developing an increasing resistance to DDT and other standard pesticides. This has caused growers to use even greater amounts of pesticides.

Nearly 5,500,000 pounds of insecticides were applied to 2,566,000 acres of tobacco in 1964, the latest year when detailed Agricture Department statistics are available. The percentage of tobacco acreage treated with pesticides increased from 47 percent in 1952 to 81 percent in 1966.

A major problem exists because tobacco leaves have the characteristic of absorbing pesticides which cannot be washed off and persist even after the curing and manufacturing process.

As a result of increased pesticides use, tobacco tested in 1965 showed six times more residue than 3 years earlier and 12 times greater than in 1957.

Research officials at the Agriculture Department have confirmed that insecticide residues, particularly chlorinated hydrocarbons like DDT, exist in high amounts in tobacco even after processing.

The principal pesticides listed by the Agriculture Department for use on tobacco in 1964 included:

DDT: 1,187,000 pounds on 559,000 acres, 2.1 pounds per acre average.

TDE: 2,331,000 pounds on 657,000 acres, 3.6 pounds per acre.

Toxaphene: 292,000 pounds on 98,000 acres, 2.9 pounds per acre.

Parathion: 466,000 pounds on 340,000 acres, 1.4 pounds per acre.

Carbaryl: 331,000 pounds on 123,000 acres, 2.7 pounds per acre.

Malathion: 101,000 pounds on 43,000 acres, 2.3 pounds per acre.

Endrin: 150,000 pounds on 149,000 acres, 1 pound per acre.

Aldrin: 135,000 pounds on 85,000 acres, 1.6 pounds per acre.

Dieldrin: 93,000 pounds on 182,000 acres, 0.5 pound per acre.

I ask unanimous consent that an article entitled "Poisons in Cigarette Tobacco Increase" published in the Health Bulletin of September 18, 1965; a research report entitled "Insecticide Residues on Tobacco During 1962," published in the Tobacco magazine of September 18, 1964; and a comprehensive review of pesticides research entitled "Pesticide Residues on Tobacco," published in The Residue Review of 1967, be printed in the RECORD.

The articles follow:

There being no objection, the items were ordered to be printed in the RECORD, as follows:

POISONS IN CIGARETTE TOBACCO INCREASE

Cigarettes on the market today contain much higher residues of insecticides than cigarettes sold several years ago, according to tests made by an independent laboratory for Health Bulletin. Four popular brands were analyzed for DDT and endrin by the sensitive gas chromatograph technique and the results were compared with previous reports of insecticide residues in cigarette tobacco published in the technical literature.

The most recent published study available to Health Bulletin is the article "Insecticide Residues on Tobacco During 1962," authored by three U.S. Department of Agriculture staff members and published in *Tobacco Science* (Volume 8). That article reported levels of DDT in brand name cigarettes ranging from 2 to 6 parts per million, and levels of endrin from 0.5 to 2 parts per million—with most brands at 1 part per million of endrin or below. Because of the great toxcity of endrin, the authors of that article recommended that its use for the control of tobacco insects be discontinued. It is no longer registered for use on tobacco by the U.S.D.A.

Health Bulletin's test results, received on September 9, showed that levels of DDT have increased dramatically since 1962. Four popular brands of cigarettes tested showed DDT levels of 25, 28, 38 and 37 parts per million respectively. Those figures indicate an average six-fold increase in DDT content since 1962. Comparison with a study of DDT residues in cigarettes in 1957 shows that the level now is roughly 12 times greater than it was then. (Bowery, et al. "Insecticide Residues on Tobacco," Agric. and Food Chemistry, 7(10): 693–702, 1959.)

Endrin levels in cigarettes have increased since 1962, despite the fact that producers are not supposed to use that highly toxic insecticide for tobacco insect control. The four brands of cigarettes tested by Health Bulletin contained endrin in amounts of 1.3, 1.5, 1.6 and 1.6 parts per million. Those are roughly twice the amounts detected in the 1962 tests by U.S. Department of Agriculture scientists. The maximum amount of endrin in cigarettes detected in the 1957 tests was less than three-tenths of a part per million. *A later study by Bowery et al. showed that pesticide residues are present in mainstream cigarette smoke if they are also present in tobacco. (Agric. and Food Chemistry, 9(3): 193–7, 1961.)*

Controlling the levels of pesticide residues in tobacco is made difficult—if not impossible—by the fact that there is no law preventing farmers or processors from using as much insecticide on tobacco as they wish. Tobacco is not classified as a food, and therefore is not subject to the control of the Food and Drug Administration. The FDA would have the legal power to set tolerances for insecticide residues in tobacco if given jurisdiction in that area by Congress. The U.S. Department of Agriculture registers insecticides for use on particular crops and can control the information placed on insecticide package labels. But it has no legal control over insecticide use, and does not set tolerances for residues on crops.

Increasing resistance of tobacco insects to DDT and other standard insecticides has forced farmers to use much larger amounts of these poisons to achieve the same degree of control they got with smaller amounts in past years. "If the present trend continues," the Texas Agricultural Experiment Station said in May of this year, "it is possible that in the near future there may not be any insecticides available which will produce the level of control to which producers are currently accustomed."

Insecticides in tobacco have attracted little attention from health researchers, probably because there are enough other harmful aspects of the smoking habit to occupy their thoughts and efforts. The search for cancer-causing elements in cigarettes has concentrated on substances occurring naturally in the tobacco plant. "The possible role of these compounds (insecticides) in contributing to the potential carcinogenicity of tobacco smoke is not known," the Surgeon General's advisory committee on smoking and health commented in its 1964 report. A spokesman for the Public Health Service told Health Bulletin this week that his agency is doing no research now on the effect of pesticides in tobacco on health.

INSECTICIDE RESIDUES ON TOBACCO DURING 1962

(By F. R. Lawson, Calvin Corley, and Milton S. Schechter)

Before the development of DDT the insecticides most commonly used on tobacco in the United States were arsenicals. The arsenic content of commercial cigarettes increased from about 15 p.p.m. in 1917 to as much as 50 p.p.m. in 1951, and then declined to less than 5 p.p.m. by 1958 (Guthrie et al. 1959). Today arsenicals are seldom used on tobacco. Small and McCants (1962) found an average of 2.8 p.p.m. in soil in North Carolina and 1.5 in tobacco. About 1 p.p.m. was found in tobacco grown on Maryland soil with no previous history of arsenic applications, (unpublished reports, U.S. Dept. Agric.).

The decline in the arsenic content of tobacco since 1951 reflects the replacement of the arsenicals with chlorinated hydrocarbons and organic phosphates. Of these the persistent chlorinated hydrocarbons are of

chief concern on tobacco. Bowery et al. (1959) showed that application of these insecticides at priming resulted in high levels of TDE, DDT, and endrin on green tobacco and that more than half of such insecticide residues persisted on tobacco through commercial processing. They also found 8.0–17.2 p.p.m. of TDE–DDT, and 0.08–0.29 p.p.m. of endrin in commercial cigarettes in 1957. Detectable amounts of these insecticides occur in the mainstream smoke (Bowery et al. 1959), and (unpublished report, N.C. State College).

Increased concern over the possible presence of insecticide residues in various agricultural products has prompted a more critical look at the status of such residues in tobacco following the application of insecticides to control various insect pests. The objectives of this study were to determine residues of DDT, TDE, and endrin on flue-cured tobacco from 1962 auction markets in North Carolina, South Carolina, Georgia, and Florida; to determine the residue levels in cigar wrapper tobacco in Florida; and to obtain data on residues in manufactured tobacco products on the 1962 retail market.

MATERIALS AND METHODS

Samples of raw, cured tobacco, as prepared and sold by the growers, were obtained from auction markets in four of the five States producing flue-cured tobacco. Flue-cured tobacco is the principal ingredient of cigarettes. Samples of raw, cured cigar wrapper tobacco were removed from stored leaf produced by 95 growers. The outside leaf on many brands of cigars constitutes 3–5 per cent of the weight of the cigar. Other types of tobacco were not sampled.

Flu-cured tobacco to be sold on auction markets is placed in piles on the floors of large warehouses. Each pile belongs to an individual grower and is usually made up of similar leaves harvested from the same portion of the stalk.

Three market towns were selected in Florida, 3 in Georgia, 5 in South Carolina, and 5 in each of the three principal tobacco belts of North Carolina. The towns selected were those reporting the most tobacco sold in 1961. One warehouse with at least 100 piles of tobacco on the floor was selected in each town, except that in two towns in Georgia and two in Florida samples were taken in two warehouses in each town. In each warehouse, 50 representative piles of tobacco were selected and duplicate composite samples taken by removing two leaves from each pile and placing them in separate bags. Since each grower may have had several piles of tobacco for sale each day, the samples did not necessarily represent 50 growers but probably did in some cases. Manufactured tobacco products were purchased from stores in Oxford, North Carolina. The brands chosen were usually the leading ones of each of the principal companies.

The tobacco leaves, including the stems, were ground in a Hobart food chopper. After extraction with hexane and cleanup by column chromatography on Florisil-Nuchar mixture, aliquots were analyzed by gas chromatography with an electron capture detector. The sensitivity was 1.0 p.p.m. for DDT and TDE and 0.5 p.p.m. for endrin on a 1.0-mg. sample of tobacco. The presence of DDT was confirmed by infrared spectrophotometry in the samples of cigar wrapper tobacco from Florida. The presence of DDT, TDE, and endrin was confirmed by spot checking 25 samples of manufactured tobacco by thin layer chromatography. (Adams and Schechter 1963).

RESULTS

Data on the mean residues of TDE, DDT, and endrin found on 10 samples of cured tobacco from the various localities are given in Table 1. They show that residues of DDT and TDE were highest in the averages of the samples collected in Georgia and South Carolina. The presence of these residues can be related to the greater abundance and necessity for control of the tobacco hornworm (*Protoparce sexta* (Johannson)) and tobacco budworm (*Heliothis virescens* (F.)) in these States. The Florida samples showed more endrin and less DDT and TDE in flue-cured tobacco than Georgia or South Carolina. This result indicated considerable use in Florida of endrin. The highest residues of DDT and endrin were found on one composite cigar wrapper tobacco sample from Florida. With this type of tobacco even one or two small holes in a leaf will reduce its value; hence, insecticides are applied frequently, usually at least once each week and often twice.

The aliquots analyzed to give the data in Table 1 included stems. Data given by Bowery *et al.* (1959) did not. Since the amount of residue in stems is unknown probably the best basis for comparison is to assume that stems have no residue and correct for the weight difference by multiplying the figures in Table 1 by 1.282. On this basis, the mean residues of DDT and TDE on flue-cured tobacco from each area sampled in North Carolina were less than those reported for similar samples taken in 1956–58 (Bowery *et al.* 1959), but the mean residues of endrin were about the same. However, high residues of endrin were found on some of the samples of flue-cured tobacco in North Carolina as well as the cigar wrapper tobacco in Florida.

The results of the 1962 analysis of manufactured tobacco are given in Table 2. The quantity of TDE and DDT in commercial cigarettes has nearly doubled since 1957 (Bowery *et al.* 1959). All of the cigarette samples contained endrin, with half containing 1 p.p.m. or more. The maximum residue of 2 p.p.m. endrin found in one filter brand was 7 times greater than the maximum found in cigarettes in 1957.

TABLE 1.—INSECTICIDE RESIDUES ON CURED TOBACCO—1962 AUCTION MARKET

Type of tobacco and area	DDT Mean	DDT Maximum	Residues p.p.m. TDE Mean	TDE Maximum	Endrin Mean	Endrin Maximum
Flue cured:[1]						
Florida	2.50	4.5	18.83	60.0	2.13	5.1
Georgia	7.90	32.0	35.85	58.0	1.21	1.8
South Carolina	10.44	27.5	31.19	60.0	1.22	2.7
North Carolina:						
Eastern belt	4.65	15.0	2.80	7.0	2.40	3.1
Middle belt	4.80	22.0	7.20	18.0	.75	2.1
Old belt	3.00	10.0	4.30	20.0	.49	1.1
Cigar wrapper:[2] Florida		216.0		10.0		7.8
Check tobacco[3]	.0		.0		<.5	

[1] 10 Flue-cured tobacco samples (50 leaves per sample) from each area.
[2] Composite sample (100 leaves) from 95 growers.
[3] Since recovery analyses were 100 percent for DDT and TDE and 95 percent for endrin, no recovery corrections were deemed to be necessary for results in tables 1 and 2. Zero figures for endrin signify that none was detected within the sensitivity of the method employed. The figures <1.0 p.p.m. for DDT and <0.5 p.p.m. for endrin signify qualitatively detectable amounts below the levels of good quantitation.

TABLE 2.—INSECTICIDE RESIDUES OF DDT, TDE, AND ENDRIN IN BRAND-NAME TOBACCO PRODUCTS

Brand No. and type	DDT (p.p.m.)	TDE (p.p.m.)	Endrin (p.p.m.)
Cigarettes—1 carton each:			
1 regular	2.0	12.0	<0.5
2 regular	3.0	17.0	1.0
3 regular	4.0	18.0	.5
4 regular	4.0	18.0	1.0
5 filter	3.0	14.5	.5
6 filter	4.0	16.5	1.0
7 filter	6.0	21.5	2.0
8 king	3.0	20.0	<.5
9 king	4.0	23.0	.5
10 king	5.0	23.0	1.0
Cigars: 6 to 8 packages, 4 to 5 per package:			
1	53.0	10.0	.5
2	32.0	12.0	.0
3	10.0	15.0	.0
Pipe tobacco: 7 1 to 5 per 8-oz. cans or ½-lb. can			
1	<1.0	5.0	.0
2	1.0	10.0	<.5
3	<1.0	13.5	<.5
4	1.0	31.0	1.0
Snuff: 1 5-oz. jar or can:			
1	<1.0	14.5	.0
2	<1.0	17.0	<.5
3	<1.0	18.0	.5
4	1.0	22.5	2.0
5	1.0	29.0	.5

DDT residues in cigars were much higher than in any other product tested. The indicated high residues in Florida wrapper (Table 1) could account for part of the high residue in cigars, since the weight of a wrapper is 3–5 percent of the weight of the cigar. Endrin residue occurred in one of the three samples of cigars.

TDE residues in pipe tobacco and snuff were similar to those in cigarettes and cigars. Endrin was detected in 7 of the 9 samples of pipe tobaccos and snuff, with one sample of snuff running as high as 2 p.p.m. of endrin.

The results of the 1962 study corroborated earlier findings that high levels of TDE, DDT, and endrin residues occur on auction market tobacco and in commercial cigarettes and other manufactured tobacco products. The 1962 study also indicated an increased use of endrin. On the basis of these data, the Entomology Research Division no longer recommends endrin for the control of tobacco insects.

PESTICIDE RESIDUES ON TOBACCO[1]

By F. E. Guthrie[2] and T. G. Bowery[3]

I. INTRODUCTION

Tobacco is a unique crop with respect to possible contamination by pesticide residues

[1] Work reported herein was partially supported by PHS Grants EF00158 and ES00044 as well as *The Council for Tobacco Research*. The cooperation of the major tobacco manufacturing companies throughout all phases of the work is gratefully acknowledged. Contribution from the Entomology Department, North Carolina Agricultural Experiment Station, Raleigh, North Carolina. Published with the approval of the Director of Research as Paper No. 2361 of the Journal Series.

because it is not classified as a food nor a drug and is, therefore, exempt from tolerances by the Federal Food, Drug, and Cosmetic Act of the United States.

The purpose of this review is to discuss residue problems on tobacco from culture through the commercial processes and to consider the importance of pesticide [4] residues on tobacco. The specific relation of pesticide residues to the health aspects of tobacco use has been recently reviewed (Surgeon-General's Committee 1964). The review by Larson *et al.* (1961) is an excellent reference source for toxicological and clinical experiments concerned with tobacco.

To permit the reader fully to comprehend the residue problem on tobacco, a brief synopsis of the culture and manufacture of tobacco is presented. Figure 1 summarizes the events which might affect pesticide residues as a result of pest control.

Field tobacco is harvested by priming (pulling) the ripe leaves (two to three) each week for about five weeks. To control the insect complex, at least one insecticidal treatment is normally applied to protect the leaves during the priming period, and the biological effectiveness of this treatment should be 10 to 14 days. Essentially every grower applies one treatment per season, and two to three applications per season are not uncommon. One application of a growth regulator is commonly applied during the early priming period for control of suckers. Residues resulting from pesticide application to tobacco, as with other leafy products, are rather high due to the large surface-to-weight ratios. At curing, about 85 percent loss of water and 15 percent loss of dry matter occurs. When green and cured samples are to be directly compared, a factor of 9.2 (to place both samples on a dry weight, stemless basis) is frequently applied. Tobacco is either flue-cured (by placing leaves strung on a stick in a curing barn where the temperature is slowly raised to 160° to 180° F. over a period of four to five days) or air cured for several weeks in a case of burley and cigar tobaccos. During August to October for flue-cured and November to February for burley, tobacco is displayed by the farmer at warehouses throughout the tobacco area and sold to the tobacco companies by an auction system. It is aged in large hogsheads (50 cu. ft. barrels) from six months to several years depending on the demand for the grade of tobacco involved. The aging process is an active fermentation, and considerable changes in the chemistry of the tobacco result. As needed, it is removed from the storage process and the midvein is removed. The leaf is then shredded and made into the desired tobacco product. During smoking of tobacco, the burning zone of a cigarette is 854° to 913° C. (Touey and Mumpower 1957). The burning zone of cigars is 600° C. and of a pipe 560° C. (Greene 1955). The various aspects of the events which might affect insecticide residues on tobacco will be discussed.

II. INORGANIC INSECTICIDES

Arsenicals were the first insecticides to be recommended for protection against the insects which attack field tobacco (Howard 1900). The earliest report of insecticidal residues found on tobacco was that of Remington (1927), who reported the arsenic content of commercial cigarettes. A number of investigators (Popp 1928, Gross and Nelson 1934, Zeidler and Wagner 1937, Barksdale 1940, Griffon and Delga 1947, Daff and Kennaway 1950 a, and Satterlee 1956) monitored the increase in arsenic residues on tobacco through the appearance of synthetic insecticides around 1950. Data in these papers showed that arsenic in United States tobaccos increased from about ten p.p.m. in 1917 to about 50 p.p.m. in 1951. Holland *et al.* (1958 b) reported residues of 52 p.p.m. in 1957, but Weber (1957), Bailey *et al.* (1957), and Guthrie *et al.* (1959 a) reported a sharp decline in arsenic residues to near background levels about 1952. Figure 2 summarizes the residues of arsenic on U.S. tobacco. The content of arsenic on tobacco produced in Europe, Asia, and Africa has consistently been lower than from American tobaccos (Popp 1928, Bailey *et al.* 1957, Enercan 1954, Satterlee 1956, and Monnet and DuPont 1953).

Satterlee (1956) suggested that arsenic residues would be a permanent problem as tobacco grown on soils containing arsenical residues from repeated applications to cotton and tobacco would absorb appreciable amounts of arsenic. Weber (1957) concluded that there was no appreciable absorption of arsenic by tobacco grown on arsenate-contaminated soil, and this was subsequently confirmed (Small and McCants 1962). It is of interest to note that arsenic is of such universal occurrence in soils that it has been referred to as a "normal constituent," four p.p.m. being found in virgin soils (Greaves 1913). A completely synthetic "cigarette" (Vanguard), void of tobacco and introduced for sale in 1958, was found to contain 1.0 p.p.m. of arsenic (Small 1960).

Following normal cigarette smoking by humans, 60 percent of the arsenic was found to be primarily in the ash and about 25 percent was found in the stump of the cigarette (Bailey *et al.* 1957). These authors concluded that 7 to 18 percent was presumably volatilized during smoking, but the volatilized products were not portioned into side and mainstream components. This confirmed earlier work by Daff and Kennaway (1950b). Cigarette paper itself contains about 0.01 p.p.m. arsenic (Cooper *et al.* 1955). Experiments by Gross and Nelson (1934) and Thomas and Collier (1945) showed that approximately 12 percent of the total arsenic in a cigarette is present in the puffed smoke when two-thirds of the cigarette is consumed. Gross and Nelson (1934) proposed that the arsenic inhaled while smoking cigars, cigarettes, or pipe tobacco was an unimportant source of arsenic when compared to tolerances then established for food products. Holland *et al.* (1958 b) reported 35 percent of the arsenic to be volatilized (both side and mainstream smoke components): 31 percent was found in butts, and 33 percent in ashes of nonfilter cigarettes. They found the filter of a filter cigarette to remove less than four percent of the arsenic in the mainstream smoke. Cigarette smoke condensates from 100 cigarettes contained 0.026 mg. of arsenic (Garcia *et al.* 1959). Using a mechanical smoker with continuous suction, Barksdale (1940) found a transfer of 50 percent of the arsenic in the suction traps. Other workers found four percent of the arsenic in mainstream smoke (Cogbill and Hobbs 1957).

Studies on As^{74} mainstream smoke using rabbits in Holland smoking boxes (Holland *et al.* 1958 a) indicated that 0.01 percent of volatilized arsenic was retained by the animal. Distribution of arsenic in the respiratory tract two hours after smoking was discussed. After withdrawal of the rabbits from As^{74} tobacco smoke, the radioactivity in the respiratory tract of the rabbits decreased rapidly for the first two days and then tapered off slowly.

In a study with eight human volunteers who inhaled smoke impregnated with sodium arsenate in the distal ends of cigarettes, Holland *et al.* (1959) found 2.2 to 8.6 percent of the total As^{74} injected into cigarettes to be transferred to the respiratory tract. Approximately 50 percent of the inhaled arsenic was eliminated in ten days, primarily in urine. The remainder was "assumed to have been deposited in the body, exhaled, and/or eliminated in body secretions and excreta over a long period of time." The general distribution and elimination of arsenic has been reported by Lanz *et al.* (1950).

As lead arsenate was the primary insecticide used on tobacco until 1948, it is also of interest to note residues found for lead. Lead and arsenic residues in popular brands of cigarettes were found to be 5 to 25 times greater than tolerances for spray residues on fruits (anonymous 1936). On the basis of data obtained with a mechanical device simulating cigarette smoking, this same author hypothesized that 6.7 percent of the lead present in the smoked portion of the cigarette enters the smoker's mouth. Zeidler and Wagner (1937) found 22 p.p.m. of lead on Canadian cigarettes and less than 2:5 p.p.m. on Oriental tobaccos. Knegtering (1938) analyzed a limited number of cigarillos for lead, finding 0.69 mg. per cigarillo. Cigarettes were also analyzed, but no lead was detected. Although cigars were not included in his analyses, he concluded that the use of cigars might be a source of lead poisoning. Grotepass (1941) found tobacco smoke to be free of lead. Although 0.66 to 2.56 mg. of lead/100 g. of chewing tobacco was found, he concluded that it was an inconseqential source of lead poisoning. De Jong (1941) reviewed the published work on cigars, cigarettes, and chewing tobacco and concluded that there was little or no possibility of lead poisoning from consumption of these products.

III. SYNTHETIC INSECTICIDES

By 1956, there remained little doubt that arsenic residues on tobacco had been sharply reduced and would be expected to be further reduced. However, the magnitude of residues from insecticides recommended to replace the arsenicals was unknown. Studies were therefor initiated on flue-cured tobacco to determine the magnitude of insecticidal residues from more recently introduced insecticides on commercial tobaccos.

TABLE I.—INSECTICIDE RESIDUES ON TOBACCO SAMPLED DURING TOBACCO AUCTION SALES—1956 TO 1962

State	TDE[1] (p.p.m.)					Endrin (p.p.m.)				Dieldrin (p.p.m.)	Toxaphene[2] (p.p.m.)
	1956[3]	1957[3]	1958[3]	1969[4]	1962[3]	1957[3]	1958[3]	1960[4]	1962[5]	1962[6]	1957

[4] Chemical names of pesticides mentioned in the text by common name are shown in Table X.

(a) Residues on commercial tobacco

Residue data from warehouse samples of tobacco taken during annual sales are shown in Table I. A minimum of five warehouses in each of the states listed was used to establish these trends. Wide variations occurred among the different locations and years, probably as a reflection of requirement for control dictated by the severity of insect populations.

Commercial products (Table II) were sampled from purchases at local food stores. One comprehensive study of a large number of types of cigarettes purchased from widely separated geographical locations showed only slight differences among types and essentially no difference among locations (Bowery *et al.* 1959). This was expected, for commercial cigarette tobacco is a very homogeneous mixture even though large quantities of different types of tobacco are mixed to prepare the finished product. The quantities of TDE-DDT [reported as TDE in this review since 90 percent of the insecticide combination on commercial tobacco is TDE (Bowery *et al.* 1959)] in cigarettes approximately doubled between 1956 and 1962 but decreased appreciably from 1962 to 1966. The content of endrin in 1956 was barely detectable with the methods then available but was 1.3 p.p.m. by 1964. The reason for the reduction in amount of this insecticide from 1964 to 1966 is discussed in a later section.

As the 1957 analyses of commercial tobacco had shown residues to be present at detectable levels, an intensive study was initiated to determine the fact of insecticides during culture and manufacture of tobacco. Concurrently, studies were made to evaluate alternate methods which might control insects with reduced quantities of insecticides. Following (Table III) is a list of these alternate methods with appropriate reference. Only the use of alternate chemicals will be given further attention in this review.

(b) Magnitude of residues on green leaves and loss by weathering

If necessitated during harvesting, applications of insecticides to tobacco are recommended immediately after priming, providing maximal period of seven days between application and priming. Losses of residues following recommended application of chlorinated hydrocarbons were 50 to 80 percent after seven days of weathering, 50 to 150 p.p.m. of TDE and 5 to 13 p.p.m. of endrin remaining on the green leaf after this interval (Bowery *et al.* 1959). Similar data were found for Endosulfan and Telodrin (Guthrie and Bowery 1962). The loss by weathering of recommended rates of phosphate and carbamate insecticide over a seven-day period was much greater, about 90 percent, and residues on green tobacco after this period were 5 to 20 p.p.m. for Guthion and ten p.p.m. for carbaryl (Guthrie *et al.* 1959 c, Bowery and Guthrie 1961 a). Trichlorfon weathers quickly, and due to its water solubility, especially so following rain. It has been observed that once organochlorine insecticide residues on tobacco have dried following application, little residue is lost by rains (Bowery 1962), however. Except for Trichlorfon, the main loss of residues during weathering is attributed to growth and mechanical loss by agitation of tobacco leaves. Aircraft applications of DDT (1.75 lb./acre) resulted in maximum deposits on the upper surfaces of green leaves of 70 to 85 p.p.m. (Manson *et al.* 1962). Dust, emulsifiable concentrate, and wettable powder formulations of malathion (1.75 lb./acre) left initial residues ranging from 13 to 53 p.p.m., and approximately ten percent remained eight days after treatment (Wallis *et al.* 1957). The authors state that "no malathion residues have been reported on the cured tobacco, and it is unlikely that this insecticide would persist during the curing, redrying and aging processes."

(c) Loss during curing

The flue-curing process caused 40 percent loss in residues of recommended chlorinated hydrocarbon and 80 percent, or greater, loss of the phosphate and carbamate insecticides (Table IV). At this time, the residues of the organochlorine compounds go subsurface, and care must be taken thoroughly to release the chemicals from cured leaf lipids during chemical analysis or low values will be reported (Bowery *et al.* 1959). Considerable conversion of Guthion to oxyguthion occurs during curing. No attempt has been made to verify whether loss of residues during flue-curing is due to conversion to unidentified products or whether the materials vaporize. Thurston and Caudill (1962) found a much smaller reduction (15 percent) of endrin residues during air-curing than previously reported for flue-curing, as might be expected under the milder conditions of air-curing.

TABLE II.—INSECTICIDE RESIDUES ON COMMERCIAL TOBACCO PRODUCTS

	TDE [1] (p.p.m.)				Endrin (p.p.m.)					Carbaryl (p.p.m.)
	1956 [2]	1960 [3]	1962 [4]	1966 [5]	1956 [6]	1962 [4]	1963 [7]	1964 [8]	1966 [5]	1966 [5]

[3] Dehydrochlorinated TDE.

TABLE VI.—RESIDUES OF TDE AND ENDRIN IN MAINSTREAM SMOKE OF COMMERCIAL CIGARETTES

Cigarette	Number of brands tested	Micrograms/cigarette and "smoked" cigarette: Cigarette	Mainstream smoke	Loss during smoking (percent)
		TDE[1,2]		
Regular	7	12.7	1.6(+1.4deHCl TDE)[3]	88
King	10	14.7	1.7(+1.3 de HCl TDE)[3]	88
Filter King	13	10.3	1.6(+0.6 de HCl TDE)[3]	86
		Endrin[4]		
Regular	12	0.19	0.06	69

[1] TDE plus DDT.
[2] Bowery et al. (1959).
[3] Dehydrochlorinated TDE.
[4] Bowery (1962).

(d) Loss during commercial processing

Although there is considerable variation in the extent of storage of tobacco, a two-year period of aging is about normal. The residue content of the samples of tobacco treated at purposefully high rates of organochlorine compounds did not alter during a two-year aging period nor during subsequent steps to prepare the processed tobacco into cigarettes (Table IV). Similar samples containing Guthion and carbaryl were found to be unaltered during aging, which was somewhat surprising as the conditions during aging would be expected to offer ample opportunity for hydrolytic detoxication over such a lengthy period (Bowery 1962).

(e) Loss during smoking

Individual smoking habits vary enormously. A number of mechanical devices have been made to "simulate" smoking, however, and the L & M Smoking Machine was used to ascertain the effect of smoking on organic insecticides (Bowery *et al.* 1959, Bowery and Guthrie 1962, Mold and Walter 1957). Briefly, the cigarettes are placed on a wheel, and as each cigarette passes a diaphragm the mainstream smoke is sucked through a series of solvents of cellulose filters. No attempt was made to collect the vapors of the sidestream smoke, nor to identify the insecticidal components, if any, of the ash. Residues in the butt of smoked cigarettes (eight puffs of two seconds duration) were not appreciably different from those in the original cigarette (Bowery *et al.* 1959).

The proportional of insecticide appearing in the mainstream smoke of experimental cigarettes prepared from tobacco deliberately impregnated with high levels of insecticide was 20 percent for TDE (plus 20 percent dehydrochlorinated TDE), 20 percent for endrin, five percent for Telodrin, three percent for endosulfan, and less than one percent each for Guthion and carbaryl (Table V). Although levels of other commercially available insecticides have not been sufficiently high to study in commercial cigarettes, they have been studied for endrin and TDE (Table VI). These studies are fairly consistent with those from experimental cigarettes, although on a percentage basis slightly less TDE and slightly more endrin was found in the mainstream smoke of commercial cigarettes. It is suspected that there is a small (less than five percent) component of endrin coming through in the mainstream smoke as a breakdown product (possibly a *delta*-keto derivative), but this has never been substantiated. No appreciable difference was found in the quantities of TDE or endrin appearing in mainstream smoke from different types of cigarettes. While making a study of the various constituents in mainstream tobacco smoke of commercial cigarettes, Mold and Walker (1957) found an important fraction of their condensate to be TDE. Their results, reported after smoking 20,000 cigarettes, were in agreement with concurrent work of others.

The transfer of organic insecticides to mainstream smoke of pipe and cigar tobacco has not been studied. Recalling that the transfers into mainstream cigarette smoke for arsenicals and organic insecticides were somewhat similar, it would be suspected that the same pattern might apply, enabling one to estimate the transfer of organic insecticides to cigar and pipe smoke. Gross and Nelson (1934) found seven percent transfer of total arsenic into the puffed smoke for cigars and 26 percent for pipes.

TABLE VII.—RESIDUES OF TDE IN RABBIT TISSUES FOLLOWING EXPOSURES TO MAINSTREAM CIGARETTE SMOKE FROM CIGARETTES CONTAINING 48 UG. OF C^{14}-TDE/CIGARETTE

[From Bowery et al. 1965]

Tissue	Calculated as C^{14}-TDE (p.p.m.): 3 months' exposure: Organo-soluble	Total	6 months' exposure: Organo-soluble	Total	Organo-soluble components (percent): TDE	deHCl-TDE[1]	Unidentified
Avg. 4 tissue fats	0.026	0.027	0.023	0.042	43	56	0
Avg. 7 vital organs	.010	.011	.014	.062	59	41	0

Avg. 6 other tissues	.006	.008	.022	.116	43	57	0
Blood ug./ml.		.011					
Urine ug./ml.		.409					
Feces ug./g.		.007					
Mainstream smoke					54	46	

[1] Dehydrochlorinated TDE.

(f) Residue retained during smoking

Although the aforementioned tests had shown that insecticidal components could be brought into the smoker's mouth, the question of retention during expiration of smoke remained to be clarified. A test was made using C^{14}-TDE experimental cigarettes in which one series was machine-smoked, one series was smoked by noninhaling smokers, and a third series was smoked by inhaling smokers. The human volunteer smokers exhaled the smoke (under slight vacuum) into a tube connected to three solvent traps. Analysis of the smoke showed that the noninhaling smoker exhaled essentially all of the TDE brought into the mouth whereas the inhaling smoker retained about 70 percent of the TDE inhaled in the mainstream smoke (Bowery *et al.* 1965).

(g) Fate of residue on inhaled smoke

The next step necessary to evaluate the impact of insecticidal residues in mainstream smoke was to determine if the quantities retained in a mammalian system via respiratory intake behaved differently from oral doses of insecticides. The problem was approached with a tracer technique (Bowery *et al.* 1965), using rabbits as "smokers." Rabbits specially selected for their willingness to accept tobacco smoke were placed in Holland smoking boxes. C^{14}-TDE added to cigarettes at levels simulating commercial cigarettes and at levels four times this quantity were "smoked" in the specially designed apparatus. A 45-cc. puff of smoke was released into the box containing a rabbit for a duration of two seconds during each minute. Those rabbits which did not breathe normally during the "smoking" process were eliminated from the tests. Seventy cigarettes were smoked each day, five days a week, for the various test periods. The rabbits were then sacrificed and the various tissues analyzed for content of TDE and metabolites. Table VII summarizes the data, and, although the tests did not include as large a number of subjects as would be desirable, the conclusions were that the fate of TDE inhaled during smoking was similar to that for ingested TDE. All of the animals were autopsied at the end of the experiment, and no untoward effects were noted.

IV. NATURAL INSECTICIDAL COMPONENTS

A discussion of insecticidal components of commercial tobaccos would not be complete without some mention of the naturally occurring component, nicotine. The content of nicotine in cured tobacco varies between one and three percent, and two percent is a likely average for American cigarettes. Table VIII summarizes the content of nicotine found in commercial tobaccos and the subsequent retention following use of various types of products. Quantities of nicotine received by the human system during smoking are appreciably greater than the quantities of synthetic insecticides received by the same route.

TABLE VIII.—MAGNITUDE AND FATE OF NICOTINE TRANSFERRED TO TOBACCO USERS

[Compiled from Larson et al., 1961]

Tobacco product	Mg./unit product	Percent: In mainstream smoke	Retained in lungs	Mg. absorbed/unit product
Cigarette	20/cigarette	15–20	65–90	1–3/cigarette.
Cigar	150/cigar		4–18	6–7/cigar.
Chewing tobacco	25/gram plug			8–88 mg./day.
Snuff				20–60 mg./day.

A large volume of literature indicates that mammals can tolerate nicotine in subchronic doses without ill effects for long periods of time, and, when administered slowly, at daily doses accumulatively much greater than lethal acute levels (Larson *et al.* 1961). The human body, particularly, seems to possess an extremely efficient mechanism for absorbing, distributing, metabolizing, and eliminating nicotine and its degradation products.

Nicotine was distributed to all tissues within 10 to 15 minutes (Hansson and Schmiterlow 1962). Rapid metabolism and excretion followed, and the liver, lung, and kidney were found to be the most important degrading tissues in the rabbit (Yammamoto *et al.* 1955). Over 90 percent of the total C^{14}-nicotine administered was recovered in excretory products in 16 hours from rats (Ganz *et al.* 1951) and 36 hours from dogs (Bennett *et al.* 1954). About ten percent of the excretory alkaloid was the intact molecule (Wolff and Giles 1950, Haag and Larson 1942). There was no evidence that nicotine was stored in the body of the rat, mouse, or dog (Ganz *et al.* 1951, Bennett *et al.* 1954). The fate of nicotine has been the subject of an exhaustive study by McKennis and his associates in recent years. The key metabolite is cotinine, and a summary of the work with a suggested metabolic scheme is found in a recent publication (McKennis *et al.* 1964). Cotinine is also a metabolite of aging nicotine residues, at least in some plant parts (Gunther *et al.* 1959). The Surgeon General's Committee (1964) stated that the nicotine inhaled during smoking "probably does not represent a significant health problem."

V. MISCELLANEOUS PESTICIDES

(a) *Fumigants*

Unpublished data available at the present time indicate that fumigants and other pesticides applied to tobacco in storage (dichlorvos, hydrogen cyanide, methyl bromide, acrylonitrile-carbon tetrachloride mixtures, and pyrethrins) would not be expected to leave objectionable residues as a result of treatment under normal conditions of storage and processing (Childs 1966).

(b) *Fungicides*

In the United States, fungicides are rarely applied to cigarette tobacco types in the field, and no data have been reported on residues of fungicides on commercial tobacco. Lucas (1966) reported residues following experimental Dyrene treatments for brown spot on tobacco (three weekly applications during weekly harvest at one lb./acre). Resulting residues on cured tobacco ranged from 0.48 to 38.4 (average 7.2) p.p.m. In other experiments where Dyrene was applied at two lb./acre and maneb at one lb./acre (six weekly applications during harvest), residues on cured tobacco were 34 to 111 (average 47) p.p.m. and 76 to 495 (average 198) p.p.m., respectively. Residues of these fungicides were shown to vary directly with number and rates of application and inversely with rainfall. Residues of Dyrene and maneb on tobacco placed in an accelerated storage test for six months were not significantly decreased by the treatment.

Anderson (1962) injected 500 p.p.m. of Dyrene into cigars subequently smoked in an artificial smoking apparatus. One percent of intact Dyrene was detected in mainstream smoke extracts, and 5.8 percent of a decomposition product, o-chloroaniline, was also isolated from the mainstream smoke.

In Europe, recent outbreaks of blue mold on green field tobacco have made frequent applications of fungicides a prerequisite to successful culture. The level of zineb on cured tobacco following field treatment (two to three lb./acre, 15 applications) was 1,050 p.p.m. for bright tobacco and 4,300 p.p.m. for burley tobacco (two to three lb./acre, 15 applications). When subjected to various manufacturing processes, the residues in the finished cigarettes were found to be 43 and 76 percent, respectively, of the original levels (Carugno and Pizzini 1963). In other tests, Chouteau (1963) found maneb and zineb residues on cured tobacco to be 1,873 p.p.m. and 2,890 p.p.m., respectively; rates of field application were not given but presumably they were recommended rates. When subjected to bulk fermentation, 78 and 62 percent of the residues disappeared. These authors observed that during air curing, zineb degrades very little whereas 30 to 40 percent of maneb is destroyed.

(c) *Herbicides and growth regulators*

Three herbicides, diphenamid, Pebulate, and Vernolate, are registered for use on tobacco, and all are applied within a week of the time tobacco is planted. No published information concerning residues likely to occur in the cured leaf or present in tobacco smoke is available.

Maleic hydrazide is frequently applied at the rate of 2.25 lb./acre to control adventitious buds when tobacco is topped. Cigarettes made from tobacco so treated contained 10 to 30 p.p.m. (Stone 1957 and Carroll 1957) of maleic hydrazide. When cigarettes containing 30 p.p.m. were smoked in an automatic smoking machine (35 cc. puff of two seconds duration once per minute until length of butt was 20 mm.), 93 percent was decomposed or transferred to the side stream. The cigarette butts contained 30 p.p.m. indicating no buildup due to sublimation or any loss due to hot smoke pulled through the butt (Stone 1957). Cigarettes containing ten p.p.m. were similarly smoked without detection of maleic hydrazide in the mainstream smoke at the limit of the colorimetric method used. In a third test in which 105 p.p.m. of C^{14}-maleic hydrazide was infused into cigarettes, 23 percent of the radioactivity was found in the mainstream smoke, a large part of which was postulated to be decomposition products.

When maleic hydrazide was applied to tobacco at the rate of 2.25 lb./acre, the green commercial leaves were found to contain 37 p.p.m. while the green sucker leaves contained 482 p.p.m. (Hoffman and Parups 1962). To determine the possible uptake of maleic hydrazide from accumulative soil residues, Hoffman *et al.* (1962) applied maleic hydrazide to soil in laboratory and field tests at concentrations up to five times the concentration normally applied to growing tobacco. Residues of maleic hydrazide disappeared more rapidly from sand and muck than from clay soils. About 88 percent of the original dose had disappeared from sandy soils within eight weeks. When tobacco plants were grown in soils containing five p.p.m. (five times the concentration which might occur if 2.25 lb. were applied directly to the soil) the green leaves contained 0.9 p.p.m. The authors concluded "that there would have to be an enormous amount of maleic hydrazide in the soil before any would be found in the plant."

(d) *Soil fumigants*

The uptake of organic chlorine or bromine by the tobacco plant following treatment with soil fumigants (DD or EDB) at recommended rates and normal weathering conditions is about 0.3 percent of chlorine and 0.15 percent of bromine above normal concentration (Gaines and Graham 1953, Moseley *et al.* 1953). There is no published information to indicate whether this slight increase in chlorine or bromine content is traceable to the parent compound, or metabolites, or whether it is a manifestation of normal physiology of the plant. From 2.8 to 5.9 percent of chlorine and 1.4 to 3.0 percent of bromine is transferred to mainstream smoke based on the total quantities present in the intact cigarette (Moseley *et al.* 1953).

VI. TOBACCO AND PESTICIDE RESIDUE TOLERANCES

Expressions regarding the need for the establishment of tolerances for pesticide residues on tobacco have been raised on occasions by those in the socio-political environment in the United States. This coupled with the serious thought being given to such an action on the part of one European country, West Germany (anonymous 1966), requires some discussion as to the unique factors that must be considered with this product over those normally utilized when tolerances are established for foodstuffs.

Since pesticide residue tolerances are usually established on the "raw agricultural commodity" one must immediately be concerned as to the applicability of this to tobacco since the product that is ultimately consumed by the public (tobacco smoke) bears little resemblance to the raw product. At first blush one might argue that the same argument holds in most cases since modern food processing can drastically alter the relationship between the raw product and the consumed product. However, pesticide residues on raw agricultural food commodities are usually altered only in a quantitative manner with little, if any, significant qualitative change taking place between consumer purchase and consumption. In the case of pesticide residues on tobacco, extensive degradation of pesticide does, or is likely to, occur during the consumption phenomena. Only after the commodity (smoke) that is to be consumed is produced do the tolerance requirements for ingested foodstuffs and ingested smoke appear to become analogous.

Therefore, any consideration of the application of tolerances to tobacco should account for the pyrolysis factor in some appropriate fashion. For example, the TDE-DDT content of cigarette tobacco is about 11 p.p.m., well above the tolerance limit of 7 p.p.m. permitted on many foodstuffs. However, the amount of TDE-DDT actually delivered to the consumer during smoking is about 1.8 p.p.m., well below tolerances for food.

This principle was utilized by the Entomology Section of the 20th *Tobacco Workers' Conference* in Columbus, Ohio, in 1964 when the following resolution was passed: "Insecticides should not be recommended for use on field-grown tobacco when the projected levels of such residues in the mainstream smoke of commercial cigarettes would exceed the tolerances established for raw agricultural products, such as leafy vegetables."

TABLE XI.—RESIDUES OF INSECTICIDES TO BE EXPECTED ASSUMING USE OF THE MATERIALS LISTED AT RECOMMENDED RATES AND WAITING PERIOD OF 7 DAYS BETWEEN TREATMENT AND HARVEST

[Compiled from Bowery and Guthrie 1962, Sheets et al. 1966]

Material	Anticipated on tobacco (p.p.m.)			Tolerance "expected" tolerance (p.p.m.)	Levels actually found in commercial cigarettes (p.p.m.)
	Green	Flue-cured	In smoke		
TDE	58	35.0	7.0	7	1.70
Endrin	7	4.2	1.2	0	.06
Endosulfan	20	3.4	.1	2	----
Telodrin	7	2.7	.08	0	----
Carbaryl	13	1.4	.01	10	<.3
Guthion	25	1.8	.001	2	----

Table IX summarizes the residues to be expected in the mainstream smoke of commercial tobacco following extensive use of recommended and experimental insecticides on tobacco. The state and federal recommendations for tobacco insect control in 1964 reflected the results for this action. Data for 1966, shown earlier in Table II, represent current analyses which indicate a marked decline in residues.

TABLE X.—*Common and chemical names of pesticides mentioned in text*

[Common name and chemical name]

Acrylonitrile: vinyl cyanide.
Carbaryl: 1-naphthyl *N*-methylcarbamate.
Cotinine: *N*-methyl-2-(3-pyridyl)-5-pyrrolidone.
DD: 1,3-dichloropropene and 1,2-dichloropane mixture.
DDT: 1,1,1-trichloro-2,2-bis(*p*-chlorophenyl)ethane.
Dichlorvos: *O,O*-dimethyl 2,2-dichlorovinyl phosphate.
Dieldrin: 1,2,3,4,10,10-hexachloro-*exo*-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4 - *endo* - *exo*-5,8-dimethanonaphthalene.
Diphenamid: *N,N*-dimethyl 2,2-diphenyacetamide.
Dyrene: 2,4,-dichloro-6-(*o*-chloroanilino)-*s*-triazine.
EDB: 1,2-dibromoethane.
Endosulfan: 6,7,8,9,10,10-hexachloro-1,5,5a, 6,9,9a-hexahydro-6,9-methano-2,4,3 - benzo - dioxathiepin-3-oxide.
Endrin: 1,2,3,4,10,10-hexachloro-*exo*-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4 - *endo* - *endo*-5,8-dimethanonaphthalene.
Guthion: *O,O*-dimethyl *S*-4-oxo-1,2,3-benzotriazin-3(4*H*)-ylmethyl phosphorodithioate.
Malathion: *S*-[1,2-bis(ethoxycarbonyl)-ethyl] *O,O*-dimethyl phosphorodithioate.
Maleic hydrazide: 6-hydroxy-3-(2*H*)-pyridazinone.
Maneb: manganese ethylenebis(dithiocarbamate).
Nicotine: 1-methyl-2-(3-pyridyl)-pyrrolidine.
Pebulate: *S*-propyl butylethylthiocarbamate.
Pyrethrins: insecticidally active principles of *Chrysanthemum cinerariaefolium*.
TDE: 1,1-dichloro-2,2-bis(*p*-chlorophenyl) ethane.
deHCl-TDE: 1-monochloro-2,2-biz(*p*-chlorophenyl)ethylene.
Telodrin: 1,3,4,5,6,7,8,8-octachloro-1,3,3a,4, 7,7a-hexahydro-4,7-methanoisobenzofuran.
Toxaphene: mixture of isomers of octachlorocamphene (67 to 69 percent chlorine).
Trichlorfon: *O,O*-dimethyl (2,2,2-trichloro-1-hydroxyethyl) phosphonate.
Vernolate: *S*-propyl dipropylthiocarbamate.
Zineb: Zinc ethylenebis(dithiocarbamate).

Summary

Residues of inorganic insecticides on tobacco have decreased sharply in recent years, and the levels of arsenic on tobacco are of little significance at the present time.

Organic insecticides applied for tobacco insect control can be detected at relatively high levels during the early phases in the culture of tobacco due to the large surface-to-weight ratio characteristic of leafy products. During the flue-curing process about 40 percent of TDE and endrin are dissipated whereas more than 70 percent of certain other organochlorine insecticides, phosphates, and carbamates are lost in this process. The content of TDE and endrin in the cured leaf remains constant during two years of commercial processing. During the smoking of cigarettes 80 to 90 percent of TDE, 70 to 80 percent of endrin, and 95 percent (or more) of carbaryl and Guthion are dissipated. Noninhaling smokers exhale essentially all of the TDE in the mainstream smoke whereas inhaling smokers retain the majority of the insecticide brought into the system. The fate of inhaled TDE in rabbits appears to follow similar pathways of storage and elimination as reported for oral doses. The intake of the most common insecticide appearing in tobacco smoke by the one-packper-day inhaling smoker is approximately equal to the intake of insecticide in his daily food (utilizing TDE plus DDT for comparative purposes).

The use of fumigants for control of stored tobacco insects, maleic hydrazide for sucker control, and fungicides for control of pathogens of minor importance on flue-cured tobacco do not presently appear to be a residue problem. Should plant disease problems on tobacco in the United States increase to the point where fungicide applications become a routine practice during the growing season, the residue problem which appears to presently plague European tobacco-producing areas could become critical.

Residue problems on tobacco deserving attention include monitoring of commercial tobacco, isolation and identification of side stream components of smoke, identification of decomposition products of mainstream smoke, and the retention of insecticide residues following use of cigar, pipe, snuff, and chewing tobaccos. Marked progress could be made to reduce the number of pesticide applications if economic threshold levels and accurate prediction systems could be incorporated into control programs.

Résumé [5]

Les résidus d'insecticides inorganiques sur le tabac ont fortement diminué au cours de ces dernières années, et les doses d'arsenic que l'on trouve actuellement sur le tabac sont faibles.

Les insecticides organiqués appliqués pour la lutte contre les insectes du tabac peuvent se trouver en doses relativement fortes durant les premières phases de la culture du tabac, en raison de la valeur élevée du rapport surface/poids qui caractérise les parties feuillues. Au cours du processus de séchage artificiel à l'air chaud, 40 p. cent environ de TDE et d'endrine se dissipent, tandis que 70 p. cent de certains autres insecticides organochlorés, de phosphaes et de carbamates sont perdus, La teneur en TDE et endrine de la feuille séchée reste constante durant deux années de préparation commerciale. Pendant la combustion de la cigarette, 80 à 90 p. cent de TDE, 70 à 80 p. cent d'endrine et 95 p. cent (ou plus) de carbaryl et de Guthion disparaissent. Les fumeurs qui n'avalent pas la fumée rejettent pratiquement tout le TDE dans la colonne principale de fumée, tandis que ceux qui l'avalent absorbent la majorité de l'insecticide introduit dans l'organisme. Chez le lapin, le TDE absorbé par inhalation suit un processus de rétention et d'élimination analogue à celui qui est rapporté pour l'absorpiton par voie orale. Pour le fumeur qui avale la fumée d'un paquet de cigarettes par jour, l'apport de l'insecticide qui apparait le plus couramment dans la fumée de tabac est approximativement égal à l'apport d'insecticed de la ration alimentaire quotidienne (si l'on prend comme élément de comparaison le TDE plus le DDT).

L'emploi de fumigants pour la lutte contre les insectes du tabac emmagasiné, de l'hydrazide maléique pour l'ébourgeonnement et de fongicides pour la lutte contre les agents pathogènes d'importance secondaire pour le tabac séché aritificiellement à l'air chaud ne pose, en ce moment, aucun problème de résidus. Si les maladies du tabac prenaient de l'extension aux Etats-Unis, au point de nécessiter un emploi courant de fongicides durant la période de croissance, le problème des résidus, qui semble être actuellement un fléau pour les régions européennes productrices de tabac, pourrait devenir critique.

[5] Traduit par S. Dormal van den Bruel.

Les problèmes de résidus sur le tabac, qui méritent de l'attention, comprennent le contrôle des tabacs commerciaux, la séparation et l'identification des composants des colonnes latérales de fumée, l'identification des produits de décomposition des colonnes principales de fumée, et la rétention des résidus d'insecticides faisant suite à l'usage du cigare, de la pipe, de tabac à priser et à chiquer. Des progrès notables pourraient être accomplis pour réduire le nombre d'applications de pesticides si des seuils économiques et des méthodes précises de prognose pouvaient être incorporés dans les programmes de lutte.

Zusammenfassung [6]

Die Rückstände anorganischer Insektizide haben in den letzten Jahren stark abgenommen und die Arsenikmengen auf Tabak sind z. Zt. von geringer Bedeutung.

Organische Insektizide, die für die Insektenbekämpfung auf Tabak Anwendung finden, Können während der frühen Phasen in den Tabakkulturen infolge des grossen Oberflächen-Gewichts-Verhältnisses, das für Blattpflanzen charakteristisch ist, in relativ hohen Mengen nachgewiesen werden. Während des "flue-curing Prozesses" des Tabaks gehen etwa 40% des TDE und Endrin zu Verlust, während mehr als 70% gewisser anderer Organochlor-Insektizide, Phosphate und Carbamate bei diesem Prozess verloren gehen. Der Gehalt an TDE und Endrin im behandelten Blatt bleibt während der zwei Jahre der Weiterverarbeitung konstant. Beim Rauchen von Zigaretten verschwinden 80–90% von TDE, 70–80% von Endrin und 95% (oder mehr) von Carbaryl und Guthion. Nichtinhalierende Raucher atmen im wesentlichen das gesamte TDE im Hauptstrom des Rauchs wieder aus, während inhalierende Raucher ein Grossteil des eingeatmeten Insektizids zurückhalten. Das Schicksal des inhalierten TDE beim Kaninchen scheint den gleichen Wegen der Ablagerung und Ausscheidung zu folgen, wie sie bei oraler Zufuhr mitgeteilt wurden. Die Aufnahme des am weitesten verbreiteten Insektizids, das im Tabakrauch des "eine Packung täglich -Rauchers" auftritt, ist annähernd gleich der Insektizidaufnahme in seiner täglichen Nahrung (wenn man TDE plus DDT zu Vergleichungszwecken benutzt).

Die Verwendung von Begasungsmitteln zur Insektenbekämpfung in lagerndem Tabak, von Maleinsäurehydrazid für die Bekämpfung von Schösslingen and von Fungiziden zur Bekämpfung weniger wichtiger pathogener Lebwesen auf "flue-cured" Tabak scheint gegenwärtig kein Rückstandsproblem darzustellen.

Sollten aber die Probleme the Pflanzenkrankheiten auf Tabak in den USA bis zu einem Punkte zunehmen, an welchem die Fungizidanwendungen zu einer Routinemassnahme während der Wachstumsperiode werden, dann würde das Rückstandsproblem, das z. Zt. die europäischen Tabakanbaugebiete zu bedrängen scheint, kritisch werden.

Rückstandsprobleme beim Tabak, die Beachtung verdienen, umfassen Warnung des Tabakhandels, Isoliering und Identifizierung von Nebenbestandteilen in Tabakrauch, Identifizierung der Zersetzungsprodukte im Hauptstrom des Rauches and das Zurückhalten von Insektizidrückständen nach Genuss von Zigarren-, Pfeifen- Schnupf, und Kautabaken. Ein wesentlicher Fortschritt zur Verringerung der Anzahl der Pestizidanwendungen könnte erzieldt werden, wenn ökonomische Schwellenwerte und genaue Vorhersagesysteme in die Bekämpfungsprogramme eingebaut werden könnten.

A CITIZEN TAKES A HARD LOOK AT THE ABM DEBATE—AN ARTICLE BY DEAN ACHESON

Mr. STENNIS. Mr. President, I have before me an article entitled "A Citizen Takes a Hard Look at the ABM Issue," which was written by Dean Acheson, the former Secretary of State, and a well-known public official. The article was published in the Sunday Star of yesterday.

We all know Dean Acheson as a rugged individual, a man of vast experience in government, and a man who has faced the complicating questions of dealing with the Soviets. We know him as a gentleman who for many years was on the hot spot during the Korean war.

I think this article should be read by everyone who is interested in the ABM issue. It is a forthright exposition by a distinguished American. After leaving office, Dean Acheson continued to serve in an advisory capacity to more than one President. Some of the points made by Mr. Acheson should lay to rest some of the criticisms being leveled at the proposed program.

Mr. President, I ask unanimous consent that the article to which I have referred may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CITIZEN TAKES A HARD LOOK AT THE ABM DEBATE

(By Dean Acheson)

Complexity is a serious obstacle to the working of the democratic process. This process requires a high degree of intelligent citizen understanding of issues that profoundly affect us all. Once an issue is wrapped in technological jargon and subtle misrepresentation, the citizen is tempted to throw in the intellectual towel and be pushed toward the conclusion favored by the vocal technocrats and other spokesmen who have captured the headlines and have sought to monopolize the positive symbols of peace.

This seems to be the course being followed in the debate over the President's proposal to deploy a modest Safeguard ABM system during the next five years to protect our Minuteman missiles against Soviet attack.

Four arguments, often wrapped in most confusing technical terms and resting on tendentious assertions, have been made against the Safeguard system:

1. The Minuteman missiles do not need protection.

2. The Safeguard ABM will not protect the missiles.

3. Safeguard will cost so much as to delay much-needed domestic programs.

4. A decision to deploy Safeguard will imperil strategic arms limitation talks with the Soviet Union.

Before we examine these arguments in layman's terms, let us first see what the situation is that has led the President to conclude that prudence requires the Safeguard defense system.

Over many years, we have sought to obtain Soviet agreement on the control of atomic energy and nuclear armaments. This effort did not succeed, and both the United States and the Soviet Union have developed a large number of intercontinental and medium-range missiles armed with nuclear warheads. The United States at one time had a great superiority in these weapons, but today, as a result of steady growth in the Soviet missile force and the leveling off of the U.S. force, the Soviet Union now can deliver slightly more nuclear megatonnage by intercontinental missiles than we can.

THREE TYPES

The American nuclear arms system has three principal types of weapons: land-based Minuteman missiles in concrete silos sunk in the earth, shorter range missiles carried by nuclear submarines deployed much nearer their targets, and manned aircraft armed with nuclear bombs, but more vulnerable than either of the other two.

Both countries have developed antiballistic missile systems (ABMs) that can destroy in space incoming missiles detected by radar. The Russians have deployed some 60 of these (around Moscow). We have deployed none in the United States. The President proposes that we deploy ABMs around Minuteman silo sites to add to their security—hence, the name of the program, Safeguard.

The major new and urgent reason for this proposal now is the rapid development and deployment by the USSR of their powerful missile called the SS–9. This missile will be so accurate by the mid-1970's that its nuclear warhead would strike close enough to a Minuteman missile to destroy it despite the protection of its buried concrete silo. Moreover, the SS–9 is so large that it can carry as many as three nuclear warheads—perhaps more—each capable of destroying a different Minuteman missile.

The slower, manned bombers of SAC are much more vulnerable than hardened missiles, and will become increasingly vulnerable as the deployment of Soviet nuclear submarines close to the United States reduces the warning time of an incoming attack. The increasing vulnerability of SAC bombers as well as Minuteman would reduce our reliance for nuclear retaliation chiefly to the Polaris-Poseidon system, thus simplifying Soviet military planning. No one can say how long it will be before some technical breakthrough also renders our submarines vulnerable. Any such result would strike at the central purpose of what has been thought of as our nuclear strategy—that is, deterrence.

It would have been much better if nuclear weapons had never been possible or invented. But they exist—and are likely to continue to exist in even more dangerous forms—and while they do, what security there is lies in deterring their use by either side. Winston Churchill called this "the balance of terror." Mutual deterrence depends on the incapacity of either great nuclear power to wholly destroy the opponent's capacity to retaliate with a crushing blow. The conviction that a nuclear attack will inevitably bring on doomsday for all is our principal hope of averting nuclear war. Anything that may weaken that conviction is a betrayal of mankind.

To protect the Minuteman's contribution to deterrence, to frustrate any Soviet plan aimed at removing this agency of retaliation, the President has asked for the Safeguard system. How valid are the objections to Safeguard?

First, it is said that the Minuteman silos do not need protection. The Russian SS–9s, it is argued, are not sufficiently dependable and accurate to take out all our missiles before some would be off on their missions to Moscow and other targets. It would be better, it is said, to invest in more Minuteman missiles and rely on instantaneous retaliation rather than fall into the fatal Maginot Line defensive attitude.

ESTIMATE ACCEPTED

It is difficult for laymen to judge the performance of the Soviet SS–9s. In the absence of convincing evidence to the contrary, I accept the estimates of the U.S. intelligence community, a group of highly trained professionals who examine these complex technical developments from every possible angle. Over many years I have had to decide questions on which experts differed. The truth may range somewhere between them, but usually nearer to the views of those who have most often done careful homework, who have been right in the past, and who have not interjected political factors into their technical judgment. Security based on an optimistic view of Russian incompetence rests on a ledge too narrow for safety. We had best assume that our opponent is as smart as we are.

Even worse, many ABM opponents advocate alternatives that would appear more provocative to the Soviet Union, would stimulate an arms race in offensive weapons, and would limit the military and diplomatic options of the President in a confrontation with a nuclear adversary.

Some of those who argue against ABMs urge the President to follow the "policy of the empty silo"—that is, to fire the Minuteman missiles at Russian cities on the first radar report of incoming missiles and thus avoid being stripped of our deterrent. The time available for such a decision precludes any deliberation by the President, or, perhaps, any notice to him.

Whoever in fact gives the order, the judgment to start action to destroy millions of Russian people bring counter-retaliation on millions of Americans might really be that of comparatively junior military officers. Having been through one radar alarm (happily false) of incoming hostile planes some hours before the presumed attack, I have little desire to see such decisions made in a matter of seconds.

Other opponents of deployment urge that we take a chance on the survival of enough Minutemen for counter-attack by building more, putting more concrete around the silos, and relying on Russian inaccuracy in hitting them. I understand the experts disagree on the efficacy of these measures. Whether they would protect Minutemen or not, the effect of this strategy would be to absorb on American soil, even though not directly on American cities, the brunt of the first attack, with the full effects of its fallout sweeping across the country. The ABM, on the other hand, seeks to confine the first nuclear exchange so far as possible to outer space, so that the destruction directly and through fallout will be far less and the consequences of error less ghastly. Also, it might give both sides one last clear chance to pause and think before plunging into the cataclysm of nuclear war between the superpowers.

Even though some attacking missiles would undoubtedly get through, the damage would be far less and, also, the temptation to steal an advantage by a surprise first blow, a nuclear Pearl Harbor. If the essence of sane nuclear strategy is deterrence, these are essential elements in strengthening it.

COUNTER MEASURES

Second, it is argued that Safeguard will not be effective in protecting Minutemen because Safeguard can be easily overwhelmed.

A few weeks ago some scientists were suggesting that a myriad of technical devices could be employed to render Safeguard ineffective. We heard a great deal then about penetration aids, precusor blasts, and the like, all presumed to be available to the Russians as well as being cheap, reliable, and effective. Indeed, every counter measure theoretically thought to be possible was offered as though it rendered Safeguard a hopelessly vulnerable victim to any device, even a gleam in a scientist's eye.

Much of this hasty prophesy has been quietly withdrawn—although not, to be sure, renounced. It quickly became apparent that the designer of Safeguard had thoroughly investigated the devices with which it will have to contend, knew their limits of cost, availability and effectiveness, and had taken them into account in the de-

sign of the system. So the air is somewhat cleared of chaff, electronic jamming devices, radar-blinding blasts, protected warheads, and decoys.

With the demise of the decoys, some perspective has been gained. The ground to which the doubting scientists have shifted is itself as doubtful. The claim now is that for the defense of Minutemen one would want a system different from Safeguard, because its radar is soft, and therefore an easy and inviting target. The ease with which radar—the "eye" of the system—can be destroyed is the contentious issue on which critics presently base their judgment that Safeguard can be "easily" overwhelmed.

Any antiballistic missile system requires a radar. Whether it is an easy target or a difficult one depends on whether it is defended, and, of course, Safeguard has, as a major function, defense of its own radar.

Defending the radar means having missiles available to intercept Soviet missiles aimed at its destruction. To overwhelm the system the Soviets must fire a number of offensive missiles sufficient to exhaust the interceptors. Now, there is no reason to believe that they will have this number by the time Safeguard will become operational. But reason has given way to invention here again, and some scientists have postulated a special Soviet missile force whose sole mission would be to attack the radars in large numbers.

This specialized force does not now exist. The Soviets lack the required technology to produce it. Their entire weapons program, unlike our own, has concentrated on the development of large, rather than small warheads. Precise costs are uncertain, but certainly high. Even if all of the necessary technology, production, testing, evaluation, and deployment could be managed, the required effort would be considerable. And we could make additions to Safeguard which, at substantially lower cost, could offset even this uncertain, difficult, and costly Soviet effort.

OFFENSE AND DEFENSE

Indeed, it is a reasonable hope that our willingness and capacity to frustrate a Soviet attack by forcing it to cope with Safeguard will induce the Russians to abandon efforts to develop the means for such an attack. What is certainly clear is that if we make it easy rather than difficult for them, and if we make it cheap rather than expensive, we will only encourage a posture that we have sought persistently, with great effort, to frustrate and dissuading them from developing.

While on this point, let me warn against the danger of underestimating defense even in nuclear war. Throughout military history the advantage has moved back and forth between the offense and the defense, but never to the elimination, or even great reduction in the importance of either. To use "a Maginot Line mentality" as a pejorative term is to be trapped by a cliche. The Maginot Line was good and useful strategically and tactically. It was never designed as the sole and sufficient defense of France. Its flanks and top had to be protected also.

The Germans never broke the Maginot Line; they outflanked it at its northern end through feebly-held Belgian positions and inadequate British and French mobile forces. The planned ABM deployment can be saturated but not by missiles it is planned to meet in the mid-1970s. If these are increased, Safeguard can be increased also. But to write off our bombers and land-based missile forces and rely only on submarines as critics suggest would be true Maginot psychology.

Third, it is argued that Safeguard will seriously interfere with much-needed social programs to improve our domestic life. This argument is untrue and based on the subtle misrepresentation that defense expenditures over the past several years have "taken away" resources for domestic needs. On the contrary, from 1964 to 1970 Federal expenditures on welfare programs increased 120 percent, while defense spending, including Vietnam, increased only 55 percent. Furthermore, our direct expenditures on the nuclear strategic forces have decreased by about 50 percent from 16 billion dollars to 8 billion dollars annually. During the same period the Soviet expenditures in the same field have increased by about 70 percent, from $10 billion to $17 billion.

The requested ABM Safeguard program for five years is projected at $10 billion, including research and development. On an annual basis this amounts to about one-fortieth of the current defense budget and less than one-fourth of one percent of our gross national product.

This comparatively small investment buys added security for a large portion of our retaliatory force. To give an idea of the order of magnitude involved, the needed expenditure by this country over the next five years to clear up pollution of the atmosphere would be about $150 billion.

Moreover, the critics who suggest that the total $101 billion cost of Safeguard could be saved for other uses are either misleading themselves or misleading the public. Virtually all the critics of Safeguard have advocated continuing research and development of ABM, which presently makes up more than three billion dollars of the total program cost. The critics themselves never cease to recommend alternatives to Safeguard which, if not as irresponsible as the "launch-on-warning" doctrine, are at the least costly, probably more costly than Safeguard.

The recent proposal that we double the number of our Minuteman missiles so that a sufficient number will survive a Soviet attack has been advocated largely on the grounds that it would cost less than Safeguard. Such a program would, however, almost certainly precipitate a dangerous increase in offensive missiles on both sides, as each struggled to maintain its position in an offensive arms race. The ultimate cost of such a program would be very much higher than Safeguard, as well as being open-ended and dangerously destabilizing.

WON'T HURT ANYONE

Fourth, it is argued that an ABM deployment will inhibit negotiation with the Russians about limiting nuclear armaments. This argument goes against both reason and experience. Safeguard does not add offensive weapons that Russians might believe they must match. The ABM will not hurt anyone, it will not enter Soviet territory. It is designed to meet and destroy an offensive weapon in space or above our territory. The Russians already have the ABM; they understand it. Our possession and deployment of these weapons will add greatly to their hesitancy to precipitate doomsday, but not to their fear that we will do so.

There have been no official or unofficial complaints by the Soviets, of which I am aware, concerning our proposals now and earlier to develop and deploy ABMs. Their leaders repeatedly assert the desirability of purely defensive weapons. Soviet strategic and political plans and agreements are made strictly in accordance with their own estimate of what is to their national interest, with what they call the calculus of forces. What we do is of interest to them in its effect, if any, on that calculus.

A decision by the Congress to reject the President's Safeguard proposal or to delay it pending negotiations with the Soviet Union would be seen in Moscow as a weakening of the United States deterrent forces. Either decision would materially reduce the chances for a successful outcome of those negotiations.

AUTHORIZATIONS OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. MONDALE. Mr. President, I should like to speak today on the critical issue of the anti-ballistic-missile system. I have spoken frequently against the recommendations of the Committee on Armed Services, and today I should like to speak in detail, setting forth the reasons for my opposition.

I certainly do not want to see this country undefended but I also do not want us to live under the illusion that the Safeguard ABM system will provide an adequate defense.

If I thought Safeguard would make our chances for survival greater, I would support it.

If I thought large expenditures of funds on an ABM system would provide an effective defense for the country, I would advocate spending the money.

I favor continued research, development, and testing for ABM systems. R.D. & T. serves a double purpose: it protects us against changes in the world nuclear situation and it either produces a workable ABM or provides the system unworkable. Also, it avoids fantastically expensive deployment costs on a system which may be unworkable or obsolete.

The Hart-Cooper amendment stresses further ABM research, development, and testing, but it carefully prevents deployment of any sort; nothing can go into the ground. The reasoning behind it is that deployment is what throws uncertainties into the arms race and disarmament talks; deployment is what commits us to a system.

If, as the amendment provides, there is to be no preparation of any site, research and development will not be conducted in North Dakota or Montana. The facilities at Kwajalein or the contractors' plants are far better suited for testing than installation facilities not yet constructed.

Any partial preparation of missile sites will commit us to further deployment; therefore, I support the Hart-Cooper amendment that will allow further ABM research and development, but bar the deployment of any components of the system.

The reasons for my position reflect my general views on the deployment of Safeguard. I have opposed it because I fear its effect on the crucial disarmament talks; question its technical feasibility;

believe there are better, cheaper, and more certain means of protection; am not convinced that the Russian threat is as immediate as the Pentagon would have us believe; and place a priority on domestic spending to meet our tremendous needs at home.

Nuclear clouds. Mushroom shaped. Scattered across the face of the earth. We live daily and have for the past two decades with the possibility. Occasionally, we worry about it publicly, as in the 1950's, when local schools, and municipal buildings were stocked with civil defense shelters and supplies, or in 1962, when we had a close brush with nuclear confrontation in Cuba.

Nevertheless, day in and day out, 1,054 intercontinental missiles wait to be released, 30 minutes from their anticipated destination in the Soviet Union.

Of the 656 sea-based missiles, about 400 are always beneath the sea waiting to be launched from 41 Polaris submarines.

Forty percent of the 680 intercontinental bombers, armed with four hydrogen bombs each, are kept on strategic alert, ready to take off in less than 15 minutes at warning provided by the ballistic missile early warning system.

The United States plans to double its more than 4,000 strategic nuclear weapons in the next few years.

Minuteman II, the third version of the U.S. intercontinental ballistic missile, currently is replacing the two earlier versions. If the Minuteman III force is set at 500 missiles, total individually aimed ICBM warheads will increase from 1,000 to 2,000. The submarine Polaris A–3, also a third-generation missile, is fitted with a cluster of three warheads. With completion of the planned Poseidon submarine force, individually aimed warheads on submarines will rise from 656 to more than 6,000. Within the next several years, about one-half of the bomber force will be replaced with new and faster aircraft. And none of this includes the tactical nuclear weapons we have positioned throughout the world.

Arrayed on the Soviet side are between 1,050 and 1,100 intercontinental ballistic missiles, about 700 of which have been deployed in the last 3 years. Two hundred of these missiles are the large and accurate SS–9 which, like the U.S. Minuteman II, may be outfitted with multiple individually aimed warheads in the future. The Soviet Union also has between 700 and 800 intermediate-range ballistic missiles aimed at Western Europe.

Within the past year, the Russians have launched several submarines comparable to the U.S. Polaris, carrying 30 long-range missiles. Their arsenal includes 10 to 15 other nuclear-powered submarines each carrying three missiles of a shorter range capability.

Obviously, the world nuclear destructive capacity has grown from the development of the atomic and hydrogen bombs to immense proportions, with the major powers having more than sufficient sophisticated delivery systems for hydrogen weapons. The United States maintains its numerical lead in every category of weapons, but both are confident of the capability to kill hundreds of millions of persons.

The capability exists and is deployed; however, it has not been used because of belief in mutual deterrence. Both Russia and the United States are deterred from launching a "first-strike" by the knowledge that the other would inevitably retaliate, and could destroy one-third to two-thirds of the attacker's population and industry.

This uneasy deterrence balance is threatened by the deployment of the American Safeguard anti-ballistic-missile system. The threat comes from uncertainties—the uncertainties as to whether an anti-ballistic-missile system can work because it is impossible to test under the circumstances of a real nuclear warhead attack, the uncertainties which come with the inevitable introduction of offensive weapons to negate the effectiveness of an ABM defense, the uncertainties which must be added when we spiral into a new round of nuclear weapons development and the uncertainties about our intentions when the deployment of more weapons indicates a decision to spend on military materials rather than on peaceful and domestic needs.

Unusable nuclear weapons offer us nothing but a balance of terror. After having stockpiled nuclear weapons with an explosive power of 15 tons of TNT for every man, woman, and child on earth, it seems absurd to be told that we must increase our nuclear armaments so that we can disarm from a position of strength. An equal absurdity is that the moment we begin the work on ABM's, we and the Russians also build the MIRV—multiple independent reentry vehicle—the weapon to circumvent ABM's.

The impact of agonies and absurdities surrounding the American defense posture of the past 20 years, Prof. George Wald, of Harvard, says, is what is bothering the students. "I think that what we are up against is a generation that is by no means sure that it has a future."

To straighten out the problems which Americans confront, both young and old, we must make clear that we are a nation of peace, not a nation of war; a nation of life and not one of death and destruction. The best way we can do this is by making every possible effort to achieve successful disarmament talks.

First. Ending the nuclear arms race is so important that we must let nothing jeopardize disarmament talks. I fear the effect of a decision to deploy Safeguard, creating uncertainties about our good intentions and difficulties for enforcing any arms accord. If we fail to take advantage of an opportunity to level off the arms race when both the Americans and the Russians feel that they have a secure deterrence, we forgo a rare opportunity to achieve peace and security.

Both the Nuclear Nonproliferation Treaty and the possibility for disarmament talks offer some hope of escape from the arms race. After China and France entered the category of nations with nuclear capability, we sought international agreement to stop the worldwide deployment of nuclear weapons. The treaty may be abrogated, but international negotiations and agreements, international good faith, are truly our only means of survival. The Nuclear Nonproliferation Treaty gives us a chance to step back, at least symbolically, from the international competition in arms, and to encourage other nations to do the same thing

Section VI of the Nuclear Nonproliferation Treaty requires the United States and Russia to do everything possible to halt the arms race, including disarmament talks. Whether or not we follow that specific encouragement, the U.S. acceptance of the treaty is hollow indeed if it is not followed by other efforts to dampen the arms race. However, our good faith will also be questioned if we move ahead with ABM deployment notwithstanding ongoing disarmament talks. Deployment of the ABM or any other new missile development such as the MIRV flies in the face of our proclaimed policy of nonproliferation.

I am terribly afraid that our deployment of ABM, even the initial authorization of deployment at two sites, and the further testing and installation of MIRVed warheads will seriously jeopardize any chance we have of achieving accord through disarmament talks. Therefore, I deplore the fact that the Air Force recently ordered MIRV warheads.

I joined with 40 other Members of the Senate to introduce a resolution calling upon the administration to enter into a mutual moratorium with the Soviet Union on testing the MIRV warheads. Although the Soviets possess the technology and capability to deploy MIRV, it is unclear whether tests of their version of the MIRV have begun. The best way to stop Soviet development of the weapon is a suspension of American tests as long as the Soviet Union refrains from testing as well. This would keep the situation stable until there is an opportunity to reach agreement on a limitation of both ABM and MIRV.

There simply is no need to develop either the anti-ballistic-missile system of MIRV if we can reach an agreement with the Soviets to stop mutual development.

On the other hand, President Nixon's policy for the talks seems to be negotiation of a weapons escalation. Mr. President, I will repeat the last sentence, because I am very fearful that what I say is correct. On the other hand, President Nixon's policy for the talks seems to be negotiation of a weapons escalation. The administration freely acknowledges and proclaims it is now deploying the MIRV system. The administration must intend to negotiate a workable MIRV and a workable ABM if it follows the line that we would put ourselves in the strongest position by having both an ABM system and a fully-tested MIRV when we go into the talks. The majority of the committee on Armed Services made explicit their view of the administration's position:

> The President believes that the backing of the Congress on his Safeguard program would strengthen his hand in the forthcoming negotiations with the Soviet Union on the limitation of offensive and defensive nuclear systems. If we unilaterally abandon all deployment of our ABM's, what incentive do

we give the Soviets to negotiate with us a limit or a reduction in their ABM deployment?

The Secretary of Defense, Melvin Laird, in his defense of the Safeguard system in hearings before a House Appropriations Subcommittee on May 22, 1969, brushed off the problems of achieving arms limitation while the Safeguard is being deployed:

Meanwhile, we have to deal with the world as it is today. Until an acceptable arrangement is achieved, we must continue to insure the sufficiency of our deterrent.

Noting the existence of the Galosh ABM defense which has been deployed around Moscow and contains 67 missiles—a system most observers term obsolete—Laird continued his testimony:

It is entirely possible that a Soviet-United States agreement on strategic arms limitation might provide for limited ABM defense on both sides.

He ignored, however, any problems of Soviet reaction or of inspection.

The obstacles, which deployment of ABM and MIRV could put in the way of achieving some type of arms limitation agreement are: First, what will be the Soviet reaction—and our counter-reaction—and second, assuming that the situation does not remain stable, once we have achieved even limited ABM and MIRV deployment, how can any limitation and its accompanying verification problems be achieved.

We must assume that the Soviet reaction to our deployment of ABM will be to either scale up the number of deterrent missiles, strengthen their own anti-ballistic-missile system, or put multiple warheads on their existing missiles. The response might well include all three. We should keep in mind that one of the reasons used by the administration for present deployment of the Safeguard system is that the Russians have deployed a limited anti-ballistic-missile system.

Of course, the fear of either country concerning the other's ABM system is that it may be effective, and if it is effective, it could end the deterrent value of existing missiles. Mutual deterrents depend not on the number of weapons maintained by each side, but on the assurance that either side will be able to retaliate to a degree that is unacceptable if attacked by the other. If one country can protect itself against attack, then it can use its missiles on an offensive, "first-strike" basis with impunity. Secretary Laird has argued that the Soviets are moving toward a "first-strike" capacity with the development of larger and more accurate missiles and a small ABM system.

The Soviets could argue that the United States is doing the same thing by deploying ABM and adding MIRV warheads to our existing nuclear weapons. Our ABM system contains at least 10 times as many missiles as the Galosh system around Moscow. A Soviet cost analysis would show that most of the cost of the proposed American Safeguard system goes purely for population defense although its proponents claim the system is intended to defend our missiles, bombers, and the center of command, Washington, D.C.

Safeguard presumes to protect nearly all of the United States from a "light" or accidental attack and it can be the basis for a "thick" city defense system which the Russians would fear as giving us the "first-strike" capacity. In addition, we have begun work on MIRV which can circumvent the ABM on the grounds that the Russians have deployed an ABM system around Moscow.

Developments by one nation inevitably breed developments by the other.

Although the Defense Department claims a rapid buildup in Soviet forces indicates their push toward a "first-strike" capacity, many other observers argue that the rapid Soviet buildup is only an effort to achieve parity with the number of missiles maintained by the United States.

If both the United States and Russia have ABM and MIRV, arms limitation negotiators, although they might be able to negotiate an acceptable limitation on the deployment of ABM and MIRV, would be faced with the problem of inspection. As ABM defense may include a large number of small missiles or missiles with multiple warheads which would be impossible to count unless onsite inspection were allowed. Equally difficult to check would be the performance of radars or computer programs. Deployment of ABM enhances the incentives to deploy MIRV, which makes the probability of arriving at an agreement even more complicated.

We have a chance in the ABM vote to assure meaningful disarmament talks—uncomplicated by the problems of onsite inspection—by demonstrating our good faith and slowing the deployment of ABM.

Proponents of ABM claim that it will strengthen the President's hand as he enters arms negotiations with the Soviets. The assumption is that if the Soviets enter negotiations with a deployed ABM system, we should too. However, if the United States argues that it should be allowed to catch up to the modest Soviet system, then the Soviets in turn could argue that they should be permitted to close the gap in submarine-launched missile capabilities and the strategic bomber force. The superiority of the American Polaris force offsets by many times the U.S.S.R. ABM system.

The United States would do better if all new strategic force deployment, both offensive and defensive, for both sides is terminated as soon as possible. If disarmament talks fail and if the United States is in danger of dropping behind in the arms race, we can then rapidly deploy more offensive nuclear weapons.

Of course, I recognize that we must not fail to insure the safety of the United States from nuclear attack. On the other hand, we must not fail to take any steps to reduce or terminate the possibility of such attack. At the moment, the two world power nuclear forces are balanced, and that balance exists at a level far above the number of weapons needed to inflict catastrophic damage. This dangerous fact can give us hope, hope of reaching some type of arms accord.

Soviet Foreign Minister Andrei A. Gromyko, speaking recently in Moscow to the Supreme Soviet, gave encouragement to an atmosphere which can produce meaningful talks; he said:

We are for the development of good relations with the United States and would like these relations to be turned into friendly ones because we are convinced that this would correspond to the interests of both the Soviet and the American peoples . . . when it comes to problems of safeguarding peace, the Soviet Union and the United States can find a common language.

He reaffirmed Soviet willingness to seek negotiations with the United States, but the Russians have yet to reply to the U.S. proposal to begin disarmament talks in the first 2 weeks of August. We should keep that fact in mind during our consideration of the effect of Safeguard deployment on Soviet willingness to talk about arms limits.

Our situation is well described at the conclusion of the "Over View" section by Abram Chayes, Jerome B. Wiesner, George W. Rathjens, and Steven Weinberg in "ABM: an Evaluation of the Decision to Deploy an Anti-Ballistic-Missile System."

We are now at a point where it can be said that both sides have a sufficiency, a moment of rare and precious strategic balance. That is why this moment seemed so hopeful for the conclusion of some kind of strategic arms limitation agreement, in which, as almost everyone agrees, the best hope for ultimate security lies.

If there are risks in deferring deployment for a time, we believe they are small. There are also risks in going forward now, because if this moment is lost, one like it will not come soon again.

Second. Safeguard is the most sophisticated system ever designed, and we have little assurance that it will work. More research, development, and testing should give that knowledge before we make a decision for deployment.

Assuming that what is for me the most important consideration—achieving arms limitation—is not a factor, will the proposed ABM system achieve its purposes?

The Safeguard system contemplates deployment at 12 sites within the continental United States: at missile bases, air bases and around Washington, D.C. The location of the sites provides light air cover for the entire continent. The Armed Services Committee has reported a bill which would authorize phase 1 of the Safeguard plan. Phase 1 allows acquisition of the sites at Grand Forks, N. Dak., and Malmstrom, Mont., and the missiles' radar and computer systems there.

The chief purpose of the ABM Safeguard system, we are told this year, is to defend American missile wings. At the same time, Safeguard is basically the Sentinel system proposed by President Johnson and intended to provide light protection for many American cities. By reducing the number of missile sites, increasing the radar capacity, and moving the missiles away from major cities, Sen-

tinel has become Safeguard, deployed not against a future Chinese attack on our cities, but against a future Soviet attack on our missile bases.

The shift is intended to allay Russian fears that the United States is building a viable defense that will protect it from the Russian deterrent. The basic components of Safeguard remain those of an area defense, providing a very light missile cover for nearly the entire continental United States.

Safeguard includes two separate radar systems: PAR—perimeter acquisition radar—a long-range radar design to detect incoming missiles at a range of 1,000 to 2,000 miles and track them until they come into the range of MSR—missile site radar—which performs surveillance and detection, target track, missile track, and command functions for the Safeguard antiballistic missiles. Their extensive range means the PAR's are not needed at every site.

The computers for this system, the largest and most complex ever built, are intended to interpret the radar signals, identify and track targets, distinguish between actual warheads and decoys, allocate and guide the Safeguard missiles, and fire them when they are within range of their target.

The two missiles in the system are the Spartan and the Sprint. The Spartan is a long-range missile, armed with a large warhead and designed to intercept incoming missiles in outer space. At that altitude effects from a nuclear explosion are felt on the surface of the earth. Spartan, therefore, is designed as a city defense, but an ineffective or open one because it is easy to fool the Spartan missile. All decoys, penetration devices and attempts to jam a missile are effective in outer space.

The other missile, Sprint, has a range of about 25 miles, is highly maneuverable, and has a high rate of acceleration. The Sprint is designed to pick up incoming missiles which escape the Spartan. It is less easy to mislead the Sprint with decoys because most of them burn up as the incoming missile enters the atmosphere.

The weakest link in the system is the radar. For radars to work they cannot be protected in silos such as the offensive missiles are. Consequently they are quite soft and vulnerable to less than a direct hit by an incoming missile. The radar sits exposed and virtually unprotectable—potentially as ineffective as a blinded Cyclops.

The long-range radar has little capability to discriminate between actual warheads and decoys. In addition, incoming missiles may be equipped with electronic jamming devices intended to mislead the radar. The Russians have developed FOBS—fractional orbit bombardment system—which delivers a missile on a much lower orbiting trajectory, accomplished by placing a missile in orbit and then breaking the orbit, giving the defensive radar scarcely 3 minutes warning. Intentionally caused fire storms or nuclear explosions screen incoming missiles from the defending radar.

No possibility exists for testing the system because it is impossible to simulate an incoming nuclear attack with simultaneous explosions.

The radars, computers, and missiles must operate in close coordination, and the system, to be effective, must be able to handle a large number of incoming missiles at a time when there may be many nuclear explosions and blackouts. Past experience with complicated radar and computer systems is not encouraging. The SAGE—Semi-Automatic Ground Environment—was a defense system designed to protect against manned-bomber attack through the use of radar and computer analysis. After 15 years of work and $20 billion, SAGE has not worked well enough to convince us of its reliability against a well-planned air attack. In this year's budget, the administration is asking for an airborne warning system (AWACS) because the ground-based radar was vulnerable in earlier warning systems; at the same time, the administration presses the expensive Safeguard which will be entirely dependent on ground-based radar.

Problems exist with each of the ABM components, and no one knows yet whether the system will work as a whole. All political questions aside, much more research and development and testing is needed before we deploy Safeguard.

I agree with the members of the Senate Armed Services Committee that we should continue research and development on ABM systems. The world situation may change, and we may later want to deploy an ABM of some type; I do not believe that we should close all doors to that possibility.

Third. Alternatives to Safeguard exist that are better, cheaper and more certain to achieve the purposes of an antiballistic-missile system.

Technical difficulties present different problems of varying seriousness of each of the specific defensive purposes.

The defensive missile site problems include the large number of Sprints which may be needed to destroy incoming ICBM's and the vulnerability of the radar. It would be much cheaper to either superharden the missile silos or increase the number of our offensive missiles so that more of them would survive an attempted preemptive first strike.

If a large number of offensive missiles are fired at one Minuteman site and if our ABM system at 95 percent effectiveness will allow one in 20 of the incoming missiles to penetrate the defense, it is difficult to expect the President to wait and see if the attack fails. Undoubtedly he would launch the Minutemen, and the ABM would be left defending open holes. If an enemy knows that the President will wait out a first-strike attack, it serves only to encourage that attack.

Cities are "soft" targets and extremely vulnerable to even one missile with a nuclear warhead eluding the defense. The Spartan missiles are especially designed to protect population centers, but decoys and penetration devices in outer space can mislead the radar and misdirect the Spartan.

No one claims that either the Sentinel or Safeguard system would be an adequate defense for cities. President Nixon, on March 4, 1969, warned—

> The heaviest defense system we considered, one designed to protect our major cities, still could not prevent a catastrophic level of U.S. fatalities from a deliberate all-out Soviet attack.

Secretary of Defense Laird presented the predicted fatalities from a Soviet first strike in the mid-1970's. A Soviet attack with no defense could kill between 110 and 120 million Americans. It was predicted that the Sentinel system would cut the deaths to 100 million, decreasing the death rate by only about 15 percent.

Bomber bases are the same soft targets as cities. Safeguard's protection for them is ineffective and unneeded because the warning system and radars give ample opportunity for aircraft carrying nuclear arms to be aloft by the time missiles arrive.

ABM is also sold as protection against the accidental release of a missile against the United States. A better protection against an accidental launching is the use of a self-destructive device on each missile; such devices should be a subject for negotiation at the strategic arms limitation talks. Indeed it is perplexing why we have not equipped our ICBM's already with a self-destruct mechanism to avert an accident on our part.

Finally, in the attempt to find a purpose for phase I of the Safeguard system, Secretary of Defense Laird on May 22 rationalized the deployment of ABM at two missile sites, Montana and North Dakota, on the grounds that it would provide an opportunity to test the system.

Neither the Governor of Montana nor the Governor of North Dakota is happy about the prospect of ABM development in his State.

The type of research and development Mr. Laird envisaged at the two missile bases would be possible only if offensive missiles could be fired into the States with a nuclear blackout of some sort which is impossible under the Nuclear Test Ban Treaty. It would be far wiser to continue the development and testing at Kwajalein where there are research and development facilities already and the possibility exists of firing ICBM's into Kwajalein to actually test the system in limited circumstances.

In response to Mr. Laird's May 22 ABM White Paper, George W. Rathjens, Jerome B. Weisner, and Steven Weinberg, pointed out:

> One cannot but wonder if all of the recent emphasis on the advantage of Phase I deployment for check-out and R&D purposes is an afterthought—an effort to find an acceptable rationale for the Safeguard decision, arrived at after it had become apparent that both the threat to our retaliatory force and Safeguard's actual utility as a defense for Minuteman had been much overstated.

The honorable Senator from Tennessee (Mr. GORE) has referred to the ABM system as a program in search of a mission. And indeed it is. We could have found and still can develop a better means of defending our ICBM's with an anti-ballistic-missile system which would be less expensive, and contain more, smaller missiles and a less sophisticated radar.

Chayes, Wiesner, Rathjens, and Weinberg outlined a good defense for our deterrent if a need were determined. First,

the ABM system would be concentrated to protect enough intercontinental ballistic missiles to assure the retaliatory capacity of the United States to any enemy first strike. They suggest that it protect two wings of missiles and not include the soft bomber bases. Second, it would not include Spartans and PAR's, intended for long-range use, and ineffective against heavy sophisticated attacks. Third, rather than using Sprints, it would use a simpler and cheaper weapon which could be deployed in greater numbers. The simpler weapon, although it would not protect cities, would be sufficient for the protection of hardened missiles sites. Fourth, it would use more, cheaper, harder radars at each missile site. And finally, the computer programing would be far simpler because most decoys and penetration tactics are less effective at lower altitudes.

Basically, it is much simpler to defend our missile sites because they can be defended at lower altitudes. And as long as we are sure that we have retaliatory capacities sufficient to destroy or inflict intolerable damage upon the attacking nation, the concept of mutual deterrence keeps nuclear peace.

We should step back from Safeguard. If we later decide that it is necessary to deploy a deterrent defense, then we should deploy one that is designed to be effective. The trouble with Safeguard is that it is basically a city defense system with much of its cost allocated to components designed to defend a city against a light nuclear attack.

Secretary Laird in his March 19 testimony said that one of the reasons the administration rejected Sentinel was that it could be interpreted by the Russians as a first step toward a heavy city defense. Although the Safeguard missiles are not deployed as close to cities, the system itself is basically the same and subject to the same interpretations. A city defense, if it makes us invulnerable to attack and gives us the capacity for a safe first strike—at least if that is what the Russians think it does—steps up the ante in an arms race. Safeguard gives us a poor defense of the Minuteman missiles, very little protection from attack against our cities, and makes the Russians believe that we are building the basis for a city defensive system.

If we are concerned about the potential Russian threat of the mid-1970's, we should choose a response which takes less leadtime to develop than the complicated anti-ballistic-missile system. Because it takes between a year and a half and 2 years from the start of construction to the operational availability of an ICBM—as compared to the 1976 availability of ABM—it is wiser to plan to deploy more Minuteman missiles if we need them based on the evidence we have in 1972 or 1973. That alternative would protect us as well by 1975 as would the provocative ABM.

Thus far, about $4.7 billion has been spent in research and development on land-to-air nuclear defense systems, including the Sentinel. Mr. Laird, to illustrate that the ABM system is ready for production and deployment, noted that some of the components are already being manufactured, and that $434 million has been obligated for procurement; as of March 30, 1969, $103 million in procurement funds had been expended. Although the bill before the Senate authorizes research and development, procurement and construction for ABM at a cost of about $760 million, the actual cost of fiscal 1970 expenditures on Safeguard is an appropriation request of slightly over $1 billion plus $350,000 carried forward from the past year.

Costs for the completed Safeguard ABM are estimated presently at between $10 and $13 billion. The senior Senator from Missouri, (Mr. SYMINGTON), citing the additional costs of the C–5A transport plane and the F–111—at 5 times its original price—said it is within the range of possibility that the "thin" system could cost at least $40 billion, and if we develop a heavier defense system, the cost could go as high as $400 billion, a figure greater than the current national debt.

The $40 billion figure includes sufficient missiles and radars for 95 percent effective protection of Minuteman missiles. This means that 1 in 20 offensive missiles would elude ABM, perhaps knocking out the system's radar and thus destroying the defense for a Minuteman wing. The price for ABM jumps to $100 billion if ABM is deployed to defend 50 cities; the additional cost covers many more missiles, radars, and computers. If 95 percent effective ABM protection is provided for the entire country, the cost may go as high as $400 billion, and still there is the chance that one in 20 missiles may get through.

The cost of any ABM system must be measured in the tens of billions of dollars; in contrast, we can duplicate the entire ICBM force or the entire Polaris fleet for about $5 billion. The cost of superhardening 1,000 Minuteman missiles is between $6 and $7 billion. Superhardening would protect three times as many Minutemen as Safeguard phase I which would cost $4 billion, and superhardening would increase the number of surviving missiles at least half again as compared to the number which would survive if protected by the full Safeguard program at a cost of more than $10 billion.

If we do not deploy ABM we will continue to have sufficient defense to protect us for some time to come: the Polaris missiles, the defensive measures already taken to protect the ICBM's, and the mobility and quick reaction of bombers. The Safeguard system is intended to protect our Minuteman missiles. However, those missiles are already in hardened silos which prevent their destruction unless the attacking missile is accurate and carrying a heavy warhead. The early warning system allows a sufficient time for the Strategic Air Command to become airborne. Safeguard, as presently designed, would not assist in a defense of bomber bases from a simultaneous Russian attack on bomber bases and nuclear sites because radars employed in the ABM, if they work as described, pick up an incoming missile in time to allow the bombers to leave the ground. The ABM is not intended to protect our Polaris missiles.

The key to our defense and stability has been, and will continue to be, the near-invulnerability of the deterrent force which arises from the diversity of weapons systems and the power of any single strategic weapon which we might send against an enemy urban target.

Fourth. The proponents of Safeguard base their case upon the threat of Russian missile development. They ignore the ease with which the Russians, if their threat is growing as fast as claimed, can nullify whatever ABM protection we deploy.

Our position is sufficiently strong for us to avoid the fears of a Russian buildup, but most military planners overreact to any new developments. We have been plagued with cries of "missile gap" for the past 15 years. The Senate Committee on Armed Services report on the ABM included minority views that the committee heard witnesses for deployment who said little other than to reemphasize fears of the Soviet Union. Questioning of Secretary Laird in the past few months indicates that this administration's justification for deploying a system to protect our missile sites from Russian attack is based upon the same evidence which allowed the previous administration to officially ignore the Russians and deploy a similar ABM system near cities to protect against a light Chinese attack.

Why the Russians accepted talks and what they plan in future missile deployment figures heavily in the thinking of proponents of ABM. President Nixon rejected canceling the Safeguard program and reverting to research and development because, according to Secretary Laird:

> He was convinced that the Soviet threat to our bombers and land-based missiles was more imminent than previously assumed.

The majority report of the Armed Services Committee also was based upon a number of presumptions about Russian intentions: what their position will be in negotiations on ABM; how they will react to the talks if the United States does deploy ABM; and when they will have a variety of new weapons.

The emphasis of the majority position coincided with the armed services minority summary of the evidence presented:

> It was noticed that witnesses who testified for deployment of the system devoted much if not most of their time to re-emphasizing their fear of the Soviet Union; whereas witnesses who opposed the proposed system expressed in detail why they believed the system would not work, or why and how it could be nullified in any real effectiveness by relatively minor additions to the Soviet SS–9 production.

The proponents of Safeguard, with the assistance of the Department of Defense, have declassified every possible piece of evidence about the Russian threat; at the same time they have refused to declassify how much more Russian development will be necessary to nullify our Safeguard system.

According to Wolfgang Panofsky, di-

rector of the Stanford linear accelerator and an expert on nuclear physics:

If the threat to Minuteman grows at the rate projected by the Defense Department, and if Minuteman become vulnerable at a certain time several years hence, then if the Safeguard system were installed and functioned perfectly, then the Minuteman would be just as vulnerable as before only a few months later . . .

It would . . . appear clear that if we proceed with these systems, the Soviet Union will respond by increasing its offensive strength so as to negate any possible advantage which might be derived from said Safeguard deployment. The result could only be a further escalation of the arms race.

The simplest offense against an ABM-protected installation would be to saturate it with incoming offensive missiles or with multiple warheads such as MIRV to the extent that all defensive missiles are used up. Experts have calculated that if we take into consideration a 30 percent failure probability for each missile, something that must be done under the present state of missile development, then three defensive missiles must be allocated to destroy each incoming warhead with 97 percent certainty. This requires that each missile base have three times as many defensive missiles as the number of offensive missiles they expect an attacker to use.

All of the Russian offensive missiles might be directed at several U.S. missile bases, and as long as the Russians have a slim margin of offensive missiles after the Safeguard defensive missiles are used up, they retain the ability to destroy the missile sites. An arms race between offensive missiles and the number of defensive missiles needed to destroy incoming warheads could spiral beyond control with neither side certain that it has the needed slim marg'n.

Fifth. The deterioration and uncertainty in American life raises a different security question; if we want to remedy domestic ills we must cut back our immense and disproportionate defense expenditures.

After three decades of war, World War II, the cold war, the Korean war, and the current war in Vietnam, Americans are tiring of military and defense spending consuming 40 percent to 60 percent of the Federal budget, especially as problems in the United States become less easy to ignore; they are becoming apprehensive of the warnings from the Pentagon which justify new projects.

Gen. David M. Shoup, retired commandant of the U.S. Marine Corps, wrote recently:

The defense establishment now devotes a large share of its efforts to self-perpetuation, to justifying its organizations, to preaching its doctrines, and to self-maintenance and management. Warfare becomes an extension of war games and field tests. War justifies the existence of the establishment.

And the Defense Establishment has become the largest organization in the world. The Pentagon spends almost 10 percent of the U.S. gross national product; its spending accounts for 43 cents of every Federal tax dollar. The Military Establishment employs directly or indirectly 8.5 million people—one of every nine jobs in the United States. As of 1968 there were over 23 million living veterans of U.S. military service.

Congress has finally taken the size of the military and General Eisenhower's warning of the military-industrial complex to heart. Close investigation of Defense Department practices reveals which companies benefit from military procurement, contract profit margins and cost overruns, inefficient or shabby performance on contracts, the relationship between the military research centers and the Pentagon, and former military personnel employed in the defense industries.

In the past 6 months we have learned that almost all large military contracts overrun their original cost estimates from 200 percent to 700 percent. We have seen billions of dollars expended on major missile or defense systems abandoned as obsolete or unworkable after years of research and development. Work on such projects as the B–70 bomber, the nuclear-powered airplane, the Dyna-soar, the Sea Master jet-powered seaplane, and the Skybolt continued long after the projects were declared unworkable. More than $15 billion of tax money has gone for missile systems produced, deployed, and then abandoned as out-dated or unworkable. The bad record of the military on keeping spending and costs under control decreases our confidence that the ABM is a system we can afford.

A commitment to an expensive, questionable ABM when taxpayers are caught between inflation largely caused by high rates of Federal spending—10 percent of the GNP is military spending—and high taxes—43 cents of every tax dollar goes to support the military—is unwise. I believe we should cut all funds for Safeguard deployment until we are convinced that there is a need, that there is no better alternative and that the system works.

But for now the question is whether we spend on destruction in the name of protecting life—which no one claims the Safeguard system can do—or on life-giving domestic programs.

Almost every great nation has been destroyed from within. If a nation will not spend money on problems within, then no amount of money spent on dangers from without will save that nation. A nation with the capability of destroying the world certainly must also have the capability for encouraging life.

Surely feeding the hungry, housing the poorly housed, remaking a livable environment, and providing adequate school and health facilities for millions of Americans must come before the deployment of yet another nuclear weapons system unless we find ourselves in a changed world position where the protection offered by our present deterrent is no longer effective. The administration states, however—

Notwithstanding the severe budget stringencies under which the Government will have to operate over the next fiscal year, President Nixon found it necessary to recommend this program to the Congress.

As Congress considers appropriations for domestic programs throughout the rest of the year, we shall realize exactly how expensive ABM is. One sacrifice of a human program to the military effort was the $100 million cut the Nixon administration made in the Job Corps. As a result of this cut, the number of Job Corps slots were reduced by more than half, ending training for 19,000 Corpsmen; 340 of them were at the Job Corps conservation camps at Lydick Lake and Tamarac, Minn.

The $1 billion ABM will cost in fiscal year 1970 could buy many other human programs. $1 billion could buy day care to provide Headstart opportunities for 625,000 more children. At least 500,000 welfare parents could receive job training and full supporting services to move into regular employment under the work incentive program (WIN) for $1 billion. $1 billion could buy 225,000 additional training-employment opportunities through the new careers program. And perhaps most striking, for less than half the cost of ABM we could provide children's allowances of $50 per month for all children under the age of 6.

Estimates supplied by the Department of Agriculture, the Agricultural Committee and the National Planning Association, the National Council on Hunger and Malnutrition, and the Bureau of the Budget indicate that to feed the hungry through school lunches, food stamps and direct commodity distribution will cost anywhere from $2 to $4 billion dollars a year.

Congress has never adequately funded the low-income housing programs, rent supplements, the homeownership program, or the model cities programs. The Department of Housing and Urban Development receives hundreds more applications than it can possibly fulfill. The Riot Commission called for 6 million new housing units in the next 5 years for low- and moderate-income families; the Housing and Urban Development Act of 1968 set a similar goal for 10 years. The price tag? $75 to $80 billion in Government assistance over a 10-year period—the military budget for 1 year.

Crime control and law enforcement.

Public transportation systems.

Clean air and water.

We are not the only nuclear power feeling the pressure of domestic spending needs. The director of the Russian Institute at Columbia University, Prof. Marshall D. Shulman believes that concern for the cost effect in the 1971–75 5-year plan of an upward-spiraling arms race led the Soviet leadership into accepting disarmament talks.

In a speech on the floor of the Senate recently, the Senator from Wisconsin (Mr. PROXMIRE) cataloged the Soviet economic position. He pointed out that the Soviet Union supports 10 percent more people than the United States on one-half the economic production of this country. Correspondingly, its military budget at less than $40 billion is about half that of the United States, after making allowances for price and wage differences.

The most severe Russian domestic spending pressures come from the agricultural and consumer sectors of the economy. Russia devotes seven times more people to agricultural production than does the United States, but it pro-

duces 20 percent less food. Industrial efficiency in the Soviet Union is coming more and more to depend upon motivation from the rewards of better housing, food and clothing. Soviet industrial investment must continue at the same rate to maintain the present growth of ouput necessary to support its military capacity. If the Soviet Union spends a greater share of its budget on the military, it will be to the detriment of a healthy economy and evenutally to the detriment of the ability to support a large war machine.

The American people have lived with fear of Soviet attack for a quarter of a century and have expended a thousand billion dollars on defense in recognition of possible danger. Many billions of the dollars spent have been wasted. Gigantic military expenditures have been detrimental to many other plans, programs, and policies which now appear equally important to the security and well-being of this Nation.

> If we had had more accurate information about planned Soviet strategic forces, we simply would not have needed to build as large a nuclear arsenal as we have today—

Said Secretary of Defense Robert S. McNamara on September 18, 1967. He continued:

> If the Soviet offensive-defensive threat does not increase beyond the highest level projected through 1972 and the latest national intelligence estimates, we will have more assured destruction capacity than we will probably need.

In the past it has proved impossible to defeat military plans. Patriotism and caution—the fear that if we do not spend every requested cent in protection of America, we may regret the day—have made military budget requests nearly sacred.

Are we now going to react with fear to statistics painting a supposed Russian nuclear buildup, fear which will drive us to another round of missile armament for an already filled nuclear arsenal?

We cannot allow the same forces which have operated in the past to draw us closer to nuclear holocaust. In the words of Albert Camus:

> I know that the great tragedies of history often fascinate men with approaching horror. Paralyzed, they cannot make up their minds to do anything but wait. So they wait, and one day the Gorgon devours them. But I should like to convince you that the spell can be broken, that there is only an illusion of impotence. That strength of heart, intelligence and courage are enough to stop fate and sometimes reverse it. One has merely to will this not blindly, but with a firm and reasoned will.

For these reasons, Mr. President, I strongly oppose the proposed deployment of the ABM system.

Mr. TOWER. Mr. President, will the Senator from Minnesota yield?

The PRESIDING OFFICER (Mr. HUGHES in the chair). Does the Senator from Minnesota yield to the Senator from Texas?

Mr. MONDALE. I yield.

Mr. TOWER. Does the Senator have some assurance that if we cease our development and deployment of the ABM, the Soviets will likewise arrest their contingent development of air superiority aircraft, that they will arrest their development and deployment of their offensive missiles, that they will arrest their development of deepwater silent submarines, that they will arrest the momentum of their development of military technology, if we merely, by a simple act, turn down the ABM?

Mr. MONDALE. I have two answers to the question posed by the Senator from Texas.

First, his question assumes that the ABM system is an effective deterrent to the alleged Soviet buildup. I have become firmly convinced, based upon the closed session held in the Senate recently, my reading of all the literature I could obtain, and the nearly 5 hours of secret testimony before the Committee on Foreign Relations which I sat through, that whatever the dangers alleged from the buildup of Soviet nuclear missile capability, the ABM system is a weak, a timid, and an insipid response.

I believe that if there is one thing we can afford to do, it is to wait a few months, or perhaps a year, in responding to a possible Soviet buildup—especially with an inadequate, inappropriate, and highly doubtful response.

The second point is that we have the advantage in every weapons system. The Senator from Texas refers to nuclear submarine capability. The Senator is surely aware that we have a massive margin over the Soviet Union in deliverable missilery propelled by nuclear submarines and fired from submerged positions, that even with their increased production, it will be many years before they could catch up.

We are far ahead of the Soviets in MIRV capability technology. We are far ahead in the number of manned bombers and in the number of missiles—and in practically every other category there is.

With the capacity to destroy the Soviet Union several times over, should we not now take a chance and use a reasonable period to see whether we can agree with the Soviet Union to limit the arms race before we become billions and billions of dollars poorer and far less secure than we are today?

Mr. TOWER. May I say I am not arguing the quality of the current capability of the ABM. I am not even at this point arguing whether or not it works, although I think it does. I think it will.

Mr. MONDALE. The Senator must know that even if it works the way the proponents say it will work, it does not help. If we could get the proponents to declassify a little of this material, we could specifically talk about that.

Mr. TOWER. The Senator implies that if we will stop it, the Russians will stop it and we can have some meaningful talks. I want to know what assurance the Senator has that if we stop it, they will stop it. They are ahead of us in some areas of technology. They have much better air superiority than we have. As a matter of fact, it is going to take us a long time to catch up with them, if we try. As far as submarine development is concerned, they are proceeding at a more rapid pace than we are. As far as hardened missile sites are concerned, they are proceeding at a much more rapid pace than we are. The point is, if we arrest our effort here, will they sit down and arrest their own?

Mr. MONDALE. I have two answers to make to the Senator. First of all, we will know whether they are arresting their development. If they escalate to the level which the Senator from Texas would have us believe they might, then we can always respond at that time. As the Senator knows, we know virtually every detail of the development of such things. They are observable. We know them.

Mr. TOWER. If I may interject at that point——

Mr. MONDALE. The second point is this. If the Senator could persuade the Department of Defense to declassify some of the evidence that has been presented to us to show how useless the ABM system is, perhaps we could debate that point with a little more credibility.

Mr. TOWER. I think what the Senator is referring to, as far as declassifying some information is concerned, are some "think" papers that were done 2 or 3 years ago. They are going to work them over again.

Mr. MONDALE. I have no doubt the Defense Department would like to work them over.

Mr. TOWER. There are subsequent papers that would have to be declassified in the process. There was classified material not even brought out in the discussions in the last closed session, because of its sensitivity.

But let us go back to the original point. The main thrust of the argument of Senators who have opposed the ABM is that if we will simply fail to develop and deploy the ABM, we are going to create a vastly more favorable climate for talks and the Soviets are going to have less zeal in the development of their own technology. If the Senator can give me some evidence of that, I will be on his side.

Mr. MONDALE. That is good news. First of all, let me say I am glad to hear the proponents of the ABM system have better information than that which was disclosed in the closed session, because I would like to think their fervor was based on more than the slim evidence that was disclosed. Perhaps it could be made available to Members of the U.S. Senate, so we could know all the facts.

Mr. TOWER. I thought the distinguished Senator from Washington (Mr. JACKSON), who is being denigrated, actually did a splendid job. By consensus, he pretty well answered all the questions that were raised in that session.

Mr. MONDALE. The Senator from Texas knows I have great respect for the Senator from Washington, but I do not recall his stating, at any time in that debate, that he had all kinds of new information that was not disclosed to the Senate, which was stronger than the evidence which was.

Mr. TOWER. I think the information is going to come before the appropriate subcommittee, and that is new information here. But I think we are working on the same ground here. We have been working on it for 3 or 4 weeks. I am a little disappointed that the opponents of the ABM are not prepared to come to a vote. I cannot understand the reason for the delay. I think every document

which the opponents bring forth will result in bringing forth another document on the part of the proponents. I think the lines are hardened. There seems to be a singular unwillingness on the part of some Senators who are opposed to come to a vote. To the credit of Senators HART and COOPER, they are disposed to bring it to a vote at the earliest opportunity. But we cannot bring it to a vote and we are holding up the work of the Senate.

Mr. MONDALE. As the Senator from Texas knows, this is probably one of the most important issues to come before the Senate in many years. If we continue to proceed on the theory that there is no way to negotiate a settlement on armaments with the Soviets; that there is no reason to believe that a few months spent in trying to reach an agreement with the Soviet Union could bring anything favorable; that the only security there is for the American people is to respond to every single appeal of the Defense Department for more and more arms and for new and different kinds of weapons systems; that all we should do, as we have done for years, is consult our suspicions and fears; and that we make no efforts to limit arms, then it seems to me this generation has lost any opportunity to deal with problems at home and is resigned to agree to a policy that is going to create far more tension and far less security than anything else.

Thus, how we decide on this issue is not a question that comes just before this body, but it is a fundamental question of what kind of world we want.

I say a couple of weeks of debate spent on that question is time well spent. If we had spent this kind of attention in the first place, instead of routinely passing favorably upon every request of the Pentagon, we would be billions of dollars richer and more secure. I am glad we are finally standing up and having the kind of debate we should have.

Mr. TOWER. I think 4 weeks of debate pretty well gets at all the answers and questions.

Mr. MONDALE. The Senator just mentioned that we have all kinds of new information at the Defense Department that we have not heard.

Mr. TOWER. I did not say it is new. It has been there. They have not chosen to disclose it.

Mr. MONDALE. Why have they decided not to provide the Senate with information of which we should be informed?

Mr. TOWER. I think it is available if the Senator decides to go after it. I have the distinct feeling that there is an effort to reach into the past to find "think" papers developed by the Defense Department to support conclusions already arrived at.

Let us be realistic. The lines have hardened. We all know how we are going to vote on this issue. I do not think any more argument beyond what has been had is going to change the outcome. The point I make is that while the proponents of the ABM are being accused of pitching our arguments on the basis of fearful arguments—in effect, we are being told that we are pushing the panic button of fear and suspicion—on the other hand we could probably make an equally good case that the proposals of the opponents of the ABM are based on visionary support and good faith that perhaps have no background in experience and history.

Mr. MONDALE. Why do we not just have talks with the Soviet Union and find out?

Mr. TOWER. I am prepared to have talks with the Soviet Union, but I am not prepared to have talks with the Soviet Union while we are doing nothing in the way of weapons development and they are doing everything. They are devoting far more to research and development than we are. They have far more updated facilities for research and development than we have. And technologically, they are going to be ahead of us in a very short period of time, if they are not now.

If the Senator can give me some assurance that they are going to arrest all this while we sit and bargain, then I will be in his corner.

Mr. MONDALE. The Senator from Texas knows that we enjoy an impressive margin in every one of the weapons fields. We can destroy the Soviet Union several times with our power, and there is no threat to that retaliatory power until the middle of the 1970's, at the very earliest. We are not romantic about the Soviet Union. What we are suggesting here is that we have negotiations, and see if we can agree to limit this tragic arms race. If we do, we will be richer and more secure than if we do not. That is a hardheaded, practical, realistic position.

The position of the proponents, basically, is that we should deploy a series of new systems such as the ABM and the MIRV, which make it exceedingly difficult to reach an agreement and even more difficult to enforce an agreement. In effect, the position of the proponents is to negotiate an escalation. We would like to negotiate a limitation. We think we would all be better off.

Mr. TOWER. I think we would be, if we could all just sit down and beat our swords into plowshares and our spears into pruning hooks. But I would like to say that the only reason we maintain a huge military establishment is to deter aggression on the part of others.

I do not think that the Senator from Minnesota would even hint that this administration, the previous administration, or the administration before that had imperialistic designs on the rest of the world. I do not think, even in the most partisan context, I could accuse the Johnson administration of that, nor that the Senator from Minnesota could accuse the Nixon administration of that.

The fact of the matter remains that there are nations in this world that do have designs on others. They would prefer not to resort to military means to accomplish those designs, but if they have to, including Czechoslovakia, they will.

I think what the Senator from Minnesota is arguing is that we cannot have meaningful negotiation unless we allow the Soviet Union to achieve military parity with the United States. Is that the thrust of his argument?

Mr. MONDALE. As the Senator from Texas well knows, and as I have repeated several times in this colloquy, we already enjoy a massive superiority.

Mr. TOWER. In certain areas.

Mr. MONDALE. And we well know, at any given time, what the Soviets are doing. We retain the right to expand production of Polaris missiles and Polaris submarines; and I happen to think that the Polaris is a better way than the ABM of meeting the Soviet challenge. We can always deploy more offensive missiles, as well as a number of other things.

What makes this situation critical is that ABM is a new weapons system, which, whether it be for offense or defense, upsets the whole structure and balance, making it increasingly difficult to reach an agreement. That is why I and many others think this is not the time to deploy a new system.

Mr. TOWER. Mr. President, the Senator says we know what the Soviet Union is doing at all times. I have no criticism of our intelligence gathering community, but I must say that the Soviets have a much easier time getting intelligence in this country than we have in getting intelligence in their country, because they are a closed society, and we are an open society.

We cannot always be sure what they are doing. I think, generally speaking, we have underestimated what they are doing, and this gets me back to the point that if we are going to negotiate in a meaningful way disarmament, we have got to have parity.

Again, that raises a number of questions. That means the Soviets have no imperialistic designs on anyone else. In the second place, what is parity? How do we determine parity? They are superior to us in a number of fields. Would the Senator be prepared to see us ask them to stop development of an air superiority weapon while we catch up with them in that field, or while we allow them to catch up with us in others?

How do we know whether we have parity, unless we have open inspection? Does the Senator believe a closed society like the Soviet Union is going to allow open inspection, so we can determine whether or not we have parity before we begin these talks?

Mr. MONDALE. As the Senator from Texas knows, we know by air surveillance what they are doing with their missilery. We know how many missiles have been deployed, we know the character and the kinds that are being deployed, and it is this information that the proponents of the ABM have been using daily to raise concern about the capacity of our retaliatory forces.

There is nothing about Soviet missile development that we cannot determine by our present surveillance and information-gathering sources. We can easily afford to go to negotiations now, and see if we can agree with the Soviet Union. We will keep up with the facts during the course of the negotiations. If developments such as those to which the Senator makes reference should occur, we can always review the matter at that time. The question is whether we are going to take this reasonable risk to end the insane, immoral, and outrageously costly arms race—one which strips this

Nation of its capacity to deal with its own problems, creating another security risk, perhaps a more serious security risk—or whether we are going to continue just consulting our fears and apprehensions, and accepting every single proposal the Defense Department sends down here because they would like to have us spend the money.

Mr. TOWER. If the Senator will yield further——

Mr. MONDALE. Gladly.

Mr. TOWER. What we are proposing in this bill is an expenditure of $759.1 million for research and development, and for predeployment procurement and preparation. We are not asking for operational deployment here. A year hence, we can come back and review the matter. All we want to make sure of is that the state of the art is sufficiently advanced, and valuable lead time is not lost, in the event the negotiations fail.

The Sovets themselves have said that they do not regard this as provocative, because it is a defensive weapon. They are employing or have deployed an ABM themselves. They say that that is defensive, not offensive.

The other option we can take is to put all our eggs in the offensive basket.

Mr. MONDALE. The Senator must know that the so-called Galosh ABM system is an old "Model T" system, so bad that even the Russians stopped deploying it. It is at the technological level of some of our earlier ABM systems, which we ourselves have abandoned. To raise that question is, I think, to create the impression that the ABM system in and around Moscow poses a serious or substantial or significant threat, when it does not.

Mr. TOWER. What would the Senator's reaction be if he found that they had ceased work on the present system because they were developing or had developed a better system?

Mr. MONDALE. That is the reason we need negotiations—to agree on these matters, to determine at what level we are going to place a ceiling on arms development, to decide if we are going to try to continue to outbuild other nations. Are we going to continue to spend increasing billions of dollars on such systems, many of which are highly dubious, to continue to consult our fears, and not try to reach an agreement on arms limitations?

Mr. TOWER. Therein lies the dichotomy between us.

Mr. MONDALE. As the Senator knows, the Hart-Cooper proposal favors continuing research, development, and testing of an ABM system. The distinction is on the deployment issue. The proposal to establish the system in Montana and North Dakota, obviously, is the beginning of a deployment of the system; and we hope through this proposal, to avoid that possibility.

Mr. TOWER. I cannot see why we cannot proceed with onsite research-and-development testing and evaluation as a prelude to deployment and be prepared to deploy if necessary.

Again, the whole argument is based on assumption. We are making an assumption—those of us on this side of the aisle—that the Russians will not negotiate and that we cannot have a satisfactory settlement or a satisfactory resolution of the arms race. The opposition is saying that we should risk it; that we should take a chance; that perhaps we can achieve some sort of negotiation to limit the arms race.

We are accused of basing our argument on fear; but our fear is well founded. It is based on history. It is based on experience. There is all the evidence in the world to show that the Russians desire to achieve military superiority to accomplish their imperialistic designs in the world. There is nothing to show that even if parity is achieved, they will be willing to negotiate to arrive at a satisfactory conclusion in the matter of a limitation of arms development.

Mr. MONDALE. Is the Senator from Texas suggesting that an effort to reach an arms limitation agreement with the Soviet Union would be futile; that there is no hope?

Mr. TOWER. I would be delighted if an arms limitation agreement could be reached with the Soviets. If it were a matter of determination that both of us should be equal, that would be fine, provided we had meaningful inspection. But I do not see that our placing ourselves in a position of inferiority or parity will necessarily help the negotiations along.

Mr. MONDALE. Mr. President, this past weekend, a public opinion poll prepared by Dr. Gallup showed that almost 60 percent of Americans polled expressed the view that they still did not understand all the factors that go into the ABM system and are having difficulty in fully understanding the debate.

I think this underscores the need to have fuller amplification, debate, and discussion, because the Senate does not operate in a vacuum. This body has a responsibility to debate in public, so that the public might have better knowledge of the issues and facts that bear upon matters that are dealt with in the Senate. Certainly that public opinion poll shows the need for further discussion and education on the ABM.

Mr. HART. Mr. President, will the Senator yield?

Mr. MONDALE. I am glad to yield to the Senator from Michigan.

Mr. HART. I had risen simply to congratulate the able Senator from Minnesota on his discussion and to intrude no further. But his very last point bothers me. I think it should bother all of us. Why is it that 58 percent of Americans are either unaware of the anti-ballistic-missile program or have not made up their minds about it? The Senator from Minnesota suggests that that would indicate the necessity for further discussion in the Senate. Perhaps so. But are we at fault? The discussion has been thorough and full, I should think.

One certainly cannot quarrel with the coverage of the discussion in the media. I suspect that newspapers are not sold and television channels are not kept locked in when someone explains or undertakes to write a technical discussion about the anti-ballistic-missile system. I think we all agree that we are talking about something that bears on a nuclear arms race which involves the survival of us all. Yet, more than half of the people in this country, we are told, have not heard about it or have not made up their minds.

Perhaps we, who are nontechnicians, really have undertaken to discuss too technically the anti-ballistic-missile system. Perhaps we count warheads and multiply them by three and get into sensors and radars, and I doubt if any of us could come close to being the equal of Dr. Seagraves in college physics. My grade in that subject was not very good 30 years ago.

Perhaps at the risk of being charged with oversimplifying the debate, we should bring it into more of a layman's context.

The argument is made that by our beginning to deploy an ABM system, the Russians will not be discouraged, but will recognize it for what it is, a defensive system. Then, why in heaven's name when the Russians began to deploy their ABM system, did we get in a lather and begin to MIRV because they had begun to deploy an ABM system? That is a system that we understand now is outmoded and ineffective.

We ought to get that point discussed and developed a bit further. We cannot have it both ways. We are wrong in one or the other of those analyses, are we not?

Mr. MONDALE. Mr. President, I agree with the Senator from Michigan. We have for the past few months been officially stating that the Russians are prepared for a first strike. "There is no doubt about that," said the Secretary of Defense.

I wonder what the response of the defense planners and political leaders of the Soviet Union is. I wonder if they really believe that we think the Soviet Union is prepared for a first strike.

What would their reaction be? And what would our reaction be if it were the other way around?

The only way I can see to sort out these suspicions and try to replace terror and a sense of insecurity with some stability is to have the strategic arms limitation talks. We must work out our differences, try to agree on a system that limits arms and provides an inspection system which would permit us to know without doubt that the agreement is being kept, and permit the Russians to have the same opportunity. We would both retain our mutual deterrence.

It so happens that we are now ahead of the Russians in every weapons system. We have nothing to lose and much to gain by eliminating the suspicions that have created the ever-increasing arms budget and ever-increasing environment of instability, uncertainty and terror.

Mr. HART. Mr. President, again risking oversimplification in an effort to broaden an awareness of the questions before us and in the minds of the people of this country, perhaps we should make this point: sometimes when we are proposing that we should delay deploying the ABM until we have had an arms control discussion with the Soviet Union, we are asked to prove, if we delay the deployment, whether the Soviets would withhold its action in developing some kind of a super rocket or bomber. We

ought to ask ourselves where the balanced budget is, who is really ahead, and whether there is anyone here that would trade the American weapons system.

Does anyone want to trade America's nuclear power for that of the Soviets? Would we be able then to go into discussion and negotiations?

Mr. MONDALE. Mr. President, I agree with the Senator from Michigan. I sat through hours of executive sessions and through the debate we had on the floor. There seems to be little, if any, doubt that we have a mammoth advantage in every critical strategic weapons system. It is well known that our MIRV technology is almost ready for deployment, if it has not already been deployed.

I think that the ABM system we are testing is not much of a defense. However, compared to the Galosh system, it is the difference between a modern Cadillac and a Model T.

If there ever is going to be a time in our history when we can and should determine to end the insane arms race, now is the time.

Mr. HART. Mr. President, in the hearing to which the Senator from Minnesota makes reference before the Committee on Foreign Relations, does he recall the statement of Dr. Marshall Shulman, professor of government and director of the Russian Institute at Columbia University, when he said:

It follows, also, Mr. Chairman, that it would not be wise to deploy an ABM system in the belief that it would improve our bargaining position in relation to the missile talks. To do so would be more likely, in my opinion, to strengthen the position of those on the Soviet side who are only too ready to argue that the United States is too committed by its system or its pressure groups to an arms race to be seriously interested in its abatement.

Mr. MONDALE. Mr. President, I do not recall that. However, I agree wholeheartedly with the point.

Mr. HART. Mr. President, I think it is important that we should remind ourselves of this periodically. Getting back to the point that persuaded me to do more than just thank the Senator from Minnesota, this Gallup poll of July 26, which he discussed as he concluded his remarks, indicates that a majority of Americans are either unaware of the ABM program or have not made up their minds about it. Fifty-eight percent of Americans are unaware or do not know. Yet, across the country, in full-page ads, captioned "84 percent of all Americans support an ABM system," is this ad by members of the Citizens Committee for Peace With Security, the chairman of which is William J. Casey. One need not be a Ph. D. in mathematics to know that that one does not add up.

Mr. MONDALE. Is that the Mr. Casey who is going to be with the Arms Control and Disarmament Agency?

Mr. HART. This is my understanding, yes.

Mr. MONDALE. It is no wonder, then, that the American public becomes confused, when a man who has taken a position as one who is supposed to be primarily concerned with limitation of armaments helps sponsor a poll which says 84 percent of the American people support an ABM system, and Dr. Gallup comes out a week later and says 60 percent do not understand the ABM issue.

Mr. HART. Or do not know about it.

Mr. MONDALE. According to the Gallup poll, how many support the ABM system?

Mr. HART. Twenty-five percent, if I read this correctly.

Mr. MONDALE. Twenty-five percent favor the ABM, and the ad says 84 percent. Is that within the normal margin of error?

Mr. HART. Well, it is, in the development of weapons systems cost estimates, but aside from that, I know no area where that range of mistake is so accepted.

Mr. MONDALE. I thank the Senator.

THE SURTAX EXTENSION

Mr. WILLIAMS of Delaware. Mr. President, earlier today an item appeared on the UPI wire service commenting upon the fact that the majority leader, speaking for the Democratic policy committee, has indicated that there will be no votes on the surtax extension, thereby leaving the impression that this tax is going to be allowed to lapse.

Approximately 3 hours later a second item appeared on the same wire service with a New York dateline.

I ask unanimous consent that both these items be printed at this point in the RECORD.

There being no objection, the two items were ordered to be printed in the RECORD, as follows:

TAXES

WASHINGTON.—Senate Democratic Leader Mike Mansfield raised the possibility today, Congress might quietly bury the 10 per cent income tax surcharge this week by letting paycheck withholding of the extra levy expire.

"The surtax expires at midnight Thursday," Mansfield told reporters, referring to paycheck withholding. The surtax itself expired June 30, but Congress extended withholding for a month while considering President Nixon's plea to extend the surcharge another year.

"If it goes out of existence Thursday, it would be very hard to revive it in view of the deep undercurrent in this body."

He referred to opposition by some Senators toward Nixon's surtax proposal, under which the 10 per cent levy would apply this year, then drop to 5 per cent Jan. 1.

Mansfield warned last week that Senate opposition to the surtax was increasing. He said the administration was calling it a vital anti-inflation tool but had no evidence it had slowed inflation so far.

The House passed Nixon's surcharge proposal a month ago, and the Senate Finance Committee approved it. But Mansfield's democratic policy committee has refused to put the bill on the Senate calendar until coupled with a tax reform measure.

Last week, Mansfield proposed a compromise—extend the surtax through November, enough time to get a tax reform bill ready. Then, he said, Congress could take up the surcharge and reform.

Senate Republican Leader Everett M. Dirksen told newsmen he rejected Mansfield's proposal. But Mansfield said Dirksen hadn't said the same to him and he was still hoping Dirksen and the administration would agree.

"I'm hoping the accommodation which was proposed would be accepted," Mansfield said.

Mansfield's veiled threat to let the whole surcharge package expire came in response to questions about a resolution, scheduled for a House vote today, which would extend withholding of the levy another 15 days.

Newsmen asked Mansfield whether he'd rush the resolution through the Senate. Unexpectedly, he declined to say he would. He said the proposal would go to the Senate Finance Committee, but declined to promise he'd then put it on the floor for a fast vote.

A week ago, Mansfield had offered to extend withholding up to 4 months. But today he said he was uncertain because so many Senators had since told him they opposed the surtax.

STOCKS

NEW YORK.—The gloom intensified on Wall Street today as the stock market took another tumble. It has been in a steady decline for more than three weeks.

The selling hit virtually all major groups. One exception was the airlines with some issues recording gains on the strength of new routes awarded several companies by the Civil Aeronautics Board.

The downdrift has been attributed by some analysts to concern by investors over the prospect of corporate profits and expansion. The failure of the Senate to extend the income tax surcharge has added to Wall Street's worries.

Mr. WILLIAMS of Delaware. Mr. President, I emphasize again that this lack of decision on the part of the Senate and the prevailing uncertainty as to what the Senate will or will not do with respect to the extention of the surcharge and what it will or will not do with respect to the repeal of the investment credit is creating chaos in our markets.

I hope the leadership in the Senate can be prevailed upon to allow the Senate at least to vote on this measure and to remove this cloud of uncertainty. Certainly there can be no excuse for the continued delay on the part of the Senate to act.

I most certainly do not attribute to the Democratic policy committee any ulterior motives; however, if this were part of a plan to create a recession in this country no other action that could be taken would be more fruitful in that direction than these unwarranted delaying actions.

I appeal to the leadership that we get action on this tax bill at an early date.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. I asked the Senator to yield because it would be so easy to dismiss the situation as a stockmarket decline: The stockmarket is going down, so what do we care? Most of the people in the United States are not materially affected. But people have to realize that it is not just the market going down. Housing starts are going down by a million; that is approximately 40 percent.

The economic pressure will be felt, because high interest rates are being built into every price, and wage settlements are taking that into consideration, going up approximately 6 or 7 percent. We are heading for a recession. There is no question about it. I do not know that it can be avoided, considering the way the Federal Reserve Board has put the brakes on in this situation. Certainly,

we are not helping it any by marking time as we are on the surtax extension.

I am delighted that the Senator is pressing the fight. It is interesting that he and I, in a sense, have joined in it; and I think it is quite symbolic of the situation the country faces.

Mr. WILLIAMS of Delaware. I thank the Senator, and I should emphasize what he has said.

When one speaks of disrupted financial markets he is speaking not only of the price of stocks as it affects investors but also of the climate in which the employers of America expand and operate their businesses. This can be carried over into increased unemployment, which I am sure none of us wants.

Interest rates have been climbing, and while I do not claim that extension of the surtax alone would change the interest rates or solve that problem, it is one of the factors with which we must deal, along with many others including the control of Government spending. All these are actions which must be taken as part of an overall correction of our fiscal dilemma.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. AIKEN. I read this morning that several utility companies have been permitted to add the surtax into their rate structure. My question does not concern that however. My question is, "Would it not be better to have a 4- or 5-month extension of the surtax than no extension at all?

Mr. WILLIAMS of Delaware. Except for this point. Even if the surtax were extended for 4 or 5 months the uncertainty is still not removed from American industry as to whether the surtax is going to be extended.

That uncertainty as to whether Congress will or will not face up to these hard financial decisions is what causes many of today's problems.

Another point is this: Under this proposal of the Democratic policy committee no action would be taken on the investment credit until November. Many companies file their tax returns on a fiscal year basis. One company in particular mentioned that its fiscal year ends on August 1. It has bought approximately $10 million worth of equipment since the April date. We all expect that there is a reasonable chance that this investment credit will be repealed retroactively. The company, however, would be in this position when it files its annual tax return. It must pay its taxes based on the law on the books on the date it files its return. The 7 percent tax credit has not been repealed. It is still the law. The company would have no choice except to take the tax credit. It can invest the money in 90-day Treasury bills, draw 6 percent, and if and when Congress does repeal the investment credit retroactively, it will have 60 days to file an amended return and to pay the tax to the Government. There is no choice except to give the company the 60 days without penalty or interest because, as Congress retroactively repeals this tax, a penalty cannot be put on a taxpayer for not having paid a tax which was not the law on the date he paid his tax.

So not only would the Government lose the use of that revenue during this interval, but also it would have to borrow the money, and perhaps borrow it from the same man.

Another point is that when the companies go to the bankers to arrange their loans they do not know the terms upon which they are going to purchase this equipment, whether the investment credit will or will not be allowed.

My suggestion is that we make this tax bill the pending business and that we proceed to vote. There are those who earnestly think that a 3- or 4-month extension would be better. If that is the will of the Senate I accept the will of the majority. On the other hand, let the Senate itself decide.

Surely it is not expected that all Senators blindly delegate to the Democratic policy committee our proxies to vote as they order.

Mr. President, if the Democratic policy committee is determined to repeal the surtax let the country know their position by voting on the bill. In that way we will know where we stand. Then the administration could cut expenditures accordingly; otherwise the Democratic policy committee could raise the debt ceiling to cover the additional deficits. I know of no reason why we should leave this matter hanging in the air with no action being taken. That is my point.

As the Senator from New York has said, this situation does contribute to the uncertainty that exists in the financial community. It has an adverse effect on interest rates.

A couple of weeks ago it was reported that the city of New York had sold a sizable bond issue. It was estimated that the interest rate was three-eigths percent higher than it would have been had it not been for the uncertainty as to whether or not Congress was going to change the tax exempt status of State and municipal bonds.

It is true, as the Senator from Vermont has said, that American industry, whether one is talking about utilities or manufacturers, makes allowances for taxes as a part of the cost of the operation.

On another point, suppose we do not extend the surtax or it is repealed. In that event the money that has been withheld from the employees would have to be refunded. It is true that wage earners would get the money back next year but it would be without interest. I think a great many inequities are being created in this situation.

There is now on the Senate Calendar a bill which was considered by the Committee on Finance. The hearings have been held, and the hearings have been printed. I have a copy of the printed hearings on my desk. They are available to all Senators. I do not see why we do not proceed to a vote on the bill, either up or down, and settle the question.

Mr. President, I made this same point last year when the Senate at that time was delaying action on the original tax bill. I could take the speech that I made last year in support of President Johnson's tax bill, change the dates, and make the same speech now while urging President Nixon's request for prompt action by the Senate on his proposed tax bill.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. AIKEN. Mr. President, I agree with the Senator that tax legislation is undoubtedly the most important legislation that will come before this session of Congress; that it ought to be considered and a decision made at the earliest possible moment.

But I have an elementary question about the surtax. Is the surtax intended to hold prices up or to hold prices down?

Mr. WILLIAMS of Delaware. As far as I am concerned the surtax is not a vehicle to control prices at all. It is needed to provide revenue to avoid an unbearable deficit.

Mr. AIKEN. Then, does it affect prices at all?

Mr. WILLIAMS of Delaware. Our Government will be operating at a deficit of $5 billion to $6 billion a year even with the extension of the surcharge. If we do not extend it we will have a deficit of at least a billion dollars a month. That is inflationary and as the Senate delays action now, fires of inflation are fanned in this country and prices are pushed higher.

Mr. AIKEN. I noticed just a few minutes ago on the ticker that the surplus as of June 30 was about $1.9 billion or nearly $2 billion more than anticipated. How much of this amount was due to the 10-percent surtax? Would it be all of it?

Mr. WILLIAMS of Delaware. It would be a part of it. The tax surcharge enacted last year provided about $9 billion in extra revenue. But I point out that when they talk about surplus today they are speaking of the overall collections of the Government, including trust funds. The Government did not close last year's operations with any surplus. It does not have the right to use trust fund money to defray the normal operating costs of the Government. For example, about $400 million of that amount is due to accumulation of surplus in the railroad retirement fund. That fund represents money paid by the employers and employees of the railroads. Not a dime of Government money goes into that fund. Yet the accumulation in that trust fund is treated for bookkeeping purposes as though it were Government money. The same thing is true with respect to the trust fund for social security. Those funds cannot be used to defray the normal operating costs of the Government.

When that fancy accounting now used for bookkeeping purposes is eliminated we come up with a deficit last year of $6 to $8 billion.

Mr. AIKEN. Mr. President, would the Senator yield further?

Mr. WILLIAMS of Delaware. I yield.

Mr. AIKEN. Mr. President, the news item stated that the surplus as of June 30 is the largest surplus since the $1 billion-plus surplus of 1960. But if I remember correctly, and I think I do, that surplus of 1960 was due to a $13 billion deficit in 1959.

Mr. JAVITS. Exactly.

Mr. AIKEN. As a citizen-taxpayer I do not think I understand the situation too well, but I do rely on the Senator from Delaware for good advice.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. Mr. President, I asked the Senator to yield to me. I know the Senator from Arkansas (Mr. FULBRIGHT) wants to be heard on this one point of the Democratic versus Republican tug-of-war here.

I would like to suggest to the Senator from Vermont (Mr. AIKEN), the Senator from Delaware (Mr. WILLIAMS), and our leader, that the war of nerves has to end because if it does not there will be nothing to fight about. We must end this war of nerves.

I understand the situation well. We know much about political infighting. However, in my judgment—and in this statement I do not bind the Senator from Delaware in any way—whether the time is to be 5 months or 1 year the Senate had better express itself and do it quickly because this is a situation that is deteriorating very quickly.

Whatever any Senator may say about my coming from the financial community—for which I do not apologize and never will—that is where the ear is to the ground. The situation is bad, and it is my position that the situation is not going to get better if we "horse around" with this matter.

I hope this war ends in a matter of days—and not weeks or months—because the economy of the entire country is seriously in jeopardy.

Mr. WILLIAMS of Delaware. I thank the Senator. That is my point. I respect those who feel this surtax should be extended only for 4 months or 6 months, and while I strongly disagree I shall abide by the decision of the Senate. But whatever the decision is let the Senate make it. If the Senate is only going to extend the surtax for 4 months, 6 months, a year, or repeal it, whatever we do let us do it, and let the taxpayers know the rules. That is my only point. I want a vote on the bill. The Senate has a right to work its will and under no circumstances can 100 Senators delegate to the Democratic Policy Committee the power to make or enforce its own will on the Senate regardless of what other members may think.

Who are these men who comprise this all powerful group?

I agree with the Senator from New York. This tax bill is not an issue that should be characterized as Republican versus Democrat, for it is not. I remind Senators that last year I joined with the then-Senator from Florida in a bipartisan effort to put through the surtax originally as it had been proposed by then President Lyndon Johnson. We introduced the bill which later became the law. We joined together not as Republicans and Democrats but as Members of the Senate. That measure was a bipartisan effort.

I am confident that whatever position I may take or whatever position others may take we will not find complete agreement of positions straight across the aisle. But this should not be a partisan question at all. I find no fault with any Senator who disagrees with my position, but I have a right to express it and to vote accordingly. Another Senator has just as much right to his position that the time should be perhaps, 4 months or 6 months. I think I am entitled to my position and he is entitled to his position. Whatever we do, let the Senate as a body make the decision.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. FULBRIGHT. The Senator has been in the Senate for as long as I have. He knows very well when we have a deadline, as we now have. The present law, I believe, expires Friday, does it not? The extension of the withholding?

Mr. WILLIAMS of Delaware. The Senator is correct.

Mr. FULBRIGHT. The Senator from New York is entirely correct. I do not quarrel with him although I come from a State having as little to do with the market as any State could have. I agree the situation is significant.

As a practical matter, the Senator from Delaware heard the majority leader express what I think is a reasonable proposal for a compromise; that is, the extension of the law to the end of November. That would do several things. It certainly goes part way toward the Senator's view, but it also gives us an opportunity in other areas to deal specifically with tax reform; and in addition to that the opportunity to have budgetary cuts.

The Senator from Delaware has made a great reputation in the past on his very effective activity in this field and his tax knowledge. If he would cooperate on some budgetary cuts it would be equally effective, if not more so, on the question of inflation and, as the Senator said a moment ago, bringing into balance the financial situation. This is a measure that the Senator from Delaware has long supported.

In view of the short time, I submit that everything indicates we should make the agreement. If there is serious objection to either side's position, the Senator knows it cannot be passed, really, between now and Friday. Therefore, it is a made-to-order situation in which agreement should be brought about. The majority leader, after consultation at great length with Members on this side of the aisle, and with the policy committee, has made clear his position. I do not think that is an unreasonable position. I do not understand why it does not go a long way toward meeting the views of the Senator from Delaware, giving us time really to work out a reasonable position on two or three other related situations, specifically tax reform and also budgetary matters. I do not see why the Senator objects to that.

Mr. WILLIAMS of Delaware. Mr. President, first as to the July 31 deadline, I did not object to its extension. I recognize, as do other Members, that we cannot finish action on this bill by July 31, to get it through conference, even if we tried. The House is sending over an extension of 15 days, or until August 15. The minority leader and I conferred with the majority leader this morning and suggested that we stop it at the desk and pass it.

There was a rumor we were going to try to attach the surtax to it. I assured the Senator and the majority leader that there is no truth to such a rumor so far as I am concerned. This extension could and should be passed without amendment. But the point I make is that we should then proceed—to a vote on the bill itself.

Mr. FULBRIGHT. That is only 15 days. That is no time for the other matter.

Mr. WILLIAMS of Delaware. If we will stop this filibuster and get down to business we can do it. There is no reason why we cannot. The Senator mentioned my past interest in budget cuts, I can assure the Senator that this is not just a past interest; it is a continuing interest, and I only hope I will have his support in the days ahead.

Going back to last year, one section of that law was a section requiring a mandatory reduction in expenditures by around $6 billion. Later, Congress, much to my regret, did whittle that down, but we retained a portion of that reduction.

Again this year I tried to get meaningful legislation requiring mandatory expenditure control to be written into the law. However, on a rollcall vote in the Senate I was defeated. The rollcall was about 80 to 16 I believe. I do not know whether the Senator from Arkansas was one of the 16 that tried to put meaningful expenditure control into the law, but, anyway I lost. After we lost, I took the next step available. Recognizing that we could not get votes in the Senate for a control over expenditures I discussed this with the White House and received a commitment from the President that he would support a real control over expenditures.

I had a letter from the President dated July 16 on this subject, which I shall be glad to read at this point:

THE WHITE HOUSE,
Washington, July 16, 1969.

Hon. JOHN J. WILLIAMS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS. I am aware of the concern over extension of the surtax and repeal of the investment credit unless expenditure controls are made clearly effective. Possibly some of this concern arises from the flexibility of the expenditure control provision of H.R. 11400 just passed by the Congress.

In this legislation the limit on expenditures for fiscal year 1970 would appear to be $191.9 billion—one billion below the $192.9 billion projected in my revised budget. However, the actual language (1) authorizes me to exceed this ceiling by two billion dollars for increases in specified items of uncontrollable spending, thereby raising the ceiling potentially to $193.9 billion; and (2) enables Congress to raise expenditures by any amount for any program, thereby permitting automatic Congressional increases in the ceiling.

There is an obvious advantage in having a precise ceiling—one which clearly specifies the maximum allowable expenditures. I therefore assure you and your colleagues—that includes the Senator from Arkansas—that I accept in good faith the $191.9 billion ceiling as passed by Congress. More than this,

barring a plainly critical and presently unforeseeable emergency, I will hold total expenditures for fiscal 1970 within the $192.9 billion indicated in my April budget proposals.

I will regard this $192.9 billion maximum as a ceiling on fiscal 1970 expenditures, on this premise—that when an increase is approved by Congress or develops in one program it will be offset by a corresponding decrease in another program, thereby keeping the total budget within the $192.9 billion maximum.

For the Executive Branch this means that if uncontrollable spending, such as interest on the public debt and social security benefits, should exceed the April estimates, or if other spending essential to the national welfare is approved, the additional spending will have to be offset by reductions elsewhere Further it means that, if the Congress should vote expenditures above those provided for in the breakdown of the $192.9 billion total, it will also need to impose compensating reductions in other programs. Failure to establish such priorities in allocating funds within the $192.9 billion total will compel the Executive Branch either to impose offsetting reductions itself in programs approved by Congress or to refrain from spending the increase.

I believe this firm expenditure control, prompt extension of the surtax and the excises, and repeal of the investment tax credit will give us the tools our country needs to brake and stop inflation. It is my understanding that the Ways and Means Committee and the Finance Committee will follow this action with prompt consideration of a major tax revision package which will include many of the reform proposals I recommended to Congress last April.

Working together, I am confident that the Congress and the Administration can establish sound priorities and keep within a $192.9 billion expenditure total for 1970. I assure you that I intend to see that this is done.

Sincerely,

RICHARD NIXON.

Mr. President, considering that we could not get the votes in the Senate I have gone as far as I could in getting expenditure controls. Without this cooperation of the President I could not have made this satisfactory progress in that direction.

I will join the Senator from Arkansas in trying to control them further, as the various appropriation bills come up.

I recognize that he and perhaps others feel that a 4-month or a 6-month extension of the surtax would be just as effective an action as a 1-year extension. I respect his position, but I disagree with it.

All I am asking for is an agreement that we just not let this drift as a state of uncertainty. Let us make the tax bill the pending business and go on and vote it up or down, letting the country know under what rules they are going to operate. That is all I am asking. I am not asking for a commitment on the part of any Senator that he is or is not going to support the bill as the administration requested or as we reported it. Let the Senate work its will. The Senator from Arkansas has been in the Senate longer than I have, but during our period of service we have never had a situation just like this before, a situation where we would be given an ultimatum that unless the Democratic policy committee can get a solid commitment that all Senators will vote in a certain manner, they will not make the tax bill the pending business. That is not the way for the Senate to operate. Let the leadership make it the pending business, and then each Senator who has strong feelings on the subject can try to persuade others to adopt and approve his position. If he fails, then the Senate proceeds to approve whatever position it wishes. That is all I am asking, that we remove this indecision, this uncertainty, and let the American taxpayers know the rules of the game under which we are operating.

Mr. FULBRIGHT. I thank the Senator; but I think the way to remove that doubt is the way the majority leader has suggested. I can remember a number of occasions—not relating to taxes—on which agreements were worked out between both sides and then, under unanimous consent, very controversial matters were solved. I was not always in agreement, but that is the way to do things when there are controversial matters to be acted on within a limited time.

I do not see how a provision for 15 days is going to work with respect to either the budget matter or reforms—obviously not the reforms. The main reason for the 4 months is that a number of those who are interested, and I am not among them, in some reforms insist upon having those reforms or not voting for the surtax at all. There is a very grave doubt whether the surtax standing alone could pass. Distasteful as it is—I voted against it last year—I am not sure I will vote for it this year unless it is a part of some arrangement in which some progress will be made—that was worked out as a compromise.

I think the majority leader did everything he could to find an area of agreement that would allow him some assurance of getting action, because he realizes the seriousness of the situation, just as the Senator from New York expressed it. It was a good-faith effort to arrive at an agreement which would be effective. The Senator knows this has been done on highly controversial matters, especially in the area of social legislation, where, after a long, drawn-out stalemate, it is solved by agreement. That is what the majority leader is trying to do.

With reference to the tax matter and the budget matter, I may point out that we have before us an authorization bill for appropriations. I hope the Senator from Delaware will join me and other Senators in being specific—without the generalized ceilings which are always subject to having holes punched in them—about adjusting the budgetary matters. I hope he will join us in that and in many other efforts that can be had between now and November, when we would have to vote on the bill.

Mr. WILLIAMS of Delaware. I agree with the Senator that we should arrive at a decision on the pending bill, and I appreciate that he would like to have me vote with him on the matter. I respectfully suggest to him that the roll be called right now and that the Senate proceed to vote on it. I have been ready to vote for 3 weeks. Let us call the roll.

I am not criticizing the majority leader. The Senator knows that the majority leader speaks for the Democratic policy committee. But what I am asking is that we be given a chance to vote. I feel very strongly that the Senate is creating an unnecessary disturbance in our financial community by its delayed action.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. SYMINGTON. The Senator from Delaware knows of my great respect for him, especially in the field of finance. I am not a member of the finance committee. So as to inform myself, I would ask the Senator a couple of questions.

Is it not true that, despite the fact this tax has been in effect about a year, it has at least not yet been successful in stemming inflationary tendencies?

I ask that question with the premise that last month, inflation for that one month increased 0.6 percent. If we agree to continue this tax until the 30th of November, it is my understanding the administration stated they would like to see the surtax cut from 10 percent to 5 percent next year? That to me eliminated the idea this was the basic answer to inflation.

There are people in my State who believe at least some tax reforms are necessary, say a $100 exemption relief in the lower brackets, and elimination of millionaires not paying any taxes. I do not mean millionaires in property, rather citizens of the country who have an income of $1 million who do not pay taxes, even though they do not have tax-free securities such as municipal bonds. Some thought those two could get by the Senate with the surcharge continued until the 30th of November, which would be only the difference of 1 month; and I understand it is planned to cut it then anyway.

I ask these questions because if anybody has made an impression on me—and I say this with great sincerity—on the importance of reducing Government expenditures, it has been the able and distinguished Senator from Delaware, with whom, over the years, it has been my privilege to serve.

We have a Federal budget now of some $193 billion. Six years ago, when I started talking about the growing danger incident to our continuing unfavorable balance of payments, some of my colleagues would kid me about it. The Senator from Delaware never did. I present to him that the last quarter to the best of my knowledge, was the worst quarter we have ever had in our history of balance of payments. If carried out on an annual basis, it would run some $11 billion a year.

Under those circumstances, I would ask the distinguished Senator from Delaware if he believes that prompt passage of this surcharge tax extension would take care of the inflation going on in the country today because—in my opinion—of the gigantic expenditures now characteristic of the Federal budget.

Mr. WILLIAMS of Delaware. I appreciate the questions of the Senator from Missouri. To the best of my ability, I shall try to answer them, but I first want to refer to the remarks he made earlier when he referred to his own attempts to alert the Senate to the problem of our balance of payments. It was a

timely warning. I regret that more attention was not paid to the warning he was presenting.

To get back to the question, do I think the enactment of the surcharge will check inflation? The answer is: As to that in itself, no. I do not think any one action, extending the surtax alone, or cutting the budgetary expenditures alone, or monetary policies alone, will in itself do the job, but I think it takes a coordination of all of them.

I go back to last year. The Senator is correct when he says the enactment of the surcharge last year did not check inflation as it had been anticipated it would do. There is no argument about that. But I am going to point out clearly why I think it failed. In the first place, President Johnson, and I am not necessarily carrying his banner, recommended to the Congress early last year, in January, the enactment of a surcharge as one necessary measure to reduce our staggering deficit and control inflation. I promptly endorsed it. I had advocated similar action months before. I thought we had to take that action, and I publicly endorsed it. Later the Senator from Florida and I joined in introducing the 10-percent surcharge, as advocated by the President, but we accompanied that with what in our opinion was an equally important measure; namely, expenditure controls. It takes both taxes and expenditure controls to do the job and to be effective. Congress enacted that package, but action was delayed then just as Congress is delaying action today.

While we introduced that bill in February and the President was appealing for prompt action just as Mr. Nixon is today, Congress did not get around to passing the bill or to putting it on the President's desk for signature until approximately July 1—6 months of unnecessary delay.

There was a delay of 6 months, during which time expenditures were running uncontrolled and deficits were mounting. The surtax was not as effective as it would have been because of the uncertainty for a period of 6 months as to whether it would be enacted. That in my opinion was one of the contributing factors as to why it failed.

There was another contributing factor. After the surtax had become law the Federal Reserve System in my opinion made a serious mistake by misjudging the economy. Instead of cooperating and moving with restraint the Federal Reserve pumped a substantial amount of additional credit into the country. It increased the flow of cash far above that needed. That action was highly inflationary and in direct contradiction of the action taken by imposing the surtax. To that extent the effect of the surcharge in controlling inflation was minimized.

Then there was a third factor. Along with the surtax was a proposal to reduce expenditures by $6 billion. That would have had a salutary effect, but Congress later enacted a series of exemptions for their special projects, with the result that only about one-third of the expenditure control remained effective. That resulted in about $4 billion more spending than was anticipated. Four billion more was poured into the economy than was anticipated at the time the bill passed. This undue delay in meeting the threat of inflation head on was the failure of Congress to act, not the formula itself.

In my opinion, those were the three contributing factors that to some extent nullified the congressional action on imposing the surtax.

Of course, no one can look back and say what would have happened "if," but there is no doubt a mistake was made.

The point I make today is that here again we see the pattern of Senate-delayed action developing. Again there is uncertainty as to what Congress will do. No one is more familiar with what problems such a situation can present than the Senator from Missouri, who made a great record in private industry before he came to the Senate. He knows that any industry, in making its plans, likes to know exactly under what rules it will be expected to operate.

They have a right to know as soon as possible what the tax rates will be.

When they plan to buy new machinery are they going to get the 7-percent investment credit or are they not? Many in business file tax returns on a fiscal years basis, and, as I pointed out earlier, there are problems for those companies that are filing on a fiscal year basis after July 1. As of July 1 the investment credit is still the law of the land, and companies that are filing tax returns must—they have no choice—take the 7-percent investment credit now, and later if we repeal it retroactively file an amended return and pay it back to the Government. Not only is this unnecessary work but it creates uncertainty. What excuse is there for delaying this decision?

I feel strongly that if the Senate delays action until the end of the year and lets uncertainty prevail as to whether we will or will not extend the investment credit, even though we then extend the surcharge and repeal the investment credit, we will have lost the wholesome effect as a brake on inflation that would prevail if we passed it today. That is the reason that I urge that whatever action the Senate wants to take we vote on it—4 months, 6 months, whatever it is, let us lay down the rule and eliminate this uncertainty. Frankly, I would take that same position if I thought the Senate would defeat the measure. If the Senate is going to defeat the proposed extension of this surtax let us do it now; and then let those who make this decision tell us how they plan to cope with the resulting $12 billion deficit, and let them assume full responsibility for the inflationary results of their action.

As the Senator knows, nothing in the world creates more disturbance in industry and in the financial community affecting interest rates and cost of living, than this uncertainty. Companies make all the allowances for the worst and must prepare for even worse than that which will actually develop.

As I said the other day, it is a good bit like the boy scheduled to get a whipping; anticipating the whipping and walking down to the barn with your dad is far worse punishment than the pain you experience after it is all over.

I think that is just what we are talking about in connection with this tax bill today. Whatever decision to be made make it quick.

I yield to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, as a result of a conversation I had with the distinguished Senator from Delaware a little over 3 years ago, I recommended at that time to the Secretary of the Treasury that we recognize this problem on a fiscal basis as well, instead of just on a monetary basis. In other words, I recommended that he come in for a tax increase.

I would not argue in any way with what the Senator has presented today. He knows the facts far better than I. But I would ask him this question: Does he believe that the continuation of this tax will have a major effect, to the point where it will control the inflation now characteristic of our economy, or does he believe that it is also necessary to reduce expenditures, as many of us have been trying to do on this floor for some weeks? I am not referring to any particular item, I do not wish to get into a debate on any parochial line of reasoning. But is not the important thing for us to do now is to reduce spending?

Mr. WILLIAMS of Delaware. I agree with the Senator; and I have made this statement many times, but I repeat it again here: If we are only going to extend this surcharge to provide an additional $8 or $9 billion with which to expand the spending programs of the Government we will not only contribute nothing toward controlling inflation, but I think it would have an adverse effect. I think it would actually be more inflationary to collect extra taxes only to pour the money out in increased Government spending streams.

For that reason, I firmly believe we have got to have this act accompanied by firm control over expenditures. If I felt for a moment this was only going to serve the purpose of providing additional revenue to increase spending I would not support the tax bill myself.

That is the reason I said last year that I would not support the surcharge, even though I was the author of the bill, if the expenditure controls were deleted from it. I told the administration this year that after our failure here in the Senate to obtain, legislatively, a firm, meaningful control over expenditures I would be reluctant to support this surcharge extension. I could not argue for its enactment on the floor of the Senate unless we had a firm commitment worked out with the executive branch that there will definitely be controls over spending. That was the reason I solicited and received the letter from the President promising that the administration would hold the lid on expenditures. The Senator from Missouri, who has taken this line consistently, will agree with me that my voting record in the Senate has reflected that belief.

Mr. SYMINGTON. There is no question about that.

Mr. WILLIAMS of Delaware. One further point. The Senator mentioned the balance of payments and that in this quarter they are worse. I am sure he will

agree with me that last year's improvement in the balance of payments, about which there was so much boasting, was not a true correction of our balance-of-payments problem. It represented an unusually large inflow of foreign investment capital coming into this country and buying of American securities, bonds, and stocks; and that resulted in a mathematical improvement in the balance of payments, while at the same time our exports as related to imports were on the adverse side.

Mr. SYMINGTON. It also reflected the financial problems of a particular country.

Mr. WILLIAMS of Delaware. That is correct; there was a flight of capital from abroad coming into this country.

When we speak of the strength of the American dollar today, as some do, while it is in a little better position than it was a couple of times last year, to a large extent the dollar looks stronger today because we are comparing it to the weaker currency position of some of the other countries, which were stronger last year.

I do not think we can afford to gamble on the stability of the dollar. I remember very well, as does the Senator from Missouri, that during the debate on the question of whether the Senate would or would not enact a surcharge last year it was necessary for the administration to call the leadership of the Senate on a certain Friday and adjourn the Senate before we could have a vote. If we had had the vote, at that time it was almost certain to be adverse on the enactment of the surcharge. It was the opinion of the Secretary of the Treasury, the Chairman of the Federal Reserve, and others that the American dollar would have gone over the brink within 72 hours had the Senate defeated that surtax on that date.

When the Senate adjourned early that Friday and carried the vote over until the following Tuesday the administration mustered enough votes to pass the measure.

I plead with the Senate leadership not to let that happen again—but time is running out.

I say, let us not gamble with the stability of our dollar to that point again. That is the reason I think it is vitally important that we take action. I think any action would be better than inaction; that is the point I am making. I am not trying to say I have the only answer, but the Senate has a right to express its will. Let us take action and solve the impasse before it is too late; that is all I ask.

Mr. President, I yield the floor.

ORDER OF BUSINESS

Mr. DIRKSEN. Mr. President, I see the majority leader is present, and I would rather like to address what I have to say to him, and also to the distinguished Senator from Kentucky.

Mr. WILLIAMS of Delaware. Mr. President, I yield to the Senator from Illinois.

Mr. DIRKSEN. Mr. President, I thought when we finished the dialog that at 3 o'clock we were going to discuss some procedural matters with reference to the ABM issue pending before the Senate and then likely have a vote on the Cooper-Hart amendment.

Mr. WILLIAMS of Delaware. I am willing to yield the floor.

Mr. DIRKSEN. Mr. President, I accept the floor in my own right.

Obviously we are not going to get action on the tax matter unless we set aside the ABM debate and address ourselves to it.

Tomorrow it is expected that the House of Representatives will complete action on the tax bill and that it will be messaged over.

I discussed the matter with the majority leader, who thought that perhaps it ought to be committed to the Senate Committee on Finance. I uttered the hope that perhaps we could ask for immediate consideration and that if there be objection, it would then go to the calendar and could be called up at an appropriate time.

I think that one of the hazards involved in sending it to the Finance Committee is that if action is expected, there must be a physical vote. The question is how long will it take to get a quorum. That is one matter.

The second matter involves how much discussion there will be before that bill finally gets to a vote.

Since time is so important in this matter, I renew my hope that perhaps we can call it up and have objection made, if anyone so desires, and put the measure on the Senate Calendar. It will then be there to call up at any time. It has got to be here and ready so that when the ABM matter is set aside—and that matter has not been agreed to yet—we may then get to the tax bill.

However, that is a parliamentary problem that confronts us. And it has got to be solved first. There is no other answer to it.

That question anticipates whether a vote can be had on the pending amendment, the Cooper-Hart amendment.

Various objections have been registered. Some Senators say that we ought to wait and ought not to conclude the matter until the President returns. They say that there will be hearings in the Committee on Foreign Relations, that the senior Senator from Tennessee (Mr. GORE) is prepared to adduce heretofore unexplored material of high value. I do not know what it is. However, one can anticipate that all of this will take time.

The query is, without discussing the merits of any measure, whether it is the surtax or the ABM: When do we vote so that we can give a sense of certainty to the Members of the Senate as well as to the commercial community when we finally get around to the surtax?

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. Mr. President the distinguished minority leader did approach me earlier today about the possibility of putting on the calendar the 15-day extension of the surtax withholding levels.

I did not at that time express any enthusiasm for such a procedure, nor do I do so now. But I did say that I would be glad to discuss it, as a courtesy, with the distinguished chairman of the committee, the Senator from Louisiana (Mr. LONG).

It would be my preference this time to have the resolution, if and when it comes from the House, referred to the Committee on Finance, which is the proper procedural attitude to take.

The distinguished minority leader has indicated that it would be difficult perhaps to get the members of that committee together. I do not think it would be difficult at all, may I say, most respectfully, in view of the deadline of midnight this coming Thursday, at which time the surtax will go out of existence if it is not renewed in some shape or form.

My present guess is that it might well go out of existence. That would mean that the money withheld from salaried workers and wage earners would have to be repaid to them.

It would mean also, in my opinion, that it would be very difficult to get the surtax resurrected again in view of the undercurrent of feelings I have detected on this side of the aisle.

I would say that if the Committee on Finance can meet and report out on a 9-to-8 basis the extension of the surtax as reported from the House, with all of these factors in mind, there will be no trouble in getting a quorum present, and that, in view of the time expiration of midnight Thursday next of the present surtax, if not extended, it would be possible to get action at that time, too.

I am sure the distinguished minority leader, who is a member of that committee, would agree with that and understand the situation in which not only he finds himself, but I also find myself at the same time.

I have nothing more to add to what I have said twice today on this matter and what the Democratic policy committee and the Democratic members of the Finance Committee authorized me to state on Thursday last.

I am not the author of these proposals. I am the servant of the policy committee, and what the policy committee decides to do, I will do to the best of my ability and without any if's, and's, or butt's.

I am here as a lightning rod in a certain sense, because there is a lot of heat coming in my direction. But I do not mind that. It goes with the job and with the responsibility intrusted to me. And that responsibility will be carried out without fear or favor.

I am saying now that I am putting everything on the table, where it has always been, anyway, and it will be for the Senate to decide what to do within the next several days about this most important question which confronts us.

I can only repeat again that if I detect correctly the undercurrent of feelings on this side of the aisle as far as the surtax is concerned, if it ever goes off the books, it is very possible that it will not be put on the books again.

I do not know what the distinguished Senator from Tennessee (Mr. GORE) has in mind, except that he has called a meeting of his subcommittee in executive ses-

sion on Wednesday next. It will be my hope, in view of the developments which have become known on the floor of the Senate over the past 2 or 3 days, that it might be possible the next day, Thursday, to take up the ABM amendment.

If an agreement could be reached with the distinguished Senator from Tennessee, I would hope that the distinguished chairman of the Committee on Foreign Relations, the Senator from Arkansas (Mr. FULBRIGHT), would reconsider his position and perhaps come along. I do know that the Senator from Kentucky (Mr. COOPER); the Senator from Michigan (Mr. HART); the Senator from Mississippi (Mr. STENNIS); the distinguished minority leader, the Senator from Illinois (Dr. DIRKSEN), and the Senator from Montana—now speaking—would like to get a vote as rapidly as possible.

Speaking for myself, I do not think that, so far as the President is concerned, he cares one way or the other when the vote comes.

That is about all I can say.

Mr. DIRKSEN. Mr. President, I have one other question I should like to ask the distinguished majority leader.

Let us assume that the tax measure is referred to the Committee on Finance, and let us assume, also, that without an undue use of time it is reported to the Senate Calendar. Now, that implies that to get any action, the ABM matter—meaning the amendments—has to be set aside, and the majority leader, exercising his very proper province, must call up the tax bill. Under the circumstances, and in view of all that has been said, would the ABM matter and this amendment be set aside for that purpose?

Mr. MANSFIELD. If I may answer, with due respect to the chairman of the committee.

Mr. STENNIS. It is all right.

Mr. MANSFIELD. I would be loath to set the pending business aside unless some agreement, if possible, could be reached relative to the accommodation proposed in good faith by the Democratic policy committee and the Democratic members of the Committee on Finance to the distinguished minority leader and the administration, if it were given some consideration and perhaps, hopefully, approval. I do not take as a negative answer the fact that 2 hours after this accommodation was given to the distinguished minority leader, it was turned down; that it was turned down just because the press, the radio, and the TV said so. I received no word from anyone in the administration or from the Republican leadership which indicated that it was turned down. As a matter of fact, I think that last Friday the distinguished minority leader said that the door was still open, and I replied that I hoped the door would stay open.

But, frankly, this is about as far as we can go. It took a great deal of persuasion to get this far, and I think we are up against a proposition which cannot be compromised any further but which will have to be decided one way or the other at the proper time—and the proper time will not extend beyond midnight of Thursday next.

Mr. DIRKSEN. Mr. President, the awkward position in which the minority leadership finds itself—and very particularly the minority leader—is simply that what is contained in that resolution implied that the proposal would be accepted as such, without changing one jot or tittle. Now, then, that presumes that I would go to every one of the 43 Members on the minority side and ask them to concur. They may or may not concur. I have no control over that. Obviously, I cannot abrogate the privileges, the rights, and the prerogatives of any Member of the Senate. So if one of them should stand in his place and offer an amendment, or a series of amendments, obviously that is his right as a Senator. How shall the minority leader control that? He cannot control it. He might make some importunity. He might make a plea and say, "Please do not do it." But they might ignore him, for all his trouble, because everybody has a serious interest in the matter.

So I found myself in that awkward position, and I could not say to the distinguished majority leader, "We accept." I could say for myself, "I accept." But I could not say it for every Senator on this side of the aisle, and certainly I could not say it for those on the majority side of the aisle.

Mr. MANSFIELD. Nor could I. But there is such a thing as good faith and good understanding, and I have found that the word of the distinguished minority leader is as good as gold. He has never said anything to me that he did not back up; and I hope that, in reverse, my actions toward him have been on the same basis.

Mr. DIRKSEN. Mr. President, I trust it will always be that way, at the present value of gold.

Mr. MANSFIELD. Thirty-five dollars an ounce.

Mr. DIRKSEN. But I know, from what pours into my office every day, that there are people in the Capitol from all over the country. They are coming and appealing for modifications in the so-called investment tax credit:

> Can't you make a little modification so that we can buy some boxcars for our railroads? Those mean shipments; they, in turn, mean jobs. That contributes to the economy and to its viability. Can't you please do it?

What happens in my office is happening in every office—certainly in this end of the Capitol. So how can I say that somebody is not going to stand in his place and ask for a modification?

When one looks at the resolution of the majority policy committee, he sees how carefully—almost as if it were done by a genius—they nailed down the date; they nailed down everything in connection with it, so that, if you changed a comma, it probably would be a violation of the spirit of that undertaking by the committee.

I always want to play in the very best of faith. That is a chance we have to take. But the problem is, if it comes over here tomorrow, if it goes to the Committee on Finance, if we have a meeting the next morning, and if we report it to the Senate Calendar, do we then move aside the pending business of the Senate and get at it?

Mr. STENNIS. Mr. President, will the Senator yield on that point?

Mr. DIRKSEN. In just a moment.

On that question, I do not think there really has been a durable answer.

I yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, I know the importance of this tax matter, as reported to the country and as reported to the Senate. Without lessening that, I wish to address myself briefly to the real pending business of the Senate—the Cooper-Hart amendment.

Let me underscore, too, that I want everyone, of course, to have full opportunity to debate that matter pro and con as much as he might wish. But, Mr. President, this is serious business. The debate on that issue has been going on since January of this year on the floor of the Senate, in addition to the debates we had theretofore.

This authorization bill contains all the hardware of the military program, and we have to have this every year. That is contrary to the usual pattern. We authorized various programs for 2, 3, or 4 years.

I was one of the principal sponsors of the amendment to the law that required this authorization and held out for it to the last, because I thought Congress should have the opportunity to pass on it every year. The argument against it was that it will be delayed; Congress will not act; it will drag along; too much time will be consumed. We finally overcame that argument. The Senator from Georgia was the author of the amendment. That became the law, and I think it is a very wholesome law.

But it certainly does put the bee on us. This is totally a legislative responsibility. We cannot blame the Defense Department; we cannot blame industry. We cannot blame anyone but ourselves. We are holding up this matter, which will take weeks at best after it passes the Senate. The House will have to act. It will have to go to conference. The report will have to come to the Senate. Everything in the bill will have to wait for the final decision. The House Appropriations Committee has had some very fine hearings. I understand their position is they have gone as far as they can go until these authorization matters are settled.

Therefore, we have a responsibility here. This measure involves hardware for Vietnam, if it continues to last over there.

One of the arguments against the ABM is that we already have the Poseidon program. We are converting now from the Polaris over to Poseidon. These submarines are held up now in the process of remodeling, as I understand the situation, pending disposition of this bill. So this is not a minor matter. We are dealing with matters vital to our security. Many other illustrations could be pointed out. I think there is a good chance that we could proceed to a vote before too long. With respect to the tax matter, I personally would like to know more about how we are going to proceed, but I believe we can find time for a tax matter. It would have to be largely by agreement, at any rate, as I understand it. I do not believe that is the real difficulty here.

News stories in some places suggest

that the ABM go over until after the August recess. Mr. President, that would be pitiful. Here are the authors of the amendment. They are ready to speak. They have taken a position on the floor of the Senate. Let us close ranks and in some way give the Senator from Tennessee an opportunity to have his hearing. I am not talking behind his back. He knows how I feel about that. Give him a chance to have his hearing and vote on this matter Friday. I think there should be 48 hours' notice. It takes time to travel and present the arguments. I am hoping that some day this week will be considered. I have just referred to Friday. I believe that is reasonably possible. I hope they will get the hearings all together. All the background material is known. We could finally get the bill to conference and still have requests for hearings. If we listened to some persons, we would still be having hearings on the atomic bomb.

I appeal to the Senate. Let us close ranks and get started on something definite. I propose Friday.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. DIRKSEN. Mr. President, the distinguished Senator from Mississippi has made a suggestion that we might be able to vote Friday. I just talked with the distinguished Senator from Arkansas. He would not feel inclined to agree to vote on Friday. If we could accomplish it only by a time limitation, and if there was an agreement, that would be the end of it. But if we do not lay it aside, what happens to the surtax? That is the problem.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. TOWER. Mr. President, we have been engaged in repetitious debate on this issue and we are now going into the fourth week. I cannot conceive of anything new that might be brought to light that would change the already hardened lines on this issue in the Senate. I think the lines are clearly drawn.

I think we do the people of this country a great disservice if we do not go ahead on this matter. If we cannot arrive at some agreement to vote, preferably on Wednesday or Thursday—that would give the Senator from Tennessee time to reveal whatever documents he wants to investigate in his committee meeting—I would feel a strong inclination to offer a tabling motion to force the issue and bring it to a vote because I do not think we are going to contribute any more to enlighten the Senate on this issue.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. TOWER. I do not have the floor.

The PRESIDING OFFICER (Mr. DOLE in the chair). The Senator from Illinois has the floor.

Mr. DIRKSEN. I yield.

The PRESIDING OFFICER. The Senator from Missouri is recognized.

Mr. SYMINGTON. Mr. President, most of my discussion about this matter was in the closed session.

But I feel the Senator from Tennessee, who is not in the Chamber today, should also be present for this discussion, because some 2 months ago, as a guess, members of the engineering and scientific fraternity, suggested we look into some reports.

I thereupon asked that I be allowed to look at these reports. At first I was told the reports could not be located. This was done with complete sincerity. I do not in any way criticize that, but if there was any delay it was not the fault of the Senate.

Later on one of the reports was found and was promptly sent to the Senate. I think it fair to say that this report does not approve certain aspects of the design of the ABM. As is the case in much of this discussion, however, it is difficult to talk about it in open session because pertinent factors incident to such discussion have been classified.

Only last week another report was obtained and sent over. In both cases, I might add, these reports were not made by any opponents or proponents of this system or any other system. They were paid for by the taxpayers of the United States and were made at the request of the Department of Defense. One of them was made by a company headed by Gen. Maxwell Taylor, the other by a company called Aerospace. Both companies are nonprofit organizations which obtain their business from the Government.

I have been told there are other reports made by other companies.

Mr. President, this is the first weapons system I have opposed at its original presentation since coming into Government. When I was criticized for doing so I looked up the record. I found that since World War II I have worked for and voted for $953 billion for the Defense Department, which means at the end of this year that figure will be over a trillion dollars.

I do not criticize the delay of these reports, and believe everything was done to obtain them for us. I do not criticize in anyway people who are entirely sincere in their belief this system should be deployed now. But I do find there are statements in the two reports which would imply that considerable thought should be given to whether or not this Safeguard system should be deployed now instead of, as the Cooper-Hart amendment recommends, waiting a year before deciding on deployment.

In addition, there is another report which we learned about only last week. I do not know whether that is favorable or not. That is a report made by the Defense Science Advisory Board.

I understand that report is critical of the Safeguard system itself; not just any ABM system.

The scientists who told me about it—and two did—are universally respected. They would not be considered political scientists against the ABM system or political scientists for the ABM system; rather independents. They said that in their opinion it would be wise for the Senate to look at the reports before the vote as to whether or not to deploy now.

If we had known about the reports before, naturally we would have looked at them before. One has not yet been received. It is my understanding the distinguished Senator from Tennessee has requested it. I personally would like to see it.

From what I have read—and I have not tried to make any count—this will be a close vote; and I hope that it will be judged on the facts. I cannot imagine anything more valuable to a Senator, before he votes on this subject, than as much knowledge as possible of the facts.

The Senator from Tennessee is chairman of his subcommittee. He has scheduled a meeting on Wednesday to review these reports.

Now the distinguished Senator from Mississippi (Mr. STENNIS), chairman of the Armed Services Committee, knows that I have nothing but the most complete respect for him. Of all the men I have ever known, he has a wise concept of justice.

Inasmuch as the vote will be close, inasmuch as there is much pressure—let me emphasize that the pressure by no means is on only one side—we owe it to ourselves and the Senate to examine all reports made by independent experts who tried to obtain the facts.

Mr. FULBRIGHT. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield.

Several other Senators addressed the Chair.

Mr. DIRKSEN. Mr. President, will the Senator from Missouri yield to me so that I may yield the floor?

Mr. SYMINGTON. I yield.

Mr. DIRKSEN. Mr. President, I yield the floor.

Mr. SYMINGTON. Mr. President, I yield now to the Senator from Arkansas.

Mr. FULBRIGHT. Mr. President, I want to comment on what the Senator said relative to the hearing of the Senator from Tennessee which has been talked about here. I have also requested representatives from the Pentagon to come and discuss another aspect of this matter which has just been brought to my attention in the past few days.

If I may add one other thing, the Senator from Mississippi seems to take upon us a little more than usual blame for this delay. This is the first time—I believe it is correct—that I can remember this kind of bill was first submitted to the Senate. Normally, it is passed by the House first, is it not, and then sent on to the Senate? On this occasion I do not know whether they did. I do not wish to delay it beyond the time for reasonable consideration of this matter because it is extremely important; but I would not agree to a vote now, under these circumstances, on Friday.

It may be, after the hearings on Wednesday, if the matter is brought up on Thursday, that the Senator from Tennessee and the Senator from Missouri and others interested in this may wish to agree to it, so that I might not object. However, I think it would be preferable to vote next Tuesday or Wednesday.

In that connection, I do not see why we do not proceed with the tax matter. It has a time limit on it for Friday, or at least midnight Thursday. It is very important, as the Senator from Illinois has pointed out, that the last meeting of the President with the leaders of Senate and House was on the matter of the tax bill.

If this is not agreeable to the Senator from Mississippi, I have amendments to the pending bill which I am prepared to offer and to offer tomorrow morning, if the Senator would like, and utilize that time in disposing of certain amendments without any extended debate. They are simple amendments. That will make some progress in disposing of the military bill. If that is an agreeable procedure, I thank the Senator.

Mr. SYMINGTON. The Senator has mentioned something else that has come up, I believe I have a rough idea of what it is; namely, what happens when the air becomes filled with nuclear explosions and so forth.

Earlier this morning, I received a pamphlet which to the best of my knowledge is not entirely accurate. I am sure said pamphlet was sent to many other people because it is printed in rather deluxe fashion. It makes several statements which, to the best of my knowledge, are not correct.

As mentioned earlier today, I shall discuss this pamphlet briefly on the floor tomorrow.

What worries me is that if we could get a few figures declassified, we could clarify certain aspects of the system so that more people would understand its operation.

I took the two committees most thoroughly briefed on this matter and combined their votes—the only two committees that have been thoroughly briefed on this matter—and to my surprise, even though the Foreign Relations Committee has three less members than the Armed Services Committee, found that the vote on the Cooper-Hart amendment was 18 for, 14 against, 1 undecided; this out of the 33 members.

It has always been my conviction that the more facts we get, the more constructive the vote will be.

It is hard to discuss this matter intelligently without releasing classified figures; for example, the number of Sprints and Spartans involved in each missile field.

I am trying to figure a way, tomorrow, to say what should be said without violating security.

We have two reports. We are expecting two more. There may be more; so I would hope we could spend a little more time to understand the technical people, those not connected either politically against it or politically for it.

I should also say, with great respect, to my chairman, the distinguished Senator from Mississippi, that I do believe, generally, in connection with authorization bills, the Senate must proceed ahead of the House.

It is my understanding the House has not even started its hearings on the Army and Navy, and although they did start authorization hearings on the Air Force, those have been temporarily suspended.

Thus, I would hope that all Members of the Senate would have a little more time in order to understand to the best of their ability, what this is about, and not just the two committees most directly involved.

Mr. STENNIS. Mr. President, will the Senator yield to me quite briefly for a response?

Mr. SYMINGTON. Mr. President, I yield the floor.

Mr. STENNIS. Mr. President——

The PRESIDING OFFICER The Senator from Mississippi.

Mr. STENNIS. Mr. President, just by way of response to the Senator from Missouri and the Senator from Arkansas, there is nothing especially new about this authorization bill coming up in the Senate first. It should have been up in both Houses perhaps before now, but last year I was acting chairman on that bill, and it was taken up here first. I know that to be a fact. My recollection is that some previous years when I was acting chairman we took it up first. Certainly, the rule about the House taking up an authorization bill is not rigid; just appropriation bills.

Mr. FULBRIGHT. Just on appropriations.

Mr. STENNIS. Yes; appropriations are always handled in that order.

Mr. President, I know of no additional reports or additional information or as to what might be in them. I do not think any has been withheld.

I may mention, for the benefit of Senators who may not have heard Secretary Laird yesterday on one of the network programs, "Face The Nation," when he discussed this question, that Mr. Rowan said:

> Mr. Secretary, it was reported this past week that the Institute for Defense Analysis, which is sometimes described as the Pentagon's "think tank", has come up with a report saying that it would be wasteful to deploy an ABM system—an anti-ballastic missile system. Is there such a report? Have you seen it, and how do you react to it?
>
> Mr. LAIRD. Well, there are several reports that have been made by the Institute for Defense Analysis. The report you refer is an older report, on both the pros and the cons of the ABM system.

The rest of the answer is important:

> I think it's important from the Department of Defense standpoint to have these outside agencies look at both the pros and the cons. And we have had studies made outlining the adverse opinion on various weapon systems, as well as the supporting information. And we have reports from that group on both sides of this particular question.
>
> I study those reports, and then I make my recommendation after I have studied the reports to the President of the United States.
>
> Mr. SHEEHAN. Mr. Secretary, could you go into detail as to what is in these reports? The opposition in the Senate is making something of them, and claiming that they're new information—fresh information which says the system won't work—specifically that high altitude nuclear blasts would knock out the radars and the other communication networks within the system and make it unworkable.
>
> Could you comment on that?
>
> Mr. LAIRD. Well, I'd be very happy to, and I commented on that charge, in very great detail, before the House Appropriations Committee, and I would direct your attention to the detailed explanation of that that I went into on the unclassified record before the House Appropriations Committee, and this was covered in great detail.
>
> This program is just a short program, and I'm sure you don't want to get into that detail now. But I would direct your attention to the very thorough and complete answers that were given before the House Appropriations Committee when that very same question was asked.
>
> There's about ten pages of testimony in which, I think, that that question was very adequately dealt with.

The Senator from Arkansas made a legitimate inquiry last Friday, I believe it was, on that very point. I knew I had heard it gone into, but I could not give him the book and page.

Mr. FULBRIGHT. Does the Senator have the book and page now?

Mr. STENNIS. No, but I will get it and give it. I will have it for the Senator in 5 minutes.

Mr. FULBRIGHT. I thank the Senator.

Mr. STENNIS. We had this same manner in our Preparedness Subcommittee hearings, which the Senator from Missouri will remember. We always have to go into that question, and do.

I thank the Senator for yielding to me.

Mr. SYMINGTON. To the best of my knowledge, none of these reports have anything to do with the point brought up by the Senator from Arkansas. They do have something to do with—at least one of them does, and I know because I have read it—the vulnerability of the proposed radar system.

In effect, what the Senator from Tennessee and some others are asking for is the same knowledge the Secretary of Defense has with respect to these reports. He has read them and formed his opinion. If there is also a favorable report, we should have it. I did not have the privilege of listening to the Secretary of Defense, yesterday, being back in my State. If there is a favorable report from the Institute of Defense Analysis, inasmuch as I have one which is not favorable in some respects, I would also like to see the favorable report.

I did not want to leave the impression that these reports had anything to do with what the Senator from Arkansas was talking about. I do feel that in an atmosphere of this character, we would not want to be "tabled" out of any information.

We want and should have all the information we can get. It is not our fault people had trouble getting these reports together. They were made some time ago. I do not know the exact date.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. SYMINGTON. I am glad to yield to the Senator from Texas.

Mr. TOWER. I think the paper referred to by the Senator from Mississippi was written in 1966, a summer paper. Of course, the way this thing operates is that these academicians can get together and do these things ordinarily when they are deployed away from their respective universities. This is a "think tank" type operation. I have heard this paper described as "Thoughts that occurred to me while shaving." That is probably the best way to describe the report, because that is all they are. They are "think tank" type papers. A man makes proposals and says, "Why do we not see if this can work?" or "Why do we not see if it does not work?"

Relative to the matter of the Senator from Mississippi on the blackout, the

page and number are in the hearing before the House Appropriations Committee, page 61 of the hearings. I do not have the precise date. Anyway, during the course of the hearings, as appears on page 61 of the hearings before the House, on the possibility of the radar blackout, Mr. Lipscomb said:

Mr. Secretary, the charge is frequently made that the ABM system just won't work because of its nuclear environment. That the radars will be blacked out either from explosion from our shots or the shots that are coming in from the Soviet Union.

Secretary LAIRD. Mr. Lipscomb, thank you for your generous remarks. I miss sitting on that side of the table. The blackout will not invalidate the system. Over the past several years extensive analysis has been made of the effect of blackout on the ABM, both self-blackout caused by our own intercepts and the blackout caused by an enemy's high burst above the atmosphere, and also of weapon debris that escapes from the burst region at very high altitude detonation. But we believe that this can be handled by having an overlap of the PAR radar systems so that one PAR can cover the same area while another PAR is temporarily blacked out.

I would like Dr. Foster to comment on that point.

Mr. FOSTER. Mr. Lipscomb, the situation is as Secretary Laird has indicated. We made a test in 1962 to determine the effect on radar of nuclear explosions in the atmosphere. So also did the Soviet Union. From those tests we calculated the best kind of an attack to make against the Safeguard system. We also designed the Safeguard system to minimize the effectiveness of such attacks. As a consequence of these studies, we find that it is not worthwhile for the enemy to attempt a blackout attack.

I would also like to add that we have analyzed the Soviet ballistic missile defense around Moscow. We know how many missiles we would have to expend to make a blackout attack on their radars. We have decided that isn't a profitable venture either. We propose to go through that system by sheer exhaustion of the defense.

Several Senators addressed the chair.

Mr. STENNIS. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Mississippi has the floor.

Mr. STENNIS. The Senator from Kentucky has been waiting about an hour. He is the author of the amendment. I would like to yield to him.

The PRESIDING OFFICER. The Senator from Missouri yielded the floor, and the Chair then recognized the Senator from Mississippi.

Mr. SYMINGTON. Will the Senator from Kentucky yield to me?

Mr. STENNIS. Just a minute, Mr. President. I still have the floor.

Mr. SYMINGTON. I beg the Senator's pardon.

Mr. STENNIS. I will yield the Senator 5 minutes, or even 10 minutes, later, but I want to get to the Senator from Kentucky (Mr. COOPER) and to the Senator from Michigan (Mr. HART).

Mr. SYMINGTON. Mr. President, I would like to get to the Senator from Kentucky also. I have great respect for him; in fact I would not be present on the floor if he had not suggested I come over this afternoon. I did not know he was waiting, having not been here all the time.

Mr. STENNIS. Very well.

Mr. President, I yield for a reasonable time to the Senator from Missouri.

Mr. SYMINGTON. First, with respect to the matter just raised by the distinguished Senator from Texas, to the best of my knowledge it is not covered in any of the reports in question. Second, the report made by the Institute of Defense Analysis, I am told by the staff, was made in 1966 and delivered to the Pentagon in 1967. Third, the report made by Aerospace is dated 1968.

There is one other matter I would raise Mr. President; then I shall be through. We talk a lot about scientists and engineers, and technical pros and cons; but anyone who has any connection with the Pentagon knows there are many people in that building who are not in sympathy with deployment now of this proposed ABM system. It is not a scientific matter entirely. It must operate when it is installed. That is another reason why I thought it might be valuable to review these reports, so we could find out in a more practical way, perhaps, why it is there are people in the Defense Department who do not think now is the time to deploy.

Mr. President, I thank the Senator from Mississippi for yielding.

Mr. STENNIS. I was glad to yield to the Senator.

Mr. President, I yield now to the Senator from Kentucky. I suggest that the Senator from Kentucky obtain the floor in his own right. I yield the floor, Mr. President.

Mr. COOPER. Mr. President, I have no desire to interrupt my friend the Senator from Missouri. I want to come back to this issue of when a vote shall be taken, and I know the Senator from Michigan will join me.

The PRESIDING OFFICER. The Chair recognizes the Senator from Kentucky.

Mr. COOPER. The issue has been debated in the country, now, for more than a year. The debate in the Senate on the pending bill is now entering its fourth week. I should like to say, however, that I do not think there has been any unusual delay in reaching a decision on this amendment. It does have some importance. From the standpoint of costs, it involves a first phase cost of about $2 billion; and a phase 2 cost of $10.8 billion, and many competent scientists believe it will go far beyond that to $30 or $40 billion dollars.

The amendment is important to the security of the country, and to the arms talks. So I do not consider that time has been lost. During the first week, the sponsors of the bill had the obligation to explain their views not only on the ABM issue, but to explain on the entire bill. During the second week, there was no burden upon us to bring up the amendment: the moon shot occupied attention for 2 days, at least, and no debate was possible. Last week Senator HART brought up the amendment.

If one looks at the RECORD, he will find that many Members of the Senate have spoken for the amendment and have entered into the debate. If the debate has been, as is said, slow, I do not think it can be charged against our efforts to try to bring out the information we believe necessary for judgment. We have tried.

Mr. FULBRIGHT. Mr. President, will the Senator yield on that point?

Mr. COOPER. I yield.

Mr. FULBRIGHT. This has special reference to what the Senator from Missouri was saying. I do not wish to delay the vote, but the culprit seems to be me at this point.

On May 16, I wrote a letter to the Secretary of Defense, Mr. Laird, of which I shall read the first paragraph:

I understand that the Institute for Defense Analyses has prepared a paper, No. N-619, which is entitled: "Soviet First-Strike Counterforce Capability—Fact or Fiction." Will you please provide the Committee with a copy of that document?

They replied on June 2—Senators will note that they usually reply about 2 or 3 weeks later—and politely declined to furnish it. They said:

In summary, an IDA Internal Note is an internal working document for staff review, comment and criticism and is neither intended nor suitable for external distribution.

I have had this kind of response time and again from the Department of Defense. Sometimes, when the Senator from Missouri or a member of the Committee on Armed Services joins in a request, I get them, and many times I do not get them. In the same letter, I also requested a copy of the "Command and Control" study, going back to the Gulf of Tonkin. They did not then, nor have they yet, supplied it.

These are reports paid for by the taxpayers, material supplied by IDA or similar organizations, but they have refused to make them available, though finally after much effort, as the Senator from Missouri has stated, he sometimes will get one, or if the chairman of the Committee on Armed Services orders the Defense Department to make them available, as the Senator from Georgia once did in the case of the Gulf of Tonkin, we get them.

But I do not accept the idea that we are delaying the vote, when we are dealing with a matter of this importance, for the Department of Defense has no compunction about classifying anything they think is unfavorable to their position. I do not think we have delayed. I think a matter of this weight is entitled to much greater time for debate; and if there is anything further that I think we need, I shall not agree to a vote. I have already made it plain that I shall not agree to a vote on Thursday or Friday of this week. We will need to see what the hearings reveal on Wednesday.

It may be that nothing further will be revealed that has not already been revealed. Then I shall be willing to vote. I think the sensible thing to do would be to dispose of the tax matter—as I am prepared to do—and then to revert to this bill after the tax bill has been disposed of.

Mr. COOPER. Mr. President, the Senator from Michigan (Mr. HART) and I believe that as we are the original sponsors of the amendment; we have the duty to bring the issue to a decision. We have brought the question of

agreeing upon a time to vote, to the floor of the Senate so that Senators could state their views. Both of us are willing to move toward a vote on the amendment as quickly as possible. But it is the right of other Senators who believe that they need more time to object. We are at least arriving at some idea as to when the Senate can vote.

We knew, and so stated so on the floor last Friday, that the Senator from Tennessee (Mr. GORE) would hold a hearing and that he would not want a vote until after the hearing.

Certain other questions had been raised about information. One question arose after the closed hearing. We were advised on that day that we would have last-minute intelligence. We heard the most recent intelligence. Certainly we would not and do not question the credibility of Senators who offered the information, but we had no opportunity to go to the sources until the closed hearing was over. Whatever impression it carried had been made.

Several Senators said—at least one of them is in the Chamber today—that they had not finally decided until they had heard certain evidence which was given at the closed session. But those of us who oppose deployment had never heard the last-minute intelligence—until the closed hearing. We had no opportunity to challenge its meaning.

A statement by the Secretary of Defense before the House Subcommittee on Appropriations was amplified in last-minute intelligence offered in the closed hearings. Its meaning could have influenced Senators. Later I wrote to Secretary Laird and Dr. Foster and questioned them on the subjects, one of which was submarines. I received letters with answers to some of my questions, but not answering my questions on submarines.

Officials from the Department of Defense and the CIA came to my office and talked to me about the new information we had received in the closed session. I must say that their reports were in harmony, but on the subject, for which I had requested information—submarines—one could form a judgment either way. I asked, "Can you make a categorical statement that this fact is correct?"

The answer was, "No, but it is our judgment, based on certain phenomena, that it is correct."

So one could make his judgment either way.

The reports of intelligence, and their elusive nature is one of the problems we have faced in this debate. This has been brought out in the discussions on the floor of the Senate last Friday and today.

My position is the same, and I am sure that the distinguished Senator from Michigan (Mr. HART) will agree with me. We want to keep working every day toward a vote. If the tax matter comes up—and it is of great importance, as far as I am concerned—I would consider laying our amendment aside temporarily. However, I do not want to lay it aside on any other proposition, because if we were to do that, it would be necessary to start over again.

Mr. TOWER. Mr. President, will the Senator yield for a brief parliamentary inquiry?

Mr. COOPER. I will yield in a moment. I believe—and I know—that the matter of this last-minute intelligence has had a strong inhibiting effect on the matter of bringing the debate to a close.

Mr. TOWER. Mr. President, will the Senator yield for a brief parliamentary inquiry?

Mr. COOPER. I yield.

The PRESIDING OFFICER. The Senator will state it.

Mr. TOWER. Mr. President, cannot any Member of the Senate, when recognized, offer a motion to table a pending amendment?

The PRESIDING OFFICER. The Senator is correct.

Mr. TOWER. And if that motion is made, then it is not debatable and the vote must immediately ensue on the motion to table?

The PRESIDING OFFICER. The Senator is correct.

Mr. COOPER. Mr. President, I do not yield the floor for that purpose.

Mr. TOWER. Mr. President, for the benefit of the Senator, I might say that serious consideration is being given by some Senators to the possibility of offering such a motion on Wednesday or Thursday.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. STENNIS. Mr. President, I certainly hope that there will not be such a motion until after prior notice has been given for a certain reasonable time within which every Senator may have his say and debate the matter.

I am sure that the Senator from Texas does not want this done by surprise. We do not want anything like that done without notice.

Mr. TOWER. Adequate notice will be given.

Mr. HART. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. HART. Mr. President, the Senator from Kentucky has described very well our motive last Friday in undertaking to develop the possibility of arriving at a time for a vote and in reviewing the discussion this afternoon.

I rather think in view of the concern of the Senator from Tennessee and the pendency of the matter, I assume in executive session, in the subcommittee on Wednesday, that until that matter has concluded, none of us would push for a date certain.

We would all recognize the necessity and obligation to give the Senator from Tennessee an opportunity to develop whatever record there may be on Wednesday. We could then renew our discussion here.

The Senator from Kentucky has described exactly how we who offer the amendment feel. We are anxious to see the amendment go forward to a vote and that any debate that any Senator believes to be relevant to a prudent decision is available.

I am sure that no one would want the Senate to act after having notice that such a report is in existence until we have had that opportunity.

Those of us who support the amendment have the deep conviction that the deployment of the ABM system at this time would be wrong.

For that reason we would hope to win when we have a vote. However, more importantly, we hope that the vote will be the action that is correct and in our national interest.

A few days to insure that that is done is time well spent.

Mr. CASE. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. CASE. Mr. President, as the ranking minority member of the Gore subcommittee, I second the concern of our chairman and the concern of the Senator from Missouri, a member of the full committee, that we not set a time for any vote on this vital amendment until we are quite sure we have all the information that bears upon this question.

I appreciate, therefore, the assurance of the Senator from Michigan and the Senator from Mississippi on this point.

So far as the suggestion of a motion to table is concerned, I am satisfied that no matter what position the majority of the Senators might take on the final substantive question, the overwhelming majority would defeat a motion to table which they regarded as untimely because sufficient time for all information to be available had not been allowed.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. AIKEN. Mr. President, I hope that no one would be so shortsighted as to make a motion to table the Cooper-Hart amendment. That motion certainly would not carry. And if it were to carry, it would virtually assure the introduction of 100 other amendments which would mean that the debate would run on and on—until no one would know when it would conclude.

There is one question that I should like to ask the Senator from Kentucky. I have been hopeful that we might find some advantages for the civilian economy, with the ABM radar and computer systems.

I virtually had given up on that hope because of the great cost of the radars that have been proposed. I think the cost is estimated to be in the neighborhood of $100 million each. However, there will be other uses for these systems in the Defense Establishment.

Has the Senator from Kentucky found any alternative uses for the ABM radar?

Mr. COOPER. Mr. President, I am not an authority on this matter. I did make inquiry from scientists at the most respected laboratories concerned with radar whose names are well known in the radar field. Dr. Ruina is one.

Dr. Ruina informed me that the use of these radars in nondefense areas, would be prohibitive in cost. For example, radars used for air traffic control are about as large and expensive as any radars applied to civil uses, and their cost is only on the order of a million dollars. The cost of the MSR and PAR are

about 100 times greater. My inquiries revealed that the PARS and MSRS could be used for certain other functions such as early warning, observation of United States or Soviet missile tests, as an addition to the BMEWS and for satellite tracking.

Mr. AIKEN. Mr. President, as I understand it, there are six or seven uses to be made of the radars, in addition to being a component part of the ABM system.

Mr. COOPER. The Senator is correct.

Mr. AIKEN. Therefore, if the research and development work is carried on, the cost would not be a total loss in the event it turned out to be unadaptable to the ABM system alone. I think that is important.

Mr. COOPER. They could be used in several ways, should the Safeguard system never be deployed. For this reason research and development on the radars at recognized test sites would not be a loss to the military security of this Nation. Even if they are superseded, as now seems likely, we could put them to some constructive use.

Mr. AIKEN. Mr. President, so many of us are not only willing, but are also anxious to have the research and development work go on. However, we want reasonable assurance that the results of that research and development work will have some major value to our defense system, and hopefully, to our economic system.

Mr. COOPER. Mr. President, without question, Dr. Ruina said that we could make some use of the radars even if we decide never to deploy the system.

Mr. PERCY. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. PERCY. Mr. President, while the distinguished Senator from Mississippi is on the floor, I would like to comment on one portion of the comments of the Senator from Kentucky.

I would like to move forward with dispatch on the ABM vote. We all agree that the debate has been exceedingly informative and useful. There has not been a day gone by without a major speech being given by both proponents and opponents.

I think that we have learned a great deal. I think we would all want to have every bit of time that is necessary. As far as I am concerned, I would be ready to vote tomorrow or Friday. I think that I have all the information I need. On the other hand, I would want to be cognizant of the fact that there may be new information that has not yet been revealed.

I have seen no dilatory tactics of any kind, any place. We recognize the urgency of moving ahead.

When the distinguished Senator from Kentucky said he would be willing to set aside his amendment for the surtax bill, I think this is exceedingly important to the Committee on Armed Services. I do not know anyone who is a bigger purchaser in America and who would be more adversely affected by the inflationary spiral we have today. In one month we have had an increase in the cost of living of six-tenths of 1 percent, and if the Defense Department budget reflects this increase, it is costing the military services a half-billion dollars a month in just paper for which they are not getting any value. The value of the military appropriation is dwindling that rapidly.

Though the surtax is not a perfect answer for inflation, I will try on Wednesday to answer my distinguished colleague, the Senator from Missouri, on his question as to whether it has had any effect at all. I think it has had an effect in slowing down the gross national product and the growth of the economy. I can only ask. What would we have had for an inflationary spiral and growth if we had not imposed the surtax?

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. PERCY. I should like to complete my remarks.

To show the crisis we are in today in interest costs, which is a reflection of inflation, I point to last week, when the State of Connecticut, on triple A bonds, paid the highest interest cost that has ever been recorded in history. Last Thursday the State of Illinois tried to float a $48 million bond issue to finance higher education—double A bonds—and we could not get a single municipal bond dealer or banking company in this country to bid on those bonds.

Because of the demand for credit, we know that interest rates probably should go higher than they are right now; yet we know the distortions that that action would have.

So this problem of inflation is the only one I can see that would be cause for setting aside this very important debate on bringing the ABM issue to a vote as quickly as we can; as well as the rest of this military bill. We want to move forward, but that one exception, I think, is warranted by the circumstances that I see.

I yield to the distinguished Senator from Missouri.

The PRESIDING OFFICER. The Senator from Kentucky has the floor.

Mr. COOPER. I yield to the Senator from Missouri.

Mr. SYMINGTON. Let me assure the distinguished Senator from Illinois that when I asked questions of the Senator from Delaware it was with recognition that no one on the floor is more capable of discussing fiscal and monetary problems than the distinguished ranking minority member of the Committee on Finance. In asking questions, I was not taking a position, rather wanted to know from him whether or not he thought if we did this, we could control inflation. I know the Senator from Illinois will agree with me that if we extend the surcharge and it does not control the growing inflation, we will have to adopt something additional.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. JAVITS. We seem to be deadlocked on both sides, in the ABM and in the surtax. The American system has a way, when it seems that you are up against a brick wall, of showing a way out or causing you to take a way out, and it generally comes from the public, the press, and our own consciences.

I back the Senators who are sponsoring this amendment. I am a member of the Committee on Foreign Relations. I think they are absolutely right. We ought to vote on this Tuesday or Wednesday.

It is my conviction that we should deal with the surtax this week, so urgent is that. I do not think the matter should be set aside for anything but the surtax.

I can only express these things as the optimum way to proceed, because I do feel that under the American system, between now and tomorrow and the next day, it will bear in on us that we have to do what we have to do, and the positions which now seem so firmly fixed will yield, as they always have yielded, to the higher patriotic duty and responsibility which are involved.

Mr. COOPER. The Senator is always wise. I wish to clarify one thing I said earlier. In talking about laying this amendment aside for the surtax, I said I was simply expressing my own view. Of course, I would not agree to anything like that without conferring with the Senator from Michigan and those who support this amendment. But I do not want to see this laid aside for some other subject. I believe, with the Senator from New York, that after these hearings are held, we should fix a date and vote on this amendment. We cannot do it the latter part of this week.

Mr. JAVITS. May I make a suggestion?

Mr. HART. Let me thank the Senator from Kentucky for taking me off the hook. That was not a joint decision of the offerers of the amendment with respect to putting it aside for the surtax.

As I listened to the discussion about the inflationary fires that have to be banked by the surtax and that the Defense Department is the biggest sufferer from inflation, it occurred to me that it is also the biggest contributor to inflation; and if we had been doing this kind of work for the last couple of years, we would not need a surtax.

Mr. JAVITS. It may be that if the unanimous consent were arrived at tomorrow or the next day with respect to voting next week on the Cooper-Hart amendment, that would cause people to feel that the door is open to acting on the surtax this week. I make that as a suggestion, most respectfully.

Mr. HOLLAND. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Kentucky yield the floor?

Mr. COOPER. I yield, yes.

Mr. HOLLAND. Mr. President, I just want to say that here is one Senator who has been waiting a long time to vote against this amendment, has been waiting a long time to vote for the ABM program and to vote for this bill, has been waiting a long time to vote for the surtax extension, and he cannot understand these proceedings as being other than dilatory. The Senator from Florida has been through several so-called filibusters himself. He thinks he knows a filibuster when he sees it. He thinks he has seen a very skillful one in this very long, drawn-out debate. He wants the RECORD to show that he recognizes it as a filibuster, and he hopes there will be a chance given to vote on this amendment in the next couple of days.

The Senator from Florida wants to call attention to the fact that the surtax is in the wings and should be voted, and I think it is the patriotic duty of Congress to extend the surtax.

The second thing he wants to call attention to is that we are at the 28th of July. We have not passed a single appropriation bill that has gone to the President. We are talking about a vacation beginning August 13, for 3 weeks. We have not done anything worthy of the name up to now in this session, which has extended nearly 7 months.

The Senator from Florida just wants it to be clearly understood that this is a filibuster. He heard the Senator from Vermont, who has been in the Senate even longer than he, say a short time ago that if a motion was made and carried, it would mean that there would be 100 other amendments and that the debate would extend on and on and on and on. I believe those are the exact words used by the distinguished Senator from Vermont.

The Senator from Florida just wants to ask his friends to please bring this thing to an end; to leave the Senate in a position to determine this business, which is simply an authorization; to leave the Senate in the position to pass the surtax bill; and I hope to set aside the plan for vacation, when we have not passed a single appropriation bill for the current fiscal year that has been sent to the President.

Let us not have this continuous debate. If Senators want to have a filibuster, the Senator from Florida is not going to say that cannot be done; but he wants it to be clear in the RECORD, and the people to understand it, that that is what is going on.

I thank the Senator for yielding.

Mr. COOPER. I say to the Senator from Florida that that may be his view; it is not mine; and the fact that he announces it to the public does not make it a filibuster. I have gone through this about four times now, and I will do it again.

The first week certainly was the week during which the Senator from Mississippi presented the bill. The bill does not include only the ABM. Many other programs are included in the bill. Altogether it is a $20 billion bill. During the first few days the chairman was supported by quite a few Senators who are members of the committee. The next week a great many Senators were in the State of the Senator from Florida. Many of them were there for 2 days, and properly so. I do not believe we could put our minds on anything at that time except the beginning of that great trip to the moon. Monday was a holiday and the next day the Senator from Michigan introduced our amendment.

I do not consider that we have been in a long and useless debate in connection with the matter. This is an important debate. It involves the possible expenditure of at least $10 billion and many persons believe it will involve billions of dollars. It also involves the security of our country. The measure involves not only our security but also it deals with peace. It is not a simple measure.

The fact that the Senator from Florida calls it an authorization bill is not very descriptive of the amendment, in my view. Nevertheless, the Senator from Michigan and I are ready day after day to be here and to use our best efforts to arrive at a vote. We hope the vote will be the latter part of this week.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. HOLLAND. Mr. President, I do not object to the Senator continuing to speak. I have frequently spoken myself in filibusters. I think I know one when I see it.

Mr. COOPER. I must say I have joined the Senator.

Mr. HOLLAND. The fact that the Senator and his associates are willing to speak on and on and on indicates that they are engaged in a filibuster. I want to indicate that is what we are faced with.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. STENNIS. Mr. President, I appreciate the remarks of the Senator from Florida and his concern about the business of the Senate, and that this matter move along as well as the tax bill.

It is a fact that I have had many conferences with the Senator from Kentucky and the Senator from Michigan. Without any exception they have wanted to get their amendment to a vote and they have been ready and have gone to any length they could in cooperating on that score.

Mr. HOLLAND. Are they ready to vote now?

Mr. STENNIS. I think they are. I do not speak for them. However, they have come to the Chamber repeatedly for colloquies to see if we could get an arrangement to vote, and they did so today. We came here at 3 o'clock today for that purpose. I am sure that is their position. The matter is held up, nevertheless, and the Senator will address himself to that.

Mr. HOLLAND. The Senator from Florida is perfectly willing for Senators to talk, but he wants it understood that if they want to vote, he believes the Senate is ready to vote and as long as they keep talking when they say they are ready to vote, they are filibustering.

Mr. STENNIS. I appreciate the fact that the Senator is trying to get the Senate moving and I commend him for it.

Mr. HART. Mr. President, I appreciate very much the comments of our able committee chairman, the distinguished Senator from Mississippi (Mr. STENNIS).

I would be a little reluctant to quarrel with the distinguished Senator from Florida when he identifies our discussion as a filibuster. He is a better practitioner of that brand of medicine than the Senator from Kentucky or the Senator from Michigan.

Mr. HOLLAND. I thank the Senator.

Mr. HART. But I suggest in this case he ought to go back to the medical books. He is misreading some of the symptoms.

As the Senator from Mississippi said, the Senator from Kentucky and I have been here several days, not to filibuster, but to see if we could get a time to vote.

PROGRAM FOR TUESDAY

Mr. TOWER. Mr. President, I wish to ask the distinguished Senator from West Virginia what time the Senate will convene tomorrow.

Mr. BYRD of West Virginia. Under the order of Friday, July 25, 1969, the Senate will convene at 11 o'clock tomorrow morning.

Immediately following the prayer and disposition of the Journal the able Senator from New Hampshire (Mr. COTTON) will be recognized for 2½ hours, during which he and the able Senator from South Carolina (Mr. HOLLINGS) will discuss in executive session the nomination on the Executive Calendar, to wit, Carl J. Gilbert, of Massachusetts, to be Special Representative for Trade Negotiations, with the rank of Ambassador.

There is a likelihood that there may be a rollcall vote at the conclusion of the 2½ hours.

Mr. TOWER. Will the morning hour then follow the 2½ hours allotted to the Senators indicated?

Mr. BYRD of West Virginia. I do not recall that any request has been made that there be a period for the transaction of routine morning business, but that would pose no problem. I am sure we could have such a period if the Senator wishes.

Mr. TOWER. I thank the Senator.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow, immediately following the disposition of the nomination on the Executive Calendar, there be a period for the transaction of routine morning business, for not to exceed 30 minutes, with statements made therein to be limited to 3 minutes.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order of Friday, July 25, 1969, that the Senate stand in adjournment until 11 o'clock tomorrow morning.

The motion was agreed to; and (at 5 o'clock and 20 minutes p.m.) the Senate adjourned until Tuesday, July 29, 1969, at 11 o'clock a.m.

EXTENSIONS OF REMARKS

CHEROKEES HONOR GENERAL COUNSEL EARL BOYD PIERCE

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. EDMONDSON. Mr. Speaker, I was delighted to learn, in a recent edition of the Cherokee Nation News, of an honor extended to one of my distinguished constituents, the general counsel for the Cherokee Tribe, Earl Boyd Pierce, of Muskogee, Okla.

Mr. Pierce, one of Oklahoma's ablest trial lawyers and a recognized authority on Cherokee history, was honored with an appreciation dinner at the Restaurant of the Cherokees. The text of the Cherokee Nation News article reporting the occasion follows:

THE "COUNTRY LAWYER" IS HONORED BY CHEROKEES

(By Mrs. Anna Kilpatrick)

It could have easily been a birthday party for Mr. Earl Boyd Pierce, when a group of his co-workers surprised him and Mrs. Pierce with an appreciation gift and a dinner at the restaurant of the Cherokees on Monday evening—complete with his favorite dessert, a cherry cobbler. But as it was not his birthday, it turned out that his co-workers and friends felt in their hearts that Mr. Pierce had done a tremendous job in his capacity, appointed by Chief W. W. Keeler as chairman of the Provisional Committee in keeping the Cherokee Nation in continued progress the past five months while a general business manager was sought, and they wanted to thank Mr. Pierce in a small way for the tremendous job, thus the dinner.

Mr. Pierce, a highly regarded lawyer in our country, born and reared in Fort Gibson and with Cherokee Roll No. (Minor) 2609, is a Cherokee historian, and a master of the Cherokee law as well as an eloquent speaker.

It was Mr. Pierce's long, patient labor with his brother attorneys that finally resulted in the $14 million payment to the Cherokees for their land.

While Mr. Pierce was in charge of the Cherokee Nation, the Cherokee Nation Housing program continued its full activity in building low-cost homes for our Cherokees, the Cherokee Store House acquired much clothing and canned goods for the Cherokees who are in need, the Cherokee Arts and Crafts program made strides in its expansion; the second Arts and Crafts store will open soon at Catoosa, Oklahoma. The Cherokees' land, buildings and monetary values were carefully looked after. The "open door" policy of Chief Keeler was practiced so the faith and confidence in our programs among our Cherokees were re-established. The heart of every Cherokee felt proud of the added beauty created by the planting of the shrubbery around the Cherokee Nation Complex. Indeed, Chief Keeler had confidence in Mr. Pierce when he appointed him to see that the Cherokee Nation remain a nation proud of its great heritage.

Therefore, it was for these reasons and more that the co-workers and friends of Mr. Earl Boyd Pierce wanted to honor their "Country Lawyer" and a great Cherokee.

Bob Stopp, the new general manager of the Cherokee Nation, assumed his duties today. Mr. Pierce, after finishing some unfinished paper work, will leave for Washington on Tribal business.

UNITED STATES NEEDS BIT OF McCARTHYISM

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1969

Mr. MUNDT. Mr. President, indicative of our changing times, and the fact that many Americans who had almost seemed to forget the menace of communism here at home are now reexamining our current scene with a new sense of realism, is an editorial recently written by highly regarded Fred C. Christopherson, of the Daily Argus Leader, and published in that widely read newspaper of the Upper Midwest. It is entitled "United States Needs Bit of McCarthyism."

Having known Mr. Christopherson intimately for more than 35 years, I know he was not an uncritical supporter of the former Wisconsin Senator, but I also know he realizes that the domestic perils of communism, of which Joe McCarthy talked so much, are still with us, were with us at the time of McCarthy's activities, and will continue to endanger our way of life until and unless more Americans come to grips with the realities of today's manifestations of serious dissension and revolt.

Mr. President, perhaps it is time once again for the House Committee on Un-American Activities under its new name and the Senate Internal Security Committee under its old name to reactivate programs of public hearings and private investigation to inform fully many naive Americans who seem unaware of the extent to which the Communist agents and their dupes here at home are still trying to tear down the great free institutions which have meant so much to many for so long here in our beloved United States of America.

I ask unanimous consent that the Christopherson editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES NEEDS BIT OF MCCARTHYISM

Ever since the days of the late Sen. Joe McCarthy, it has been fashionable in pseudo-intellectual circles to belittle charges of any signs of Communist infiltration in the United States.

Such pseudo-intellectuals quickly pounce on persons who are bold enough—and, might I might add, wise enough—to suggest that Communists may be fostering disorder in this country. They call them witch hunters, assassins of civil liberties and nervous Nellies who aren't fit to be members of their elite society.

So frequent and vicious have been their assaults that many persons have been intimidated to the point that they have been reluctant to voice fears based upon developments.

This is an unhappy situation and one, unfortunately, that is made to order for those whose ambition it is to undermine the foundations of the American government. Under this protective shield, they can work extensively and effectively.

And that is what they are doing on a much broader scale than many realize.

HOOVER POINTS IT OUT

Director J. Edgar Hoover of the FBI, however, is one sturdy American who hasn't been intimidated. In report after report, he has directed attention to evidence of subtle Communist maneuvering behind countless episodes on the campuses of the nation, in some labor unions, in city rioting and in other manifestations directly contrary to the traditional pattern of the American way.

Because Hoover is held in such high esteem by many, the critics are hesitant to make a frontal attack on him. Instead they attack him indirectly and seek to minimize the extent of his findings. Meanwhile they continue their loud clamor and broadcast the cry of "McCarthyism" against others who refer to Communist influence in the promotion of unsavory incidents.

In consequence, the nation hasn't given the attention it should to internal security and to the erection of safeguards to prevent erosion of our vitality from the inside. The undermining process has gone forward so vigorously that many naive persons seem to feel that it is a mark of stupid provincialism to respect the flag and a sign of intellectual prowess to besmirch it.

SHREWD AGENTS AT WORK

This is another issue of significant importance that should be approached by thoughtful Americans with a full understanding of what it means. Evidence developed by Director Hoover should be appraised for what it is worth and what it means. And let us not for a moment be diverted from a proper campaign against internal sabotage by detractors who are either evil by intent or by guile.

Let us bear in mind that the international representatives of the Communists are shrewd and skilled operators. They have had long years of training and know all the tricks of propaganda and deception. They know how to capture the minds of the unwary. They understand well how to exploit the fears and the frustrations of the underprivileged and the distressed. They are also clever and adept in concealing their identity and in working surreptitiously far in the background.

A REAL THREAT

It is true that Joe McCarthy may have been guilty of excesses. It is also true that he may have operated in too much of a shotgun fashion.

But it is also true—very emphatically so—that he started out to do something that should be done. That was to bolster the American defenses against the enemy within.

As of today, the nation has gone much too far in the direction of a movement of anti-McCarthyism, so much so that an acute danger exists. What we need is a revival of a crusading spirit in behalf of stout and sturdy Americanism, coupled with a genuinely intellectual appraisal of forces arrayed against us both inside and outside of America.

Let us preserve normal civil rights. But let us also preserve the structure that makes it possible for Americans to enjoy the greatest freedom accorded to individuals in any nation on the face of the earth.

AMERICA'S ENERGY YESTERDAY, TODAY, AND TOMORROW

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. FOREMAN. Mr. Speaker, sometimes the lack of reasonable understanding can be the cause of grievous injustice—not only in the social realm but in the economic realm as well. Recently, in answer to an elementary school classroom quiz, an imaginative little fellow replied:

Petroleum is a rich source of horse power—

And, he continued—

One horse power is the amount of energy needed to drag a dead horse 500 feet in 1 second.

Regretfully, this is comparable to the amount of understanding some people have about the vitally important domestic petroleum industry in the United States today.

Important issues affecting the petroleum industry are now the focus of more public attention—in the news media and in Congress—than for many years.

Wholesale tax reform plans have made tax provisions related to the petroleum industry, such as percentage depletion, the subject of widespread discussion and comments. A petition to allow a special import quota for a proposed refinery in Maine has brought about a Presidential commission to review the entire oil import control program. Prices of crude oil, natural gas, and petroleum products are in the spotlight.

The serious problems of the petroleum industry concern all of our citizens because they affect our Nation's energy supply and, indeed, our overall national security. Although the industry has seemed on the defensive in relation to these problems, the facts show that from the key standpoint of best serving the vital interests of our Nation and petroleum consumers, the industry has a strong and justified position on every one of them. Permit me to briefly outline some of the important aspects of the petroleum industry issues—and to encourage you, if you will, to look more deeply into them and examine them carefully.

Critics attack percentage depletion as one of several tax provisions alleged to be "loopholes." It is not a loophole at all—it is simply a depreciation allowance on a depleting capital asset.

Minerals, such as petroleum, by nature have a duel character. In the earth, they are part of their owner's capital assets. When produced and sold, part of the value received represents capital, and part income, making it difficult to establish an equitable taxation basis. In keeping with the basic principle that income, but not capital, should be taxed, Congress adopted the principle of percentage depletion which today applies to over 100 minerals, including oil and gas, as a means of fairly taxing the income derived by extractive industries.

A compelling reason for adoption of percentage depletion was to supply an incentive for owners of capital to accept the great risks involved in the search for and development of mineral resources which are so essential to our economy and security. History shows the incentive has worked well in achieving its purpose. It would be risky to discard or weaken a system which has worked well over a long period of years in supplying petroleum and other essential minerals.

Critics maintain that the oil industry does not pay its fair share of taxes. This simply is not true. In addition to income taxes, the petroleum industry pays a number of other direct taxes. One of these, the severance tax, is paid only by industries which extract natural resources. The fact is that in 1966—the latest year for which figures are available—the oil industry paid $2.5 billion in direct taxes, which amounted to 5.1 cents for every dollar of gross revenue. The direct tax burden for all U.S. business corporations was only about 4.5 cents per dollar of gross revenue, or about 10 percent less than petroleum's.

Percentage depletion has benefited the consumer by helping keep petroleum prices low. In fact, the price per gallon of gasoline today, before the taxes levied at the service station pumps, are the same as the price in 1948. This is even more impressive, when you consider the many improvements made to increase the delivery performance of a gallon of today's gasoline as compared to the gasoline of 1948.

That the consumer is the beneficiary is clearly shown by the oil industry's profit record. According to figures compiled by the First National City Bank of New York, from 1925—the first year's taxes to come under percentage depletion—through 1966, petroleum company earnings after taxes averaged 9.9 percent of invested capital. By comparison, the figure for all manufacturing companies was 10.7 percent. In 1966, this comparison was petroleum companies 12.6 percent, and all manufacturing companies 14.1 percent. Of the 25 leading U.S. industrial corporations on the basis of sales, seven are petroleum companies. But not one of these petroleum companies is in the first 75 on the basis of return on invested capital.

Critics charge that because of the percentage depletion provision, petroleum producers recover their costs many times over. The fact is that although the oil industry realizes about $1 billion a year through the operation of this provision, it invests about $5 billion a year in the United States in searching for and developing new petroleum reserves.

The principal objective of the oil import control program is to help insure our national security. Unlimited importation of oil would discourage exploration and drilling efforts of the domestic petroleum industry and critically impair its ability to supply our national demands when foreign sources were cut off. In the event of another international war, which, considering the nuclear standoff of the major powers, could well be nonnuclear and of long duration, the position of the United States would be critical. To realize the danger in relying on foreign oil, we have only to recall that oil movements through the Suez Canal have been cut off twice in the past 15 years.

Another result of inadequate import controls would be a weakening of our national economy due to the decline of the domestic petroleum industry. The economic impact would be felt by numerous levels of government deprived of tax revenue, and by several industries and thousands of small businessmen who rely on a healthy petroleum business for their existence. The outflow of capital to other nations, resulting from increased emphasis on exploration outside the United States and payments for increased imports of foreign oil, could seriously damage our Nations balance-of-payments positions and thus further weaken our economy.

Weakening both our national security and economy is a high price to pay for what would amount at best to only a small savings for consumers in prices of petroleum products. Moreover, the savings to customers would disappear within a short period of time. Already 21 percent of our Nation's oil supply is from foreign sources. If we become dependent on oil from foreign nations we know from experience that the foreign countries would then increase the price of their oil.

Facts show that existing petroleum industry provisions and programs have been working exceedingly well in providing consumers reasonable prices for petroleum products. For 1968, the average price of all items included in the Consumers Price Index had risen 21 percent over the 1957–59 base period. Yet the average nationwide retail price of gasoline in 1968, exclusive of taxes, was only 6 percent higher thar. the 1957–59 average. The price of crude oil in 1968 was 2 percent lower.

A person cannot properly evaluate the critical significance to our national interests of the factors which I have discussed here by examining them only one at a time. They must be considered as a combination in relation to the effect on our Nation's energy policy. For what is of overriding importance to the national interest is the net effect of all of these factors in fulfilling huge coming demands for petroleum.

Petroleum—oil and gas—supplies 75 percent of our Nation's energy needs. The U.S. Government predicts that demand for petroleum will rise by 50 percent of current levels by 1980 and will more than double between now and the end of the century. Yet, despite the coming requirements, proved domestic reserves of crude oil declined during the 1968 for the second year in a row and now stand at the lowest level in 10 years.

As for natural gas, exploratory drilling for this vital energy source in the United States has declined by over one-half in the past 10 years, mainly because Federal regulation of natural gas producers has kept natural gas prices unrealistically low. Since 1954, the year Federal regulation of producers began, the ratio of natural gas reserves to annual production has declined from 23 to 1 to less than 15 to 1. In 1968, for the first time in history, U.S. natural gas production exceeded new reserves added, and total proved reserves of this resource declined. In a statement to a congressional subcommittee this past April, John

F. O'Leary, Director of the U.S. Bureau of Mines, said:

We are beginning to discern already the outlines of a major shortage of natural gas.

In response to questioning in the hearing, he estimated that by next winter natural gas distributors will be unable to provide service to new customers because of supply shortage.

Speaking from a more personal point of view, Mr. Speaker, practically every single State in the Union, and a very large percentage of the congressional districts, would be adversely affected economically if we were to alter these long-proven, time-honored tax principles on the same 100 extractive industries. In my own State of New Mexico, we have substantial production in only seven of these industries—copper, manganese ore, molybdenum, perlite, petroleum, potash, and uranium—but alteration of the percentage depletion allowances would severely cripple our tax base from which we derive the income for the construction of our roads, the financing of our schools and educational programs, and other important services.

New Mexico is the sixth largest petroleum-producing State with production almost equal to that of Brazil, Chile, and West Germany combined. More than 13,000 New Mexicans are employed in some phase of the petroleum industry. Their payrolls amount to almost $73 million annually, or $73 for every man, woman, and child in the State. The petroleum industry spends almost $274 million annually for production supplies and equipment in New Mexico. Last year, oil and gas operations paid $60,130,000 in direct revenues to the State—not counting local taxes or approximately one-fourth of all New Mexico State tax revenues.

A careful examination of our past experiences indicates that certainly we must at least maintain these proven incentives and tax principles, not reduce them, if our Nation is to have sufficient, reasonably priced, reliable supplies of petroleum essential to its future security and economic strength.

JUVENILE COURT PROCEDURE—EXCERPTS FROM ADDRESS BY ASSOCIATE JUVENILE COURT JUDGE ORMAN W. KETCHAM

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1969

Mr. MATHIAS. Mr. President, the adjustments in Juvenile Court procedure necessitated by the Gault decision of the Supreme Court have been the subject of some controversy. In a recent speech to the National Institute on Crime and Delinquency, in Boston, Associate Judge Orman W. Ketcham, of the Juvenile Court of the District of Columbia, made worthwhile observations on the value of those changes.

Mr. President, I ask unanimous consent that the excerpts from the speech, published in the Washington Post of July 20, 1969, be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

DUE PROCESS FOR JUVENILES BEATS FOLKSY "JUSTICE"

(By Orman W. Ketcham)

Many cries of havoc have emanated from judges, administrators and social workers in juvenile courts concerning the new and time-consuming burdens that the provision of due process of law for juveniles has occasioned. But the substance of our law should not be dependent upon the administrative convenience of our court system. In most urban courts today, the time devoted to a juvenile's case has become notoriously short. New procedures required by the Gault decision will now assure the juvenile a larger segment of his "day in court."

Those who expound the "parens patriae" philosophy believe that the introduction of due process of law will diminish the informality which has been the juvenile court's hallmark and circumscribe the discretion of the juvenile court judge. True. But those features have been tried and found wanting.

The first result of the advent of due process is to assure the juvenile a judicial hearing the outcome of which is not foreordained. It used to be the boast of the most jingoistic members of the "father knows best" philosophy that less than one-tenth of 1 per cent of all juveniles charged ever denied their offenses. Such a sudden candor and contrition from antisocial and alienated youth are so unbelievable that I submit that juveniles accused of offences in such courts were never given any opportunity to deny the charges. The presumption of their guilt was well-nigh irrebuttable.

A THERAPEUTIC PROCESS

In our American system we take pride in operating a government of laws, not of men. To set an example of this principle, due process of law should afford the juvenile the opportunity to dispute the factual assertions of policemen, school teachers, social workers and even his parents. This is granted not because all such adults are untrustworthy, but because some are.

After a fair and impartial judicial hearing, if the allegations are not accurate, the juvenile has been vindicated through a system of justice which rates high in his esteem. If the facts of the charge are correct, their careful establishment by legal rules will usually convince the juvenile that truth and justice are immutable, rather than dependent upon his cooperation or lack of it.

Either way, I believe that providing a juvenile with his proper day in court is a very therapeutic process which builds respect for law and justice.

The lawyer who represents a juvenile is in an unparalleled position to foster his client's greater understanding of the legal system which is the cement of our society. A boy charged with delinquency for the first time feels very much alone. Whether justifiably or not, he sees police, school authorities, court officials and even sympathetic social workers as demanding, judgmental and often hostile. In many instances, even his parents appear to be critical and antagonistic.

But his attorney, if he properly follows his ethical responsibilities, will be an adult firmly pledged to understand and present the best interests of the juvenile as the boy sees them. Court appointment of a lawyer can create a strong, new impression that the juvenile court law serves the boy, too, and is not just an agent of adult authority.

Providing a juvenile with tangible forms of due process of law, such as an effective and interested attorney, I believe, is a better way of expressing sincere concern for a youth in trouble than offering him a cigarette on his trip to the detention home.

A juvenile who is given effective assistance by his attorney will have the entire legal process explained and interpreted to him: the preadjudication process, the trial, the judge's decision and the dispositional decree. This should, and usually does, enhance the understanding of the youth and his parents of our judicial system and the law of the land.

LESS FOLKSY BUT FAIRER

Before the advent of due process of law in the juvenile court, the only limit which the law placed upon the "parens patriae" power of the judge was the requirement that he act in "the best interests of the juvenile"—a highly subjective and almost unchallengeable maxim. Due process of law now substitutes established legal procedures for unbridled judicial discretion.

Informality and the "arm-round-the-shoulder" approach to juvenile justice are being replaced by an arm's-length due process system of justice. Even adversary proceedings are available upon demand. The results should be less folksy, but lots fairer.

The post-Gault system sharply diminishes the paternalistic attitude of juvenile courts, which has been so hated by a majority of youth. Instead of a juvenile receiving justice (or leniency) as a matter of grace or adult "noblesse oblige," he is now entitled to the equal protection of the law just as an adult would be. An alienated juvenile will be treated as a first-class citizen with a full measure of individual rights.

Instead of the dominant father and the dependent child prototypes, the new philosophical approach stresses both equal opportunity and equal responsibility for each juvenile. Since the stated goal of our socialization and maturation process is the creation of mutual respect between individuals, this new principle of equality may well lay the groundwork for good citizenship which will last long after the relationship between probation officer and juvenile offender is forgotten.

Finally, the guarantee that a juvenile will be counseled by a lawyer (which I believe should be mandatory and unwaiveable) is an assurance of due process of law in itself. A good lawyer protects the interests of his juvenile client at every stage of the proceeding, even unto the treatment stage. For example, if the juvenile offender has an addiction to heroin, his lawyer can insist upon his "right to treatment" rather than settling for incapacitation or incarceration.

The advent of lawyers into the juvenile court also means that more of the organized bar will be indoctrinated in both the techniques and the problems of the court. There is no more powerful advocate of a budgetary cause before a legislature than a convinced lawyer. Hence, a lawyer may not only demand treatment for his client; there is hope that he will also obtain the funds necessary for the long-lacking facilities to rehabilitate youthful offenders and keep the promise of the juvenile court compact.

One of the canards most frequently stated about the introduction of due process of law into juvenile courts is that the juvenile is prevented from receiving the rehabilitative treatment he needs to save him from a criminal career. This begs several questions. An attorney for such juvenile must ask himself three vital subsidiary questions before answering the ultimate one:

1. Has the juvenile actually done the offense which is supposed to demonstrate his need for rehabilitation?

2. If he has done the offensive, is there a recognized behavioral science procedure or treatment that will correct his fault and save him from a criminal career?

3. If he has done the offense and there is a recognized treatment, can the juvenile court before which he will appear provide such treatment?

If the answer to those three questions is

"Yes," most lawyers will persuade the juvenile to acknowledge the offense and submit to the jurisdiction of the juvenile court. If any of the answers is negative, the attorney should not "throw the juvenile upon the mercy of the court." To protect his client's interest, he should contest the court's jurisdiction.

Immediately there comes to mind the juvenile who, in the eyes of the attorney and any impartial observer, did commit the offense but refuses to admit it. (This is much more characteristic than the case of the juvenile who admits his fault but whose attorney insists upon a trial.) In my opinion, the provision of due process of law for such a recalcitrant juvenile is most therapeutic.

He should (and will, if the police cooperate) be proven guilty of the crime despite his protestations of innocence. He will have had his day in court and have learned that law enforcement can and does arrive at the truth by fair, effective procedures. He will I believe, be several steps further down the road to rehabilitation than if he had—for the administrative convenience of the judiciary—been persuaded against his wishes to admit the offense and forgo his day in court.

To sum up in one sentence: I am firmly convinced that the extension of due process of law to juveniles—however burdensome or inconvenient it may be to police, social workers, judges and juvenile court personnel—is an unmitigated benefit to the juveniles concerned.

A GUIDE TO CONTEMPORARY GREECE

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MIKVA. Mr. Speaker, on March 11, 1969 I placed in the RECORD an article by George Anastaplo entitled, "Greece Today and the Limits of American Power." On April 2, 1969 I placed in the RECORD an article by George Anastaplo entitled, "The Passions of Greece Today," and "Retreat From Politics: Greece, 1967." The former article dealt with the contemporary political situation in Greece and the dilemma we Americans find ourselves in—the dilemma of supporting and fostering the current undemocratic regime. The latter two articles presented a cogent analysis of how Greece appeared to a knowledgeable American observer who viewed it firsthand throughout 1967.

Today I would like to place in the RECORD selected portions of an article entitled "A Guide to Contemporary Greece, Especially for Greek-Americans." I think the excerpts of this article will be of special interest to anyone interested in current political developments as well as to Greek Americans.

The article referred to follows:

A GUIDE TO CONTEMPORARY GREECE, ESPECIALLY FOR GREEK-AMERICANS[1]

(By George Anastaplo)

JOHN ANASTAPLO. Good evening, ladies and gentlemen. We have as our guest this evening my brother Professor George Anastaplo, Lecturer in the Liberal Arts at the University of Chicago and Chairman of the Political Science Department at Rosary College in River Forest, Illinois. He also holds an appointment as Professor of Politics and Literature at the University of Dallas. Our guest is knowledgeable in contemporary Greek affairs and has published several articles on that subject. This is what he is here to discuss with those listeners in our radio audience who telephone us this evening.

We have on the news wires this weekend the following report from Salonika, Greece: "A Greek military tribunal has handed out sentences ranging from 13 months to life for 37 members of a Communist-led terrorist band.

"Three of the defendants were ordered deported. Two persons out of the 39 on trial were acquitted of charges of various conspiracies.

"The group was charged with plotting to assassinate former premier Constantine Kollias and with conspiracy to blow up the American consulate in Salonika and the NATO bases in the north of the country."

That is the report from Salonika. Perhaps some of you listeners heard the report earlier this week of the arrest of fifteen retired Army generals in Greece. Rumors circulated at that time that an attempt to oust the army-backed regime and to restore self-exiled King Constantine to power in Greece had been crushed before it actually got under way. All those arrested were known backers of King Constantine who fled to Rome, you will remember, after his unsuccessful attempt to oust the junta in December 1967. The "colonels", as they are called, have been in power now a little over two years. They seized power in April 1967.

Let's ask my brother George what he feels is going on in Greece these days.

GEORGE ANASTAPLO. I think, John, that the most significant development in Greece today, and the one we Americans should be most concerned about, is that American installations—the American consulate in the news report you just read, for instance as well as American automobiles, the property of American personnel stationed in Greece—are now beginning to be subject to attack. This indicates that resentment is beginning to be expressed violently at the role of the United States in Greece. And it is that role—the role of the United States in Greece today—that I am most concerned about. I am, of course, concerned also about the state of affairs in their country for the Greeks themselves—for, to put it simply, Greece today is living under a tyranny. It is a tyranny that is worse than some tyrannies in the world today and milder than some others, but I think it does no good to overlook the fact that it *is* a tyranny with all the consequences that that will have both for us as an ally of that tyranny and for the Greeks as the victims of it.

* * * * *

JOHN ANASTAPLO. You were in Greece last fall when the election was held.

GEORGE ANASTAPLO. That is right, in September, when the constitutional referendum was held.

JOHN ANASTAPLO. Could every one vote in referendum who wanted to vote and could they vote for whatever they wanted to vote?

GEORGE ANASTAPLO. One could vote "Yes" or "No" on a constitution presented by the government. One could vote "No," but in many places outside the large cities the vote of "Yes" was the only vote that seemed safe.

* * * * *

JOHN ANASTAPLO. Is there much resentment in Greece toward the military junta? Is there much outspoken resentment and dislike? You don't see much of it in evidence if there is.

GEORGE ANASTAPLO. One has to distinguish between two groups in the Greek population (or, for that matter, in any population). There are those who are somewhat independently informed and there are those who have their opinions formed by propaganda. The latter group will easily take their lead from the government in power, no matter what that government is, especially if there is no opposition permitted. This group can be the majority of a country. The former group—which includes in Greece the leading military officers, the intellectuals of the country, the university people, the former politicians and many of the most prominent businessmen—is most skeptical about this government. Many of these people are even bitter about it. But what can they do about it? The difficulty is that the informed Greeks recognize themselves to be prisoners of a ruthless military minority. They are not even prisoners of the Army, but of a small number of officers within the Army, a handful of officers who took power by deception one night, who are holding it by the use of whatever means they can employ, and who claim they have the support of the United States. It is difficult and dangerous in such circumstances to express openly one's resentment, but resentment and disaffection *are* there.

JOHN ANASTAPLO. Why is there so much support for the colonels' regime among Greeks living in this country?

GEORGE ANASTAPLO. For many Greek-Americans, the military stands for that force which after the Second World War saved Greece from Communism. So it is natural for Greek-Americans to say, "We don't want Greece to go Communist. We don't want it to go behind the Iron Curtain. The military saved Greece during the bitter civil war of 1945–1949. The military made great sacrifices to save Greece at that time. Now they are doing it again." What the Greek-American doesn't realize is that it is not the military that is ruling Greece today. All one has to do to realize this is to consider the widespread purges that have taken place in the Army at the hands of this particular clique of officers. The colonels are retiring from active duty virtually all officers senior to them in order to be able to continue to hold their power. This is not the military that is ruling Greece: this is a minority of junior officers who have broken their oaths to their king and their country, who have seized power with a well-executed conspiracy and who mean to hold it indefinitely.

JOHN ANASTAPLO. I suppose the most open display of disaffection toward the present government was at the funeral last November of George Papandreou.

GEORGE ANASTAPLO. There have been two significant displays of disaffection. That was the second one. The first great display was in December 1967 when King Constantine made his attempt to overthrow the colonels' regime. His attempt was poorly executed: certain forces which he had counted on were not available. What the people who are now ruling Greece are good at *is* conspiracy, and hence counterconspiracy. They were able to stop the King's effort before it could really get rolling. But the King, in the course of his attempt, visited the city of Kavalla, which had been for years anti-royalist. When the people of Kavalla heard the King was making an attempt to overthrow this government and that he was in their city—and this I have personally heard from people who were there that day—they filled the streets, picked up the King and carried him through the city in a spontaneous demonstration. Thousands upon thousands of people thus expressed themselves in a way that the colonels' government never has been able to arrange—whereas the Kavalla demonstration was anything but prearranged. In fact, the current premier of Greece dares not permit himself to be exposed in a crowd in this way: his security precautions are, I believe, unprecedented for a Greek premier. The other great demonstration against the colonels was, as you indicated, in Athens, in No-

[1] This article is a transcript of an unrehearsed interview, set out in its entirety, conducted by John Anastaplo on his nightly radio program, "Open Line," on Station WJOB (East Chicago-Hammond, Indiana), Saturday, May 31, 1969 (between 7:30 and 10:00 p.m.).

vember 1968, at the funeral of George Papandreou. Evidently, the central part of Athens was packed that day with people who expressed in this way their opinion of the colonels' regime. American reporters spoke of hundreds of thousands as having been involved in that demonstration—many more, evidently, than had voted against the constitutional referendum in that area six weeks earlier. They were thus expressing themselves in what they considered a genuine referendum.

* * * * *

JOHN ANASTAPLO. Why has American aid to Greece been restored? It was cut off for awhile after the colonels took power in April 1967, but I understand it has been restored. What is the justification for this?

GEORGE ANASTAPLO. Aid was cut down in early 1967—it was never cut off completely—in the hope that the cut might publicly indicate that Americans are somewhat reluctant to ally themselves with this regime, perhaps even in the hope that it might help move this regime back toward constitutional government. After the constitutional referendum of September 1968 which we have referred to, the American government restored its military aid, perhaps under the assumption, "Well, they have had a referendum; now, the country is somehow back under a constitution." The first American mistake was not to cut aid off completely; then, it was a mistake to take that constitutional referendum as being anything other than a fixed election. Thus, I think it was a mistake to restore our aid; I think it is a mistake now to continue it. In fact, I believe that the American government is partly responsible for the continuation of the colonels' regime and that it will be held to be largely responsible by the Greek people in due time. The sooner we disassociate ourselves from that crowd now in Athens, the better off we will be in the long run. It is not difficult to work out a program of what the United States should do now—and this I have done and have presented to people in the State Department on several occasions. The interesting question for me tonight relates to something somewhat different, and that is the role of the Greek-American community in all this. Inside Greece the colonels' principal sources of support are the arms they have and the dread in the Greek people of another civil war: the colonels can use those arms against the Greeks and they know the Greek people will not resist as quickly as they might otherwise resist if they had not had so terrible a civil war only a generation ago. Outside Greece there are two principal sources of support for the colonels: first, the United States, because of its acquiescence in and its lukewarm support of the regime, and second, the attitude of the Greek community abroad, particularly the Greek-American community. It is very unseemly that Greek-Americans, living in a free country (most of them—the ones I am thinking—having been born in Greece, for it is primarily the older generation, I am referring to), should allow themselves to become the spokesmen and the supporters of a tyranny that is as bad for Greece as, say, the Russian tyranny is for the Czechs and the Slovaks.

JOHN ANASTAPLO. I noticed Bill Mauldin's cartoon in the Chicago *Sun-Times* last Wednesday, showing the prisoner's ball-and-chain on both the Greeks and the Czechs, with "Imported Tyranny" written on the Czech ball and "Domestic Tyranny" on the Greek ball.

GEORGE ANASTAPLO. Yes, that does sum it up neatly. The curious thing about the Greek-American support of the colonels is that the alternative to this regime—the most plausible, immediate alternative to this regime—is a government under a conservative, experienced Greek. I am referring, of course, to Constantine Karamanlis, who is now living in Paris. In fact, it is hard to think of any prominent politician in Greece who would not be an improvement over the tyranny of the colonels. But Constantine Karamanlis is the most plausible alternative. Why the leaders of the Greek-American community, instead of throwing their support to a government formed by Mr. Karamanlis—which is what most Greeks today would support and which is what the State Department would probably be relieved to go along with—why, instead of throwing their support to him, as an alternative to the colonels, that community and its leaders continue to support the band of usurpers which is ruining the country of Greece is very difficult for me to understand.

* * * * *

LISTENER No. 1. In the event of a civil war in Greece, do you feel the United States would step in immediately?

GEORGE ANASTAPLO. That would be a serious decision. If we allow the situation to deteriorate to such a condition that the decent, informed and energetic people in that country begin to take up arms against their present tyrants, what should then be our position? It is hard to know what we would do. The people who will eventually put up armed resistance will have with them Greeks of the Left, including Communists, as well as Greeks of the Right and Center. The United States might then argue, especially when it detects in that armed resistance people who are labelled "Communists," "Well, the colonels we know. The other people we don't know. Therefore, we will support the colonels." We will thus have made a bad situation even worse. That is why I have been arguing that now is the time to get rid of the colonels and to allow the Greeks to replace the— with a conservative experienced leader such as Mr. Karamanlis.

* * * * *

It is, as I said, very hard to lay down a requirement for other people to follow, especially when it means risking their lives. But that is not our problem. Our immediate problem is, What can we do, what should we do——

LISTENER No. 2. As Americans——

GEORGE ANASTAPLO. As Americans, in a situation where conditions are deteriorating and civil war is facing our ally? If we were confronting a situation where we had no responsibility at all for what is there or where we could do nothing at all once conditions had deteriorated, then we could justly say, "That is a Greek internal affair. Let the Greeks settle their own affairs." We could properly stay out of it. If that were really the situation, such a course of action on our part would be defensible, perhaps even necessary: we could sit back and watch. But that is not what is going to happen. We are going to be involved—we are involved, we have been involved—and I am wondering whether it would not be more intelligent to move now when we can help the Greeks replace the colonels by a friend of ours who is popular in Greece, who is experienced and reliable, and thus help the Greeks avoid a civil war which can lead to the destruction of all that we value in that country. That is the risk we are running by going along as we are with the colonels.

* * * * *

LISTENER No. 2. It is not too late for Greece?

GEORGE ANASTAPLO. It is not too late for Greece. In Czechoslovakia we simply don't have the influence we have in Greece. In Greece, we have great influence—and not only the United States government, but the Greek-American community as well. The Greek-American community has allowed itself to be deluded about what is going on in Greece today and about what is good for the country of their relatives. The Czechs and Slovaks in this country, on the other hand, are not deluded about how things are in their homeland. Neither are the Hungarian-Americans. I cannot think of any people who are as deluded about what is going on in their homeland as are Greek Americans, and especially Greek-American leaders, at this time.

* * * * *

LISTENER No. 3. Does all this mean there are no elections there?

GEORGE ANASTAPLO. No elections. In fact, the government has systematically removed from office, high and low alike, the officials the Greeks had elected over the years. It has replaced them by appointing, or reappointing, men considered loyal to the present government. The Greeks have had no elections for any office whatsoever since the colonels took over. Nor are they about to have any elections that mean anything. If they have any elections under this government, they will be like a Russian election. They had a referendum on a constitution last September, Russian-style. You know how that is: you vote for the government slate or you vote for nothing. There was no question about the outcome last September. Any parliamentary elections the colonels conduct will be roughly the same: any election conducted by them will be a fraud. Only the uninformed or the cynical will approve of them. One has only to consider how the extensively documented charges of deliberate torture in Greece are being handled by the Greek-American press and by the Greek government. It is time to be blunt with such people, for Greece's good.

* * * * *

LISTENER No. 4. Do you believe the Greeks will have to go to war to regain their freedom?

GEORGE ANASTAPLO. I think it would be better if it didn't come to that, because if there is recourse to war, one cannot predict how it will turn out. One cannot predict how things will go. After all, we have our experience in Viet Nam, of which the Greeks are quite aware: things don't always work out the way one expects. The Greeks are no better equipped to set a limit to war than we have been.

* * * * *

GA—GEORGE ANASTAPLO

LISTENER No. 6. Historically, it seems to me, we have been backing military juntas all over the world since the Second World War. I don't see why this should be any different.

GEORGE ANASTAPLO. We haven't been backing only military regimes. It's too bad, and even harmful, that our government has given our citizens generally the impression you have. In Europe, for instance, we have been backing for the most part constitutional governments, genuinely constitutional governments. Greece, we should remember, is part of our NATO alliance in Europe. Virtually every other country in the NATO alliance is a free government, that is, a government freely chosen by the citizens of its country. This means that Greece has become for us a sad exception in Europe. Furthermore, we are backing in Greece a minority of officers who are going to get us into serious trouble, militarily, politically and economically. That is to say, we are going to end up picking up the bill for the mess the colonels are making of the Greek economy; we are going to have trouble militarily, because if civil war does begin, we are going to have the problem of deciding whom we are going to back; and we are going to have trouble politically, because no matter how it all comes out, if we don't hurry up and do something decisively public about it, Greeks will for many years to come look back and say, "America was responsible for the years of tyranny we suffered." Whether that will be true or not, that is certainly what they are going to be saying. The sad part about it all, I want to repeat, is that the alternative, and the alternative that Greeks of all parties are generally willing to accept, is a man who is a conservative,

who is a friend of the United States, who is very experienced, who is very well regarded, who was for eight years prime minister, who is available and who would have very little trouble coming to power if American support for him should develop. That, of course, is Mr. Karamanlis, who is the most plausible alternative at this moment to the colonels. It is hard, I want also to repeat, to think of any prominent politician who would not be an improvement over the tyrants who now control Greece. Mr. Karamanlis is not indispensable. But he is, for several reasons, most convenient as an immediate alternative to the colonels.

* * * * *

LISTENER No. 7. I am not Greek, but I am interested. What are the other NATO countries doing about the situation in Greece? Is there not a way for them to put on pressure, without the emphasis being just on America?

GEORGE ANASTAPLO. Severel of them have spoken out very strongly. For instance, the Scandinavian countries (some who are in NATO, some not) have been quite strong against the regime. Great Britain has spoken out as well. The Prime Minister of Greece denounced on the floor of the House of Commons what he called the "bestialities" of the Greek regime, referring to the tortures. That was last year, long before such things as the recent May 27th issue of Look magazine came out with its detailed account of what is going on in Greece. Public opinion is far clearer in Europe about what the nature of that regime is than ours here. The same can be said about the Greek communities in Europe, outside of Greece, as well as about the Greek-Canadian community.

* * * * *

LISTENER No. 7. Are Greek-Americans afraid to take sides because they are getting two different points of view?

GEORGE ANASTAPLO. The ones I am thinking of are not afraid of taking sides. If they would refuse to take sides, that would be far better than what they are doing now. They *are* taking sides. I am talking about the older Greek-Americans, the "opinion leaders," the ones who have influence in Washington, the ones who have money, the ones who own the Greek-American press. The Greek-American newspapers, for instance, have been terrible. This is most recently evident in the way they have responded to the Look revelations about Greek tortures, tortures that informed and responsible men all over Europe have known about for at least a year now. If one follows Greek-American newspapers, one sees week after week that most of the articles on Greek affairs come from the Greek government. This seems to be true of many if not all of the Greek-American newspapers in this country: they are simply taking the stuff and printing it as it comes from Greek government sources. This one can notice just by looking through several of them, especially if one knows the sources. One often sees, for instance, material that is handed out by the Greek Embassy in Washington published as news by the Greek-American press.

* * * * *

LISTENER No. 7. How is the press coverage about Greece in this country?

GEORGE ANASTAPLO. If you read the New York *Times* or the *Christian Science Monitor* or any of the European papers, you find that this regime is a failure. If you read the Greek-American press, you find it is a great success. Whom should you believe and why? Let me suggest something to you. You have Greek-American friends?

LISTENER No. 7. Yes.

GEORGE ANASTAPLO. Let me suggest some simple questions to ask them. Don't ask them what their peasant relatives say when they visit Greece, because peasants can't know what they are talking about on certain issues. It often takes a long time to get down to the peasants what is happening to their country. Ask them, if they have been following Greek affairs for years, "Of the man you once thought was the best man in Greece—whoever he was, whether you thought it was a man of the Left or of the Center or of the Right, whether you thought it was a general or the King—of the one or two or three men you thought highly of before 1967, what does that man, or what do those men, think of this regime now?" Now, that is a very safe question for me to suggest that you ask. I don't have to know who it was they admired, who they looked up to. But if they were following Greek affairs before 1967, they had somebody, some public figure, whom they respected, somebody in Greek politics or somebody in the Greek military or somebody in the social or cultural life of Greece. *Who* was he and what does that man say now? In almost every case, everybody who was once anybody is now against this regime. You can then challenge your Greek-American friend: "Look, you once admired a certain man—X or Y or Z, whether he was of the liberal party or of the conservative party, whether he was a royalist or an anti-royalist—you once admired him. Why is he also against the colonels? In fact, why is anybody against them? Why is virtually everybody who ever knew anything about Greek politics and the Greek government against these people?" Is it just a coincidence that this is so?

* * * * *

LISTENER No. 10. Is there any Communist faction in the country at all?

GEORGE ANASTAPLO. This government is *said* to be anti-Communist. There are people who are resisting this government who are Communists. There are others who are resisting it who are non-Communists. This is evident in the two news dispatches my brother referred to at the beginning of this program. My impression is that, so far, more non-Communists than Communists resisting the government have been tried and imprisoned in Greece for opposing the present government.

* * * * *

LISTENER No. 10. Do you feel we are now giving help to the dictators?

GEORGE ANASTAPLO. Certainly, we are helping the dictators of Greece. The American government admits that we are supplying arms to them. We are also supplying indirect aid of certain kinds. I think we should stop it completely. I also think that if we indicated very strongly what our position was—if we made it clear that we believe the colonels to be bad for Greece—, the Greek army would rise up and throw these people out.

LISTENER No. 10. Would there be leadership of any kind for such an uprising?

GEORGE ANASTAPLO. Yes, the best officers are still against this regime.

* * * * *

JOHN ANASTAPLO. Wouldn't you say that leadership for a successful attempt to oust the colonels would have to come from this shore, from Greek-Americans, and that that leadership has been slow in coming?

GEORGE ANASTAPLO. That, it seems to me, would be the safest way for both the United States and Greece. It is only if the Greek-American community and the United States take a public position different from that which it is well known in Greece they have been taking up to now—only if that happens may bloodshed be avoided. I have been deliberately directing my arguments on this subject to those whom I can hope to reach, my fellow-citizens in this country. I leave it to others to tell the Greeks what they should do or to tell Europeans what they should do. It is important to emphasize at this time what we Americans can do. If we don't do what we should do, then the Greeks will be forced to do what they don't want to do, and that is to fight. Those now seem to be the likely alternatives.

MICHIGAN LEADER HEADS KIWANIANS

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1969

Mr. GRIFFIN. Mr. President, recently Robert F. Weber of Detroit was elected president of Kiwanis International at the organization's 54th annual meeting in Miami Beach, Fla.

As a Kiwanian in the Senate who represents Michigan. I am pleased and proud that a distinguished Detroiter has been chosen to head this outstanding international service organization.

In a recent letter to me, Mr. Webei pointed out that Kiwanis International is launching a major emphasis program called "Operation Drug Alert." Under the program, each of the 5,000 local Kiwanis Clubs will tackle the growing problem of drug abuse as a major concern in 1969–70.

Mr. President, I can attest to the fact that Kiwanis has many other fine goals as well. I ask unanimous consent that resolutions adopted by the recent convention, indicating the scope of the organization undertakings, be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED AT THE 54TH ANNUAL CONVENTION OF KIWANIS INTERNATIONAL IN MIAMI-MIAMI BEACH, FLA., JULY 2, 1969

1. WE BUILD WITH GOD

Whereas our first Object charges Kiwanians "To give primacy to the human and spiritual, rather than to the material values of life," and

Whereas our nations were founded, are presently sustained, and aniticipate the future through the providence of God, and

Whereas His strength supports us in proportion to our faith in Him,

Therefore be it resolved *by the delegates to the 54th Convention of Kiwanis International that in response to our stewardship of God's many gifts, we Kiwanians pledge to place spiritual values first in all matters of judgment, and*

Be it further resolved *that as we build with God, we renew our determination to remain at all times humble and subservient to His will.*

2. DRUG ABUSE

Whereas enlightened leadership throughout the world decries the illicit drug traffic which exists at the expense of millions of people and leads to their ruination, and

Whereas Kiwanis International has recognized the evils of drug abuse and its increasing prevalence in our communities, sapping our moral fibre and destroying the human being, and

Whereas drug addiction and dependence in their inception and continuance have spread from the areas of undesirable association with a criminal environment to a growing segment of our society at all economic levels, and

Whereas the lack of knowledge of the effects of drugs has combined with the permissiveness of our affluent society to stimulate an increasing trend toward drug abuse among our youth

Therefore be it resolved *that Kiwanis International, through its member clubs, combat drug abuse through the adoption of a major emphasis program wherein Kiwanis*

attention and activity will be focused worldwide on exposing the mental, physical, and financial hazards of such abuse; and

That all Kiwanians and Kiwanis clubs actively support regularly constituted authority in the enforcing of existing laws and the creation of appropriate new legislation designed to combat and eliminate the drug menace; and

That Kiwanis Clubs initiate and support programs designed to educate and alert their own members and their fellow citizens, with particular concern for the youth of their communities, to the harmful effects of illicit drug traffic and use.

3. THE RULE OF LAW

Whereas the second Object of Kiwanis International is "To encourage the daily living of the Golden Rule in all human relationships," and

Whereas all Kiwanians should respect the laws of their lands and the rights of their citizens, and

Whereas all Kiwanians should realize that crime is a growing menace to a free society, and

Whereas all Kiwanians should recognize the periodic need for change in existing laws of their lands to provide for an expanding and inquiring citizenship, and

Whereas all Kiwanians should encourage those who seek change to do so peacefully and within the framework of the law;

Therefore be it resolved *that Kiwanians everywhere pledge themselves to observe the rule of law in their society, reserving to themselves and to others the right of lawful dissent without infringing upon the rights or dignities of their fellowmen; and*

That Kiwanians everywhere be urged as responsible citizens to provide individual leadership in upholding the existing laws, making necessary changes in them, or initiating new laws as the situation demands; and

That Kiwanians everywhere emphasize the inherent danger of all forms of crime to the economy and to the future progress of their nations and implement action programs by the local Kiwanis Clubs to dispel general apathy, to make the public more knowledgeable and their members more effective against this menace; and

That Kiwanians everywhere support and voice their appreciation of deserving public officials and law enforcement officers for their dedicated service.

4. KEY CLUBS AND CIRCLE K CLUBS

Whereas Kiwanians recognize that our complex society demands increasing responsibilities of our youth and requires earlier leadership experience; and

Whereas sponsorship of Key Clubs and Circle K Clubs broadens the scope of opportunities for service; and

Whereas the basic concepts of the Objects of Kiwanis International can be furthered through meaningful guidance of young men in high schools and colleges;

Now therefore be it resolved *that every Kiwanian pledge himself to accept his responsibilities to Key Clubs and Circle K Clubs in order that young men of high school and college age may have the opportunity to perform service to their schools and communities; and*

That every Kiwanian, recognizing the benefits of education for leadership, provide this training by personal participation and example to the end that every Circle K and Key Club member shall be a responsible citizen and carry throughout his life the inspiration of Kiwanis devotion to freedom and individual enterprise.

5. DIALOG WITH YOUTH

Whereas highly knowledgeable, well educated, idealistic and morally sensitive young people represent our best hope for the future; and

Whereas it is recognized that there are legitimate student protests and that changes are inevitable in an ever-moving society; and

Whereas illegal protests and demonstrations, sit-ins, riots and other acts of violence interfere with the rights of the large majority of students, enrolled with the serious purpose of furthering their education,

Now therefore be it resolved *that Kiwanians foster opportunities for a more effective dialogue between youth and adults; and*

That every Kiwanian and Kiwanis Club activitly support school administrators and students who are working out their problems in a lawful and orderly manner; and

That Kiwanians again express their confidence in youth by appropriate recognition of their achievements.

6. PORNOGRAPHY

Whereas standing up for decency in literature and entertainment is expected of those who accept the Objects of Kiwanis International, and

Whereas many bookstores, newsstands, and some distributors traffic in magazines and books which even from their covers are obviously objectionable, and

Whereas in many films, stage productions, and other forms of public entertainment every traditional code of decency has been violated,

Now therefore be it resolved *that every Kiwanian as an individual citizen make known his concern for decency in literature and entertainment and show by example in his home and in public life his adherence to a personal code of decency; and*

That, in cooperation with others of like mind, he make known to sponsors, producers, distributors, and retailers his opposition to that which he finds objectionable; and

That Kiwanians everywhere support and voice their appreciation to those who adhere to a code of decency in literature and entertainment.

7. VOCATIONAL AND TECHNICAL CAREERS

Whereas the education and training of our youth is paramount to their proper growth and development into productive citizens; and

Whereas there are many students who should be oriented toward vocational and technical careers,

Now therefore be it resolved, *that increased emphasis be placed upon vocational-technical studies so necessary to our modern economy and that Kiwanians promote greater public encouragement of those who work in the trades; and*

That Kiwanians actively involve themselves through financial support and personal service in providing improved methods and facilities for vocational-technical education in their local communities.

8. CONSERVATION AND POLLUTION CONTROL

Whereas in no other age has man been blessed with a greater abundance of available natural resources or so great a capacity for creatively shaping his natural world to the benefit of all mankind; and

Whereas through the waste and misuse of such resources as air, water, land, and forest and through the accelerating demands upon such resources by an affluent and rapidly expanding population, modern man has reason to be deeply concerned as to the exhaustibility and pollution of such resources; and

Whereas man's abuse of nature has extended to his abuse of life itself, as evidenced in the tragic annual increase in crippling injuries and death from accidents; and

Whereas the full cooperation of our citizenry is essential to the preservation of our natural resources and to life itself.

Therefore be it resolved *that each Kiwanian and each Kiwanis Club be dedicated to positive action within the community to identify the greatest needs and opportunities for conservation of life and resources and apply, personally and collectively, intensive effort toward the satisfaction of such needs and the seizure of such opportunities.*

SCHEDULE OF MINNESOTA SIXTH DISTRICT GRASSROOTS CONFERENCES

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. ZWACH. Mr. Speaker, it is a great privilege for me, and I am highly honored, to represent the people of the Sixth Congressional District of Minnesota here in the Congress of the United States.

Minnesota is a great place to live and wonderful people live there. In the quality of life, all the aspects that provide for the better things of life: healthful climate, longevity, educational, medical, and cultural facilities, recreational opportunities, and opportunities for gainful and profitable employment, Minnesota ranks second of all the 50 States. You can see I am justifiably proud.

But we have more than quality of life and wonderful people. In Minnesota, we have a balance of green fields, forests, and sparkling lakes and streams found nowhere else in America.

In our Sixth Congressional District there are 3,871 lakes totalling more than half a million acres, an average of 134 acres per lake. Most of this water is still unpolluted, clear, blue, and drinkable. A dozen varieties of fish can be caught in their waters and waterfowl swim upon their surface and nest on the shorelines. In summer and winter these lakes provide the best in recreation, swimming, boating, water skiing, fishing, hunting, and ice skating.

Our forests provide a steady income from the harvesting of timber and pulpwood, providing employment in lumber and paper mills. Wildlife abounds in their shadowed depths.

With all of this, the Minnesota Sixth Congressional District is one of the most thoroughly agricultural districts in the entire Nation. We have 32,500 farms on which live some 130,000 people. Each farmworker provides food and fiber for himself and 44 others. Agricultural production in our district provides eventual employment for over 650,000 people. Our farms have 25 percent of Minnesota's dairy cows and 28 percent of our State's pigs. We are a leading producer of corn, soybeans, and flax.

We are proud of our public school system that ranks among the best. And we are a leader in vocational education for those who are not college bound. We are proud, too, of the seven colleges in our district whose graduates takes their places among the leaders of our great Nation.

Mr. Speaker, I am deeply grateful for the opportunity to be of service to the people of this most generously endowed area. My constant aim is to serve my constituents in the best way possible.

I keep in close contact with my people by regularly informing them of my ac-

tivities in Congress in news releases and columns mailed weekly to our 87 weekly and nine daily newspapers as well as our 21 radio stations which also receive a weekly radio report.

To enable me to be in touch with their thinking, each year I send a congressional questionnaire on the issues before the Nation to each of our 134,000 households. The response to these questionnaires is excellent.

As the Representative of this great district, I have considered it my duty not only to be well informed of the opinions of my constituents, but also to be of the greatest possible service to persons having problems dealing with agencies or departments of our Federal Government.

Each year I hold grassroots conferences throughout our district at times when Congress is not in session.

During the time when I am in Washington attending to official duties, I have a competent secretary in our district office in the Federal building in St. Cloud to assist callers and to help them with requests for aid in dealing with the Federal Government.

This year, during our official August recess, I am again taking time to hold these grassroots conferences throughout our district at convenient public buildings. Because of the shortness of the recess, I must confine these meetings to the county seats this year.

I deeply appreciate the fine cooperation of the many public officials who have made these meetings possible by making meeting places available so that I can render this public service.

I have arranged the following schedule. All of the meetings will be held in the county courthouse except that for Stearns County which will be held at my district office in the Federal building, St. Cloud.

Monday, August 18: 9 to 11:30, Granite Falls; 2 to 4:30, Willmar.

Tuesday, August 19: 9 to 11:30, Benson; 2 to 4:30, Morris.

Wednesday, August 20: 9 to 11:30, Ortonville; 2 to 4:30, Madison.

Thursday, August 21: 9 to 11:30, Montevideo; 2 to 4:30, Litchfield.

Friday, August 22: 9 to 11:30, Buffalo; 2 to 4:30, St. Cloud.

Saturday, August 23: 9 to 11:30, St. Cloud.

Monday, August 25: 9 to 11:30, Ivanhoe; 2 to 4:30, Marshall.

Tuesday, August 26: 9 to 11:30, Redwood Falls; 2 to 4:30, Olivia.

Wednesday, August 27: 9 to 11:30, Elk River; 2 to 4:30, Milaca.

Thursday, August 28: 9 to 11:30, Foley; 2 to 4:30, Little Falls.

Friday, August 29: 2 to 4:30, Brainerd.

Anyone wishing to see me may do so at the location most convenient for them. No appointments are necessary. I sincerely urge individuals and groups to call on me if I can be of help to them in solving any of their problems dealing with the Federal Government.

The knowledge I obtain for these conferences will enable me to render better service, both legislative and personal, to all of the people of our important Sixth Congressional District.

1776

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. TEAGUE of California. Mr. Speaker, I call to the attention of my colleagues the excellent editorial which appeared in the July 3 issue of Stars and Stripes. It was beautifully written by my old friend and former fellow townsman, Mr. Harry Say, and follows herewith:

IN 1776

This is not an editorial to publicize a theatrical play, but to make a point we can not escape mentioning the show. An evening some months ago at the National Press club in Washington, D.C., where a great many of the top newspaper and broadcasting experts of the nation gather, we listened to a veteran Washington representative of one of the great newspaper chains of America give this advice to a friend who had telephoned him.

"No—you will not want to spend your money for the show. It's just a corny revolutionary period costume deal—no real entertainment or sparkle in it. Wait till something better comes along."

The advice this veteran newspaper writer gave his friend dovetailed exactly with that of many of the expert critics on Broadway where the show later opened for its regular run. The production was "1776", the story of the creating of the Declaration of Independence.

At the time the Washington newsmen gave his expert advice, folk were already standing in line. It was sold out for every seat during its entire Washington run. The fact should have given the lofty critics up in New York a disquietng thought. But no. New York critics have a conviction that a Washington audience is not a normal one; that is made up of small town folk collected from over the United States to punch typewriters for the government. They still predicted the play would flop inside a week. They could not understand that something of history with a patriotic background would succeed.

In New York, "1776" has been a sellout week after week. Movie companies are competing to obtain screen rights of the play turned out by Sherman Edwards, a former history teacher who liked his subject, and felt history dramatically presented would attract audiences. He labored long to find a producer who shared his thoughts to the extent of taking the costly gamble of staging the play.

One can understand to a degree the side track on which the critics were thrown. No lavish sets. No pretty girls chorus, no sex in the daily use of the word. Just such characters as Benjamin Franklin, John Adams, Thomas Jefferson, John Hancock and their colleagues of 1776 debating and writing the Declaration of Independence. Oh, yes, there were a couple of women in the production—Thomas Jefferson's wife and Mrs. John Adams.

What the audience sees is history as it was made—these bold and far-sighted men of the Colonies struggling with the job of writing a meaningful declaration destined to last down through the centuries.

On the stage the signers finally finish their job. In silence they sit around their table. In the background the Liberty Bell tolls, louder and louder. The curtain goes down, and the New York audiences that the critics did not think would be there, break into cheering seldom heard by any producer or playwright.

A heartening sight it is 193 years since the great document was signed to observe the reaction of average Americans. Doubly satisfying it is to know that a high percentage of teenagers are enraptured by the show.

It gives one reason to believe this Fourth of July that underneath all the surface turmoil of riots, draft card burners, law breaking, political chicanery and such that the foundations on which the United States was born are still of solid stuff.

Our salute to the author and producer. They have provided that Americans still revere patriotism, find pride in their nation's history, and do not have to be baited to a theatre by sex or dirt.

DEMO CUTTHROAT POLITICS

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MICHEL. Mr. Speaker, an editorial appearing in the July 24, 1969, edition of the Peoria Journal Star has some rather interesting and pointed comments regarding the activities of some of our friends on the other side of the aisle as well as other factions of the Democratic Party. With no further comment, I include the editorial in the RECORD at this point:

DEMO CUTTHROAT POLITICS

When one looks at the barrage of criticism now arising from the Democratic side of the aisle against Richard Nixon, it is a curious exercise to try to sort out the "new" positions from the "old."

Somehow, the Kennedy-Johnson space program was wonderful and untouchable—but since it has come under Nixon's authority, space has become a waste of time to its former boosters.

Once upon a time, Secretary McNamara was unassailable, a genius, a man whose judgments were fantastically beyond criticism or question—but since Defense has come under Nixon's authority, everything they did the last eight years was wrong! (Nobody mentions that these were McNamara's decisions, though). The attack is on "the Pentagon", and the impression is that all McNamara's alleged mistakes of yesteryear are really Richard Nixon's fault.

So it goes on program after program, area after area.

The most simple, cold turkey example of the role of partisan politics in decision-making involving the welfare of the country, lies in the vote record on the straight surtax levy.

One hundred and fifty-six Democratic Congressmen regarded the surtax as an absolute necessity when Lyndon Johnson was President. Two-thirds of the same congressmen are opposed to the surtax now that Richard Nixon is president.

Such is the influence of cut-throat politics on issues, as compared to the merits of the issue, itself . . . or the good of the country.

This brand of politics is a pretty smelly business.

Perhaps the most saddening example in the whole cast of "switchers" is Sen. Ed Muskie. He had given such an appealing impression of a craggy man of integrity just a year ago.

And now he is one of the howling mob, reversing his past attitudes, and leaping in strictly on the basis of every opportunity to throw a spear at the man now tied to the target stake of the Presidency.

When so many "leaders" are so busy making themselves too cheap for the job, where is the next presidential candidate coming from?

SUCCESSFUL APOLLO MISSION TO MOON HIGHLIGHTS HISTORY'S MOST FANTASTIC ERA

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. EVINS of Tennessee. Mr. Speaker, the successful Apollo 11 flight to the moon is one of the great achievements of the greatest period in history. And much of the success of the great achievements in this golden age of progress can be attributed to scientific work in Tennessee and the Fourth Congressional District which I am honored to represent in the Congress.

In this connection I place herewith in the RECORD my recent newsletter, Capitol Comments, because of the interest of my colleagues and the American people in this most important event:

(Capitol Comments by JOE L. EVINS, Fourth District, Tennessee, July 28, 1969)

APOLLO SPACECRAFT JOURNEY TO MOON AND SAFE RETURN HIGHLIGHTS HISTORY'S MOST FANTASTIC ERA

The successful flight of Apollo 11 to the moon is the most dramatic event of mankind's most fabulous age. Historians unquestionably will record the 20th century as mankind's golden age of progress. This is the era when the accumulated knowledge of centuries is being combined with new knowledge and new technology to produce a series of fantastic and unprecedented achievements.

The significance of the landing on the moon is as much the success in developing the technology required to achieve this goal as it is the physical exploration of the moon and the success in manned space flight. This new space technology already has resulted in progress in many other fields of science with practical application—in medical science, for example, and in many other areas.

As a matter of fact, many historians believe that the three most important achievements of this remarkable age are the successful moon landing, the splitting of the atom and successful penetration into the secrets of genetic life code in human cells. Tennessee and the Fourth Congressional District can be justifiably proud of the role of the scientific facilities in our area in achieving success in all three fields—at the Arnold Engineering Development Center at Tullahoma, in the testing of Apollo components and engines, and at the Atomic Energy Commission and Oak Ridge National Laboratory at Oak Ridge in the development of nuclear energy and in work on the genetic code which promises revolutionary innovations in medical diagnosis and treatment.

The raw courage of the three Apollo astronauts—and of all the astronauts that preceded them in the step-by-step progression of the program of space exploration—is a tribute to the resourcefulness and determination of all Americans and all mankind. As Astronaut Neil Armstrong said when he set foot on the moon:

"That's one small step for man—one giant step for mankind."

The courage of the astronauts coupled with American technology, determination and success in overcoming all obstacles is reassurance to all mankind that he can solve his problems through patience and perseverance. The three astronauts—Neil Armstrong, Edwin "Buzz" Aldrin and Michael Collins—deserve our commendation and our gratitude for their magnificent demonstration of achieving what was considered impossible.

Truly we are indeed fortunate to live in Twentieth Century America as man continues to achieve incredible breakthroughs for progress.

TRIBUTE TO DR. JEFFERSON GARNER

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. ANDERSON of California. Mr. Speaker, today I rise to pay tribute to an outstanding educator in the public school system of southern California, Dr. Jefferson L. Garner, superintendent of the Centinela Valley Union School District. Dr. Garner is retiring from his position as superintendent of schools and will assume a new post of visiting professor of education for the University of Southern California. As superintendent for the past 15 years, his record has been that of one remarkable accomplishment after another.

It is my intention this afternoon to extend recognition to the character of this influential educator. Dr. Jefferson Garner bestows a special blessing to all he encounters—a recognition of human frailty and the need to value the spirit and soul of man. He is warm with the compassion that comes only from a deep liking of fellow humans—a sensitive awareness that every man has his own sense of dignity and worth for which he must be respected and honored.

Dr. Garner received his A.B. from Chico State College in 1936; his M.S. in Education from U.S.C. in 1947; and his Ed. D. from U.S.C. in 1948. His background discloses a steady and progressive rise in concern for the educational program of the children in his area as he assumed greater responsibility regularly. Starting as an elementary school teacher in 1936, he became a principal in 1939, and the registrar of the Plumas County Union High School in 1942. In 1944, he became assistant registrar to the Los Angeles city schools and assistant superintendent of the Centinela Valley Union High School in 1947. In 1954, Dr. Garner assumed his latest position, superintendent of the Centinela Valley School District. He is a member of many professional organizations and is actively involved in the community service programs of the Rotary Club. I wish him well in his new post of visiting professor of education for the University of Southern California, and I am pleased that he will continue in his chosen field of endeavor that he has served so well.

The real spirit of this innovative educator is captured by the following article, which is reprinted from the June issue of the Centinela Valley Union High School District News:

JEFF GARNER

Every man eventually becomes known by one all-pervading quality—the essence, the heart—of his life, his work. With Jeff Garner it is his warm liking of people, a generosity of spirit; yes, a deep affection for the human race.

It is this quality that has permeated this school district during his superintendency, that underlies the concept that education, learning—call it what you will—is pretty much the reaching out of the hand of one human to another, that the great nourisher of learning is the warmth of human contact and feeling.

"One of the first things I learned about teaching was to keep out of the kids' way," Jeff once said. "Give him his head; he'll find his way—if you've really got something to give him."

Giving a human being his head, the freedom to fulfill his capacities, is a basic philosophy with Jeff Garner, as applicable to the adult world as to children.

A long-time friend of Jeff's related that many years ago in Jeff's presence he was effectively dissecting what he considered the abundant minus qualities of an individual. The friend was quite eloquent, and no doubt there were elements of hard truth in his observations. Jeff listened in non-committal silence for several moments before finally interrupting.

"There's only one thing you're forgetting," he told his friend. "You can ask only so much of a man. I think you'll find a man does the best he can if you let him alone and give him a chance. It's pretty much what we all want—the chance to do our best." He paused for a moment. "Do you think there just might be one good thing you could say about this man?"

"I've never forgotten that question of Jeff's," the friend said. "The idea has stuck with me ever since—that the one good thing you can say of another person far outweighs all the rest."

Jeff's greatest gift is his acceptance of human frailty, acceptance undiluted with the anemic toleration of "understanding," but warm with the compassion that comes only from a deep liking of fellow humans, a sensitive awareness that every man has his own sense of dignity, his own sense of worth for which he must be respected and honored.

"I've yet to hear Jeff Garner run a person down," observed a teacher who has worked closely with him for several years. "Even if you think a guy can't do much more than whistle by the time Jeff gets through extolling the talents of the whistler you walk away wondering how come you could be so stupid in not seeing such obvious talents yourself."

Jeff Garner's feeling for people is reciprocated in many ways.

During the reconstruction of Leuzinger High School there was a choice in the quality of seats to be used in the auditorium. One was handsome and expensive; the other, sturdily homely and lower in cost. Against the advice of those who counseled that the expensive seat was an invitation to teen-age destruction, Jeff insisted on the better quality.

"Have you thought of it this way?" he countered. "Kids appreciate good things like anyone else. Appreciating and liking a good thing, they'll be proud of the better seat. And when you have a kid who's proud of something, you can be darned sure he's going to take good care of it."

Those yet unscathed seats at Leuzinger testify to a man's faith in youngsters.

In another instance a recalcitrant youngster had exhausted all rules and regulations at one of the schools as well as the patience and tempers of the staff. It was decided that the young man must permanently depart the campus.

The distraught mother, her son in tow, appeared in Jeff Garner's office for a tripartite conference requested by the parent.

A teacher at the boy's school was surprised to see the boy the next day when he appeared on campus, apparently unshaken by what in the realm of any teenager's experience might be regarded as a confrontation of formidable potential.

"What happened?" the teacher asked.

"That Dr. Garner's real cool, man," the youngster answered, his face breaking into the first smile the teacher had seen in weeks.

"Well. . . . but what did you talk about?"

"He was telling me all the things he did as a kid," and after gleefully recounting some of the events of Jeff Garner's teen years, the youngster's face sobered. "I've got to make it now. I can't let him down." And the boy did make it.

And there have been others—staff members, students, friends—who have "made it" because of Jeff Garner's faith and helping hand when sorely needed.

Ever seeking a way around the prohibitions, restrictions, frustrations, educational cliches and jargon that stand ever ready to afflict kids, teachers, and schools with deadly boredom, Jeff Garner's free-wheeling approach to education emphasizes the unorthodox, the imaginative, the creative—the philosophy that learning, rather than being limited to a classroom, relates to the quality, color, and texture of human experience, and that often a youngster is infinitely the richer for appearing in a play or painting a painting than mastering the chapter of a text.

It is this same approach, Jeff Garner's faith and willingness to gamble on the productive creativity of his staff that has brought about many programs which have given this district a distinguished leadership among educational systems.

Honoring his retirement, the recent art show of Lennox High School was dedicated to Jeff Garner by the students. In the program notes of dedication were there words:

". . . you have made this district one of the rare places in secondary education where aesthetic values—the values of the spirit and soul of man—have a relevant and significant place in our educational framework."

The dedication by these fledgling artists of their creative efforts to Jeff Garner bestows a special blessing of its own—the recognition of a man whose life and work are characterized above all else by a warm sensitivity to those elements most cherished by youth (yes, and once-upon-a-time-youth)—the values of the spirit and soul of man.

PRAISE FOR JOB CORPS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. PICKLE. Mr. Speaker, it is no secret that I am an admirer of a job well done, especially when it is done under fire. The Gary Job Corps Center has tossed aside the Washington-generated problems involving Job Corps nationally, and has continued to provide thousands of young men the best training they have ever had. The people who come to visit leave as supporters of the program.

In doing so, the Gary center has become somewhat a model for Texas teachers, and others, as is witnessed by this editorial from the Houston Chronicle, July 20, 1969:

PRAISE FOR JOB CORPS

The federal government's Job Corps vocational training program appears to be serving its purpose in a highly successful manner, at least in the Camp Gary Center at San Marcos.

A group of 30 Houston area school teachers has given unsolicited, enthusiastic approval of the Camp Gary program and recommended that it be expanded. The group recently toured the San Marcos center as a part of the Bill of Rights Institute summer program being conducted at the University of Houston.

The teachers spent several hours observing the training in metallurgy, masonry, carpentry, printing, welding, commercial arts and the use of heavy equipment and machinery. They saw classrooms used for basic training in reading, mathematics and social communications skills, and they talked individually with the corpsmen.

"We were impressed with this group of young men who were acquiring a quiet dignity within themselves as human beings and a genuine pride in their ability to master a vocation," the teachers reported. "I saw more hope on the faces of these men than you will find on the faces of students in a normal high school or college classroom," one teacher said.

The Job Corps program is valuable from the standpoint of providing a large segment of young people with the ability to hold constructive jobs and maintain a secure place for themselves in society. Unlike the programs based on the hand out system, vocational training represents an investment in young people who are willing to work.

CAPTIVE NATIONS WEEK

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. SHRIVER. Mr. Speaker, the third full week of July marks the 11th annual observance of Captive Nations Week. I join my colleagues in Congress, the people of the Fourth District of Kansas, and the rest of the Nation in commemorating the national observance of this week.

We, the American people, who so justly value and treasure our freedom of speech, freedom of religion, and freedom of assembly mourn the loss of these human rights and dignities by the East and Central European people to Soviet dictatorship. Through overt and inovert aggression we have seen the Russian Communist subjugation of the national independence of Albania, Bulgaria, Estonia, Hungary, Latvia, Lithuania, Czechoslovakia, Poland, and Romania. The so-called Brezhnev doctrine and the Czechoslovakia tragedy manifest for the free people of the world another grave reminder of Russian suppression. The Brezhnev doctrine is a symbol of tyranny by unpopular regimes and perpetuated solely by the military force of the Soviet Union.

Let us resolve anew to never forget the millions of people who are under the yoke of communism in East and Central Europe. One of our greatest, yet most inspiring and worthy challenges, is the pledging of our Nation and our people to the cause of freedom for all mankind. America must continue to be the beacon of faith and the personification of individual rights and human dignity for the suppressed European nations. Captive Nations Week manifests our awareness of the importance of freedom for the 100 million people in the Communist-dictated lands of East and Central Europe. The right of self-determination for all people is our confirmed obligation. Through our obligation, may the people of Europe see freedom from Communist dominance and suppression.

DEFAMATION OF OUR ETHNIC, RACIAL, AND RELIGIOUS GROUPS

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. HELSTOSKI. Mr. Speaker, I am pleased to be one of the cosponsors of the House Concurrent Resolution, offered by Mr. RODINO, dean of the New Jersey delegation; a resolution expressing the sense of Congress with reference both to defamatory films and broadcasts, as well as to the need for establishment and implementation of adequate standards for such films and broadcasts.

For quite some time now, many of our radio and television "comedians" have demeaned and degraded our ethnic, racial, and religious groups. Our protests to the networks, sponsors, and the performers have fallen upon deaf ears, thus requiring the Congress to take steps in dealing with this problem. No one will deny the fact that Congress has had much more important problems to cope with, but if the film and broadcast industries cannot police themselves on this subject, Congress has to take appropriate steps.

It appears that some action must be taken to curb such films and broadcasts which maliciously ascribe ethnic, racial, and religious origins to undesirable patterns of behavior.

While the first amendment gives every individual the right to speak out freely, it does not grant any individual to speak in a manner which is degrading and defamatory about his fellow Americans no matter what their ethnic, racial, or religious origins may be. America is no place where such demeaning characterization are to be condoned.

America has been, is, and will be the melting pot of the world, and each individual, regardless of origin, has contributed his share to the betterment of America.

As an American of Polish descent, I am proud of my heritage and I wish to call attention to some names which, I am sure, you will recognize immediately.

Generals Thaddeus Kosciuszko and Casimer Pulaski fought for us in our war for independence. And, General Pulaski is known as the "Father of the American Cavalry."

As Poles, Ignace Jan Paderewski and Fryderyk Chopin contributed much to the field of music and musical composition. Surely, everyone is familiar with the name of Madame Marie Curie-Sklodowska, the discoverer of radium, and with Nicholas Copernicus another great Polish scientist. Who, among baseball fans, is not familiar with Stan Musial.

The Americans of Polish descent do

not desire, or should be referred to as "Polacks." To them this is a very degrading appraisal of their national origin.

Among the Italians, we find such names as Enrico Fermi, an atomic scientist; Guglielmo Marconi, a scientist in the radio field; G. Galileo, an astronomer; Luigi Galvani, the developer of the galvanic battery; Columbus and Vespucci, navigators.

You know of Benvenuto Cellini and Leonardo da Vinci, as well as Michaelangelo. Do you remember the Dimaggio brothers? Joe has just been voted the best among the living players.

And, the Italians resent any reference to them as "Dagos." I applaud them in their desire to eliminate this reference to them, which is a derogatory description of a group whose national origin has made great contributions to our country.

I would like to suggest to these "comedians" that before they utter one word with reference to any of the ethnic groups, the racial groups or the religious groups, that they first study the contributions made by these people to our American way of life and for the betterment of all mankind.

One factor that we should all remember is that the people of these various ethnic, racial, and religious groups will remain long after those who degrade them in their "comic" performances are gone.

It is unfortunate that Congress must step into this picture, and it is only because the film and broadcast industries do not desire or cannot police themselves in this area.

While, at this time, we are only expressing the sense of Congress in dealing with this problem, the resolution proposes to establish three principles: First, it would call upon the producers and distributors of films and broadcasts to cease the production and distribution of films and programs which defame, stereotype, ridicule, demean, or degrade ethnic, racial and religious groups. Second, it would call on responsible persons in the motion picture and broadcasting industries to establish and enforce adequate standards. Third, in the event that the motion picture and broadcasting industries do not establish and enforce adequate standards within 1 year after enactment of this resolution, it would call on Congress to establish such standards through Federal legislation.

Mr. Speaker, I trust and hope that congressional concern on this problem will force the writers and performers to reassess their approach to the ethnic, racial, and religious groups and direct their performances toward uniting these groups into a solid American society. Never before in our history have we had the need for unity among those who are a part of this "melting pot" as we do now.

We are in the critical years of our American way of life and no one should take upon himself to degrade, demean, and ridicule anyone who is a part of these great United States or who has origins outside our boundaries.

OVERPOPULATION BIGGEST PROBLEM

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MICHEL. Mr. Speaker, on July 18 the President sent a message to the Congress relating to the overpopulation problem bringing into clear focus the scope of the problem and offering some constructive suggestions as to what might be done to find some solutions.

An editorial appearing in the July 24, 1969, edition of the Peoria Journal Star discusses the problem in some rather straightforward and blunt language and I include the editorial in the RECORD at this point:

OVERPOPULATION BIGGEST PROBLEM

We are bringing more kids into this world than we can possibly provide for.

There isn't enough land to grow enough food to feed the numbers of kids being produced on this planet today. There aren't enough adults around to produce their needs or provide enough teachers to teach them.

It is a tragic, measured, analyzed reality that the figures simply don't add up. There aren't enough resources on earth to provide for the avalanche of babies. There aren't the crops, the land, or enough capable adults to provide services.

Where the reality has hit first and hardest, desperate steps are already being taken. In Japan, which once was the Number One population crowding problem on earth, abortion is open, legal, and being practiced. In India, where massive efforts to increase food production are outstripped by baby production, they have launched a massive campaign of outright sterilization—along with tens of thousands of planned parenthood centers.

That is the really dark side of these statistics about "more than half of population of Latin America is under 21", and such.

There just aren't enough able adults in good health still in their years of vigor to take care of such a staggering number of kids in need of food, clothes, and education.

Result: millions of those growing up to adulthood aren't well fed or educated or capable of solving the problems and contributing significantly to the feeding, sheltering, clothing and education of the still rushing tide—but they are capable of adding more and more babies to the problem.

The tidal wave inundates human progress and human hopes of a better life and higher standard of civilization as well.

Our own booming birth rate threatens to contribute to a similar slippage right here. In any case, the effects of this build-up toward disaster in the hemisphere and on earth certainly doesn't leave us untouched now—nor able to "tread water" and keep our heads out in future as the tide rises.

I don't know who said it first, but it is a plain fact:

"Whatever your present cause may be, it is a lost cause . . . unless we check the population explosion."

Yet we face this overriding reality in America, against a conditioned reflex that expects our local miracle of technology to provide all things for all men with no effort.

In short, we are looking in the other direction, living in a fool's paradise, unaware of the massive shadow of the tidal wave looming over us.

THE LESSON OF APOLLO 11

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MIZE. Mr. Speaker, the adventure of Apollo 11 has few parallels in human experience. Our pride as a people in this accomplishment is utterly unbounded. Americans have met the challenge issued by the late President Kennedy "to put a man on the Moon and return him safely to Earth in this decade." President Nixon has said of this past week:

The world has never been closer together.

The President's profound observation is manifested in many, many ways. Men and women throughout the world can take pride in this magnificent achievement. The dignity of all men is enhanced by the courage and resolution of a few. Men have always lived in the reflected light of the distinguished and the dedicated among them. But more than that, Apollo 11 was the product—more than any other single event in history—of the commitment and struggle of the great thinkers and innovators of all the ages in human history.

From Galileo and Copernicus to Goddard and Von Braun, brilliant, untiring men throughout the world have contributed their lives and energies to the mission that culminated in the live television coverage of Neil Armstrong's first footfall on the surface of another world. It was a proud moment for every race, every creed, every sort of man; it was a moment of universal timeless participation in high adventure and discovery.

It was one of those few moments when technical achievement, courage, discovery, conquest, and the commitment of millions were all coordinated for peaceful purposes. "We came in peace for all mankind." Those words of our President and the astronauts will remain etched on a plaque on the moon, untarnished and undefiled throughout the eons ahead. They are words of commitment and words of hope. They are words this Congress, this Nation, and all humankind cannot ignore as space becomes a familiar medium for exploration and travel.

Perhaps, as we grow in wisdom and experience, we shall learn to accept the challenges of peace, in space and here on earth, as proper challenges for modern man. The challenges are limitless, just as space is limitless.

Hunger, serious disease, inadequate education, prejudice, and exploitation of men by other men—these are the curses that Americans can move against in the decades ahead.

The incredibly complex Apollo program has succeeded beyond our dreams and hopes. Its success should give us hope for future endeavors, future challenges.

Our earth is a resilient, fertile garden for men to cultivate. Men's minds and faith are resilient and fertile as well. With these gifts from God, an optimistic future is within our grasp.

"We came in peace for all mankind," and all mankind has joined us in the journey. That is the lesson of Apollo 11, and that is our hope. It must be our destiny.

FLAME ENGINEERING

HON. KEITH G. SEBELIUS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. SEBELIUS. Mr. Speaker, my remarks today are prompted by a letter and a newspaper article regarding one of a my constituents in western Kansas, Mr. Ralph Pivonka, an enterprising and successful businessman from La Crosse, Kans.

Mr. Pivonka is typical of our citizens in western Kansas and typical of his pioneering forebearers. Out of necessity, he and his son designed and built a propane torch with which to burn weeds and trash on the family farm. That homemade device has now led to a first-rate local industrial concern—a profitable business with incorporation plans.

Mr. Pivonka asks a most pertinent question: How can a successful businessman succeed in an area suffering from depressed farm conditions? How can he contribute to the revitalization of his home community? What can be done?

Mr. Speaker, I offer the article regarding this successful smalltown businessman from the June 12 issue of the Wichita Eagle along with excerpts from Mr. Pivonka's letter to me for inclusion in the RECORD. I think it is obvious that through the example of Ralph Pivonka we can revitalize rural and smalltown America. It is equally obvious Congress should do all that it can to aid in this effort before success stories like this one become a thing of the past.

The article and letter follow:

FLAME ENGINEERING,
LaCrosse, Kans.

Hon. KEITH G. SEBELIUS,
House of Representatives,
Washington, D.C.

DEAR SIR: As a struggling small manufacturer I appreciate your interest in our welfare and the welfare of rural Kansas, with conditions in Western Kansas not good from any point of view. If we cannot create something to hold our people, all but a few western Kansas towns will all but disappear. In LaCrosse, the last 6 months have seen 6 businesses close their doors. These were not exactly small businesses—a grocery, a clothing store, a variety store, a recreation parlor, a drug store, a shoe store. We have prospects of losing an auto agency, an implement agency, and—heaven forbid—our hospital. The hospital will surely close as our only active doctor is closing his office July 1; many other towns in this area are in the same position. Depressed farm conditions are closing businesses by the dozens.

As a small manufacturer, I am aware that there are a number of agencies within the government that are supposed to assist us in obtaining business. However, how to obtain this help is another matter. I have spent countless hours and several thousand dollars in visiting these agencies and have received the usual polite brushoff. The Agriculture Department and their Forest Service are buying thousands of dollars worth of equipment similar to what we manufacture, but to date, we have sold only $25.00 worth of our equipment to them. As small manufacturers, we are unable to support representatives in Washington to lobby for our interests. We need help desperately in obtaining some of the business that is going to Eastern manufacturers.

Your interest in our activity is sincerely appreciated. Perhaps with your help, we may overcome some of these difficulties.

Respectfully,

RALPH C. PIVONKA.

FATHER, SON'S PROPANE TORCH APPEARS BRIGHT

(By Darrell Morrow)

LA CROSSE, KANS.—Fourteen years ago Ralph Pivonka, 64, La Crosse, and his son, Mike, 32 designed and built a propane torch for use in burning weeds and trash on the family farm.

Now the father-son team devotes full time to manufacture and sale of propane torches for farm and commercial use. They produce patented Red Dragon torches under the partnership name of Flame Engineering.

"We started out of necessity. We needed a torch and got to building them. Neighbors would borrow them and never would bring them back, so we decided it maybe had some commercial value. The boy said, 'I'll make them if you'll sell them,'" said Ralph Pivonka.

Four years ago they expanded the business, then run mostly from the farm workshop, and entered the national market. Since that time demands for their products has extended into the international market.

* * * * *

Primary emphasis of the business is on the production of torch equipment for control of insects and weeds from farmlands.

"We use a method radically different than anyone else in the industry. We throw the propane on the ground and use a pilot light to ignite it. It is so darn simple that only a Kansas hayseed would think of it," Pivonka said.

The work of Pivonka and son attracted enough attention nationally that Ralph Pivonka was asked to present a paper at the Fifth Annual Symposium on Thermal Agriculture at Memphis, Tenn., in January 1968. The organization is composed primarily of scientists and researchers and barred speakers who had commercial or manufacturing ties from the platform, Pivonka said.

While other flaming equipment on the market uses vaporized gases from the top of the tank, his equipment uses liquid propane off the bottom.

"In any type of flaming the greatest amount of heat is created at point of combustion. When combustion takes place within the torch, only hot expanded gases are expelled. These gases are heated to incandescence, but because of their expanded condition lack the quality of adhering to the ground for any length of time.

"In liquid spray flaming, the natural tendency of propane to seek low levels has the advantage of creating a flame that adheres to the surface for considerable longer periods than normally is accomplished with conventional equipment. The super cooling of natural vaporization adds to the tendency to adhere to the surface to be flamed, in many cases even to penetrating into cracks in soil, into and under trash where initial combustion creates the greatest amount of heat.

"This initial combustion also creates considerable radiated (infra-red) heat. This radiated heat has penetrating qualities not found when combustion takes place at a point other than point of contact. Radiated heat penetrates deeply into fibrous material creating damage within the plant that destroys its ability to survive," Pivonka explained.

He advocates using the liquid spray flaming equipment during late fall or early spring to destroy insects, their eggs, and some weeds from alfalfa. The flamer is pulled at a speed of about five miles per hour on relatively windless days for best performance, he said.

The first flaming for field use designed by the Pivonkas was for that purpose, but Pivonka said they have had numerous requests for application of the principle to other uses. He said some farmers believe use of the flamer on alfalfa may extend useful life of a planting from three to four years.

"We had a request from Grand Forks, N.D., for a potato vine burner. The idea is to destroy the potato vine so the ground can dry up and farmers can get into fields to pick the potatoes. Flamers also are used to destroy old corn stalks."

A British company has enlisted aid in application of their flaming equipment to drying soil reclaimed from the ocean so it may be compacted more quickly. The company uses a "soil disturber" which aerates the soil by throwing it into the air. "The idea is to flame the soil and dry it while it is in the air," he said.

Experimentation may be undertaken at Houston, where the British equipment is being used to build a levee from reclaimed soil.

The father and son said the demands for their equipment has outgrown their capabilities to produce it. They have contracted much of the production with a La Crosse machine shop. They now devote most of their time to the development and distribution end of the business.

The business has outgrown its partnership status, they have been told by Internal Revenue Service, and they plan to incorporate probably late this year, Pivonka said.

From the single flaming torch which they initially built in the farm workshop for their use and later for sale in the LaCrosse area, they have expanded to 47 items, Pivonka said.

Development of one of their products was requested by bush pilots in Alaska. The pilots requested that they make a simple heater to be used for warming cold plane engines so they would start in frigid Alaskan winters. They previously had let the engines idle continuously.

"We came up with a 100,000 BTU heater that weighs 11 pounds and fits into a fiber suitcase," he said.

One of their requested requirements was that the heater connections be made of common four-inch stovepipe, commonly available anywhere in Alaska, in case extensions or replacements were needed.

A Wichita aircraft manufacturer has indicated interest in the heater for a cold start accessory for its executive plane, Pivonka said.

The aircraft manufacturer requested that the stovepipe be replaced with a fancier connection pipe and the kit packaged in a contoured flight suitcase, he added.

MOON CALL

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. POFF. Mr. Speaker, I quote herewith an editorial from the July 22 issue of the Richmond Times Dispatch.

It strikes me that this editorial is a complete and conclusive response to the

editorial which appeared in the July 19 issue of the New York Times.

The editorial follows:

NIXONPHOBIA

It is curious how exceedingly petty certain segments of the population can become when the subject under discussion is Richard Nixon.

An editorial in last Saturday's *New York Times* is a case in point.

Under the heading, "Nixoning the Moon," the *Times* took the President to task for his "attempt to share the stage with the three brave men on Apollo 11" by talking with the two of them who were to be on the moon.

President Kennedy initiated the Apollo program, and Lyndon Johnson was the program's prime political friend and most strenuous advocate, said the editorial. But now, the paper continued, because Mr. Nixon is president "by accident of the calendar" when the moon shot actually was being made, he was engaging in a self-serving performance "unworthy of the President of the United States."

This truly reaches the depths of the picayune.

As unhappy as it makes the *New York Times*, the fact is that Richard Nixon is now the President of the United States. It was entirely fitting for him, as the representative of all the people of this nation, to commend the astronauts on their great achievement and to express to the largest worldwide television audience in history America's hope that this epochal scientific achievement will inspire man on earth to redouble his efforts to achieve lasting peace.

The President's message was eminently appropriate, and the sight and sound of the chief executive talking from the White House with the first men ever to set foot on the lunar surface added to the drama and significance of the historic occasion.

Only a bad case of Nixonphobia would lead anyone to view the President's telephone call, as the *Times* did, as nothing more than "a publicity stunt of the type Khrushchev used to indulge in."

HONORING DR. FRANK PORTER GRAHAM A GREAT AMERICAN

HON. NICK GALIFIANAKIS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1969

Mr. GALIFIANAKIS. Mr. Speaker, 60 years ago this summer a great American, Dr. Frank Porter Graham, graduated from the University of North Carolina, one of the Nation's great universities. One major factor that contributed to this university's greatness was the many years of leadership by Dr. Graham as its president. This year we also commemorate his retirement from a useful and illustrious career of public service as an official of the United Nations.

I am pleased, Mr. Speaker, to honor Dr. Frank, as he was affectionately known to thousands of students. I cannot think of a more appropriate way to recognize this true statement than to repeat his own words expressing his hope and faith as an American:

THE FAITH AND HOPE OF AN AMERICAN

In the fulfillment of her heritage of freedom and hope of brotherhood may America more and more be a land in which free people become brothers in the sight of God and in the human heart. Here the autonomy of the human spirit, the freedom of the mind, the liberty of inquiry, speech, publication, association, enterprise, work and worship, together with a personal sense of moral and social responsibility, are essential to the dignity of the free individual in whom are the security of the state, the welfare of the people and the progress of civilization. Here the best answer to the totalitarianism of the police state is not scrapping the Bill of Rights but keeping the faith of our historic Americanism. In this land the equal freedom of people to organize for self-development, cooperation and creative participation in the agricultural, industrial, commercial, political, professional, cultural and religious life is now the moving frontier of our dynamic democracy. In the general life the daily toil of millions of men and women is above privilege and power, and the integrity of simple people is beyond price.

May this America be a land where the home, as the sanctuary of love, nurture and faith, is the source and measure of civilization, and the schools, libraries and playgrounds of the people are the chief hope of the equal opportunity of all the children in all the states to develop to the highest their individual capacities for a unified and useful life. In the cities, the towns and the country may the multiplication and acceleration of the mechanical contacts of civilization increasingly mean the enjoyment of leisure and recreation, the widening of information and sympathies, and the deepening of the cultural and spiritual content of the lives of the people. The commonwealth not only means the common responsibilities for the conservation and development of the natural resources and cultural heritage for this generation and the generations to come, but also more and more means the common opportunities of the people for free information, sound knowledge, equal suffrage, fair employment, decent standards of life and labor, social security against the hazards of modern society, good health and medical care within reach of the people, and lawful agitation to broaden the base of the general welfare and lift the level of human liberty "in the pursuit of happiness" in America and the world.

In this land of liberty, for which our fathers died, and for which we would live, work and give our all, may America become a country in which the highest and lowest and all the people equally together have the freedom to struggle for the higher freedom of truth, goodness and beauty; where democracy is without vulgarity, excellence is without arrogance, the answer to error is not terror and the response to a difference in color, race, religion, ideas, economic condition or social status is not discrimination, exploitation or intimidation.

Here is humility of repentance for our own wrongs, freedom of indignation against injustice and evil in places high or low, and courage in action for human decency and fair play. Our democracy is made fairer and stronger by the robust struggles of freedom, and life is made richer by the vigor and variety of the differences of the people. Where and when men are free, the way of progress is not subversion, the respect for the past is not reaction, and the hope of the future is not revolution; where the majority is without tyranny, the minority without fear, and all people have hope of building together a nobler America in a freer and fairer world.

These toiling and hopeful people, as pioneers along the free frontiers of the vast wilderness of our yet unmastered international society, seek to prevent both the destruction of human freedom and self-destruction of civilization and to share their generous strength for peace on earth and good will among men. In a dynamic world, in which a depression or a war anywhere involves human beings everywhere, the people of the American dream, against the lags of the conceptions of the absolute state, the superior race and the master class, patiently struggle in the atomic age through the United Nations, through regional re-enforcements of collective security, through economic cooperation and technical assistance programs, to end all wars and all depressions and to provide the basis for the self-determination and equal opportunity of all people. On the fresh continents of abundant resources, fronting east and west on the two great oceans between the Old World and the New, the people of America, are the grateful heirs of all the ages, races, regions, cultures, and hopes of mankind. With all their faults, frustrations and aspirations these people of this youthful nation would rise to the responsibility of their power and the opportunity for their gretaest to help give fresh hopes to stricken peoples for food and freedom and to help organize justice under law and peace among nations. In creative cooperation with all peoples, East and West, the American people would share their heritage, their toil, their strength and their dream in the unresting adventure of the human spirit in the long pilgrimage toward one world neighborhood of human brotherhood in answer to the prayers of the people for peace, freedom and justice on God's good earth.

THE SIGNIFICANCE OF MOON LANDING

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. SHRIVER. Mr. Speaker, the successful and historic mission of the men of Apollo 11 is over—and now a national discussion on the future of space exploration has begun. Under the leave to extend my remarks in the RECORD, I include editorials from the Newton Kansan and the Peabody, Kans., Gazette-Herald on the significance of the U.S. landing on the moon last week. The editorials follow:

[From the Newton Kansan]

MANKIND PROFITS FROM MOON LANDING

Man's dream of the ages came true Sunday night as Neil Armstrong stepped on the surface of the moon.

"It's one small step for man; one giant leap for mankind."

Armstrong and his companion, Edwin Aldrin, Jr., roamed over the moon's surface adjacent to their landing module as millions of watchers throughout the world watched them on television.

They picked up rocks and dust from the moon's surface to bring back to earth, and they placed gadgets on the surface of the earth's satellite to send back scientific information.

And what does all of this mean? Is it only a giant publicity stunt to demonstrate to the world that Americans are better scientists than are the Russians?

If that were the only significance of this giant leap it would be millions of dollars down the drain.

But there are many benefits that man will eventually reap because of the money spent, the hard, super-accurate work accomplished, and the confidence of the crew in their equipment.

For man is learning more about the universe in which he lives. Information brought back by the moon men will help scientists unlock the secrets of the origin of the earth, and possibly its eventual fate.

These products of the moon landing sound far out and unreal, but there will be more evident products also. Many of the skills learned, many of the gadgets invented, and much of the knowledge obtained in the project will eventually be used for products and for ideas that can help man make his life on earth a better one.

(From the Peabody (Kans.) Gazette-Herald)

IT'S BEEN QUITE A WEEKEND

This past weekend has been quite a time around here. First we had that fine Saturday night rain, and that certainly was welcome. Of course, on Saturday afternoon, we installed an air conditioner over at the Burns News Office—the first one ever in that establishment, and that must be some sort of a milestone.

Oh yes, there was that little matter of Neil and Buzz landing on the moon for a short stroll and a little rock hound work.

That trip to the moon held the interest of most Americans except some of the more sophisticated young and old. It was difficult to realize just what a historic and amazing event we were watching. You had to pinch yourself to realize that this was not another science fiction show, another simulation but the very real thing. That Armstrong and Aldrin were actually right there on the moon—another of the heavenly bodies—and that this means that man can travel and survive on some other chunks of the universe other than earth.

The implications for the future are so fantastic that we unscientific folks can only guess at them. More space travel is certainly in the offing. Last week Vice President Agnew's comments about the exploration of Mars were controversial. This week they seem almost academic.

For the moment—and that is the correct time reference—further exploration of the moon will be the goal. There must be mapping, scientific study of rocks and minerals and other research that may or may not bring economic and other benefits to earth men.

But further space exploration is such a sure thing, it hardly seems worth while talking about it. There simply is no stopping point from here on.

Which statement may bring us "back to earth" with a rather unpleasant thump. These space explorations are exciting and scientifically fantastic—and they are costly. Billions of dollars in tax money has been poured into the Apollo and previous projects. Billions more will be spent in further exploration of the moon. Explorations of Mars and other planets will be much more expensive.

We must go on—but what if the results are only interesting scientifically, and of no economic benefit? What if the benefits are only in the field of space knowledge, earth stature, and keeping ahead of the Joneses? How much of our economic life blood can we afford to pour into what may prove to be pure scientific research?

That's a rather worrisome question. Are we in danger of pauperizing ourselves to prove a scientific point?

There are, of course, numerous benefits in the fields of television, metallurgy, health, etc., which will be derived from the research going into the space projects. But will it be enough to really begin to pay back the economy for the strains the space program is going to put on it?

We may well have a space bear by the tail and not be able to let go of it. But what a wonderfully interesting, exciting, amazing bear it is.

And what a great trio of space explorers the U.S. has to welcome home this week from the most interesting, exciting and meaningful journey since Columbus broadened the horizons of the world by sailing across the Atlantic.

PREVENTIVE DETENTION NOT AN ANSWER TO PROBLEMS OF LAW AND ORDER

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MIKVA. Mr. Speaker, the problem of mounting crime is perhaps the most perplexing and frustrating challenge facing this Congress. Rarely has this body been so united in determination to attack a social ill. Yet rarely has any issue less lent itself to meaningful legislative solution. The temptation to press forward with quick and easy sounding action to protect our citizens from danger is great. But the solutions are neither quick nor easy, and if we act unwisely and repressively we may at once both compromise the Constitution and delude ourselves into believing that substantial action has been taken to reduce crime.

President Nixon's recent crime fighting proposals reflect appropriate executive concern over this serious problem. But at least one of the administration proposals—the plan referred to as preventive detention—is an ill advised and unconstructive attack, which both rolls back the Constitution and misplaces the emphasis.

No less a concerned constitutional scholar than Senator SAM ERVIN of North Carolina recently described preventive detention as "unconstitutional" and warned it "smacks of a police state rather than a democracy under law." The Senator's fears are well grounded. The presumption of innocence until conviction by due process is an unequivocal principle of our judicial heritage. Moreover, pretrial imprisonment based on an ambiguous process of "pretrial trial" findings of substantial "probability" of guilt or "dangerousness" simply cannot be tolerated under any notion of fairness and due process.

Mr. Speaker, there are serious problems of protecting citizens from those awaiting trial. But the place to attack the problem is at the judicial end. The Constitution guarantees a speedy trial. The courts must be given the tools to swiftly and surely determine and imprison the guilty. This, rather than giving the State the tools to incarcerate those it extra-judicially terms dangerous, would provide the real base for meaningful attack.

I would urge my colleagues to read Senator ERVIN'S brief but incisive remarks on this question which can be found on page 19798 of the July 16, 1969, RECORD. I would also like to insert into the RECORD at this time a perceptive and revealing article from the March 8, 1969, issue of New Republic. The article, "Jail Before Trial," was written by Abraham S. Goldstein of the Yale Law School. A criminal law expert, Mr. Goldstein authored "The Insanity Defense" in 1967 and served as a consultant to President Johnson's Commission on Law Enforcement and the Administration of Criminal Justice.

The article follows:

JAIL BEFORE TRIAL

(By Abraham S. Goldstein)

Criminal procedure in the United States has only recently begun to narrow the gap between widely stated ideals and an unsatisfactory reality. Safeguards as elementary as the right to appointed counsel at trial and the right to be free of coercive interrogation or search without warrant are still in their infancy, furiously resisted by police and prosecutors. Meanwhile, mounting crime has drawn the controversy away from the courts and into the more volatile political arena. Provoked by student protests, black militancy and peace demonstrations, and by a pervasive feeling that "everything is coming unstuck," the forces of "law and order" are using basic institutions as scapegoats and threatening to distort them beyond recognition. One hoped that a lawyer President, determined to present himself as cool and unflappable, would not succumb to this intemperate mood. Regrettably, however, President Nixon's proposal for preventive detention before trial places him in the vanguard of those who would solve the crime problem by rolling back the Constitution.

The Nixon proposal brings to public view a problem, and a controversy, which has been nagging at students of criminal justice for quite some time: does it make sense to release persons charged with crime until they can be tried and convicted? President Nixon has said it does not, at least where the persons involved are, as he put it, "dangerous hardcore recidivists." The Constitution, on the other hand, has been construed fairly consistently as requiring release in noncapital cases, provided the accused can put up the necessary bail to assure that he will appear for trial. The rationale of this right to pretrial release is not just obeisance to the presumption of innocence, though that is hardly unimportant. The person denied release risks loss of employment, with all that may mean to his family and to the public welfare rolls; he is less able to locate witnesses and generally to assist in his defense; the pressure of detention may have an unduly coercive effect upon him, leading to waivers of preliminary hearing, pleas of guilty and waivers of jury trial; and, in the end, he is likely to draw a heavier sentence than his released counterpart.

Though the Nixon proposal has not yet been presented to the Congress, it speaks in broader terms than bills which have been introduced. These, which would be applicable in the federal courts and in the District of Columbia, include one by Senator Joseph Tydings (D., Md.), which would authorize detention only where the felonies charged involve actual or threatened "serious bodily harm," armed robbery, burglary and comparable offenses; another by Rep. William McCulloch (R., Ohio), would add narcotics offenders to the list; a third by Sen. Robert Byrd (D., W. Va.), would add the risk of "danger to other persons or to the community" to the risk of nonappearance which is now the exclusive citerion for pretrial detention. Nixon would subject "dangerous hardcore recidivists . . . [to] temporary pretrial detention when they have been charged with crimes and when their continued pretrial release presents a clear danger to the community." None of the proposals addresses itself to the problem of detention during a riot or emergency situation, where some sort of carefully limited detention may be justifiable.

Preventive detention before trial has long been formally recognized in European countries, including England. And it exists in fact, if not in law, in the United States as courts regularly set bail in amounts deliberately calculated to keep in custody persons who are regarded as dangerous, or persons who are thought to deserve punishment but are unlikely to be convicted. Indeed, the prac-

tice has been so widespread that fewer persons are released on bail in most of our states, where there is nominally an absolute right to bail, than in England where there is no such right. The current proposals would take this practice of preventive detention out of an illegitimate twilight zone and make it a regular part of the criminal process.

A measure very much like some now being considered was recently rejected by the Advisory Committee on Pretrial Proceedings of the American Bar Association. It recommended instead a statute patterned substantially on the federal Bail Reform Act of 1966. That statute, which is currently under attack, preserves the traditional standard, making release turn entirely on whether the person charged is likely to appear for trial. The tacit assumption on which it builds is that monetary bond may always be "excessive," in the constitutional sense, when indigent persons are being held, particularly if other factors such as ties to family, job and community make it probable that they will appear. But in assessing the probability of appearance, the court may consider "the nature and circumstances of the offense charged, the weight of the evidence against the accused, the accused's . . . character and record of convictions." The underlying theory, and it is by no means a new one, is that the more clearly guilty a person is, the greater will be his motivation to flee; the more heinous the offense and the worse the criminal record, the heavier will be the sentence and the less credible the promise to return for trial. These same characteristics, of course, may describe the preventive detainee, to the extent that they do, and are applied to retain in custody persons who are both likely to commit crimes, and unlikely to appear for trial, they serve the purpose of preventive detention. But even if such persons remain at large, the federal statute authorizes the court to impose a wide variety of conditions to increase the probability that the accused will appear for trial by reducing the probability that he will commit a crime during the pretrial period. These range from a promise to appear to probation-like supervision, from travel and employment restrictions to a requirement in appropriate cases that the defendant return to custody each night.

We have nothing that describes in any systematic way how these relatively new federal bail provisions have worked. At best, we have some anecdotal material, of the sort presented at the recent hearings of the Senate Judiciary Committee, which describes the occasional highly visible offender who has committed a crime during his release period. There is little to tell us of the extraordinarily large number who do not. Though this lack of evidence should in itself be persuasive where freedom itself is at stake, there is evidence that argues strongly against the change, at least as a serious effort to "solve" the crime problem. Everyone who has ever looked closely at bail has concluded that the bail amount is regularly manipulated by the courts to accomplish preventive detention. That, rather than release, is the *de facto* norm when "dangerous hardcore recidivists" are drawn into the criminal process. Whatever might be said in favor of bringing such use of bail into the open and legitimating it, it is grossly misleading to suggest that crime will be significantly reduced if we do no more than authorize the detention of those who would have been detained in any event, albeit illegitimately.

The Nixon proposal is especially offensive because it uses words and phrases like "hardcore recidivists" and "clear danger to the community" as if they really had content directly relevant to the questions of prediction inherent in preventive detention. It is impossible to say with much assurance who will commit a crime in the future; it is even less possible to say who will commit a crime within the limited period a defendant is awaiting trial, particularly if he is hedged about with restrictions as to what he may do and where he may go and if he is brought on for trial expeditiously.

It is not as if the question of probable danger were a new one. The history of our law represents in considerable part an effort to assess the distinction between the threat of danger and the fact of injury. In the law of attempts, incitement and conspiracy, in offenses like vagrancy and loitering, in provisions for civil commitment of the mentally ill, the sexual psychopath and the juvenile, we have confronted the question of probable danger and come away with very few guides for decision. We cannot say with any confidence how likely it is that yesterday's robber will rob tomorrow, that yesterday's man of violence will be violent tomorrow—especially if "yesterday" is many years past. There are no rules of thumb that can be carried over to a hearing on danger held promptly after arrest, before many facts can be accumulated.

This is dramatically evident in the materials surveyed by the DC Crime Commission. Though 7.5 percent of defendents released in a year were later charged with offenses committed while awaiting trial, only 4.5 percent were charged with crimes of actual or potential violence. More importantly, as the ABA committee pointed out, "Nothing in the DC statistics or any others now available indicates that those defendants who did commit crimes while released were distinguishable beforehand from other defendants who had similar records and charges but who did not commit crimes while released."

The only area where we have tolerated such detention before the facts are really in is that of emergency commitment of the mentally ill and, however unsatisfactory that often is in practice, it does turn on medical certifications and incapacitating mental illness. The new proposals would extend these extraordinary measures to persons charged with crime, with neither a predictive science at hand nor a body of concepts adequate to the need. It is a disastrous oversimplification to pretend we have the capacity to make the fine discriminations that these proposals demand. A pretrial detention procedure would inevitably lead to overprediction of crime, with undue emphasis given to the prior criminal record, the only hard fact available. Dangers imagined and feared by judges and the public rather than the fact of danger in the accused himself would become the touchstone of detention.

Nixon's emphasis on "hardcore recidivists" as the primary prospects for preventive detention is undoubtedly intended to reassure that the power to detain will not be used lightly. It is important to note, however, that such persons were probably subject to habitual offender laws after they had committed two or more felonies. Under these, they might have been sentenced for periods as long as thirty years or life. If they were not, it was because prosecutors chose not to proceed against them under such laws or because sentencing judges relying on the investigation of probation officers, concluded that they were not so dangerous as to warrant extended detention. Even where habitual criminal statutes are not available, the offenders have often committed many offense and prosecutors have either chosen not to charge them for all or judges have imposed sentences to run concurrently rather than consecutively. Finally, if such persons were incarcerated, they were probably released by parole officials who concluded that they could safely be at large. It may be, of course, that prosecutors, sentencing judges and parole boards are exercising their authority unwisely and releasing persons who should be kept in custody. But the remedy is not to imprison the unconvicted offender; it may be to use more effectively the power already existing for dealing with the convicted offender.

The preventive detention proposals seem to be aimed not at the ordinary property offender, the thief or the forger, who makes up some two-thirds of all offenders but rather at the man of violence, the sex offender or the narcotics addict, persons presumably so lacking in self-control that they cannot be relied upon to behave responsibly even when they are subject to bail or other conditions. The narcotics addict is the prime example. His physiological or psychological dependence may be such that he cannot be trusted. For him, in more and more jurisdictions, there are civil commitment procedures, which include provisions for emergency commitment. Similarly, the serious sex offender and the man of uncontrollable violence may be committable under special procedures for commitment of the mentally ill. However disagreeable it may be to think we already have preventive detention procedures, and however reluctant we should be to use them, the fact is they do exist and can be invoked for many of the cases to which publicity has been given.

Perhaps the most important point to be made against the proposal is that the principle of pretrial preventive detention, once legitimated, is likely to develop a life of its own. More and more crimes will be regarded as sufficiently threatening to warrant detention before trial. This will do irreparable harm to the presumption of innocence and to the more concrete interests described earlier. It will, in addition, add materially to already clogged court calendars and an overburdened judicial system as new procedures are created to determine the issue of probable danger and new provisions for appellate review are devised to make preventive detention more palatable. Over time, the result may well be more trial delays, more extended pretrial detention and, eventually, as some of the proposals contemplate, a requirement of release if the trial is not held within a stated period of time. This may lead, in turn, to a condition I have observed in at least one Latin-American country; trials rarely held and preventive detention an entire substitute for post-convention imprisonment.

The criminal law has always had to take into account that the restrictions we place on state power may cost us some measure of protection from danger. In the effort to avoid all danger, the proponents of preventive detention exaggerate what can be predicted about criminality to justify an indiscriminate practice if imprisoning persons whose guilt remains to be proved. Such a course would sacrifice too casually the liberty of too many persons for a negligible increase in public safety. Worse, it may delude us into thinking something substantial is being done to reduce crime.

LEGISLATION TO BENEFIT FEDERAL EMPLOYEES

HON. HOWARD W. POLLOCK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. POLLOCK. Mr. Speaker, today I am introducing a bill which will benefit Federal employees. This legislation will enable them to receive retirement benefits after 30 years of service, regardless of age. It replaces the retirement at 65 plan with a procedure similar to that of our Armed Forces. Prospective employees will no doubt be attracted by the option of retiring early with the chance to pursue a new career or sample leisure activities. Present employees will surely be pleased. In addition, the bill is at-

tuned to the growing need in America to spread employment among the increasing labor force. The proposal is far-sighted in theory as well as immediately beneficial to those affected—two worthwhile objectives for this Congress to pursue.

IMPACTED SCHOOLS

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. BROWN of Ohio. Mr. Speaker, I am personally convinced that the rationale behind the impact aid program is still a sound one and that the Federal Government has an obligation to assist those school districts which educate the children of Federal employees impacting those districts. Today I only want to point out the unique situation which exists in my congressional district, in which Wright-Patterson Air Force Base is located.

My congressional district has the most schools receiving impact aid in the State of Ohio and receives the most impact aid. That aid is for 13,000 "B" students and 162 "A" students, because Wright-Patterson is not a "residence" base. The proposal of the Appropriations Committee would virtually annihilate the school districts surrounding Wright-Patterson. The school districts in the Seventh Ohio District would lose nearly $2.5 million in aid. Although 162 students would be aided, 13,000 would be cut off.

As a friend of the impact aid program, I am constantly reminded of the wealthy suburban Washington school districts and the irony of their Federal subsidies. It is unfortunate that the views of so many must be prejudiced by the location of these districts. The wealthy suburbs around Washington are not typical. Instead I would ask my colleagues to study the figures accompanying this statement which indicate the more typical impacted school—a district with a higher than State average tax rate, a lower than State average tax valuation per pupil, and a lower than State average expenditure per pupil. While Wright-Patterson is atypical among military installations in having little base housing, I feel that this economic picture of the average impacted school is more typical than the economic examples of impacted districts surrounding Washington. The schools in my district are already taxing themselves more heavily to accommodate the nearby military installation, a national burden; I do not think it fair to substantially increase the local burden for a national benefit.

I am shocked by the degree and abruptness of the cutback which the impact request would force. Due to the virtual absence of "A" pupils, the Federal contribution to these schools would drop from 88 percent of entitlement last year to absolutely nothing. Two school districts receive more than 10 percent of their budget from impact aid; several more receive nearly 10 percent from the Federal contribution. To eliminate this assistance, without warning, in 1 year is inconceivable and an orderly adjustment is not possible.

Another question in this connection concerns the congressionally authorized study currently being done by the Battelle Memorial Institute. I fail to understand the logic of killing the program through the budgetary process before the recommendations from that study are available.

Finally, I think that we must remember that the impact aid program is not part of the more recently enacted categorical programs for Federal aid to education. Impact aid is, in my opinion, more like an obligation of the Federal Government—a payment in lieu of taxes. We do not allow local districts to tax the Federal property but we insist upon their educating federally connected pupils. In the Seventh Ohio Congressional District the taxpayers are already tolerating higher tax rates and accepting a lower expenditure per pupil than the State average. I personally cannot rationalize asking them to do more to defray what is a legitimate national expense.

The table referred to follows:

RANKING OF SCHOOL DISTRICTS IN SEVENTH CONGRESSIONAL DISTRICT AMONG ALL DISTRICTS IN STATE, JUNE 196

[647 school districts in the State of Ohio, 1968-69 school year]

	Enrollment	Tax val. pupil	School millage	Total millage	Local tax rev./pupil	State aid per pupil
Beavercreek	42	519	83	112	404	155
Fairborn	30	550	157	81	492	211
Mad River-Greene	180	578	194	250	545	60
Mad River-Montgomery	46	627	90	120	592	9
New Carlisle	64	609	102	108	555	88
Xenia	34	499	142	137	426	154
Yellow Springs	493	284	27	51	114	346

COMPARISON OF TAX RATES OF IMPACTED SCHOOLS IN SEVENTH CONGRESSIONAL DISTRICT WITH STATE AVERAGE

[Based on school year 1968-69—fiscal year 1969]

School district	Operating tax rate (mills)	Bond tax rate (mills)	Total school tax rate (mills)	Tax valuation per pupil	1967-68 school year expenditures per pupil operating	Percent of budget, Public Law 874	Public Law 874 receipts represents (mills)	Enrollment October 1968
Beavercreek	31.00	5.70	36.70	9,096	507	5.5	3.50	7,840
Fairborn	28.20	5.70	33.90	8,367	481	10.0	6.50	9,450
Mad River-Greene	24.70	7.90	32.60	7,631	511	8.7	5.41	3,105
Mad River-Montgomery	28.80	7.73	36.53	5,800	548	14.0	17.50	7,328
New Carlisle	28.30	7.50	35.80	6,598	475	6.4	4.45	6,075

LET US GET SOME ANSWERS ON INTERMODAL OWNERSHIP

HON. BOB ECKHARDT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. ECKHARDT. Mr. Speaker, 10 cents of every dollar of agricultural and industrial production cost in the United States goes for the transportation of freight. No industry can so readily help produce an efficient economy or so quickly become a drag on expansion as the transportation industry. We are living in a time of rapid change when old policies and programs are constantly under review. There is a need for new thinking. George Peterkin, Jr., president of Dixie Carriers, Inc. of Houston, recently delivered a thoughtful paper to the annual meeting of the ICC Practitioners calling for a new drive by the ICC, the Department of Transportation, the Association of American Railroads, and the Water Transport Association to promote improved voluntary coordination or rail and water service. Mr. Peterkin believes that substantial savings in transport costs and, therefore, improvement in productive efficiency for both industry and agriculture would result from improved business cooperation of rail and water carriers. I would like to share the contents of this paper with my fellow Members and submit its introduction into the RECORD:

LET'S GET SOME ANSWERS ON INTERMODAL OWNERSHIP

I would like to add my word of welcome, as a Houstonian, to the ICC Practitioners Association annual meeting in Houston. I hope you have had a chance to see some of the transportation aspects of this city because they have a bearing on the topic of my speech. Here in Houston, perhaps more than any other place in the country, we have an example of what a man-made ship channel and a man-made intracoastal canal can do to help produce not only flourishing barge lines but flourishing railroads and flourishing truck lines and airlines. I think it can be said of Houston that part of our growth, over many years, has been attributable to a high degree of cooperation among the different modes of transportation. There has been a great deal of transportation business to do. In our many different ways, we have cooperated to get it done. And in large measure because of this cooperation the Gulf region is one of the fastest-growing regions in the country.

I would like to stress that point because the advocates of intermodal ownership have to prove that the only way to achieve needed cooperation is through intermodal ownership. I would be the first to say that cooperation could be better in the enlightened self-interest of all. But cooperation and

coordination do exist and more of it would exist, in my view, if a better job of business selling were done by carriers and shippers.

Speaking for myself, I believe with many others that we are in a time of rapid change and that we cannot afford to maintain doctrinaire positions on important issues of transportation policy. At the same time, we cannot afford to overlook the lessons of history. Those who do, as the saying goes, are compelled to relive the rough patches.

The emphasis of my remarks will be directed toward my field of particular knowledge which are the larger tonnage movements and this means in most cases rail and water transportation. Nevertheless the applicability of these thoughts holds true for all modes.

The history of railroad ownership of water carriers is an unhappy one, extremely well-documented and beyond dispute. In view of that history, a case has to be made that conditions have materially changed.

Instead of arbitrarily saying "no" to intermodal ownership, let's try to get some sensible answers to some obvious questions. Too much of the discussion of this subject is on an emotional level. Proponents make their appeals based on the "injustice" created by a law, which they claim now, is obsolete. They never get to the hard core of the issues. The result is that in the seat of decisions there is a failure of belief that conditions have changed or changed enough to risk letting down the bars to intermodal ownership.

The first relevant question should be the easiest to answer. Better coordination of water and rail service means the *substitution* of a water connection for a rail connection or a rail connection for a water connection. Would we see more of it or less of it than we see under today's independent ownership? The most economical use of transport resources on steel pipe shipped from the Pittsburgh district into the Southwest would be by barge to Memphis or Houston and rail beyond. Barge would be substituted for hundreds of rail miles if the public interest in the most economical use of transport resources were to govern. Up on the Great Lakes, for example, cost studies have shown that modern self-unloaders can transport coal so cheaply that a substitution of boat service even for so short a distance as 40 to 60 miles of rail service produces a lower overall cost, including all the costs of transfer to the vessel. Would that rail-lake route be preferred under common ownership?

There is a failure of belief among shippers and others that it would be and that the public would achieve the lowest possible cost transport service.

The second question is more complex. Would super-concentration of industry, which Mr. Nixon's Attorney General has said is a "danger" to "our economic, political and social structure," be stimulated if railroads went intermodal? Six railroads are now among the top 100 largest corporations in the country. The Attorney General's interest is in the top 200. Would railroad economic power become so overwhelming as to stifle transportation competition? Would transport pricing to all intents and purposes become administered or dictated by a few of the largest companies? That could, of course, be very good for the stockholders of intermodal companies, but could also serve to injure the public interest rather than enhance it as claimed by proponents of intermodal companies. The railroad merger trend, approved by the ICC, has clearly been disturbing to the Justice Department. The Canadian experience is often cited as an argument for the benefits of common ownership. The Canadian Pacific Railroad owns water and truck subsidiaries. But it seems to me, that the CPR is also the most compelling argument against common ownership. Only the Canadian Government is big enough to compete with it. It operates, at a substantial loss, the Canadian National Railway, which is, or at least is intended to be, a yardstick for the CPR.

Super-concentration of power in transportation already exists. There is a failure of belief that more of it would be in the public interest.

The third question has to do with the chronic shortage of capital in the railroad industry. From an insufficient stock of capital, would the railroad managements starve or foster an intermodal subsidiary? In the early 1970's very substantial investment will be required by the barge industry to re-equip itself with larger barges and more powerful towboats to take advantage of the completion of a 12-foot channel from Cairo, Illinois to New Orleans. In addition, the gross national product is expanding rapidly and substantial new investment will be needed to keep pace with public requirements for expanded and improved capacity? Would the barge shipper be better off relying on independent management to raise the capital required for change and expansion or would he be better off trying to get a proper priority from the railroad store of capital?

There is a failure of belief that water carrier subsidiaries of railroads would be able to command an appropriate share of the already insufficient capital resources of the railroads.

The fourth question relates to the structure of the barge industry. There are half a dozen barge lines with broad certificates of convenience and necessity to handle regulated products. There are many more than half a dozen railroads who would want to own barge lines if the bars were let down. So, overnight, if the present laws were changed, there would be a fantastic sellers' market in barge lines and all the major barge lines would probably be owned by railroads in very short order. How then would competition work?

Barge-rail competition over the past several decades has led to very substantial rail rate reductions, often reductions on the order of 50 per cent. Would a rail-dominated barge industry continue to produce reductions "to meet water competition?" There is a failure of belief that it would and the very thought that it would is ludicrous.

These, I think, are the questions which need some candid answers. Until satisfactory answers are supplied, I believe any proposal to charge the present state of the law is going to be met with understandable skepticism.

I do think, however, that a considerable change of climate could be achieved over a few years if the railroads would, by concrete action, demonstrate the seriousness of their interest in achieving improved coordination of intermodal service. What is most needed is a good faith showing by the railroads through their use of the voluntary means which lie at hand to bring about such improved coordination.

Many, and perhaps all the benefits claimed for intermodal ownership can be achieved and, in our view, much more appropriately achieved, through voluntary coordination without any of the risks of diminishing competition so obvious to everyone.

Our trade association, the Water Transport Association of New York, has been busy for the past year or more with a campaign to improve intermodal relationships. We take the view that the historic reluctance of the railroads to join with water carriers may well be based on assumptions which are no longer relevant. One cannot, of course, expect overnight success in a field where feet have been firmly set in cement for decades.

We have attacked the problem movement by movement. Our research has indicated a number of "willing partner" arrangements where higher earnings could be achieved by the railroad and the water carrier and lower overall costs made available to the public by joining the most efficient water service with the most efficient rail service.

We have been able to demonstrate savings in utilization of rail equipment, savings from new investment in transloading operations, savings from substituting water for certain portions of a rail haul.

We proposed to a joint meeting of the Traffic Executive Association—Eastern Railroads, the Executive Committee—Western Railroad Traffic Association and the Southern Freight Association last year that we jointly sponsor an intermodal rate bureau. We had a very cordial joint response. The idea was not acceptable at that time, but the railroad industry, the joint letter said, "desires to maintain an atmosphere of cordiality so that if situations arise in which closer coordination appears to be in the interest of two or more modes, there will be no obstacles to full exploration of the matter."

You might call that a polite brushoff. But ideas of this kind are not sold instantly. In the meantime, our "willing partner" program has achieved some new joint rail-barge rates and represents a focus around which to organize some new thinking. We have a considerable number of new ideas for joint rail-water service under study. The basic principle underlying this whole program is to achieve movements which make sound business sense for the railroads and ourselves as well as producing benefits for the shipping public.

We think there is great potential for improved water-rail coordination which would result in increased earnings for all modes, more efficient use of transport resources and savings to the public. Some of our water-rail studies have shown savings in the 15 to 30 per cent range.

Until there are better answers than now exist for the questions I have posed above, it makes sense to continue to promote the voluntary route. I am convinced that enlightened business self-interest will more quickly produce the desired results of efficient use of resources and low costs under independent ownership than through the creation of the intermodal super-giants. It has been said that by 1980 we will all be parts of intermodal companies. This may well be so, but if we run before we walk, if we upset the law before we upset entrenched prejudices on traffic movements, we may well end up in 1987 with a new Interstate Commerce Act designed to undo the damage created by the extinction of effective competition.

Instead of weakening the competitive process by absorbing competitors, why not try to get an objective new look at the great potential of voluntary cooperation? Perhaps the Department of Transportation or the ICC could work with the Water Transport Association and the Association of American Railroads on a national "willing partner" program to dig out those movements which would benefit from improved coordination, using as a basic yardstick the most efficient combinations of scarce transport resources. And if the earnings to the carriers and benefits to the public on particular movements are satisfactory for all, the question, overwhelming and unanswerable, will quickly become "why not?"

IT IS 1969, TIME TO "GO WEST (AGAIN) YOUNG MAN, GO WEST"

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. BARING. Mr. Speaker, a columnist in Las Vegas has saved me a lot of

time by writing about Las Vegas. I will bet, Mr. Speaker, that my staff and I must get 25 to 50 questions any given week, either by phone or in person, about Las Vegas and Nevada. Well, I will insert into the CONGRESSIONAL RECORD a column published in Mr. Hank Greenspun's Las Vegas Sun by columnist Mr. Paul Price.

I also hope some of the Senators on the eastern coast of this country read this closely and should they have further questions, I can answer them by mail or refer them to organizations within my State.

Mr. Speaker, here is Las Vegas, thanks mostly to the research of the Greater Las Vegas Chamber of Commerce and the Bank of Nevada quarterly reports:

DATELINE: LAS VEGAS

(By Paul Price)

(Note.—The following facts, figures and fascinating information were compiled from information provided by the Greater Las Vegas Chamber of Commerce and Bank of Nevada quarterly reports.)

The Las Vegas story, and you probably didn't know the half of it:

The original settlers of Las Vegas were not Mormons (surprised already?) but "massive prehistoric beasts that rumbled through the Las Vegas Valley, then a lush pasture land veined by sweetwater streams."

That was nearly 30,000 years ago and Las Vegas still remains a lush land but the greenery comes from flowing money and not growing grass. The inhabitants now are mostly human beings, practically all of them civilized although a few monsters still are present.

Time advanced and man-tribes, increasingly efficient and more intelligent as the ages passed, developed a pattern of growth and development that has never ceased and apparently never will.

The modern era of the one "lush valley" started with the early exploitation of Capt. John C. Fremont, noted explorer of the Rockies and the Pacific Coast. He discovered "a camping ground called Las Vegas" and we have named a street, hotel and school in his honor.

It was 10 years later, 1855, that Brigham Young sent a daring band of 30 Mormon settlers from Salt Lake to take a foothold and start developing the lands. They "established only the most meager hold on the valley" before the resident Paiute Indians banished them.

Suddenly some unknown and now long forgotten prospectors discovered gold and silver in the area. Word of the strikes flashed across the continent and the massive population boom erupted. Miners, prospectors, "take-a-chancers" and camp followers literally flowed into Nevada and spawned the boom towns of Searchlight, Goodsprings and Eldorado Canyon.

Vegas was a dusty tent town near the present Union Pacific depot and suddenly was turned into a desert metropolis when the railroad named it a division point. Land sales zoomed and in a two-day auction 1,200 residential lots sold for $265,000.

That was in 1905 and the combined worth of those properties probably would be incalculable today.

Then came the doldrums. Nothing much happened and the little town slumbered, sweated and mostly existed until 1930 when the Hoover Dam hydroelectric project began.

Las Vegas started to leap forward, even in those grim days of depression, and the pace was accelerated with the outbreak of World War II. Cheap power and land, according to the Chamber of Commerce, brought "thousands of new residents, among them the far-sighted individuals who envisioned the area as a year-round resort . . . and the era of the multi-million dollar hotel was born."

It was a case of boom-boom-boom from the late 1940s until today and nobody truly knows what the future holds—except more of the same and on a greater scale.

The chamber waxes lyrical indeed in its dreams of the future:

"It has become a growing industrial complex; a sophisticated scientific research center; a humming dynamo generating power for the Great Southwest, and one of the most aviation-oriented cities in the country where the sky is by no means the limit."

It also happens to be the greatest gambling and entertainment city in the entire world, and that may help a little.

What about Las Vegas today?

We currently have a population of nearly 300,000 in the greater Las Vegas area, of which 160,000 is credited to the city. This is an increase of approximately 18,000 over the same period of 1968.

Latest figures as compiled by the Bank of Nevada in its "First Quarter, 1969" report the following:

School enrollment figures, "a significant growth barometer," was 67,576 enrollees compared to 63,242 in 1968—up 6.8 per cent.

McCarran International Airport posted a record high in first quarter air travel with a "passenger service" of 965,519—up 172,950 for an increase of 21.8 per cent.

Central Telephone reported total services of 151,896, compared to 135,760—up 11.8 per cent over 1968.

There were 1,191 births in Clark County in the first three months of this year. The total labor force was 113,300, with only 5,700 unemployed. Service stations pumped 30,604,464 gallons of gas and 10,306 marriage licenses were issued.

Construction permits gained impressively in the first quarter of 1969. The aggregate total was $32,615,480, compared to $18,808,599 last year. That's a gain of 73.4 per cent!

Visitors are the number one factor in the Las Vegas economy. More than 3,522,000 passengers, "on and off," passed through McCarran in 1968—a figure that will be humbled this year.

A major attraction continues to be Hoover Dam, which attracted 8,878,040 visitors last year, most of them in 2,690,315 cars. That figure also is a cinch to tumble because in the first quarter of '69 alone, the Hoover Dam check reported 1,828,125 persons in 553,977 vehicles.

Real estate transactions were stupendous in 1968 and promise to be even more impressive this year.

Estimated real estate sales last year totalled $257,608,000 with $306,752,515 the total loan figure and 8,810 trust deeds recorded.

But in the first quarter this year, $70,412,000 already had been recorded in estimated sales. The loan figure was $92,957,680.

Where will it end? Who can hazard a guess?

This is a prosperous economy. Four of the five local banks—Bank of Nevada, Nevada State Bank, First National and Bank of Las Vegas—listed deposits of $447,281,194.

Compare this figure with the previous year—$381,941,948. It represents a whopping boost of 17.1 per cent.

Bank debits, considered an important economic barometer, increased last year by 18.9 per cent.

Following is some more incidental information:

Lake Mead is the largest man-made lake in the world and offers 550 miles "of secluded beaches and sandy coves."

There are approximately 150 churches in Las Vegas, representing a total of 35 different denominations. A percentage breakdown shows 49 per cent of the churchgoers to be Protestant; 25 per cent Roman Catholic; 22 per cent Mormon; and three per cent Jewish.

Conventions drew 206,709 persons to Clark County last year. Sales and use tax transactions totalled $525,349,351. Water consumption totalled 17,906,545,000 gallons.

The average maximum temperature is 79.7 degrees and the average minimum 52.4 with 3.72 inches of precipitation and 86 per cent possibility of sunshine.

The city is 289 miles from Los Angeles, 448 miles from Reno, 578 miles from San Francisco and 1,157 miles from Seattle.

Nevada has a three per cent sales tax, but under the optional sales tax law passed at the last Legislature the rate on July 1 will go to 3½ per cent in Clark County.

There is no inheritance or estate tax.

The city has two daily newspapers, five TV channels (one educational), six modern hospitals, 10 championship golf courses, 4,500 public, private and semi-private swimming pools and is serviced by eight major airlines, seven bus lines, the Union Pacific Railroad and about 500 taxis.

The next time the folks in Dubuque ask, "What kind of town is Las Vegas?" send them this column.

It will save you a lot of trouble and time.

So, Mr. Speaker, I hope my colleagues and their staffs will read this pretty closely. Because, you see, I represent the entire State of Nevada and quite happily so. Nevada's population is not certified by the U.S. Census Bureau as being over the so-called 500,000 mark, so I do not have as large a staff as some of my colleagues. And, we just do not have enough time to answer everyone's questions adequately in person or on the phone. Hopefully, they will read this and, if they want more, I will be glad to answer their letters requesting more facts or forward them to the Las Vegas Chamber of Commerce, Nevada Resort Hotel Association, or the State of Nevada, Carson City, or elsewhere, because we have the facts of Las Vegas, Reno, Lake Tahoe, and even Beowawe, Nev., and we have them in spades. Do not phone—write. Our phones may be tapped.

THE ECONOMICS OF STUDENT UNREST

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MIKVA. Mr. Speaker, I would like to insert in the RECORD an interesting and intelligent artice by Mr. David Bakan of York University on the subject of student disorders.

Mr. Bakan's article is especially important because it gives this problem the attention it deserves. The article is not an attempt at a superficial "solution" of the problem through annihilation of protest, but a plea on behalf of the students that we listen to and understand their message.

We live in an era in which man has become locked in the powerful grip of his frightening inventions. As Mr. Bakan says, we can ill afford to overlook the potentialities of these inventions and the uses to which they are put. It is just this point which the students, through their protests, are attempting to make. It is

the young who have the greatest stake in the future. Let us heed, not suppress, their voices.

The article follows:

THE ECONOMICS OF STUDENT UNREST

(By David Bakan)

The worldwide condition of student unrest may be better understood in economic terms. It is erroneous to interpret student unrest as merely an expression of youthful idealism or mischievousness. It is erroneous to think of the activists as separate, divided from other students, and possessed of some private problem or ideology. Every group within a social body expresses something about the social body as a whole.

The root problem is in careers and income, and the place in society that is associated with careers and income. Student unrest may be compared to labor unrest of some decades ago. As the root problem was economic with labor, so is it now with the students.

The unrest is based on the fact that formal education has become very important to the economic future of students. Thus, students are rightly more ready to object if the education they receive is less adequate than their wishes or expectations.

Resources expended for education by a student, his parents, and public and private agencies, constitute a very large investment. A student, young though he may be, has a deep interest in seeing to it that this investment is properly managed. It is difficult to assess the average dollar value of each year of formal education. Yet, it is considerable.

Momentarily setting aside considerations of simple dignity associated with being human, a young person of college years may represent a total investment of, perhaps, as much as $50,000 or even $100,000; having received the benefit of public and private cash outlays for protection, food, clothing, shelter, pre-natal, and post-natal medical attention, dental attention, recreation, entertainment, and informal and formal religious and secular education for, say, about twenty years. This is in addition to all of the unpaid love and care associated with his upbringing. The college student, over and above all idealistic and selfish considerations, is a custodian of a substantial amount of the society's treasure. He is at once beneficiary, vessel, and custodian. It is his responsibility to provide for the future of that treasure, which is what his career represents to a very large degree. It is not only his right to protest if his education is in any way inadequate, it is his responsibility.

The university has become the major gateway to virtually every rewarding and important career possibility. The question is how the passage and processing in that gateway shall be managed. What kinds of educational experiences shall be provided, and for what kind of a future? And how shall we guarantee that access to careers will be managed with justice and competence? The wish on the part of the student activists to have a greater hand in the management of the gateway is indicative of discontent with the way in which the gateway has been managed.

Certainly, one cannot, in one's nonage, know whether the education one is receiving is shabby. Yet, on the other hand, who should know so well whether it is shabby as those for whom school is a daily and lifetime experience? Since we keep students in school well past their nonage, we should be obliged to take their assessments to heart.

Some of the best students—from an academic point of view—are among the activists. Berkeley, Chicago and Harvard have been main loci for student protest. There may be no universities in the world which have higher admission standards then these. Their activism is based on a wisdom, unclear and unprecise perhaps, of the unrealized potential of the university for themselves and others in the world of the future.

Among the great issues in education today is that between *technological* and *humanistic* approaches to the problems that beset mankind. The war in Vietnam is a special instance of this conflict, since warfare in general, and this war in particular, is a kind of supreme instance of efforts to solve the problems of mankind technologically rather than humanistically.

Students today tend to be more humanistically oriented than their professors. There is, for example, the characteristic disappointment of sudents with their first course in psychology because it is usually more technological and less humanistic than they would have liked it to be. The activists in particular tend to be more humanistically inclined than students who are less inclined to activism.

Typically, salaries and total professional incomes of professors who are technologically oriented are higher than those of their humanistic colleagues. Typically, the former are better supported in their research, more excused from teaching duties, more often called upon to give advice to business, industry and government, and have greater access to publication sources. Indeed, discussions of the "publish or perish game," into which professors are forced, characteristically overlook the fact that it is simply easier to publish a technological manuscript than a humanistic one. Publication pressure on faculty is—even if not intended—a subtle but powerful device that channels faculty interests in technological directions because publication of technological papers is easier.

Since the balance of power within most faculties is on the side of the technological, humanistically inclined students are often on their own, as it were, with little, if any, faculty support.

At issue is whether the resources of the future, and hence careers for students, will move in technological or humanistic directions. Most concretely, how will public moneys be distributed in the future between technological and humanistic activities? And how will public moneys be used to create career opportunities? If public budgets move more in technological directions, the humanistically inclined students will suffer with respect to career possibilities, and vice versa.

The future of mankind is being fought out on the campuses. If we take the biblical three score and ten as a lifetime, the twenty year old has fifty years with which to be concerned for both his selfish and altruistic interests. In a time when total destruction of the world is a concrete possibility everyone's selfishness and altruism must converge.

Humanistic education is desperately needed at the present time for all. The three main problems of man are *want, drudgery,* and *safety.* "In principle," technology has solved the problems of want and drudgery. It remains for men to learn to live properly with each other to achieve "in fact" what technology has given to us "in principle." Technology without adequate humanism often leads to reductions in safety as from war, pollution, radiation, and poisons. More humanistic work and education are needed to cope with these.

It has been a common complaint among teachers that students do not want to learn. Today we hear from the students that the teachers do not want to teach.

It has been a common complaint among teachers that students don't listen. It is now time that teachers, and the age groups that they represent, should listen.

Those who are closer to three score and ten may have a smaller vested interest in the future, and can afford to be cavalier about it. But those who are young cannot afford to neglect the future that easily.

DESERVED TRIBUTE

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MCDADE. Mr. Speaker, on the 22d of July, the chamber of commerce of Scranton, Pa., honored Dr. H. Meecher Charmbury, secretary of mines and minerals, at a special luncheon held in his honor.

I wish to take public note of how deserving that tribute was. Dr. Charmbury is the finest secretary of mine and mineral industries the Commonwealth of Pennsylvania has ever had. Over the past several years, we have turned to Dr. Charmbury to give his advice and assistance in the many problems which have faced us in the Commonwealth of Pennsylvania overall, but particularly in my own Congressional district. His advice has been the wisest possible. His help has been the strongest possible.

Too often the misconduct of a public official is bruited about the Nation. Too seldom is there any publicity given to the overwhelming body of splendid civil servants who are responsible for running the Nation and the States. Dr. Charmbury is an outstanding example of what a fine civil servant should be. He is a brilliant scientist. He is certainly the most distinguished and industrious man you could find anywhere in this Nation. Above all, he has that deep understanding and human compasson to guide him in making his wise decisions.

I wish to pay my own personal tribute to Dr. Charmbury. I know that the Speaker and all my colleagues here in the Congress join with me in applauding this distinguished servant of the people. If we were to tally up the work and the worth of every public servant in America, I know no man who would excel my fine and splendid friend, Dr. H. Beecher Charmbury.

With your permission, Mr. Speaker, I will append herewith an article from the Scranton Tribune concerning this award and two editorials from the Scranton Tribune and the Scranton Times, which newspapers paid their own tribute to this magnificent man.

The article and editorials follow:

[From the Scranton (Pa.) Tribune, July 23, 1969]

CHAMBER OF COMMERCE FETES CHARMBURY—SERVICE TO AREA IS RECOGNIZED

At a special meeting Tuesday at Scranton Club, the Chamber of Commerce honored Dr. H. Beecher Charmbury, secretary of Mines and Mineral Industry at a luncheon.

C of C president William J. O'Hora cited exceptional service in the development of the Scranton area, and presented Dr. Charmbury with a recognition award for his interest and participation in the Scranton Scar-Lifting projects, the flushing of underground mine fires, and for his participation in a program to employ crush culm to fill in the voids under the city surface.

Representing the federal and state mining department were: Joseph Corgan, U.S. Bureau of Mines; Charles Kuebler, head of the U.S. mining office in Wilkes-Barre; Gordon Smith, deputy secretary anthracite

region, and Roger Howell, Pennsylvania Department of Mines.

The C of C gave the Bureau of Mines expert a special VIP attache case containing samples of industrial material manufactured within the Greater Scranton area. The C of C officials stated the products were manufactured locally by national corporate concerns due to the interest and involvement of the U.S. and Pennsylvania Department of Mines and Mineral Industries and especially the interest of Dr. Charmbury.

President O'Hora explained "The excellent cooperation between the local Industrial Development Corporations, SIDCo., LIFE, SLIBCo and the Pennsylvania Department of Mines under Dr. Charmbury's supervision was a most important factor in the industrial development of the Greater Scranton area and all former anthracite mining areas in Northeastern Pennsylvania."

In 1936 Dr. Charmbury received his B.A. degree in chemistry, cum laude, from Gettysburg College, and his master's degree in chemistry from Pennsylvania University the following year. He was awarded his Ph. D. degree in fuel technology from Pennsylvania State University in 1942.

Dr. Charmbury received an honorary doctor of science degree from Gettysburg June 9, 1969. The degree citation read in part:

"In the service of the commonwealth, you have brought your skill to bear on the problems of underground fires, strip mining and polluted air. You lead us to hope for a bright future for the commonwealth and its underground."

[From the Scranton (Pa.) Times, July 23, 1969]

A DESERVED AWARD

The honor paid Dr. H. Beecher Charmbury, head of the Pennsylvania Department of Mines and Mineral Industries, yesterday by the Greater Scranton Chamber of Commerce was one richly deserved. From the time that he was named to his position by former Gov. William Scranton in 1963 Dr. Charmbury has shown a keen awareness of the ills bequeathed to our community by coal operators of the past—surface subsidences, mine flooding, underground fires, burning culm banks and the like. He has been sympathetic and cooperative. He has been generous with his time and his energy in trying to solve our problems. The C of C at yesterday's ceremony presented Dr. Charmbury with a "recognition award"; the word "appreciation" could well be added.

[From the Scranton (Pa.) Tribune, July 24, 1969]

DESERVED TRIBUTE

Dr. H. Beecher Charmbury, state secretary of mines and mineral industries, was most deserving of the tribute paid him Tuesday by the Greater Scranton Chamber of Commerce. Dr. Charmbury was cited for exceptional service in the development of the Scranton area.

He received a recognition award for his interest and participation in the Scranton Scar-Lifting projects, the attack on underground mine fires and for his participation in a program to employ crushed culm to fill in the voids under the city's surface.

Dr. Charmbury, following his appointment to the state post by former Gov. William W. Scranton, became Harrisburg's best known representatives in the Scranton area. He has made countless trips to Northeastern Pennsylvania and his demeanor seldom changes—he is cool under pressure, extremely cooperative with newsmen and highly competent in his job.

Protesters prepared to find Dr. Charmbury a ready target for their wrath over ancient coal mining practices mellowed rapidly once its members came to know the man. He owns the disarming personality of a college professor, which he was before he answered the call from Governor Scranton.

He holds a B.A. degree in chemistry from Gettysburg and a master's degree in chemistry from Pennsylvania State University. He was awarded his Ph. D. in fuel technology from Pennsylvania State University in 1942.

The praise from the Greater Scranton Chamber of Commerce was a confirmation of the citation Dr. Charmbury received when he was awarded an honorary doctor of science degree from Gettysburg last June 9. The citation read in part: "In the service of the commonwealth, you have brought your skill to bear on the problems of underground fires, strip mining and polluted air. You lead us to hope for a bright future for the commonwealth and its underground."

It is significant that the U.S. Bureau of Mines detailed a representative to attend the C of C ceremony.

Close cooperation between federal and state agencies has resulted in the winning of the battle to remove coal mining scars from the terrain in the Scranton area.

REVENUE SHARING MORE URGENT THAN EVER

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. COUGHLIN. Mr. Speaker, on June 3, I, along with 10 of my colleagues, introduced the Federal Revenue-Sharing Act, H.R. 11868.

The need for this legislation obviously is more urgent than ever. There is no doubt that many of our State and local governments are about to collapse financially because of their inability to raise the necessary funds from the restricted and limited areas of taxation available to them.

We must seek ways to enlarge and reinforce the fiscal foundations of these governments, and I believe H.R. 11868 is the vehicle that will provide the means to do the job.

Since the introduction of this bill, I have received numerous inquiries from both my colleagues and the public concerning the specific amounts that would be returned, under the provisions of the bill, to the various States.

I, therefore, asked the Legislative Reference Service to tabulate the returns on the basis that the funds available in the first year, as provided in the bill, would be 3 percent of the Federal income tax revenues, or $2.42 billion, according to the latest figures.

The LRS has done a magnificent job of research, and I include its breakdown of Federal revenue-sharing figures in the RECORD for the benefit of all those who wish to see this legislation enacted into law. The figures were compiled by Maureen McBreen, analyst in taxation and fiscal policy, and Beatrice D. Poindexter, reference clerk, Economics Division, of the Legislative Reference Service:

ESTIMATED DISTRIBUTION BY STATE OF $2.42 BILLION UNDER H.R. 11868

(1) State	(2) Total resident population, July 1, 1968 (thousands)	(3) State population, as a percent of total U.S. population	(4) State and local revenue from own sources, fiscal year 1967 (millions)	(5) Adjusted gross income, calendar year 1966 (millions)	(6) State revenue effort factor (col. 4÷col. 5)	(7) State revenue effort percentage (col. 6÷16.3)	(8) Col. 3× col. 7	(9) Unadjusted [1] State allotment (col. 8×$2.42 billion (thousands)	(10) Col. 9× .388484 percent [1] (thousands)	(11) Total State allotment [1] (col. 9—col. 10) (thousands)	(12) Local revenues as a percent of total State-local revenues	(13) Amount to be allocated to local governments (col. 11× col. 12) (thousands)
Alabama	3,558	1.78	$914.1	$5,611.6	16.3	100.0	1.78	$43,076	$167	$42,909	37.7	$76,177

Footnotes at end of article.

ESTIMATED DISTRIBUTION BY STATE OF $2.42 BILLION UNDER H.R. 11868—Continued

(1) State	(2) Total resident population, July 1, 1968 (thousands)	(3) State population, as a percent of total U.S. population	(4) State and local revenue from own sources, fiscal year 1967 (millions)	(5) Adjusted gross income, calendar year 1966 (millions)	(6) State revenue effort factor (col. 4÷col. 5)	(7) State revenue effort percentage (col. 6÷16.3)	(8) Col. 3×col. 7	(9) Unadjusted [1] State allotment (col. 8×$2.42 billion (thousands)	(10) Col. 9×.388484 percent [1] (thousands)	(11) Total State allotment [1] (col. 9—col. 10) (thousands)	(12) Local revenues as a percent of total State-local revenues	(13) Amount to be allocated to local governments (col. 11×col. 12) (thousands)

Virginia	4,595	2.29	1,343.8	9,457.3	14.2	87.1	1.99	48,158	187	47,971	42.8	20,532
Washington	3,276	1.63	1,419.5	8,102.4	17.5	107.4	1.75	42,350	165	42,185	37.2	15,693
West Virginia	1,802	.90	503.6	3,150.0	16.0	98.2	.88	21,296	83	21,213	34.3	7,276
Wisconsin	4,221	2.11	1,781.7	10,075.3	17.7	108.6	2.29	55,418	215	55,203	40.5	22,357
Wyoming	315	.15	158.8	674.4	23.5	144.2	.22	5,324	21	5,303	49.6	2,630
Total	199,861	100,000	76,121.4	467,271.8	[2] 16.3	100.0	100.39	2,429,438	9,438	2,420,000	[2] 49.2	1,190,537

[1] It was necessary to take a number of additional steps to arrive at the final distribution. By multiplying col. 3 (State population percentage) by col. 7 (State revenue effort percentage) by the $2.42 billion available for allotment, it was impossible to arrive at a total distribution which coincided with the $2.42 billion. In this case, the total unadjusted State distribution (col. 9) amounted to $2,429,438,000, or $9,438,000 more than the $2.42 billion available for allocation. Th is $9,438,000 represented 0.388484 percent of the $2,429,438,000 derived. We then multiplied this factor (0.388484 percent) by each State's unadjusted allotment (col. 9) and subtracted the result (col. 10) from the unadjusted State allotment and arrived at the adjusted State distribution given in col. 11.

[2] Average.

MARTY LIQUORI

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. RODINO. Mr. Speaker, Cedar Grove, N.J., has every right to be very, very proud of their hometown boy, Marty Liquori, Jr., who as a 20-year-old student at Villanova has been recently beating the world's best milers.

An article concerning this young man's father follows:

FATHER OF PREMIER MILER HUMBLE ABOUT ACHIEVEMENTS

(By Don McKee)

A normal reaction to the comment, "If you think I'm fast, you ought to see my son," is "Oh, yeah, so what else is new?"

But when a Montclair service station dealer says it, he means it and in duplicate, too, since he is the father of the world's foremost miler as well as a 14-year-old, an Essex Catholic freshman who turned in better half-mile times than his brother at that stage.

And yet, Martin Liquori Sr. of Cedar Grove, who operates the Mountain Esso Service at 146 Valley Rd., admits, "Yes, the boy is good, isn't he?"

The boy is Marty Liquori Jr., a 20-year-old student at Villanova, a junior, who within the past year has emerged as the number one miler.

Young Marty obviously has a number of good racing years ahead of him, and the day may come when the results of a mile run will be announced in the following manner: First, Liquori, Second, Liquori.

Waiting in the wings for his chance to carve a niche for himself in track annals is 14-year-old Stephen Liquori, Marty's brother, Steve, as a freshman this past season at Essex Catholic High School was timed in 2:07 for the half-mile and has broken 5 minutes in the mile.

Louis Liquori of Bloomfield, the 74-year-old grandfather of the boys, maintains a keen interest in the racing activities of Marty and Steve. In the 1920's he ran cross country in New Brunswick.

Martin, Sr., Who was born and raised in Bloomfield, gave track a try at Sacred Heart School in Bloomfield under the tutelage of Johnny Gibson. However, when he matriculated at Bloomfield High School, from which he was graduated in 1947, he devoted much of his energies to working afternoons as a delivery boy for a typesetting outfit.

Following his graduation and the abandonment of plans revealed in the senior yearbook to follow a career as an FBI agent, Martin Sr. obtained a job with the former Lindsley Chevrolet Agency in Montclair. He became parts manager.

Between 1952 and 1966 he was assistant plant manager for an envelope company in New York City.

He assumed the operation of Mountain Esso Service here three years ago.

Martin Sr. is married to the former Sarah Tosone of Montclair, whose brother, James, operates an electrical contracting business just a stone's throw from his brother-in-law's service station, Mrs. Liquori was graduated from Montclair High School in 1947.

Members of the Liquori family have journeyed far and wide to see their son run, including a visit to Mexico last year for the Olympic Games. Several years ago they traveled to California to see a group of meets, in one of which Marty bested Dave Patrick. In the meet after they left, Marty broke the 4-minute mark.

Essex Catholic High School Coach Fred Dwyer, a former outstanding miler in his own right, and Villanova Coach "Jumbo" Elliott received much praise from Martin, Sr.

Two very avid rooters in the Liquori family are the boys' sisters, Lynn Ann, who attends East Orange Catholic High School, and Genevieve, a student at St. Catherine's School in Cedar Grove.

Another rooter is Joseph Liquori of Bloomfield, the proud uncle, described by Martin Sr. as "one of my key men here at the station."

Although Martin Liquori Sr. understandably is mighty, mighty proud of the cinder exploits of his sons, notwithstanding the successes he remains a very humble man, which is as it should be for one who is affiliated with the Humble Oil & Refining Company.

VALLEY FORGE SITE OF ARCHERY COMPETITION

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. COUGHLIN. Mr. Speaker, the House and Senate have provided that the period from August 26, 1969, through

September 1, 1969, be designated as "National Archery Week" in tribute to the increasingly popular sport of archery among Americans of all ages.

I am pleased to note that the site of this competition will be Valley Forge State Park, Montgomery County, Pa., in the 13th Congressional District. Valley Forge, of course, occupies a place in American history without parallel. It serves as a magnificent park where people can visit the encampment and battlements where George Washington and his Continental troops endured untold hardships to forge the mettle of a fledgling nation.

In addition to its historical attributes, Valley Forge provides excellent facilities for events such as the 85th national archery championships scheduled from August 21 to August 24. Prior to this competition, the world archery championships will be conducted there from August 13 to August 20 with competitors from some 30 nations taking part.

Valley Forge State Park is fascinating and beautiful anytime of the year, but it will be an especially interesting place this August for visitors.

A MESSAGE FOR OUR YOUTH

HON. PETER N. KYROS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. KYROS. Mr. Speaker, Maine's Church World publication recently contained a fine article by a fine individual, James Page of Portland. Jim Page is a decorated veteran of World War II and the Korean war, and he continues, through his work, to show his dedication to our Nation. He is an adviser to the Diocesan Committee for Youth Activities, and has written a column which is of special relevance to our young people. While Mr. Page's remarks were originally directed to members of the Catholic faith, I feel that they are of equal importance to all persons, and I welcome this opportunity to bring these patriotic words to the attention of my colleagues:

PATRIOTISM AND YOUR COUNTRY

(By Jim Page)

The United States of America is not yet two hundred years old but it has become the recognized leader of the nations of the world. This mantle of leadership came to us with the advent of World War II. The nations of the world now look to your country for aid, guidance and protection.

Your country must now make world shattering decisions within moments and very often these decisions determine the survival of the entire earth. Thousands of young Americans are resting forever in the soil of a foreign land, victims for world freedom.

The past few years have brought about a decline in Patriotism among the teenage and young adult groups. Flag waving is "squaresville" and the "in thing" is to rip, tear, walk and spit on the American Flag.

No other nation on the face of the earth has been as richly endowed by God as this country. No other nation has given so freely of its natural and manufactured resources, no nation has offered so many of her youth as a blood sacrifice in the defense of others.

Now, more than ever, is the time to support and defend this country. There are enough people trying to tear us down. You would not think of denying your Catholic Faith; so, why would you desecrate the flag of your country? They go hand in hand, the Cross of Christ, the symbol of your Faith, and Old Glory the symbol of your America.

Soon you members of the CYO will be entering the adult world and in a few years you will become the "establishment." You will then realize that two things will sustain You, belief in God and love of Country.

I urge you to never apologize for your country to anyone. We are not perfect but, there is not a nation in the world that does not look upon us with either envy or respect. Take the opportunity to travel across this blessed land and see for yourselves what God has given you.

Soon the torch of freedom will be passed on to you. You will be expected to keep it burning bright for all the world to see. Young men, you may be called upon to defend your country. Will you run away from her or will you defend her?

Perhaps, in your greater wisdom, you may be able in the future to sit at the council tables of the world, and with the help of Almighty God you may be able to create a new world where the teachings of Christ prevail and lasting world peace will be enjoyed by all.

The future of this country is in your hands. Are you worthy of the task which will soon be yours? You can start by telling the world what is right with America. You can begin by respecting your Flag at every opportunity because the Flag is You.

Let it never be said that it was your generation which allowed the fires of freedom to die and plunged the world into slavery and darkness. Be a Square, wave the Flag.

BRIG. GEN. ROBERT E. LEE, USAF

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. CORMAN. Mr. Speaker, we in the Congress enact laws. We depend, however, upon other men in the executive branch to produce the results we intend. Thus, we may conclude that the most adroitly drafted legislation, blessed with the most clearly expressed intent, and colored by our deepest concern will fail of its objective in the absence of the will to carry out its provisions with intelligence and understanding. It is always extremely satisfying to find an individual who has carefully and accurately interpreted the congressional intent, and then gone "all out" to implement the legislation.

As chairman of the Subcommittee on Government Procurement of the House Select Committee on Small Business, it has been my distinct privilege and pleasure to observe at firsthand an individual whose intelligent and vigorous implementation of the Small Business Act has made a major contribution to the betterment of the small business community.

I speak of Brig. Gen. Robert E. Lee, USAF, who, for the past 3 years has been the executive director, Procurement and Production of the Defense Supply Agency. In this capacity, he has been personally involved on a daily basis with problems vitally affecting small firms doing business with the Department of Defense. As you know, the Defense Supply Agency purchases for the military services the common items of supply, such as food, clothing, lumber, tentage, and thousands of other articles which can be obtained from small business firms. General Lee's effective implementation of the Small Business Act in this particular area has been outstanding.

In his appearances before our subcommittee, he has been a highly cooperative and effective witness. In handling a multitude of questions brought to his attention by small business firms, General Lee has continuously displayed a sensitivity to the needs of, and the problems faced by, the small businessman. When cases were brought to his attention, no company could be too small nor its difficulty too routine to elicit a thorough analysis, sympathetic understanding, and a prompt decision.

On July 31, General Lee will retire after 28 years of military service. His departure will leave a void that will not be easy to fill.

I know that I speak for the members and staff of the Procurement Subcommittee in wishing General Lee success and happiness in the new and challenging career he will undertake after he leaves his present office.

FULL FUNDING TO MAINTAIN ADEQUATE EDUCATIONAL FACILITIES AND OPPORTUNITIES FOR AMERICAN YOUTH IS A NATIONAL IMPERATIVE

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. DONOHUE. Mr. Speaker, over these past few years and especially over these past several months there has been a great deal of rightful concern and discussion in the Congress on the subject of national spending priorities.

Within the next few days when this House is considering the bill containing the committee proposed appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies, each of us will have the opportunity to register our convictions on the priority place that should be granted for the reasonable funding of adequate educational expansion facilities and opportunities for American youth.

On this score, practically every recognized educational administrator and organization, at all levels, have registered emphatic belief that the committee proposed appropriations for the proper educational encouragement and development of our youth are regrettably and woefully inadequate. They have registered their further and intense conviction that increased fundings in such vital educational areas as student loans, construction facilities, impact aid, library materials, under title II of ESEA, improving the quality of instruction in programs of title I of ESEA, vocational edu-

cation, and providing equipment under title III of NDEA should be at least held and approved at the 1969 fiscal year level and, indeed, could be justifiably increased substantially beyond that level.

Mr. Speaker, every Member here is, I know, rightly and patriotically concerned about our urgent legislative obligation to insure the most prudent Government spending of the taxpayer's money and each Member must meet that obligation in accord with his own wisdom and conscience. For my own part I intend to support the proposal to increase funding appropriations for the educational programs and objectives outlined above. I intend to do so because I conscientiously believe such an investment in our American youth and in the future of this country is a profoundly wise and prudent investment that eminently merits inclusion among the very highest spending priorities to maintain, improve and expand our national integrity, progress, and leadership for world peace.

I earnestly hope that every Member of the House will thoroughly and scrupulously examine the vital urgency and importance of the educational programs that will be presented to us very soon in H.R. 13111 and I further most earnestly hope the great majority will, in their wisdom, see fit to approve increased funding authoritatively held to be essential for their true effectiveness in the national interest.

TRUTH-IN-LENDING LOOPHOLES

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. HALPERN. Mr. Speaker, as a vigorous supporter and sponsor of the landmark truth-in-lending legislation passed last session, I am most anxious to see that this new law is implemented and proves to be truly helpful to all consumers in their credit transactions. I have been encouraged by the thorough Regulation Z developed by the Federal Reserve to implement truth-in-lending, as well as the conscientious activities of many businesses in seeking to comply with the new requirements.

However, through the research facilities of Consumers Union, it has come to my attention that, despite the design of Congress and the compliance of most businessmen, certain "loopholes" have become apparent which may seriously lessen the effectiveness of this measure. It is not yet clear whether new legislative or administrative action are necessary to close these "loopholes". But, I feel a first step must be recognition and awareness of the problems.

With this in mind, I would like to commend to my colleagues, for their thoughtful consideration, a recent report by Consumers Union:

TRUTH-IN-LENDING'S LOOPHOLES—YOUR HOME

(Prepared by Consumer Reports)

MOUNT VERNON, N.Y.—The new Truth-In-Lending Act, which goes into effect July 1, leaves open two tempting opportunities for lenders to understate—perhaps grossly—the finance charge and the annual percentage rate.

The first loophole favors lenders and credit merchants who take as security an interest in the borrower's house or land. The other deals with the purchase of a home.

This is the way the first works: A number of credit-connected charges can be loaded onto a loan secured by residential property without showing up in the finance charge or the annual percentage rate. The lender can charge for title examinations, for title insurance, for preparing deeds and other documents and notarizing them, for appraisal fees, and for credit reports. And cases have been reported in which those charges multiplied actual borrowing costs astronomically.

Those who exploit debtors have frequently used second mortgages and other types of real estate liens as their tools. Home owners have been induced to use the equity in their property as security for loans to consolidate debts, finance home improvements, or raise money for any number of other purposes—good or frivolous. And some installment sales contracts routinely name the buyer's house as security, without his knowledge.

It should be clear that not many reasons for borrowing are compelling enough to justify risking the loss of one's house.

CAN CANCEL IN 3 DAYS

Fortunately, a very prominent notice must go on every consumer-credit contract involving a real estate lien, second mortgage or security interest in your house if the loan is for any purpose except to finance the purchase of *that* house. The notice explains, in large type, that the customer may cancel the contract within three days of signing it, and without penalty or loss of down payment. To cancel, you merely fill in the blanks, sign the notice and mail it to the address shown on it before midnight of the third day, not counting Sundays or holidays when the post office is closed.

Because of the three-day cancellation privilege, it is expected that carpenters, roofers, electricians and other service firms will now be inclined to wait at least three days before starting a home repair or improvement—if they are operating under installment contracts secured in some way by a lien on your house.

But suppose your furnace suddenly must be replaced in the dead of winter, or your roof blows away. By preparing a written statement describing the emergency situation, you can relinquish your cancellation right.

THE SECOND LOOPHOLE

When you purchase a house, you should know about the second loophole—that the disclosures required by Truth-in-Lending in a first mortgage to finance a house do not have to include the finance charge in dollars.

First mortgages usually run for 20 or more years. Hence the total interest cost is likely to approach, equal or even exceed the many thousands of dollars of the original debt. In these days of record-high interest rates, the cost of financing the purchase of a house really mounts up. The total interest on a 20-year, 7½ percent mortgage of $30,000 will come to $28,000. If the loan runs for 25 years, the interest alone is $36,500. Amounts that large are reason enough for house hunters to be told the whole truth about finance charges. Since the law doesn't require disclosure, you should ask the mortgage lender to figure up the total finance charge.

Mortgage contracts must, however, disclose their anual percentage rate, which is really nothing new. Up until now, mortgage interest was about the only kind of interest on consumer loans that was regularly quoted as the true annual rate.

Yet it wasn't by any means always an accurate statement of borrowing costs, and to the extent that first-mortgage lenders may fatten their finance charges with unreasonable extra fees for title searches, credit reports and such, it may not be accurate in the future.

But one kind of fee *will* now have to be counted in. Those are "points" or "discounts," which mortgage institutions have used for many years to pad out interest charges. Under Truth-in-Lending, the extra cost of points must be reflected in the annual percentage rate.

HOUSING: COMMITMENT AND FRUSTRATION

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. FASCELL. Mr. Speaker, the Secretary of Housing and Urban Development, the Honorable George Romney, pointed out in a recent address that commitment is the difference between accomplishment and frustration in the struggle to meet our Nation's challenges.

In 1961, President Kennedy challenged us to reach out to the moon, and 8 years later, because of the commitment of $24 billion and the efforts of hundreds of thousands of Americans, that goal was realized triumphantly.

Twenty years ago the Congress of the United States declared it to be this Nation's policy and goal that every American should have a decent home. That goal was reiterated in 1968, but we seem to be no closer to its realization today than 20 years ago; and, in fact, it seems as far away as the moon must have seemed then.

Recently, Miss Elizabeth Virrick, one of Dade County's pioneers in social work and civic affairs, called my attention to an article published in Ink, a journal of civic affairs which she edits. It is a perceptive discussion of our failures and problems in providing decent housing for all Americans, and it includes an analysis of the recent Kaiser and Douglas reports.

I commend this article to the attention of our colleagues:

A DREAM OR AN ACHIEVABLE REALITY?

The vital question before this country is: Can housing be built for low- and moderate-income families? There is a feeling among some people that we have reached an impasse in our efforts to supply housing for those living in substandard housing and poor environment. The discussions, articles, books and reports of researchers and investigating committees are taking on a gloomy tinge. Few, of the general public, realize exactly what is involved, how it evolved and even fewer are aware of what the effects may be if we fail to solve this tremendously complex domestic crisis.

COSTS

Between the time this is being written and the time you read it, the costs of construction will have jumped several notches. Someone has said that for every ten cents an hour increase in wages of construction workers, $100 is added to the cost of a building. Recent negotiations of new contracts in all building trades have ended in large hourly wage rate increases, from skilled artisans to laborers. Each delay in construction caused by strikes and shut-downs adds heavily to the cost. Then, too, the cost of all building materials is skyrocketing at frightening

rates. The graphs showing increases in cost of construction have had upward lines for years, resembling the drawing of the side of a mountain. Now, the lines have exploded upward resembling almost perpendicular cliffs. All the while, mortgage interest rates also have climbed.

HOW EXPLAIN?

The handwriting on the wall spells inflation but this is only a word. None of it makes much sense (nor can it be satisfactorily explained) to those who have been led to believe that housing would be provided. And while it is bad enough not to meet the Housing Act's avowed goal of twenty years ago of a "decent home in a suitable environment for every American family," it is infinitely more culpable to be in the position of having held out hopes and then not live up to them. It requires no magician with words to explain the mischief that this causes and the understandable (though not condonable) acts of people caught in this melee whose frustration leads them to the only means they know of reacting to it.

Is Congress shadow boxing or playing games?

The strait-jacket imposed by Federal guidelines as to permissible room costs and unit ceiling costs set by Congress several years ago and never adjusted to take cognizance of increased costs, makes almost impossible all building of public housing or any building for low- and moderate-income families. Congress by failing to make appropriations for some of the new provisions in the 1968 Housing Act, has made it still more difficult to explain to those living in crowded, deteriorated and dilapidated housing who have waited patiently for years for housing to be built. It would seem to make sense for appropriations to follow inevitably and quickly on the heels of Congress' authorizations.

Nationally, Neighborhood Development Programs (NDP) have used up all the appropriations that were allotted to them and Washington has received applications for 75 millions of dollars more than is available of 1% mortgage loan applications. The NDP innovation in the 1968 Act that was hailed as a great step forward, also is already a victim of Congress' failure to appropriate funds for programs it has authorized.

A LOOK AT SOME OTHER OBSTACLES

Thousands of hard working, dedicated people all over the country have labored to bring into being housing authorized by the various Housing Acts and amendments since 1949 and to make Urban Renewal work to improve housing and living conditions in American cities. The difficulties that they have had to cope with would long since have discouraged less staunch people. Urban Renewal projects under the most favorable circumstances, have moved at a snail's pace, taking six, eight or more years, and then, only, if the redevelopment plan called for downtown malls, high rent apartments and the like. Rehousing the people who had always lived in the urban development area, multiplies the problems. Everywhere, people are trying to find out why progress is not faster. Many of the reasons emphasize the necessity to change time-honored systems and customs.

We have known for many years that our tax-assessment system is inequitable; that our building codes make sense only to those whose interest is in keeping the status quo and the cost of building high; that our zoning is archaic and tends to keep property values beyond the reach of many; that mortgage interest rates seem to be set to prevent moderate income people from owning a home and to keep rents high; all these together connive to escalate the cost of building a home, owning a home or for that matter, even renting a standard home at a rent within the means of those who most need standard homes.

TAX ASSESSMENTS

As to tax assessments, where is the justice in one man's profiting at the expense of others? Throughout Dade County, for instance, there are many large tracts of vacant land with built-up subdivisions around them and farther out. The man holding the vacant tract is able to do so because his assessment on undeveloped land is low. During the years that his land lies vacant, roads going to and beyond his land are built and maintained. Power and telephone lines are installed and police and fire protection are available. All this time, his land becomes more valuable and he will eventually profit from the developments created by others while the taxpayers have footed the bills for roads and utilities that run past land that produces less than its share of tax revenue. This type of land speculation helps keep the cost of land too high for many people to be able to acquire sufficient equity to be eligible for a loan to build.

Higher tax assessment on unimproved land could serve as a tax inducement that would spur more building.

BUILDING CODES

The South Florida Building Code has been made more stringent than almost any other code in the United States. One of the reasons is the overreaction to hurricanes. Yet, let someone explain why in the hurricanes, frame buildings even those with sketchy foundations, have generally ridden through the storms at least as well as almost any other construction. How important some of the rigid regulations are, is a matter still to be proved, but it is not necessary to demonstrate how expensive they are. Many architects claim that a less rigid code would result not only in lowering the cost of building, but would also give designers an opportunity to build more innovative and original structures.

Two important national investigating Commissions' reports, recently published, emphasize strongly the role of zoning ordinances, tax assessments and building codes, as well as high mortgage interest rates in hamstringing the construction of housing for low- and moderate-income families. These same handicaps bid fair to slow down all building to a point where the national economy will suffer severely. Recent reports on the number of building permits applied for and construction starts, show figures lower than at any time since 1958.

Kaiser and Douglas Reports on Housing.

These two documents of major importance, recently released, can supply whatever information anyone might want on housing. Former Senator Paul H. Douglas and his sixteen member National Commission on Urban Problems visited 22 cities (including Miami) and heard 347 witnesses in public hearings. Edgar F. Kaiser headed the President's Committee on Urban Housing, which was directed "to find ways to encourage the private building industry to play a larger role in rehabilitating the depressed areas of America's cities."

SOME OF THE FINDINGS

The two reports, while very different in size and focus, both arrive at very similar conclusions as to the amount of housing needed now and for the next decade. Both see America's task as monumental.

The Douglas report, among its 149 recommendations, calls for an annual goal of 2 to 2.25 million units including 500,000 for low and moderate income housing; the Kaiser report sets an annual average of 2.6 million new and rehabilitated housing units including 600,000 for lower income families.

The size of the job seems overwhelming when compared with past performance. The Kaiser's goals represent almost a "40-percent increase in the current housing stock, or 70 per cent more than the total production of the decade of the 1950's." The Kaiser report points out: "During the entire 30-year history of federal housing subsidies, only 800,000 subsidized (public housing) units have been built. Recent annual production rates were only around 50,000. In 1949 Congress set a six-year goal for public housing. In 20 years, only two-thirds of that goal has been met."

As reported in "City," the bimonthly publication of Urban America, Inc., "There are about 66 million housing units and 60 million households. Although there appear to be more than enough rooftops, an estimated 6.7 million occupied units are substandard dwellings—4 million lacking indoor plumbing and 2.7 million in dilapidated condition; 6.1 million units (both standard and substandard) are overcrowded with more than one person per room. Among the six million vacant units, only about two million are in standard condition and available for occupancy—the nation's lowest available vacancy rates since 1958. These estimates suggest a growing shortage of decent housing, not only for lower-income families but for the entire population."

The Kaiser Committee proposes that "the federal government grant eminent domain power to acquire land to be leased for development of subsidized housing. The committee also proposes that HUD should be granted limited powers to preempt local zoning codes and any exclusionary state codes or local ordinances from application to federally subsidized housing.

The Douglas Commission would encourage the use of state powers of eminent domain to provide sites for low- and moderate-income housing.

Both reports state that America can pay for the housing goals embodied in the 1968 Act if housing is given the high priority it needs. "So far, however, Congress shows little enthusiasm for reordering expenditures." As the Douglas Commission gloomily notes, "Recent action on the request for the 1969 fiscal year housing appropriations does not augur well for the future . . . Unless the new programs are funded more adequately, the new act cannot achieve its goals." In one of its major recommendations, the Commission urges that money for key programs be made available upon authorization "in order to avoid this traditional roadblock to the fulfillment of these programs—the failure of the appropriations committees, especially those in the House, to appropriate sums for the programs which the legislative committees and the Congress as a whole have passed and authorized."

RECOMMENDATIONS

"Restrictive labor practices add to the cost of construction and support antiquated building codes. To make building dollars go farther and to speed up the physical production of housing units, both reports suggest building code reforms and improvements in technology. The Kaiser report recommends that the federal government be given power to preempt local building codes and ordinances. The Douglas Commission would emphasize remedial action at the state and local levels with federal assistance power as persuasion: In its capacity as prime persuader, the federal government can make aid contingent upon establishment of model building as well as zoning codes."

Who will volunteer to take the part of David against these Goliaths of outdated, but firmly entrenched, building and zoning codes and tax assessment practices?

LAST BUT NOT LEAST

For each and every unit of public housing that has been built in Dade County, there has been a struggle, except for those built at the very beginning (1937) when housing was scarce and jobs were needed by depression-hungry people. Throughout the life of the Housing Authority, the hard working Board and staff carried on the good fight. In De-

cember, 1967, the Housing Authority was joined with the Urban Renewal Agency to form "Little HUD" (Housing and Urban Development) and the struggle continues.

There have been variations on the theme by those who have opposed the construction of low rent housing but the song is still recognizable. Of late, it has adopted a new refrain because no one can, or even attempts to, deny the desperate need for housing for low income people. The new chorus is: "Yes, we need public housing and we want public housing. But we don't want it in this particular location." By now this has been said in reference to so many areas that practically the entire County is covered by imaginary signs saying: "Not here—somewhere else." This leaves us with almost nowhere else.

Even scattered site housing, which is indistinguishable from its surrounding structures—often better—is opposed.

WHO SHALL SPEAK FOR WHOM?

Much of the opposition comes from people who do not realize that they are being callous and unthinking when they allege that their neighborhood will be deteriorated if public housing is built. Time and again there has been improvement in appearance and in property values where low rent units have been built. Then, too, grasping the larger issue, the question becomes: can we afford not to salvage our cities and its people.

Those who have the power of decision as to whether public housing may be built, are running short of time in which to hone their powers of perception to decide who is opposing and why, who has the right to dissent and thus wield an awesome power over the fate of others, but most important of all, whose voice should be heeded.

There are, in Dade County, thousands of people on the waiting list for public housing, in spite of the remarkable record that has been made by the Housing Authority and "Little HUD," even with all the difficulties. The following are some of their achievements:

5500 units of public housing;

96 units of public housing for large families—3, 4 and 5 bedrooms—will be ready for occupancy as soon as the vandalism can be controlled so that stoves and refrigerators can be installed;

3500 units committed to NDP areas for private leasing;

2000 units have been built since 1960—more than any other city in the South.

Relocation of over 900 families into public housing; over 2000 since 1964, without which the community would have been in deep trouble. In other words, sufficient families have been relocated in standard housing, mostly public housing, so that the first four parcels in the Urban Renewal Program have been able to get started.

Finished the acquisition of the land in the first Urban Renewal project, demolished the buildings and acquired some of the land in the other parts.

Placed on the boards another 2200 units of public housing, in spite of extreme opposition. One Hundred units designed by Alfred Parker under construction and another 700 designed by the same architect will be out for bids before the summer is over, plus 600 units for the elderly.

Dade County has supplied more relocation public housing than any other city of comparable size.

Was granted $26,000,000 for Neighborhood Development programs (NDP) for ten areas—one of the first in the country, the first in the southeast.

The Junior College site in downtown Miami will come out of this money. None of them would have happened without Little HUD.

Little HUD has out for bids $2,500,000 for water and sewer developments in the Model Cities area. This will complement the system that was put in by the Housing Authority in that area in 1962.

Built the first scattered site public housing in the South.

Obtained reservation of funds for 696 individual grants for rehabilitation of homes in the NDP areas.

Now modernizing James E. Scott Homes and Liberty Square public housing projects with a $2,500,000 modernization grant, including new lighting which is being installed in the James E. Scott area.

Procured a $515,000 government grant for a Park in the James E. Scott area—the first and only such grant for a park in the nation, using public housing money.

Minimum Housing Code Enforcement is also under Little HUD. There have been four times as many inspections as when the Department was under the City of Miami, in an equivalent time. The work force has been doubled.

Miami is the only city that qualified for the Kaiser "In-City" program. This project will start with fifty units, developed in accordance with innovative ideas that have evolved from several years of research.

SUGGESTIONS

We suggest that from the top to the bottom of the governmental hierarchy, the next ten years be proclaimed "The Decade of Building for People Now Living in Slums and Substandard Housing."

When opponents start putting forth objections to various programs, we suggest that the County Commissioners pierce through the verbiage and oratory and decide just who is speaking for whom and whether or not they are really speaking for the best interests of those they purport to represent.

We suggest that a short, direct way to get action be devised so that Little HUD can get on with its work without the roadblocks and delays that are caused by trying to follow a double set of conflicting guidelines—those of Metro and those of the Federal government.

SURTAX SAVINGS BILL

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. RARICK. Mr. Speaker, from time to time I have spoken on the subject of the surtax and its extension. I have repeatedly said that it is patently ridiculous to attack inflation by taxing the private sector of our economy to remove dollars from circulation only to pump those same dollars back into the economy by continued deficit financing and wild Government spending in the public sector.

I recently outlined the principal features of legislation which I proposed to introduce to correct this situation. It is quite simple. It sets aside the dollars removed from the private sector by surtax withholding. It prevents those dollars from being spent by the Government in the public sector. It encourages taxpayers' savings by returning them to the very individuals from whom they were taken, at the same rate of interest paid by the Treasury for other short-term loans, as soon as it is appropriate to terminate the emergency surtax. I have today introduced this measure.

At the time I outlined my purpose, I predicted that we would have the surtax collection extension before us again. Today, it was. In view of the imbroglio in the other body it is my confident prediction that another short extension will not be our final action on surtax collection.

I include the text of the surtax savings bill:

TEXT OF SURTAX BILL

SECTION 1. Congress finds that the extension of the surtax is designed, in pertinent part, to ease inflationary tendencies by reducing individual spending. It is therefore the policy of Congress to couple the extension of the surtax with provisions for applying funds collected under the surtax toward the purchase of United States obligations. Such a policy is intended to limit government spending of collected surtax charges, and, at the same time, provides a mechanism whereby surtax charges can be returned to taxpayers, with interest, at a time when it is hoped the economic posture of the country will be more stable.

SEC. 2. (a) Section 3402 of the Internal Revenue Code of 1954 (relating to income tax collected at source) is amended—

(1) by striking out "July 31, 1969" in subsection (a)(1) and inserting in lieu thereof "June 30, 1970";

(2) by striking out "August 1, 1969" in subsection (a)(2) and inserting in lieu thereof "July 1, 1970"; and

(3) by striking out "August 1, 1969" in subsection (c)(6) and inserting in lieu thereof "July 1, 1970".

(b) The amendments made by subsection (a) shall apply with respect to wages paid after July 31, 1969.

SEC. 3. (a) The Secretary of the Treasury shall apply the surtax collected from each taxpayer under section 1(c)(2) of the Internal Revenue Code of 1954 toward the purchase of interest bearing securities of the United States.

(b) The securities issued under this section shall be called "Surtax Savings Notes" and shall be issued under the Second Liberty Bond Act. By their terms or by regulations prescribed by the Secretary of the Treasury under the Second Liberty Bond Act, such securities shall—

(1) bear as their date of issue, the date of the first day following the date prescribed for the filing of taxpayer's income tax return;

(2) mature on the last day of the one-year period beginning on the date of issue;

(3) be transferable; and

(4) bear an interest rate equal to the average interest rate paid by the Department of the Treasury on short term obligations of the United States for the thirty day period preceding the issuance of such securities.

(c) In addition, the securities issued under this section shall be in such form or forms and denomination or denominations and subject to such terms and conditions (not inconsistent with this Act) of issue, conversion, redemption, payment, and time or times of payment of interest or interests, as the Secretary of the Treasury from time to time at or before the issue thereof may prescribe.

(d) The Secretary of the Treasury may prescribe such regulations as he deems necessary to carry out the purposes of this Act.

SEC. 4. The President is authorized to terminate the imposition of the surtax under section 1(c)(2) of the Internal Revenue Code of 1954 at such time as he deems it advisable.

3M CO. TRAINS HARD-CORE UNEMPLOYED MEN AND WOMEN IN ST. PAUL

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. KARTH. Mr. Speaker, the Twin Cities Courier, a respected minority newspaper in my congressional district, recently carried an article on 3M Co.'s training and employment program.

With so many efforts of this kind failing to achieve their intended purpose, it is noteworthy to point out that success can be achieved if the company involved makes the super effort.

3M Co., has done just that. I join the Twin Cities Courier and the community I am privileged to serve in publicly congratulating 3M on their tenacious effort. 3M does not permit failures. When given a responsibility we all share, they do it first class. If we had more companies like them, a major portion of our social problems would be resolved.

I commend to you the following article:

ONE YEAR LATER 3M STILL KEEPS FOCUS ON TOTAL PERSON IN TRAINING, EMPLOYMENT

"The total person."

That was the focus in May 1968 when Minnesota Mining and Manufacturing Company (3M) opened a training center at 1197 University Ave., St. Paul, to give hard-core unemployed men and women an opportunity for gainful and meaningful work.

One year later the unique program, that goes beyond the usual on-the-job-training policy, speaks for itself.

From a modest, unheralded beginning May 1, 1968, when less than 20 trainees were enrolled at the center, the program has expanded to include 75 men and women (the maximum, at present) and marks 54 "graduates" now employed in local 3M plants in this vicinity, working regular shifts on regular production jobs at regular rates of pay.

Several recent graduates and one trainee, together with 3M officials and center executives, discussed the program with this newspaper June 27, evaluating "one year later" progress from the viewpoint of persons who had benefitted by the program.

Robert Mentey, formerly of Milwaukee and now employed at the 3M plant near Hastings, said he was out of a job and "desperate" when he learned of the Factory Training Center here. He admitted he was a high school dropout, going from job to job, trying to take care of his wife and four children, without too much success. "I had a little trouble getting past Don, but when I did get accepted, the program opened up a whole new life for me."

The "Don" he mentioned is Donald A. Williams, former TCOIC executive and now employment coordinator for the center. He explained the guidelines for admission to the program as "very flexible," depending principally on the individual's need, willingness to learn, desire to work and cultivation of good work habits. "In Bob's case," Williams said, "He had a physical disability he wasn't even aware of until the company gave him the routine examination.

Bob took up the story at that point. "They didn't just tell me I needed surgery and could come back again after I had it," he said. "These people care about a guy. They arranged things so I could go into Ramsey County Hospital, have the operation, then snapped me up the minute I was back on my feet. I didn't have a dime to help myself, so you better believe I know what this program is all about. Now I've got a good job, already been moved up a couple of notches, and still have plenty of chance for advancement."

Dan Rivera has been on his new assignment nearly two months and has a heavily bandaged forefinger to prove it. He treated the injury lightly last Friday, being much more enthused about the five month's training received at the center before starting on the regular plant assignment as trucker. Dan is one of a few trainees with a year of college to his credit, but was at "loose ends" until the center gave him incentive and real prospect of moving up the economic ladder. Now his earnings match his ability and offer a "decent future" for his wife and child.

Being single was no economic advantage for Cecil Wadena, who dropped out of school after the 10th grade. Cecil had plenty of drive but no skills until he enrolled at the center shortly after it opened in 1968. Sixteen weeks of training taught him everything he needed to know to take on the job of mixer at 3M's Chemical Division.

Patricia Riddle is one of few women taking advantage of center opportunities. She's now employed as a tape rewinder after finishing 13 weeks of training and says it's the best job and "best paying job" she's ever had. An 8th grade education and some business college studies were not enough to open up meaningful employment doors for the young woman who is head of her family and main support of four children. "The money isn't everything, although it does mean I can take care of my family and buy them some of the nice little things they want. But the training and my job make me feel important to the company. They make you feel needed . . . as if the work can't go on if you are not there."

Abram H. Weaver, center supervisor, agreed with this. "Every trainee and employee is important," he said. "That's why we stress good work habits, good attendance records, promptness and job interest. The center is in production, too, remember. Trainees produce tape and coated adhesives for use, not for demonstration. Of course they make mistakes. Doesn't everyone? But these men and women are doing productive work long before they move into the regular plants."

Tom Henderson takes pride in his work as a machine operator with 3M's Magnetic Products Division "because the center instilled pride in a job well done while I was in training those 14 weeks. The U.S. Army veteran was under-employed as a janitor when the center opened up new economic vistas and satisfying employment. "It sure makes a difference to the wife and kids (Tom has 3 children) when man is happy at his work," Tom said.

Derrel White of St. Paul has the unique distinction of being a center "dropout." Derrel began training last November, then left to find other employment. This May he returned to the program and appeared reluctant to discuss the interim experience. "Just say the center offers what I need to get ahead. But I had to find that out for myself." He's still in training as a general helper, and should move on to a regular production line by fall. The center doesn't object to giving anyone a second chance "or as many chances as a person needs, if he or she really wants the opportunity," said Don Williams.

John Broadway, assistant Maker Operator on a #1 Maker for 3M, had top billing at the Friday luncheon as a "charter trainee." John was one of the first 12 persons hired by the company after he completed four months training shortly after the program started. "These people give a man a chance to use whatever skill and brains he has," John said. As a machine maintenance man before taking training John speaks with the voice of experience, as if former employment was less than challenging. Two years of high school and natural mechanical ability had not taken John where he wanted to go, especially with a wife and three children, until he enrolled in the training program and found his regular employment niche." It makes a man feel good to put in a full day's work when he knows the company is depending on him to keep his end of the operation going as it should."

John was not the only trainee-turned-employee to praise 3M's shop foremen. Each vied with the other to declare his (or hers) the "best yet." They said the foremen "go out of their way" to help new employees understand new assignments and get familiar with every operation "without breathing down your neck." According to center "graduates," the men in charge make each employee feel important to the production effort and needed in any particular department. One said he had never felt that way in his life, as if his absence or carelessness on the job would "gum up the whole works. Just say it sure makes a guy feel worthwhile after he's been feeling mighty low before this came along."

The statement summed up the total-person concept initiated by 3M Company a year ago. Very few trainees drop out of the program after enrollment. Some, like Derrel, return. The scarcity of women was explained by Don Williams. "We're in heavy production and our employment is necessarily limited to women for that reason. But we do hire women, and welcome them at the center for training in suitable jobs. Many have gone into laboratory and clerical work, as well as light manufacturing.

"Our job at the center is to discover abilities many men and women were unaware they possessed. Then we train those abilities and skills, producing while training, and insisting each give his or her best in performance and work habits. This is self-half in action, not "make work" or any type of hand-out. These men and women earn their pay from the very start. When they go into regular production, they're worth every dollar they earn and the company knows and appreciates that," Williams said.

"We need this untapped source of the job market the unemployed and under-employed need us," said Weaver. "Too many able people are denied a chance at good jobs because of rigid requirements. The center fits the individual to meet the normal requirements necessary on any job."

Lack of education, prison or delinquency records, former poor job performance, nothing of this nature stands in the way of anyone wishing to enroll in the program, Williams explained. After a year in business, the Factory Training Center and its total-person concept received top evaluation from those who know, from experience, what it's all about. As one "graduate" said, "Give it a big fat A-plus in our book."

A NEW STAGE OF LIFE

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mrs. HECKLER of Massachusetts. Mr. Speaker, one of the greatest tasks before this country today is to promote understanding between the generations, and to perceive accurately the causes of unrest among the Nation's youth.

An editorial appeared recently in the Attleboro Sun on this subject which offered some real insights into the problem. The article discusses Prof. Kenneth

Kenniston's thesis that youth is troubled both by "the urgent need to fulfill the promises of the past and at the same time, to define the possibilities of the future." This is well worth considering and I offer the full text for the benefit of my colleagues:

A NEW STAGE OF LIFE

Much is made of the fact that half the nation's population is under 30 years of age. This is often suggested as the explanation of student unrest.

But in all historical eras, the vast portion of the population has always been under 30, counters a psychologist. In primitive societies, most people die before they reach that age.

If chronological youth alone was enough to insure rebellion, the advanced societies—where more of the population reaches old age than ever before in history—should be the least revolutionary and primitive societies the most. This is not the case, says Kenneth Kenniston, associate professor of psychology at Yale Medical School.

More relevant factors, he says, are the degree of involvement of those under 30 with the established institutions of society and the opportunities that society provides for their continuing intellectual, ethical and emotional development.

It is difficult for us to believe it now, but until the end of the Middle Ages, no separate stage of childhood was recognized in Western societies. Infancy ended at 6 or 7 (the "age of reason" in Catholic teaching), whereupon children were integrated into adult society to work as junior partners of the adult world.

The recognition of adolescence as a separate stage of life is of even more recent origin, the product of the 19th and 20th centuries. Only as industrial societies became prosperous enough to defer adult work until after puberty could they create institutions—like widespread secondary-school education—that could extend adolescence to virtually all young people.

Today, in more developed nations, we are beginning to witness the recognition of still another stage of life. Kenniston calls this the stage of "youth." This stage, which continues into the 20s and sometimes the 30s, provides opportunities for intellectual, emotional and moral development that were never afforded to any other large group in history.

In the student revolts, thinks Kenniston, we are seeing one result of this.

What the advanced nations have done is to create their own critics on a mass basis. Young people in college have been freed from requirements of work, of gainful employment and even marriage, which permits them to criticize society from a protected position of disengagement.

It is not that industrial societies have failed to keep all their promises but that they have succeeded in some ways beyond all expectations. Many of today's students have never experienced anything but affluence, political freedom and social equality. Not all of them, but many of them, are searching for a new vision, a new set of values, a new set of targets "beyond freedom and affluence."

But they also know that millions have not yet achieved these benefits they take for granted.

"What characterizes student unrest in the developed nations," says Kenniston "is this peculiar mixture of the old and the new, the urgent need to fulfill the promises of the past and at the same time, to define the possibilities of the future."

A more generous appraisal of themselves, our favored youths could not hope to ask for.

THE MILITARY-INDUSTRIAL COMPLEX: A FOURTH BRANCH OF GOVERNMENT?

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MIKVA. Mr. Speaker, one of the most significant developments in Congress during this first session of the 91st Congress has been the growing concern with the tremendous power and influence of the so-called military-industrial complex. With accusations and denials flying in all directions, it would be all too easy for the important aspects of this problem to become submerged.

Amid the confusion, occasionally a clear voice comes through which states succinctly and straight-forwardly the nature of the problem and the cause for concern. Such a voice is that of Edward R. Kantowicz, whose article entitled "The Military-Industrial Complex: A Fourth Branch of Government," I came across recently in one of Chicago's outstanding independent newspapers, the Polish America. I insert Mr. Kantowicz' article at this point in the RECORD for the benefit of my colleagues in considering the important problems raised by the existence of a "fourth branch of government" in America.

The article referred to follows:

THE MILITARY-INDUSTRIAL COMPLEX: A FOURTH BRANCH OF GOVERNMENT

(By Edward R. Kantowicz)

Though it has been eight years since President Eisenhower, in his farewell address, warned the nation against the military-industrial-complex, public opinion generally ignored this issue for most of those eight years.

A year or two ago the student and anti-war demonstrators discovered this issue. Those disillusioned with the Vietnam war sensed that the military-industrial-complex has been the only winner in Southeast Asia. Campus protesters realized that their professors have been working for years as servants of the Defense Department; and thus they added a new element to the issue, describing the defense establishment as the military-industrial-academic-complex.

Yet although the militants tried to dramatize this issue, most people ignored the substance of their complaints and were content to deplore their tactics. But finally, this year, the military-industrial-complex issue came out of the streets and has touched off a major, national debate in the Congress and the news media.

Many sources have fueled this debate. Disillusionment with Vietnam has become respectable, an economy-minded Congress has begun to examine the 80 and 90 billion dollar defense budgets rather than rubber stamping them, President Nixon's ABM plans have raised up fears of a new acceleration of the arms race, and the frequent military "accidents" of recent years—such as helicopter collisions, the Pueblo seizure, and the recent ramming of an American destroyer by an Australian aircraft carrier—have destroyed the illusion that the generals and admirals always know best.

In its simplest terms, the defense complex is an 80 billion dollar economic merger of higher education, heavy industry, and the armed services. Both state and private universities have become heavily dependent on federal aid to meet their rising costs, and this aid often comes in the form of subsidies for basic, scientific research related to military needs. American industry has had numerous ties, some proper, some improper, with government for a long time, but only in the last twenty-five years have billion dollar contracts bound industry so closely to the military. The military establishment itself has always been respected in the U.S., but, except in time of war, it has seldom had much political power. Our country has never been endangered by military coups, and the few generals who have become presidents were generally weak, benign political leaders.

But now that the generals are directly linked to the corporations and the universities, their ability to exert pressure on the government has been enormously enhanced. The universities provide the military with respected, articulate defenders. The corporations give them access to vast funds for lobbying and for strategically placed campaign contributions. Furthermore, the very size of defense contracts makes millions of ordinary Americans, employed in defense-related industries, stockholders in the military establishment. If a U.S. president wished to attack the complex head on, he would not only meet determined resistance from the Joint Chiefs of Staff and the corporate lobbyists; he would also engage thousands of workers in Seattle, Fort Worth, and Houston, where unemployment would follow cut in defense spending.

The power of the military-industrial-complex presents several obvious dangers. As long as defense budgets continue to be swelled by expenditures for missiles and bombers which are obsolete before they are even deployed, the amount of money available to deal with our nation's social needs will be limited. Secondly, the automatic requests for ever more sophisticated weapons systems effectively doom any hopes for controlling the arms race. Finally, the more weapons we have on hand and the more influence the military gains, the more likely it becomes that we will use these weapons. Many more Vietnams loom ahead.

But the most pervasive effect of the military-industrial-complex is its political power. The merger which created this complex has also constituted it as a fourth branch of government, insufficiently balanced by the other three.

All popularly-elected governments develop unofficial, long-lasting departments which give them a continuity transcending the changes caused by elections. In nations like France and England, where a permanent civil-service bureaucracy has long been entrenched, the bureaucracy makes most of the day to day decisions in government, untouched by changes in the top leadership. In America, spoils politicians have generally been able to continue their petty grafts and patronage policies undisturbed by the periodic reform attempts of presidents and public opinion.

Today, the military-industrial-complex has become the preponderant power in our government and is shortcircuiting the checks and balances. Presidents will come and go every four or eight years, Congress will hold periodic hearings, public opinion will flare up and then die down, but the defense establishment has become permanent. With just a little patience, this establishment can ride out the periodic attacks against it and still get most of its requests granted.

The news media give the impression that it is now open season on the military in Washington. But I doubt if the Pentagon is worried. A major disadvantage of the excellent news coverage which television and the press are now capable of is that such coverage often serves as a substitute for action. The people watch the news specials which explore the dangers of the military-indus-

trial-complex; then, reassured that these dangers have been exposed, they turn to other matters and the furor dies down. The public has had a catharsis, but the complex is untouched.

The best hope for the immediate future is that the political leaders will not let the current debate over military spending cease, that they will choose wisely the specific issues to debate—such as the ABM, the proposed war profits tax, arms limitation agreements—and that the public will not lose interest. The politicians and the people must be persistent if they wish to rule and not be ruled by this fourth branch of government in our political system.

THE FLIGHT OF APOLLO 11

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. CHAMBERLAIN. Mr. Speaker, the flight of Apollo 11 has ended but its ramifications have only begun. As with all great events the full measure of its significance cannot be immediately grasped but will only be revealed in the decades and even centuries ahead. Nonetheless the record of what was said in 1969 about this incredible accomplishment will be, I suspect, of almost as much historical interest in the years to come as the feat itself. For this reason I am pleased to make a part of that record the timely and illuminating editorial comments on the moon voyage of the three daily newspapers which serve the Sixth Congressional District of Michigan.

The editorials follow:

[From the Lansing-East Lansing (Mich.) State Journal, July 25, 1969]

MAN'S COMMON GOALS CAN BE ACHIEVED

They're back.

Man's most daring adventure is over, a complete success. So much so that it's still difficult for most of us to believe it could happen with such precision and virtually no snafus.

American astronauts have walked on the moon and planted a flag and a few scientific gadgets on the lunar surface. They even had time to chat for a few moments with the President of the United States by phone before they hopped in their space bug and zoomed back to earth.

Neil Armstrong, Edwin Aldrin and Michael Collins now will face the world acclaim they deserve for their deeds and cool courage. Their names will go into the history books.

Perhaps the most amazing part of the moon journey was that the astronauts calmly and deliberately seemed to make it look so easy. Of course, it was anything but that.

The moon conquest was the product of the greatest pooling of brains and technical genius in modern history and involved hundreds of thousands of men and women.

It cost the lives of some brave men and it shook the world.

Now comes the great debate which, in fact, has already started. For if man can master the techniques of travel to other planets, certainly we can also coordinate efforts in finding answers to the earthbound problems of war, poverty, pollution and strife.

The walk on the moon was not just a space spectacular, a mission accomplished and to be remembered only by future generations. It was an end but also a beginning of a new era in world history.

By accomplishing the impossible, the Apollo program has demonstrated what can be done when men set their minds and total energies toward a common goal.

The world needs peace, establishment of freedom, and decent living standards for all. It's possible that the moon mission may have been a long step toward helping people everywhere recognize that these are common goals and can be achieved.

[From the Lansing-East Lansing (Mich.) State Journal, July 21, 1969]

AMERICAN SPACEMEN HAVE OPENED A DOOR

The events of Sunday, July 20, 1969, leave the world in a state of awe unparalleled in this century.

There have been many incredible milestones during the past 69 years, but nothing quite so startling as the spectacle of seeing two men set foot on another planet for the first time.

As this is written, the American astronauts still face the perilous journey back to earth. Millions pray for their safe return from what certainly is the most spectacular pioneer exploration of all time.

With precision and cool courage they have pushed through the partly opened door of the new space age and stepped beyond. Thousands on earth who made it possible stood and held their breaths.

Now it is a fact.

Americans, once again, have accomplished what once was thought to be impossible and moved the human race toward a new era. The implications of putting men on the moon and what this portends for the future is still difficult to calculate.

But, as has been said many times, this achievement is equal to and perhaps surpasses al previous probes of man into the unknown.

It can only be hoped that by stepping among the stars, man can somehow recognize his smallness in the universe and learn to live in peace.

[From the Jackson (Mich.) Citizens Patriot, July 22, 1969]

MOON WALK PROVES PERFECTION POSSIBLE

Emotions of the human race piled up and tumbled over one another as Neil Armstrong and Edwin E. Aldrin, Jr., made their perfect landing on the moon and romped in the euphoria of one-sixth gravity like school boys playing with a pogo stick.

The technical perfection of the venture came to be taken almost for granted, although doubts and fears had to linger in the minds of the millions who watched.

Would the LM be able to take off from the moon on schedule? Would it be able to link up with Columbia, the command module? Would the ride down the chute of space to a pinpoint landing in the Pacific also be perfect? What would happen if . . . ?

Have we been taking too much for granted because the space flights have gone so well, with a few near-misses, but no disasters save one tragic fire which took place on the ground and not in space?

If doubts were raised in the mind of the great average American who is paying the bill for space exploration, it might be due to his own bad experiences with the products of American technology.

Maybe his new car has been called back to have a manufacturing defect corrected. Perhaps the washing machine he bought six weeks ago is making strange noises. His television goes on the fritz, even though less than a year old, just as he is ready to watch the moon walk pictures. Maybe the computers which perform vital functions where he works, have a way of going zany at critical moments. Sophisticated new processes in manufacturing develop bugs. He tries to direct-dial a telephone call to Kalamazoo and ends up talking to a recording in Powder River, Wyo.

He comes to understand the painful truth of Murphy's law: "If anything can go wrong, it will."

Then he kibitzes on man's greatest adventure and hears only reports of perfection. The space men's code word, "beautiful," or the phrases, "you're looking good," drones out of the TV or radio speaker hour after hour, telling the listener that no one in the technological chain of the space mission has goofed.

An average man learns that devices which could not be tested under field conditions—such as the gadgets the spacemen carried on their backs as they walked the moon—performed perfectly. Ingenious men and their clever computers had been able to anticipate and cancel out every threat implied in Murphy's law.

So we grow confident. The fear of possible disaster slips farther back into the consciousness. We begin to assume that the take-off from the moon will be perfect (it was); that the rendezvous will be right on the mark; that the trip back to earth will be so perfect that it borders on the boring, and that the spaceship, with its precious cargo, will splash down within shouting distance of the recovery aircraft carrier.

The technical prefection of the mission so far is all the more amazing because of its sheer complexity. The workaday jobs of industry and the professions, no matter how sophisticated they may seem, are child's play by comparison. The trick of designing and manufacturing a modern automobile, for example, probably involves less than one-thousandth of the technological moves necessary to put a man on the moon and bring him back.

Be that as it may, the perfection of the Apollo 11 mission gives those who worship at the altar of American technology new goals to shoot at. Maybe the example heralds the day when all cars will perform perfectly from the day they are driven off the assembly line; computers won't send bills to the wrong people for goods or services they already have paid for, airplanes won't dawdle for hours at the end of runways waiting for a slot to take off and something will be done to get people to work in the morning and back home at night with the relative ease with which the Apollo crew went zipping a quarter of a million miles into space for a rendezvous with destiny.

[From the Owosso (Mich.) Argus-Press, July 22, 1969]

WE LEAVE PLENTY OF "CALLING CARDS"

Astronauts Neil Armstrong, Edwin Aldrin and Michael Collins may have been short on human company during their lunar voyage, but there is no shortage of inanimate reminders of earth along their course.

In the brief time since the first Sputnik, less than 12 years ago, man has distributed an incredible number of his souvenirs in cislunar space—the 240,000-some miles separating earth and moon—and on the surface of the moon itself.

As of June 30, there were 1,730 manmade objects—functioning and spent satellites, rocket bodies and other debris—in space, according to the U.S. Air Force Aerospace Defense Command which catalogues all launchings. To which have now been added the castoffs of Apollo 11 and Luna 15.

Not only the United States and the Soviet Union, but France, Britain, Canada and Italy—using American rockets to launch their satellites—have contributed to the total. The U.S. count leads all others combined by almost three to one.

Strewn across the moon's surface are the remains, intact or shattered, of 22 American and Soviet unmanned lunar probes.

Apollo 11 added considerably to the total.

In addition to the flag and the lower half of the lunar module which serves as the launch pad for their blast-off from the moon, Armstrong and Aldrin left behind functioning scientific equipment and no longer needed items such as cameras, tools and even parts of their space suits.

It all adds up to some $15 million worth of space-age hardware—a bargain price for the few bags of lunar rocks for which it is being exchanged.

[From the Owosso (Mich.) Argus-Press, July 23, 1969]

A GIANT LEAP

Almost as astounding as the achievement itself is the rapidity with which it has been accepted.

All the doubts, the uncertainties, the fears that preceded the epochal moment, shared by hundreds of millions here on earth almost as firsthand experience, are eclipsed by the fact. Man has set foot on another world.

Space has not yet been conquered. But it will be, although the conquest is sure to be long, hesitating at times, filled with new doubts, uncertainties, fears and disappointments. We all know it now as certainly as do the men of Apollo 11.

Never before has so much of humanity been aware simultaneously of a turning point in the human story. Behind us lies the earth-bound past, the long milleniums of man's struggle up from primeval darkness. Ahead lies a future in the stars as yet only dimly perceived but, we are now certain, inevitable.

Prometheus bound has become Prometheus unbound.

It is indeed "a giant leap for all mankind," not only for the billions who inhabit earth today but for all the untold generations which have gone before. It is a link in the unbroken—and, we may hope, unbreakable—chain of human progress.

Cave dwellers who first turned stones into tools have contributed as surely as have the two men who have walked on the moon, the thousands who have participated in the Apollo program, the many more of different times and lands who have added bit by seemingly unrelated bit to theory and technology that have released man from earth.

The conquest of space truly transcends time and the divisions of man. It is as if all of human history has been preparation, a gathering of strength and knowledge and a focusing of purpose toward this moment. The men who first walked the moon happen to be American. But that is only because the organization that has shaped all that has gone before into successful achievement of the goal has been an awesome and indisputably American contribution.

Not the least of the achievements of Apollo 11 is the sense of unity it imparted to men on earth, not only among Americans but people of all lands who shared in the drama and saw it for what it is, a triumph for all men. If only a portion of this sense of community and interest can be retained, the moon program will be well worth the immense cost and effort.

Already attention shifts to what is to come. This November, Apollo 12 will land in the Oceanus Procellarum, the relatively smooth area that covers much of the moon's western face. Apollo 13 and 14 are targeted for rougher areas, first looks at the moon's tortured highlands.

Step by small but increasingly confident step, the exploration of the lunar surface will continue until Apollo 20, the last mission now definitely scheduled, sets down in the deep crater of Copernicus in July, 1972. By then, a new course to the planets will have been charted.

Neil Armstrong's "one small step for man" will have become a conquering stride.

WYATT POLL RESULTS

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. WYATT. Mr. Speaker, each year since I was first elected to this body I have issued a questionnaire on significant national and international issues to those I represent in Oregon's First Congressional District.

The same procedure was followed this year, with over 180,000 questionnaires distributed to my constituents, I received 30,894 replies, a record number of returns.

These annual polls are highly important to me, as they indicate the feelings of those I represent on matters to come before Congress. The tabulation of this year's questionnaire results has just been completed, and I would like to present it at this time for the benefit of my colleagues in this body:

	Yes	No	No opinion
1. If the Paris talks drag on with no apparent progress toward a peaceful settlement of the Vietnam conflict, would you favor a resumption of the bombing of North Vietnam?	57.8	31.0	11.2
2. Should the President be required to secure the approval of Congress before taking any action involving the commitment of American forces to hostile actions abroad?	73.6	21.0	5.4
3. Should the United States extend diplomatic recognition to Red China?	44.3	43.4	12.3
4. Do you favor President Nixon's recommendation for a limited antiballistic missile program?	51.9	31.8	16.3
5. Foreign aid:			
a. Should the United States continue to extend military assistance to other nations?	34.6	53.2	12.2
b. Should the United States continue to extend economic assistance ot other nations?	57.2	31.7	11.2
6. Once the Vietnam conflict has been resolved, would you favor replacement of the present draft system with an all-volunteer army?	52.9	38.0	9.2
7. Tax reform: Do you feel that there are substantial inequities and loopholes in the Federal income tax laws which require change?	92.7	3.0	4.3
8. Do you favor the banning of cigarette advertising on television?	64.7	26.4	8.9
9. Should Congress enact a statute to require the licensing and registration of all firearms?	34.7	60.7	4.6
10. Should the Congress create a Cabinet-level Department of Consumer Affairs?	38.7	34.7	26.6
11. Do you favor President Nixon's proposal to create a National Law Enforcement Academy to upgrade the competence of State and local police?	70.1	19.1	10.8
12. Should the National Labor Relations Act be amended to require that farmers recognize and bargain with unions representing their workers?	28.1	55.9	16.0
13. Should Congress place a ceiling on the total amount of Federal farm subsidy payments which 1 person may receive in any 1 year?	85.0	5.1	9.7
14. Do you favor President Nixon's proposal for automatic cost-of-living adjustments in social security benefit payments?	81.3	11.0	7.7
15. Should Congress propose a constitutional amendment to set the minimum voting age at 18 in all States?	24.6	69.5	5.9
16. Should Congress propose a constitutional amendment to permit voluntary nondenominational prayer in public schools?	70.8	20.8	9.1
			Percentage favoring
17. Electoral college reform is being advocated. Which of the following choices do you prefer? (Please check 1 only.):			
a. Abolish the electoral college system and provide for the direct popular election of the President			76.4
b. Provide for the election of presidential electors by districts within each state, rather than the present "winner-take-all" system of State at-large election			5.2
c. Provide for the proportional division of each State's electoral votes among the various presidential candidates in accord with the share of the popular vote each receives in the State			9.5
d. No change in the present system			5.1
e. No opinion			3.8

FEDERAL AID TO EDUCATION TO BE CONSIDERED

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. O'HARA. Mr. Speaker, tomorrow we will begin consideration of appropriations to fund Federal aid to education for the 1970 fiscal year.

A number of us were deeply concerned when the administration recommended sharp reductions in some very important programs, among them impact aid, library assistance, and guidance and counseling.

We were further disappointed when the Committee on Appropriations, while recommending the restoration of about one-third of the cuts proposed by the administration, still did not favor adequate funding for these programs.

School districts across the Nation are caught in the vise of limited property tax revenues on one side and soaring costs and increased numbers of students on the other.

In light of this, these programs are of critical importance to hundreds of school districts and to the students enrolled therein.

Recently, I solicited the views of a number of school superintendents in my congressional district.

I offer several typical replies which I think indicate why we must increase the funding for these educational programs. I also include for the RECORD a letter from Michigan superintendent of public instruction Ira Polley, which details the school financial situation for the entire State.

The replies and letter follows:

WARREN CONSOLIDATED SCHOOLS,
Warren, Mich., May 28, 1969.

Hon. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR JIM: Please know that we in the Warren Consolidated School District will deeply appreciate your effort to assure continued Federal support of E.S.E.A., Title II and N.D.E.A., Title III.

We realize you are aware of the rapidly escalating salary costs which this district must face as reality under collective bargaining This is hardly the time for withdrawl of federal support, even though some may regard the dollars involved as relatively insignificant.

Despite the generosity of our local people in approving millage, we face a curtailment of program particularly in the areas of media and specialized services to children. The aforementioned federal titles have provided real assistance in these areas in the past years. During 1968–69 fiscal year, we expect to receive in excess of $60,000—a small sum in terms of federal appropriations, but assistance which means much to us in terms of counseling and guidance, and library and classroom learning media.

Thank you kindly for your assistance.

Very truly yours,

CLAYTON W. POHLY,
Deputy Superintendent for Curriculum Services.

CENTER LINE PUBLIC SCHOOLS,
Center Line, Mich., April 29, 1969.

Hon. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: It is with a great deal of shock that I write to you asking your efforts be made in behalf of maintaining federal aid to education. You are well aware that at the state level we are experiencing a great deal of difficulty in keeping our heads above water. You have made me aware of the impact of the federal cuts in this program. While federal aid does not compare with state and local aid, it is indeed a shocking thing to know where we as a government are putting our greatest values.

I would like to commend you for your efforts in behalf of the boys and girls in the State of Michigan and throughout the United States.

Sincerely,

WAYNE WOODBY,
Superintendent of Schools.

CHIPPEWA VALLEY SCHOOLS,
Mount Clemens, Mich., April 23, 1969.

Hon. JAMES G. O'HARA,
Mount Clemens, Mich.

DEAR SIR: Thank you for your letter of April 16, 1969, bringing me up to date on the proposed Federal Aid reduction that would affect our School District.

On the local level we currently are levying 31.61 mills to build and operate our schools. The proposed change in the School Bond Loan Program in Michigan will require an additional 2.4 mills that our District will have to levy. In addition to this, a question will be placed on the ballot in June requesting from 4 to 6 additional mills for operation. The proposed Federal Aid reduction would be the equivalent of ½ mill in our School District.

Federal Aid will not make or break us but, at this point with the financial problems that Michigan schools are having, we sure hope that something can be done so another burden won't have to be added to our plight.

Sincerely,

GORDON E. PECKHAM,
Superintendent of Schools.

WARREN CONSOLIDATED SCHOOLS,
Warren, Mich., April 29, 1969.

Hon. JAMES G. O'HARA,
U.S. House of Representatives,
Washington, D.C.

DEAR JIM: It is most gratifying to be kept informed with regard to your stand with respect to education.

We certainly don't like to balance any budget by making our children suffer for it. Michigan schools are in serious financial difficulties. Many of them are now experiencing deficits. Within a year most of them will be in this critical condition. On the other hand, taxpayers are revolting on the local level. The pressure is on, and certainly this is not the time for the federal government to do less for the boys and girls of this nation.

Therefore, I would urge you to utilize every device at your command to resist any reduction in the Elementary and Secondary Education Act as well as in the Impact Area Aid. In fact, this is the time and the hour for our federal government to come to our assistance if they are willing to recognize the universal need to improve the quality of education across this nation.

Again, congratulations upon your courageous stand.

Sincerely yours,

PAUL K. COUSINO,
Superintendent.

EAST DETROIT BOARD OF EDUCATION,
East Detroit, Mich., April 16, 1969.

Mr. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR JIM: I appreciated receiving your position paper relative to P.L. 874 and Title II and the affects of the anticipated loss of these monies on our Macomb schools.

I first of all want to commend you in your leadership role to attempt to retain for us the anticipated losses in supportive monies.

The East Detroit libraries would not have been able to up-date their volumes without these supplemented monies. In a period of crisis in our millage votes for operating, just to maintain what we have, Title II has been a welcomed blessing.

Although our district has not participated in P.L. 874, I can appreciate the loss of these revenues to those districts so affected. We would favorably encourage the status-quo in that program also.

In conclusion, as a school leader, I welcome your timely "alerts" and concerns in behalf of education here at home. Keep up the good work, Jim.

Sincerely,

ROBERT K. SMILEY,
Superintendent.

MOUNT CLEMENS COMMUNITY SCHOOL DISTRICT,
Mount Clemens, Mich., April 21, 1969.

Hon. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR MR. O'HARA: Thank you for your letter of April 10. The Mount Clemens Community School District, at the present time, is operating with an above average millage levy. Our school district also qualifies for Section Seventeen which means that our citizens are also taxed high with municipal taxes. Therefore, the possibility of losing $51,000 for category "B" students is a concern to our Board of Education and the administration of this school district. One of the problems that this school district faces is the planning of the Colchester Project. Throughout the planning the planners have declared that this would be an ideal place for servicemen from Selfridge Field. Therefore, we face an increase in category "B" students. Your support to maintain these funds will be greatly appreciated in this matter.

Sincerely,

WILLIAM C. HARDING,
Superintendent.

WARREN WOODS PUBLIC SCHOOLS,
Warren, Mich., April 21, 1969.

Hon. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE O'HARA: I've been most appreciative of your informational letters of the past few weeks. You have an uphill fight ahead of you but certainly be assured there is support and appreciation for your efforts.

I unfortunately can't give you direct evidence of loss from 874 impact legislation. For some crazy reason our district just has never qualified to any extent. We have been out of that picture for years now. I do appreciate the value to some of my neighbors and would vicariously wish God speed in your efforts for them.

The matter of Title II under the ESEA legislation, Library Assistance, is quite another thing. We have benefited considerably under that program. Our allowances have been in the neighborhood of $10,000 a year and they have done much to increase our library services. As you know our district has been growing like a weed and maintenance of adequate library materials has been a very difficult task. To add to that problem of creating an adequate library, we have this year had a serious operating deficiency problem. We don't expect this problem to clear up for another year or possibly 2 years. One area in which we've attempted to save a little money has been in the library field. As a consequence, the bulk of the improvement registered this year has been from Title II money. Actually, we have operated this year on a dispensation from the State Department because our local money expenditure has decreased. In view of our financial plight they have however authorized us to proceed with our normal appropriation, thus Title II is a very real thing to us. I hope you can do some good in that area.

Again thank you much for your flow of information and particularly for your concern for us.

Sincerely,

ROBERT S. TOWER.

RICHMOND COMMUNITY SCHOOLS,
Richmond, Mich., April 21, 1969.

Mr. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN JIM: I appreciate your letter of April 10th calling attention to possible cuts in the amount of funds for education that are reportedly going to be a part of Mr. Nixon's budget recommendations. Of course I am very concerned. Someone, somewhere in this nation is going to have to decide that education is one of this nation's most valuable investments and that it does cost money. In Richmond unless we get additional funds before next school year, all of the students are going to be on half days. We are cutting our staff 20%.

In regard to the proposed cutbacks in P.L. 874, Richmond is not specifically affected nearly as much as some of the other districts in Macomb County. Our current count of eligible youngsters is below that required so we are being phased out of P.L. 874; however, for a district the size of Richmond, the loss of nearly $1,700 in the library services assistance is critical. Even this amount represents a reduction of nearly $1,000 from the amount we originally received. We have been able to substantially upgrade our library services because of this assistance.

Thank you for your efforts on our behalf.

Sincerely,

UREY B. ARNOLD,
Superintendent.

DEPARTMENT OF EDUCATION,
Lansing, Mich., May 9, 1969.

Hon. JAMES G. O'HARA,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. O'HARA: The purpose of this letter is to urge you to support full funding of elementary, secondary, and vocational education programs in 1969–70.

The purpose also is to express my huge

concern about the President's proposed reductions in Michigan's education programs. The President's budget proposes to eliminate all funds for:

Library books and resources to school children (ESEA II);

Acquiring equipment for critical instructional areas (NDEA III);

Supporting guidance and counseling (NDEA III);

Constructing new public libraries (LSCA II).

The budget proposes a 50% reduction in public library service grants and a 30% reduction in ESEA III programs.

Altogether, Michigan's school children, parents, and elected school boards will lose nine million in federal aid at a time when state and local resources are particularly strained.

I believe that the appropriate action for the House to take now is to vote appropriations equal to the $5.4 billion which has been authorized by the Congress for elementary and secondary education during the past year. There are several reasons why this is necessary:

(1) The most critical domestic budget issue facing our people today is the financing of the public schools. In the last three years local and state spending for elementary-secondary education has risen by twenty-five percent while the federal contribution has increased less than ten percent; and the President's budget will, in fact, bring federal spending below the 1965–66 level.

If the Congress truly believes in a partnership of federal, state, and local governments to meet urgent domestic needs, then education is an appropriate place to demonstrate its commitment, and full funding is a proper expression of that commitment.

(2) State legislatures are being called upon to vote new taxes and shoulder an even larger share of educational costs; and most are meeting their responsibilities. They should not be expected, in addition, to pick up worthwhile programs which the Congress has started and then discarded.

If the Governor's 1969–70 budget is passed the Michigan Legislature will have raised its contribution to K–12 education by fifty percent over 1965–6; if the President's budget is passed as presented, the Congress in the same period will have *decreased* its contribution by over five percent.

(3) The public expects local school systems to deploy resources wisely and to involve parents and residents in school programming. It is difficult enough for a school system to gain public trust in its own regular programs without having to bear the onus of bad faith and disorganized management which comes when the Congress suddenly withdraws a program which it has asked that system to undertake only three years earlier.

Yet this is what has happened in the recent reductions of ESEA I; and it surely will happen when ESEA II is cut out and ESEA III substantially cut back, as the President proposes.

The public confidence is essential if local school systems are to prosper; and the Congress cannot strengthen that public confidence unless it achieves consistent and adequate financing of the programs which it asks public schools to undertake.

(4) Children in Michigan visibly benefit from the particular programs which the President is proposing be eliminated. Parents, teachers, and elected school and public officials have supported these particular programs because the benefits are visible: For example:

More individual attention from talented teachers, possible through various ESEA III projects.

Libraries in schools and communities where there were no libraries before, made possible by ESEA II and LSCA I and II grants.

Equipment which can help a child of poverty improve his grasp of English, made possible though NDEA III grants.

Acceptance of these benefits by the people of Michigan warrants the maximum appropriation for these titles and for all other elementary and secondary education titles.

I plead with you to find an early opportunity to describe our concerns to your colleagues on the Appropriations Subcommittee on Education. I am sure the members of that Committee will be interested in your views and analyses.

Respectfully yours,

IRA POLLEY.

WORCESTER'S PROUD PARTICIPATION IN THE HISTORIC MISSION OF APOLLO 11

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. DONOHUE. Mr. Speaker, when the historic Apollo 11 vehicle successfully blasted off at Cape Kennedy last July 16, the special pride and prayers of the people of Worcester, Mass., rose with and accompanied it until the three astronauts were safely returned to the deck of the *Hornet*. I think, by now, that it is pretty universally known that the late Dr. Robert H. Goddard, the acclaimed "father of modern rocketry," was born, educated, and conducted most of his early study and experimentation in rocketry in the city of Worcester. His loyal, gracious, and gifted wife still resides in our city of Worcester, and has maintained an intense interest in the continuing remarkable projections of Dr. Goddard's original, inventive genius.

Of course, Worcester, being an internationally recognized industrial center, substantially contributed, through its skilled industrial workers and plants, to the unparalleled success of the Apollo 11 mission. In view of these extraordinary factors, it is only fitting that the city of Worcester would proudly celebrate its unique participation in the most historic space exploration achievement in the history of the world. The celebration was in the form of a luncheon sponsored by the Worcester Area Chamber of Commerce and Rotary Club.

At this point, I would like to include an article from the Worcester, Mass., Telegram newspaper issue of July 25, 1969, containing an account of the luncheon ceremony and the further article containing the text of remarks by Mrs. Esther Goddard at the luncheon:

MISSION'S SUCCESS CELEBRATED BY CITY

(By Walter Donway)

Mrs. Robert H. Goddard, widow of the Worcester scientist called by many "the man who made the moon landing possible," yesterday joined Worcester in celebrating the successful completion of the Apollo 11 moon mission.

And as the first of Dr. Goddard's dreams became reality, she expressed the conviction that the rest of them would also come true.

But in her remarks, as she recalled the prophetic writings and experiments of her husband, who was ignored and sometimes ridiculed in his own time, there was both a quiet satisfaction and a gentle chiding.

Speaking at a luncheon sponsored by the Worcester Area Chamber of Commerce and Worcester Rotary Club, Mrs. Goddard began her speech—only moments after the successful Apollo touchdown in the Pacific Ocean by saying:

"This occasion offers a rare opportunity to use one of the most irritating comments ever made by a woman: 'I told you so.'

TRANSCENDS TRIVIA

"Therefore I am not going to say it, for our subject far transcends such trivia.

"This week we have seen one of man's grandest dreams become reality. In my husband's early life, it was a dream only. In his lifetime he brought it to a reasonable scientific hope, not widely shared in the non-academic community."

But with the splashdown, she said, "We have attained reality. We have brought the stars nearer."

WAS CLARK PROFESSOR

Dr. Goddard, a physics professor at Clark University, performed experiments in the 1920's and 30's that won him more than 240 patents, some awarded after his death in 1945. They are said to form the foundation of the science of rocketry today.

The audience of 200 or more at the luncheon, who were also addressed by Mayor John M. Shea and City Manager Francis J. McGrath, gave Mrs. Goddard a standing ovation.

After the luncheon, she was a guest of honor at a public celebration in front of City Hall, where a brass band and a cannon salute greeted the return of the three astronauts.

COMPANIES LAUDED

Before the gathering of about 100, Shea and McGrath congratulated seven Central Massachusetts companies that contributed parts or technology to the moon flight. Representative of the companies briefly described to the crowd what their firms contributed to the flight. Represented were Wyman-Gordon Co., David Clark Co. Inc., Sprague Electronic Co. Inc. and AVCO Corp.

After congratulating the companies, Mayor Shea said, "We of Worcester have other cause to be proud of this day, because years ago, in Worcester, a man conceived the first practical idea of the feat three astronauts performed today. We in Worcester are proud of Dr. Goddard, whose many hard, lonely hours of work made this great undertaking possible."

City Manager McGrath praised "the three brave astronauts who carried this mission to fruition—and the backup men, not only at Cape Kennedy but throughout the country, who proved, in contradiction to communism, what capitalism can do."

City Councilor George A. Wells told the young people who came to give Mrs. Goddard a sketch of her husband, presented in behalf of the Worcester Boys' Club, "Dr. Goddard was a product of the Worcester school system. You youngsters never forget that."

MET WITH SKEPTICISM

In her address to the Rotary club earlier, Mrs. Goddard said that when her husband first published his findings on jet propulsion, "He met with skepticism and indifference, even though, with Yankee caution, he publicly mentioned only the moon as a goal. Now that this has been attained, perhaps his further dreams, as found in his papers, may be met with less elevating of the eyebrows."

Mrs. Goddard then explained some of her husband's insights about travel to the moon, presented in a report which Goddard filed with the Smithsonian Institution in March of 1920.

Mrs. Goddard is now editing a collection of

her husband's papers, which will include this document and others.

OUTLINED VISION

In this report, Mrs. Goddard said, "my husband outlined his vision of lunar and interplanetary travel and beyond."

As early as 1919, Mrs. Goddard said, her husband had foreseen "unmanned exploration of the moon with camera and instruments. The propellants would be liquid hydrogen and oxygen, and guidance in space obtained through small side jets.

"Since limitations of instruments would eventually become clear, manned explorations must then be undertaken."

"Today we are at this point in his plan," Mrs. Goddard said, "now may I read what he thought was to come?"

PASSAGES QUOTED

She then quoted long passages from the 1919 report in which her husband weighed the possibilities of using solar energy for interplanetary travel and intergalactic travel.

Goddard included in this part of the report a discussion of the possibility of using atomic energy as an earlier, better substitute for solar energy.

"It is perhaps worth emphasizing," Goddard wrote in his projection of "superspace" travel, that although a discussion such as this may seem academic in the extreme, it nevertheless poses a problem which will some day face our race as the sun grows colder."

He then explored the possibility of locating human beings on different planets near different suns.

There is a line in a song in "Finian's Rainbow," Mrs. Goddard concluded, "that goes 'I follow a fellow who follows a dream.' I am blessed to have seen part of his dream fulfilled today. I can do no less than to express the conviction that the rest will follow."

PRESENTED PICTURE

During the luncheon ceremony Mrs. Goddard was presented, on behalf of Richard C. Steele, president and publisher of The Worcester Telegram and The Evening Gazette, a color picture of herself standing in front of Clark University's new Goddard Library, which is dedicated to her husband. She was also given the plates from which the newspapers recently printed the text of her husband's three-page patent for his experimental rocket and the plates from which the graphic schema of the rocket was reproduced.

Gary Walsh of WTAG made the presentation.

MRS. GODDARD RELATES LATE HUSBAND'S IDEAS FOR BEYOND MOON AND PLANETS

(NOTE.—Text of Mrs. Goddard's speech at the Rotary Club luncheon yesterday:)

This occasion offers a rare opportunity to one of the most irritating comments ever made by a woman: "I told you so." There I am not going to say it, for our subject transcends such trivia.

This week we have seen one of man's grandest dreams become reality. In my husband's early life, it was a dream only: in his lifetime he brought it to a reasonable scientific hope, not widely shared in the nonacademic community. In the past 10 years, as a result of the most efficient and effective mobilization of scientific, technological, and managerial talents ever assembled on this planet, we have attained reality. We have brought the stars nearer.

Robert Goddard had a hard base for his dreams. He was a Worcester product, from a family which took part in the early industrial development of this city. In the shed attached to his home was a tidy workshop, where he learned to work with his hands. A set of Cassell's "Technical Educator" was on the bookshelves. Worcester also furnished a first-rate scientific and technical education, and helpful cooperation from many business establishments, including ceramic nozzle linings from the Norton Company.

When at last he dared to publish his findings on jet propulsion, he met skepticism and indifference, even though, with Yankee caution, he publicly mentioned only the moon as a goal. Now that this has been attained, perhaps his further dreams, as found in his papers, may be met with less elevating of the eyebrows. In a report filed with the Smithsonian Institution in March, 1920, my husband outlined his vision of lunar and interplanetary travel, and beyond. First, of course, would come unmanned exploration of the moon with camera and instruments. The propellants would be liquid hydrogen and oxygen, and guidance in space obtained through small side jets.

Since the limitations of instruments would eventually become clear, manned explorations must then be undertaken. Landing on the moon must be without jar, by reducing the velocity so that it becomes zero when the surface is reached. He pointed out that such landings were certain to yield results of great scientific value, even aside from the question of interplanetary-communication.

SAW FURTHER

Today we are at this point in his plan. Now may I read what he thought was to come.

"It was intimated, at the beginning of the present paper, that a frank discussion would be made regarding the further possibilities of jet propulsion, together with such related matters as pertain to traveling great distances from the earth's surface. It is evident, from the calculations made regarding the use of solar energy in space, that the most extreme speeds will be produced by solar, rather than by chemical energy. This assumes that the energy of atomic disintegration will either not be producible in practical amounts, or will not be controllable by means involving small weight. These assumptions may not be warranted.

"If it is possible to utilize atomic energy, the matter of transportation would be comparatively simple, and a large body could be sent from the solar system, thus affording protection to the contents from meteors. In this case, living beings might be carried, the necessary light and heat being furnished by radioactivity.

"Further, atomic disintegration may open the way from the creation of what might be called artificial atoms, in which energy might be stored by many high-speed particles. This tremendous amount of energy could be liberated when these artificial atoms were broken up, or the particles were removed gradually.

"INTERGALACTIC TRAVEL

"If we pass from interplanetary space to superspace, this can only imply intersolar-system space, or perhaps intergalactic space. It is perhaps worth emphasizing that although a discussion such as this may seem academic in the extreme, it nevertheless poses a problem which will some day face our race as the sun grows colder, even though, by dint of jet propulsion, we succeed in moving sunward.

"The most desirable destination would be a planet near a larger sun or suns, so situated that the temperature would be like that of the earth, but where the cooling would be slower. The destination should be in a part of the sky where the stars are thickly clustered, so that any further migration would be comparatively easy, the stars preferably being hydrogen or new stars. Because of possible danger from meteoric matter, expeditions should be sent to all parts of the Milky Way, where new stars are thickly clustered. With each expedition should be taken as much as possible of all human knowledge, in as light, condensed, and indestructible a form as possible, so that the new civilization can begin where the old ended.

"CREW HIBERNATION

"Possibly the point open to greatest question is the matter of maintaining the crew safely at a very low temperature. It has long been known, however, that protoplasm can remain inanimate for great periods of time, and can also withstand intense cold. It may be necessary to evolve suitable beings through many generations."

There is a line in a song in "Finian's Rainbow" that goes "I follow a fellow who follows a dream." I am blessed to have seen part of his dream fulfilled today. I can do no less than to express the conviction that the rest will follow.

THE CAIRO CREDIBILITY GAP

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. EILBERG. Mr. Speaker, it is a truism of warfare that few nations, defeated on the battlefield, will readily admit to its citizens the true facts of its crushing loss. The German war machine was not destroyed by the Allies in 1918, the German generals contended; rather, it was sold out by the actions of the civilian government.

Today, the Egyptian Government is using a similar ploy in regard to its warfare with Israel. While its army and air force suffer defeat after defeat, the Government, through its official voice, Radio Cairo, and the articles in the semiofficial newspaper Al-Ahram, continues to spew forth reports of crushing Arab victories.

In battle after battle, the Egyptians boast, it is Israeli planes which are shot down; it is Israeli soldiers who are killed; and it is Israeli fortifications which are destroyed.

None of these supposed victories can be or have been substantiated; they are merely figments in the imagination of the President of Egypt. Fabrications such as these, Mr. Speaker, have the effect of arousing the Egyptian masses to engage in further acts of terrorism; they in no way lead to peace.

Since it is imperative that a peaceful settlement be reached immediately by means of face-to-face discussions between the Israelis and the Arabs, it is incumbent upon us to reveal to the world the true purpose of these inflated boasts; that they are merely propagandistic lies which thwart the cause of peace.

President Nasser's speech, reported in the press on Wednesday, July 23, is a prime example of such a boast. The Arab States, cried the Egyptian President, are about to enter into the "liberation stage"; the period when the Arab armed forces will enter Israel and "liberate" the land from its rightful owners.

The effect of such a speech, Mr. Speaker, is quite obvious: it will lead to more bloodshed; it will result in a greater number of terrorist attacks; it will breathe new hatred of Israel into

the minds and hearts of the Arab people; but it certainly will not lead to peace.

It is words such as these, words of destruction and death, which are uttered constantly by President Nasser; words of peace, however, are seldom heard.

On July 14, the Israeli Embassy, in an attempt to deflate the lies emanating from Cairo, issued a backgrounder entitled, "The Cairo Credibility Gap." In this brief report, the Israelis have presented for all to read the true facts behind Egyptian "victories" and the correct statistics concerning Israelis and Egyptian ground and air losses.

Let me cite one example. Egyptian sources contend that the Israeli Air Force has lost 33 planes in the 4-month period between March and July 14, 1969. During the period covered by the report, from the June war of 1967 until July 14, 1969, Israel has, in fact, lost only three of its planes, all to Egyptian antiaircraft fire while Egypt has lost 28 of its aircraft, 22 in dogfights and six to antiaircraft fire.

In subsequent air battles over the Suez Canal, Mr. Speaker, the Egyptians have continued these fanciful boasts. Since July 14, reports Cairo triumphantly, no less than 30 Israeli planes have been downed. The true facts, however, are these: Israel has, in actuality, lost only two planes, while Egypt has lost 11.

In order to dispel the entire slate of Egyptian myths, I should now like, under unanimous consent, to submit this statement, "The Cairo Credibility Gap," for inclusion in the RECORD, as follows:

THE CAIRO CREDIBILITY GAP

1. A study of Egyptian communiques and official statements over the past two years leads to the conclusion that the armed forces of Israel must be reeling from defeat to defeat. Cairo's inventory of Israeli losses along the Suez Canal for the single period of March 3–July 10, 1969, reads as follows: 104 dead (plus additional reports of "numerous killed", with no numbers specified); 140 tanks destroyed, 66 vehicles destroyed, 79 observation posts destroyed, 29 gun and mortar batteries silenced, 2 anti-aircraft battalions and 7 missile positions silenced, and "large numbers of missile and artillery positions knocked out of action." Egypt goes on to claim the destruction of 4 army engineering units, 12 machine gun positions, 12 command posts, 12 regional administration centers, 7 arms dumps, "much engineering equipment", "numerous fortified shelters", and "many giant fires ignited".

2. *Nasser: 60% of Israel's Canal Fortifications Destroyed:* On May 1, 1969, President Nasser made the following declaration in his May Day address at Helwan, a suburb of Cairo (Radio Cario, 5/1/69, 17.04 hours GMT):

"The Israelis announced that they had built up a fortified line along the eastern bank of the Suez Canal; that they had named it the Bar-Lev Line and that the Egyptians could not demolish these emplacements . . . *War Minister General Fawzi informed me and the Cabinet last week that our armed forces have so far been able to destroy 60% of the Bar-Lev Line (applause). General Fawzi told us at the Cabinet that the armed forces will continue to implement their plan until they complete the destruction of the remaining 40% of the Bar-Lev Line (applause).*"

Two weeks later, the Egyptian press was able to report the destruction of the remaining 40%. On July 4, 1969, the Egyptian daily, *El-Akhbar,* announced that the destruction of the Bar-Lev Line "has finally compelled the Israelis to withdraw into the desert."

On May 6, 1969, foreign correspondents were invited to tour the Suez Canal fortifications on the Israeli side. They interviewed the soldiers, inspected the bunkers and reported the truth. Not one of the emplacements had been destroyed during the weeks of Egyptian shelling. (See, for example, the *New York Times,* May 7, 1969).

3. *Israel's Air Force "Bled White":* Every air skirmish ends in Egyptian victory according to Cairo communiques. These assert that Israel has lost to Egypt no fewer than 33 aircraft between March and July, 1969: 4 Mirages, 6 helicopters, 12 Pipers, "6 combat planes" (unspecified), "a jet" (unspecified), and 4 other unspecified aircraft. Add to these the alleged downings between June 1967 and March 1969, and the Israeli Air Force has, according to *Radio Cairo,* been almost "bled white."

Israel has, in fact, lost to date three aircraft to Egypt since the Six Day War:—two fighters and a Piper spotter plane shot down by anti-aircraft fire on July 25, 1967 and on December 1, 1967 and March 9, 1969 respectively. These planes were all shot down by anti-aircraft fire.

Egypt, on the other hand, has lost 28 combat aircraft, most of them MIG 21's, between July 4, 1967 and July 7, 1969. Twenty-two were downed in dog fights and 6 by anti-aircraft fire. Twelve Egyptian MIG 21's have been downed since May 1969. (See list ———).

4. *"Raids that Never Were":* The continuous violation by Egypt of the cease-fire agreement has elicited an Israeli response both along the cease-fire lines and deep inside Egypt proper. On 6 occasions since November 1968, Israeli commandos have struck at installations within Egyptian territory. Cairo has sought either to deny their having taken place or, when this has not been possible, to place the blame on lone Israeli aircraft. The Nag Hammadi raid of November 1, 1968, is a case in point. The *New York Times,* November 2, 1968, carried the following item, datelined Cairo:

"The United Arab Republic announced at dawn today that a single Israeli warplane had bombed a bridge and a power station in Upper Egypt, near Luxor. A communique issued from the Egyptian Supreme Military Headquarters said that the raid had occurred 10 PM yesterday."

The Israeli army communique, November 1, 1968, gave its version as follows:

"An Israeli army commando unit struck tonight at three targets in southern Egypt on the road between Cairo and Aswan, some 230 kilometres north of Aswan. The targets were a transformer plant and two bridges over the Nile. Our forces returned safely to base."

The *New York Times,* November 4, 1969, carried a report from the scene of the raid, Nag Hammadi, written by the *Times* Cairo correspondent, Eric Paco. The report states in part:

"More than a dozen residents of this sleepy area in Upper Egypt contend that helicopter-borne Israeli commandos, not Israeli bombers, caused the damage reported Thursday to a local dam, bridge and power station. An Egyptian officer flatly denied the reports of the residents, who today told their version of the incidents to Arabic speaking visitors . . . Colonel Ibrahim, a military commentator on television who sometimes serves as military spokesman, contended that the damage had been caused by a Israeli plane or planes using bombs, rockets and bullets. The visitors were not shown any bullets or bomb or rocket parts to support this contention. They were hustled out of the station after a short visit in the dark . . . After causing the damage the Israeli commandos disappeared into the night according to the residents who asked not to be identified for publication."

5. *Radio Cairo:* In a land of widespread illiteracy, where the people are dependent on village radios and on word-of-mouth facts that are too often fiction, the myths of the government-controlled *Radio Cairo* linger and are undoubtedly believed. Its stories on Israel are frequently hair-raising, sometimes comical. A random example of the type of news disseminated to the Egyptian people is this item monitored on July 6, 1969, 9.30 GMT. It reads:

"The Israel authorities have today cut off all water supplies to the Arab residents of Jerusalem in retribution for the Security Council resolution of July 3, (concerning Jerusalem). The aim is to compel the thirsty people to flee the city. The Jerusalem Arabs have expressed their determination not to give in to the Zionist terror tactics."

Foreign visitors by the thousands were in Jerusalem on that Sabbath day, among them foreign correspondents. Nobody reported the story. It was another myth.

6. *Nasser's Interviews:* President Nasser's natural propaganda skill has been attested to by foreign visitors to Cairo. He is graced with personal charm, is known to be keenly sensitive to the Western mood and thinking and is adept in measuring his words to audiences abroad. The Nasser interviews in the Western press carry passages that on the surface at least appear reasonable. Such passages never reach the Egyptian public. Without exception, every Nasser interview with a Western newsman is subjected to intensive editing and censorship before it is released for publication in the Egyptian press. Deleted or rewritten are any and every reference that might be interpreted as moderate or accommodating. This was true in the case of his interview in *Look,* March 10, 1968, his interview in *Newsweek,* February 10, 1969, his interview in the *New York Times,* March 2, 1969, and his interview in *Time* Magazine, May 16, 1969. In each instance the technique has been to doctor and rephrase the original text to make it conform to actual Egyptian policy.

A particularly significant and not atypical example is the Cairo treatment rendered to the *Look* interview (March 10, 1968). *Look* had asked Nasser whether he had perhaps been misled by suspicion and faulty information when, in 1967, he accused the U.S. and Britain of attacking his air force. He replied:

"You could say that, yes."

The Cairo press gave this as Nasser's reply to the same question:

"You may say so, but others say something else."

To this day the Egyptian public has not been told the truth and no doubt many still live with the fantasy that the Egyptian air force was destroyed by U.S. and British carrier planes.

7. *Al-Ahram Story:* One of Cairo's foremost propagandists is Heyseinan Heikal, a close confidant of Nasser and editor of the semi-official daily newspaper *Al-Ahram.* On February 19, 1969, the *New York Post* carried an AP dispatch datelined Cairo that read as follows:

"President Nixon has invited a 14 year old Egyptian girl whose father was killed in the 1967 Arab-Israeli war to visit him at the White House if she ever comes to the U.S., the semiofficial newspaper *Al-Ahram* said today. "The girl, Nagla Hilmy, sent Nixon a letter last month saying her father, Hedayat Hilmy, a pilot, was killed "with weapons America gave to Israel." Hilmy had piloted Nixon's plane when he visited Egypt in 1965, *Al-Ahram* said . . . *"Al-Ahram* said it would pay the girl's expenses for the trip she hopes to make during her school summer holidays."

The report quoted from President Nixon's reply to the girl's letter as follows:

"If we can achieve peace, fine men like your father will not be lost in future battles and instead, continue to contribute to the happiness of their families and the welfare of their countries."

The Washington Post, June 21, 1969, reported that Nagla Hilmy had arrived in Washington with her mother on June 19, 1969.

The facts are these: the late Hedayat Hilmy was not killed "with weapons America gave to Israel." He was not killed in the Six Day War, nor in any military action involving Israel. *Hedayat Hilmy was a transport pilot who lost his life in October 1967 when the Ilyushin–14 he was flying from Cairo to Alexandria collided with another Ilyushin transport. Al-Ahram*, September 8, 1968, carried his photograph and an obituary notice from the family, announcing the first anniversary of his death (according to the date of the Arabic lunar year). The notice gave details of a memorial gathering that was to be held on the following day in Cairo.

In an attempt to reap a cheap propaganda victory, *Al-Ahram* had shifted the scene and the date of the pilot's death. Whether the daughter knew the true circumstances of her father's passing—she was 12 years old at the time—is not known.

8. Prestige, Morale, Politics: The character and policy of the Egyptian propaganda machine has apparently changed little, if at all, since that time in June 1967 when Cairo fabricated the US-British mass attack on the Egyptian air force, invented an air victory involving the destruction of 167 Israeli planes, and told the world that Tel Aviv had been reduced to ruin. Relevant still are the words of the *Washington Post*, June 7, 1967, which spoke of Cairo's propaganda excesses in these terms:

"Fortunately, over the years, this cesspool on the Nile has so utterly destroyed its own credibility that truth itself would be rendered dubious by disclosure from such a polluted source. But a lying media of communication, even though notoriously unreliable, can work dangerous mischief in an inflammable situation. In a society where there existed independent sources of information, its capacity for evil might be diminished. But its monopoly multiplies its works of wickedness."

The monopoly control by the Cairo Government over the nation's mass media persists, as do the fantasies and the exaggerations. Considerations of prestige, morale and politics continue to take precedence over truth, with consequences that must, as they have in the past, prove grave to Egyptian society. In the words of the *Christian Science Monitor*, June 30, 1967, "The Arab Lands refuse to face facts and take haven in self-deceptions which will make it harder for them to face reality . . . They take refuge in fantasy, thereby only compounding their future difficulties.

EGYPTIAN AIR LOSSES SINCE SIX DAY WAR

4 July 67, Suchoy–7 downed by anti-aircraft fire at Raas Sudar.

8 July 67, MIG 21 downed in dog fight over Suez Canal.

11 July 67, Suchoy–7 downed by anti-aircraft fire at Romani.

15 July 67, 2 MIG 21's downed in dog fight over Suez Canal.

15 July 67, 2 MIG 17's downed in dog fight over Suez Canal.

15 July 67, Suchoy–7 downed in dog fight over Suez Canal.

15 July 67, 2 MIG 17's downed by anti-aircraft fire over Suez Canal.

28 August 67, Suchoy–7 downed by anti-aircraft fire over Suez Canal.

11 October 67, MIG 21 downed in dog fight over Suez Canal.

10 December 68, MIG 17 downed in dog fight in vicinity of Sharm-el Sheik.

8 March 69, MIG 21 downed in dog fight over Suez Canal (pilot captured).

14 April 69, MIG 21 downed in dog fight over Suez Canal.

21 May 69, MIG 21 downed by anti-aircraft fire over Suez Canal.

21 May 69, 3 MIG 21's downed in dog fight over Suez Canal.

23 June 69, MIG 21 downed in dog fight over Suez Canal.

26 June 69, 2 MIG 21's downed in dog fight over Suez Gulf.

2 July 69, 4 MIG 21's downed in dog fight over Suez Gulf.

7 July 69, 2 MIG 21's downed in dog fight in vicinity of Sharm-el-Sheik.

Total downed—28, of which 22 were destroyed in dog fights and 6 by anti-aircraft fire. Israel's losses during the same period on the Egyptian front were 2 fighters (25 July 1967 and 1 December 1967), and 1 Piper spotter plane (9 March 1969), all downed by anti-aircraft fire.

CAMPUS DISCIPLINING TOUGHER THAN BELIEVED

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, there has been much discussion in recent weeks about the actions of college and university administrators with regard to the handling of student disorders.

Attorney General Mitchell and HEW Secretary Finch have made clear the strong belief of the Nixon administration that the administrative independence of colleges and universities is an essential element of the academic freedom which this Nation has always cherished for its institutions of higher education. Responsibility for the orderly maintenance of these institutions should not be preempted by any Federal agency.

Some have claimed that college administrators have not dealt adequately with the problem of disruptive student action. This view, it seems to me, is not correct and for the information of my colleagues, I am including at this point in my remarks, information which details some of the action which has been taken by colleges and universities throughout the country:

[From the Los Angeles Times, June 23, 1969]

DISCIPLINING ON CAMPUS TOUGHER THAN BELIEVED—COLLEGES HAVE BEEN FAR FROM SOFT IN DEALING WITH SOME DISSIDENT STUDENTS

(By John Kendall and George Kannar)

From the cradle of the student movement, UC Berkeley, to the nation's oldest university, Harvard, scores of campus disturbances this school year have prompted the question:

"Why don't they just throw the troublemakers out?"

The question implies an easy answer: get tough. The implication is that nothing is being done.

But the fact is, universities and colleges have disciplined scores, probably hundreds, with more than clucks of disapproval and slaps on the wrist. During the last school year, for example:

UC Berkeley dismissed 15, suspended 35, placed 160 on disciplinary probation in three disturbances and collected some $20,000 in fines for property damage. Those totals do not include possible action against 273 students involved in the "people's park" incident.

HARVARD TAKES ACTION

Harvard dismissed 3, "separated" 13 for periods up to two years, placed 20 on probation and warned 99 against future misconduct after 400 policemen were called to clear University Hall of protesters.

Stanford University suspended 14, placed 77 on probation and levied fines totaling $5,425 after demonstrators disrupted the Jan. 14 board of trustees meeting and occupied Encina Hall on May 1.

University of Chicago expelled 43 and suspended 81 for periods up to six quarters for a two-week building sit-in and an invasion of the Faculty Club. Police were never called.

Dartmouth obtained a court order to clear a seized building. When it was violated, 40 undergraduates were arrested by police. Thirty-six of them were sentenced to 30 days in jail. Campus disciplinary hearings were under way at the end of the school term.

FORTY-TWO SUSPENDED AT OCCIDENTAL

Occidental College suspended 42 students for the remainder of the spring term after they sat in the placement office to protest on-campus military recruiting.

San Francisco State College expelled 1, suspended 27, placed 10 on probation and issued letters of reprimand to 97 students in a tumultuous period marked by repeated use of police on campus.

San Fernando Valley State College placed 46 students on disciplinary probation after the takeover of the upper floors of the Administration Building Nov. 4. The college has reserved the right to review the cases of 27 of the students waiting trial on felony charges.

Expulsion, dismissal or suspension may seem minor to angry citizens. But to a student who may lose his 2–S draft status or financial support, or who may fail to graduate, these are not small matters.

What's happened at UC Berkeley illustrates the effectiveness of university discipline, in the opinion of Chancellor Roger W. Heyns.

He told the Comstock Club in Sacramento recently that in the past two years "only 32" of more than 350 disciplined students have committed a second violation and five have committed a third.

Heyns said the impression that UC Berkeley ignores discipline and enforcement of rules among its students is a "myth" which survives outside the campus.

In the four years prior to 1969, the chancellor reported, more than 350 Cal students were disciplined for rules violations, not including what he termed "beer, sex, and cheating" cases. (There have been only two of this traditional type at Berkeley, since Jan. 1.)

Today political activity is the principal reason for rule-breaking, not panty raids, and just as the reasons have changed, so have the uninversity's methods in dealing with violators.

Going—if not gone—are the days when the dean of students handled each discipline case like a parent, judging the student informally with a minimum of rules.

BECOMES SPECIFIC

Lately, rules have proliferated along with statements of the rights and responsibilities of students. Instead of vague commands against misbehavior, many colleges and universities have become specific in spelling out offenses, punishment and procedures.

Last month, the Board of Trustees of the California state college system amended general rules which said any student may be placed on probation, suspended or expelled for:

A—Disorderly, unethical, vicious or immoral conduct.

B—Misuse, abuse, theft or destruction of state property.

New rules list cheating, forgery, misrepresentation, obstruction or disruption, physical abuse, theft, unauthorized entry, sale or possession of dangerous drugs, possession or use of explosives or deadly weapons, lewd or indecent behavior and soliciting others to do an unlawful act.

The new regulations define "deadly weapon" as "any instrument or weapon of the kind commonly known as a blackjack, slingshot, billy, sandclub, sandbag, metal knuckles, any dirk, dagger, switchblade knife, pistol, revolver, or any other firearm, any knife having a blade longer than five inches, any razor with an unguarded blade, and any metal pipe or bar used or intended to be used as a club."

As the rules become specific and as the number and types of offenses increase, the procedure for dealing with violators becomes more legalistic, taking on the appearance of an adversary proceeding—a trial.

Changes in the students themselves help foster the trend toward legalization.

Increasingly distrustful of what they think is secrecy and behind-the-scenes maneuvering, many students demand that everything must be conducted in the open. Many want the procedures written down so they know how to defend themselves against charges.

But "openness" itself has a positive value for some of them. At Yale University, for example, "open decision-making" is one of the most appealing revolutionary rallying cries. Opening the disciplinary procedures somehow seems to lead almost inevitably to regularizing them, and eventually making them more formal and legalistic.

At UC Berkeley, regulations issued more than a year ago guarantee due process for the accused student, including right of counsel at an impartial hearing, safeguards against self-incrimination and an adequate summary of the hearing.

To William Van Alstyne, general counsel of the American Assn. of University Professors, the system becomes "more judicious" as it becomes "more judicial."

But not everyone agrees that legalism is good. State College Chancellor Glenn S. Dumke doesn't.

PROCESS COLLAPSE

"There is . . . a very real danger that student discipline on university campuses is being jeopardized by the imposition of administrative injunctions, providing attorneys for the prosecution and for the defense, the use of legal rather than academic vocabularies, etc.," Dumke said in a recent speech.

"Not only can such judicial trapping provide a false impression of due process, but they can seriously slow down that process to a point where it simply becomes inoperative."

At San Francisco State College, one of Dumke's administrative headaches during this school year, the usual disciplinary process collapsed when the student body president refused to appoint student members to a student-faculty committee.

Emergency procedures were invoked by acting President S. I. Hayakawa. He appointed an associate as the coordinator for internal affairs, charged with gathering information about violations and conducting hearings before panels of volunteer faculty members.

"We've sort of staggered along as best we could under tremendous handicaps," says a college spokesman. "We have tried to make it a fair system although it has not been satisfactory."

This fall San Francisco State administrators plan to use the same emergency system, unless the Academic State approves a new one.

At UC Berkeley, a new judicial system was proposed by a student-faculty Study Commission on University Governance. In a report, issued last year the group said.

"We, too, share the nostalgia for a community whose limited size and shared purpose permit it to dispense with rules and procedures. Reality compels the admission that such a community does not resemble the Berkeley of 1968."

The commission proposed that the central adjudicatory function of the university community should fall to a faculty-student Student Conduct Court, divided into a preliminary hearing division and trial division. The planners foresaw the occasional need for a campus review court.

They called for formation of a legal services board, an agency composed of law-trained faculty members and students. The board would prepare cases, supply advisors to students brought before the courts and assist the courts in resolving legal issues.

The commission's stated objective was to provide for a judiciary independent of executive or prosecuting functions and to create judicial and rule-making machinery which is broadly representative of all campus interests.

RULES COORDINATOR

So far, nothing has been done about the recommendations.

With one exception, UC Berkeley's disciplinary machinery remained largely the same through the university's recent troubles. A difference is the appointment of a coordinator of rules and facilities, separate from Dean of Students Arleigh Williams' office, whose task is to initiate cases according to the time, place and manner of rules infractions.

Cases which Dean Williams thinks are serious enough are heard by the Committee on Student Conduct, composed of five faculty and four student members.

Williams admits that the volume of cases has had a "serious impact" on the university's disciplinary machinery, but he says the Committee on Student Conduct continues "to meet the calendar."

"I feel our system is fair and a very wise system," he says. "I think it has handled discipline in a very capable manner. It is not lenient, nor is it repressive. It is a system that is able to provide proper justice for persons accused of violating the rules."

Not so, says Charles Palmer, UC Berkeley's student body president this year.

"I think there are tremendous problems here," he says. "Many of the structures are irrelevant. Discipline often appears arbitrary and not terribly consistent. Lots of people are tried for what they couldn't be tried for in court. It has become a political thing. Some people are disciplined and some are not."

In Palmer's opinion, the system is not representative. He says it is run by faculty members appointed by the chancellor and by students who are "not our peers."

Palmer's view is strikingly different from that of Pat Shea, a member of the Council of Presidents at neighboring Stanford.

"I think Stanford has made tremendous steps in community government and community respect for its own laws," the political science major said.

Stanford's new president, Kenneth S. Pitzer, agrees.

At his recent inauguration, Pitzer said the university's new system is intact but "seriously overburdened." But, he said, "We are gaining, rather than losing in this area. I hope for further progress next year."

"We are moving forward in rebuilding the understanding and confidence among the constituencies at Stanford."

Stanford has attempted to involve the entire campus community in determining what constitutes a community disruption, then engage each element further in solving the problem and applying disciplinary measures.

To accomplish this, a Committee of 15 last year recommended a new legislative and judicial charter.

The charter, approved by faculty, students and administration members, places primary responsibility for enforcing campus rules in the Stanford Judicial Council, composed of four students and five faculty members.

Two other new groups were formed: a 65-member Academic Senate, small enough to discuss major topics, and a five-member Faculty Consultative Group for Campus Disruptions to provide a continuous link with the faculty during crises.

Then, last fall, acting President Robert J. Glaser promulgated a new policy on campus disruptions. Generally, it makes it a violation of university regulations for a faculty member, staff member or student to prevent or disrupt normal university functions or obstruct the legitimate movements of individuals on campus.

The policy was approved by the student legislature and Academic Senate.

Thus, by the end of 1968, Stanford faced the new year with a policy on disruption, a community-approved judicial process to enforce that policy and new means for student-faculty participation.

How well the new system worked is pointed out in a recent report by Gerald Gunther, a nationally prominent professor of constitutional law at Stanford and a member of the university's Faculty Consultative Group.

NEW MACHINERY

Gunther recalled that in May, 1968, students occupied the Old Student Union Building to gain amnesty for seven students disciplined for attempting to disrupt CIA recruiting. Subsequently, the Academic Council voted in favor of amnesty for students involved both in the original disruption and the sit-in.

Last month—a year later—when students occupied Encina Hall the new machinery began to work. Within an hour of the 1 a.m. occupation, the Dean of Students and 15 faculty members had entered the building to certify that a disruption existed and to ask demonstrators both to leave and to identify themselves. Identification was begun, and after consultation with the Faculty Consultative Group, a decision was made to call police.

At 7:30 a.m. more than 100 Santa Clara County sheriff's deputies arrived. As previously planned, faculty members entered the building with each arrest team.

Their purpose, according to Gunther, was to encourage students to leave, to prevent fear of police attack, to prevent misunderstanding afterward concerning what happened and "to give pause to those demonstrators who had hoped to follow the policy of radicalizing more students by provoking actual or apparent police brutality."

The sit-in protestors chose to leave Encina Hall voluntarily. Seventy-eight demonstrators were identified and placed on immediate temporary suspension and Stanford obtained a court order to restrain further disruptions.

The Judicial Council has recommended, and President Pitzer approved, suspension for 14 of the demonstrators and probation for 48 others. The suspensions are the first such mass penalty at Stanford in more than 20 years.

ACTION ENDORSED

The day after the Encina Hall sit-in the Academic Council virtually unanimously endorsed the action of Pitzer and the provost.

Gunther says it would be "utter foolishness" to imply that Stanford has arrived at permanent campus peace.

"But," he says, "the important thing to see is that the administrative methods used and the attitudes of the Stanford community

have undergone fundamental and pervasive changes.

"While no one is happy with the resort to police force—least of all the president and provost—the contrast in community support with the earlier sit-in and with results of many other campuses is marked.

"The university has learned new and more effective procedures for dealing with disruptions and the university community, while far from united on the issue, has worked together in enforcing its policy."

Van Alstyne of the American Assn. of University Professors, who recently taught at Stanford, says he knows of no other institution that "has done as much as Stanford to make its internal processes work."

He estimates, however, that perhaps a hundred universities and colleges have revised or are revising their disciplinary procedures because the volume and gravity of student disruptions have disclosed the weakness and arbitrariness of their machinery.

One school, Cornell University in Ithaca, N.Y., found its traditional disciplinary procedure painfully inadequate this year. In fact, the issue at Cornell which prompted disruptive student action was the disciplinary system itself.

In April black students, armed with shotguns, occupied an administration building to protest alleged arbitrariness of Cornell's all-white disciplinary structure, which had just recommended punishment for five black students involved in an earlier incident.

James Perkins, Cornell's president, agreed to drop the charges if the students would leave the occupied building peacefully. They did, but two days later the faculty repudiated Perkins' compromise and continued proceedings against the five students.

Two days later, with the specter of armed violence hanging over the campus, and with a member of the Black Students Union declaring over national television that "Cornell University has just three hours to live," the faculty changed its mind and stopped proceedings against the students.

In the end, no one was punished for anything by the university, although a handful of white SDS members face civil trespassing charges.

Cornell has decided not to discipline its students until it has a comprehensive plan for revision of the disciplinary system. A special committee set up to study the problem is expected to release its report soon. Meanwhile, only routine "beer, sex and cheating" cases are being handled.

At Harvard, the Faculty of Arts and Science approved the university's recent penalties for seizure of University Hall by a 342 to 29 vote, and adopted a resolution which said:

"We recognize the need to formulate, in the near future, a document that will emerge from the widest discussion within and will reflect a wide consensus of all members of the Harvard Community.

"This statement shall apply equally to students, to officers of instruction and to officers of administration."

In an interim statement, the Faculty of Arts and Science listed activities regarded as incompatible with the purpose of the academic community. They included:

Violence against any member or guest of the university community.

Deliberate interference with academic freedom and freedom of speech (including not only disruptions of a class but also interference with the freedom of any speaker invited by any section of the university community to express his views).

Theft or willful destruction of university property or of the property of members of the university.

The faculty members recommended appropriate discipline, including expulsion, dismissal, separation or requirements to withdraw.

Dartmouth has taken a similar approach during the past 18 months to establish college guidelines by community consensus.

If any campus communities are reluctant to deal with disciplinary problems, there are plenty of legislators from the state capitals to Washington, D.C., to prompt action.

Colorado has a new law providing penalties of up to $500 in fines and jail sentences up to a year, or both, for anyone interfering with the normal functioning of a college or university.

Ohio requires colleges and universities receiving state support funds to adopt regulations for the conduct of students, faculty members, staff members and visitors.

Between 80 and 100 proposals to deal with campus disturbances were introduced this session in the California Legislature.

Knowledgeable observers expect the proposals will be winnowed to two compromise bills—one dealing with changes in the penal code and one with the education code.

Perhaps the most striking provision in the penal code bill may be a proposal requiring a 10-day mandatory jail sentence for the second conviction of an unlawful act during a campus disturbance. A third conviction would bring a mandatory 90-day jail term.

SUMMARY OF DISCIPLINARY ACTIONS TAKEN BY SELECTED UNIVERSITIES IN CASES OF STUDENT UNREST

Dartmouth College—40 students jailed for 30 days, fined $100 each for failure to abandon occupied building.

Stanford University—78 students placed on temporary suspension pending hearings, after seizure of building. After hearings, 14 suspended, 48 placed on probation. Fines totalling $3525 levied.

University of California—(All campuses.) A total of 458 disciplinary actions, including 8 dismissals, 71 suspensions, for period Sept. 1967–Dec. 1968.

University of Kansas—56 students disciplined, including 33 suspensions, 13 delayed degrees.

University of Colorado—2 students expelled, action pending against four others after disruption of speech by Hayakawa.

University of Chicago—Action taken against 165 students after sit-in at administration building. Of these 42 were expelled, 85 suspended.

Duke University—48 students placed on year's probation for seizing administration building.

Columbia University—Action taken against 500 students in wake of last spring's troubles. 300 have been censured or placed on probation, 26 suspended.

State University of New York at Stony Brook—21 students jailed for 15 days after library sit-in, action pending for 68 for same incident. 12 others facing charges for interfering with civilian recruiter.

Occidental College—42 students suspended for sit-in protesting on-campus military recruiting.

San Francisco State College—One student expelled, 27 suspended, 10 placed on probation, 97 reprimanded for last year's disturbances.

San Fernando Valley State College—46 students placed on disciplinary probation after seizure of administration building. Felony charges pending for 27 others.

Harvard University—Three students dismissed, 13 separated for up to two years, 20 placed on probation, 99 given warnings in wake of University Hall seizure. 199 were arrested.

Univ. of Miami (Coral Gables, Fla.) 14 students arrested May 14, 1968.

Southern Univ. (New Orleans) 23 students arrested April 9, 1969.

Univ. of Illinois (Champaign) 244 students arrested September 9, 1968.

Univ. of Illinois (Chicago) 22 students arrested May 8, 1968.

Ohio Univ. (Athens, Ohio) 21 students arrested November 26, 1968.

U. of Conn. (Storrs, Conn.) 16 students arrested December 26, 1968.

Roosevelt Univ. (Chicago) 50 students arrested May 8, 1968.

Purdue Univ. (Lafayette, Ind.) 41 students arrested May 21, 1968.

So. Car. State College (Orangeburg, S.C.) 30 students arrested February 7, 1968.

Grambling College (Grambling, La.) 22 students arrested October 26, 1967.

Dartmouth College (Hanover, N.H.) 54 students arrested May 7, 1969.

Fisk Univ. (Nashville, Tenn.) 303 arrested April 1968.

George Washington Univ. (Washington, D.C.) 5 students arrested April 24, 1969.

Vorhees College (Denmark, S.C.) 25 students arrested April 29, 1969.

Univ. of Wis. (Madison, Wis.) 39 students arrested February 1969.

Oshkosh State Univ. (Oshkosh-Wis.) 102 students arrested November 21, 1968.

Queens College (New York) 39 students arrested April 1, 1969.

Ohio State Univ. (Columbus, Ohio) 34 students arrested June 4, 1968.

Kent State Univ. (Kent, Ohio) 53 students arrested April 16, 1969.

Central State Col. (Wilberforce, Ohio) 92 students arrested November 13, 1967.

Western Mich. U. (Kalamazoo, Mich) 37 students arrested April 4, 1969.

According to information presented to the Special Subcommittee on Education of the House Committee on Education and Labor, the following is a breakdown of the use of various forms of action.

	Percent
Unrecorded	21.7
Agreed to Demands	4.4
Total	26.1
Injunction	2.2
Disciplinary Action	6.4
Campus Police	4.4
Outside Police	26.3
National Guard	6.4
Arrests	25.7
Use of Firearms	1.8
Total	73.9

The definition of student disorder is:

"Use of force, disruption or seizure of property under the control of any institution of higher education to prevent students or officials from engaging in their duties or pursuing their studies."

The point that I wish to make is that it is apparent that universities and colleges do respond to student disorders and the bulk of unrecorded actions were nondisruptive within the context of the definition.

CAPTIVE NATIONS WEEK

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MINISH. Mr. Speaker, this month we mark the 11th anniversary of Captive Nations Week. Since 1959, when President Eisenhower issued a Presidential proclamation to observe the event, Captive Nations Week has served as a valuable opportunity for the citizens of the United States to demonstrate their solidarity with, and concern for, the enslaved peoples of Eastern Europe.

Over the past two decades, Communist tyranny has thwarted the legitimate aspirations for freedom and self-determination of the 100 million persons of Eastern Europe. Czechoslovakia provides the latest evidence of the brutal character of Soviet hegemony. From that tragedy, however, the world learned once more that the freedom-loving peoples in Communist dominated lands have not despaired. Despite 20 years of repression, they continue to look to the day when they will at last be able to exercise their fundamental rights free of Soviet interference.

Mr. Speaker, by our annual observance of Captive Nations Week, we assist in keeping the light of freedom burning brightly in the hearts of the people of Eastern Europe. These brave individuals know the United States as the world's citadel of freedom. We must continue to support them in their difficult quest for self-government with freedom and justice.

CIVIL SERVICE RETIREMENT FINANCING AND BENEFITS

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. MILLER of Ohio. Mr. Speaker, I fully support measures to improve the inadequate financing of the civil service retirement system. It is imperative that confidence be maintained in the actuarial soundness of the retirement fund so that millions of Government employees and their families can be assured that money will be available to pay retirement annuities and survivors' benefits when they come due.

The American voters are already outraged, and justifiably so, about the 41-percent congressional pay increase that was run through this body earlier in the year over the strong objections of those of us who condemned the fiscal irresponsibility and political skulduggery acquiesced to by the silent majority of Representatives who are supposed to express the will of the people.

Just a few weeks ago this body passed legislation to temporarily extend the income tax surcharge which will continue the tax drain on our already overburdened wage earners and small businessmen. There was little question that extending the surcharge was a financial necessity to help hold the line against ruinous inflation and to prevent further rises in already unacceptably high interest rates.

When the Congress has made such demands on the American taxpayer, I cannot in good conscience vote for a measure to liberalize the retirement benefits of myself and my colleagues. When we force economic austerity on the Nation as a whole, we should not then liberalize our own benefits to be financed out of tax dollars.

I supported the amendments to strike from the bill the liberalizing retirement benefits for Congressmen. Unfortunately, those amendments were rejected; I, therefore, had no choice but to vote against final passage of the bill.

It may be construed that my vote is opposed to correcting the inadequacies of the retirement fund for civil service workers. As I have explained, this is certainly not the case. I fully support necessary measures to establish financial security for civil service employees retired now or in the future. But I cannot vote for any bill that increases financial benefits for Members of Congress, such as H.R. 9825 provided.

PAINTERS AS COMMUNITY LEADERS

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. McCARTHY. Mr. Speaker, I would like to take this opportunity to praise the work of the Painters Council, District 4, AFL–CIO, of Buffalo and western New York, in providing community leadership in the Buffalo metropolitan area. Under the able direction of Mr. Kenneth C. Carlucci, business manager of district 4, the Painters Council plays a vital role in a wide variety of civic tasks. Through direct contributions of money, through organization and labor, and through business management the Painters Council is helping to make Buffalo a better city to live in.

The council is taking the lead in arranging and managing a $10 million housing project on Buffalo's waterfront. It has painted innumerable public buildings free. It contributes to such worthwhile projects as a Girl Scout's camp, a dining room at the Crippled Children's Guild, and the Philharmonic Orchestra drive. And it leads the drive to send Christmas gifts to American servicemen in Vietnam.

In the fullest sense, Mr. Carlucci and Painters Council, District 4, are part of the Buffalo community. Without their leadership, Buffalo would be a poorer place to live. I would like to add my praise to that of the other citizens of Buffalo for the standard of excellence set by Mr. Carlucci and his associates. I am inserting in the RECORD for the further information of my colleagues an article by Anne McIlhenney Matthews, appearing in the Buffalo Courier-Express of June 26, 1969, describing the work of the council:

PAINTER'S CIVIC TASKS HAILED

(By Anne McIlhenney Matthews)

If all unions emulated the Painters Council, District 4, AFL–CIO, of Buffalo and Western New York all headaches and many of the problems in community relations would disappear.

"Bits and pieces" (as the British press puts it) have seeped into the news and into the consciousness of the community concerning what the council has done, is doing, and plans to do, but when you put them all together and assemble a whole story of the big "package" of the council's local enterprises it is big enough news to merit national and worldwide recognition.

The logical man to tell the story is Kenneth C. Carlucci, business manager of the council and therefore chief administrator of its endeavors. Carlucci succeeded James H. Wolford in this job six years ago when Wolford was promoted to general representative of the Brotherhood of Painters.

The biggest piece of news community enterprise-wise is that the council plans to get into big-time realty business as have other unions in the nation, notably like that of the restaurant-hotel employes union in Chicago. The council hopes to erect a $10 million, middle-income and luxury housing project on Buffalo's waterfront, west of the Marine Dr. apartments, east of the Thruway and on the man-made island that is projected by the city and state in their plans. A letter of intent has been sent by the council to the state director of urban development, Edward Logue, and the council is now awaiting the "go-ahead" to complete plans contingent on the preliminary site work to be done by the city and the state.

Under the plan the state will provide 93 per cent of the money for the housing complex but the council will provide the seed money and managed and administered the enterprise. The project calls for 2,500 housing units for middle- and luxury-income tenants.

Many of the council's community activities stem from collaboration by union painters and area contractors on a program created by both but administered by the painters council. This is a community "involvement" in its deepest sense, financed by a portion of the hourly wage of every union painter which goes into a fund. The "contributions" are forever lost to the individual painter and constitute a giant finance pool for charitable endeavors.

Last year this fund was tapped for a pledge of $1,500 for a pops concert to help put the philharmonic drive over the top. In other recent years union members have painted the Catholic Pamphlet Society in Fillmore Ave.; the West Side Rowing Club; Neighborhood House in Lemon St.; the Girl Scout Camp Aloha in Wales Center; the Children's Dining Room at the Crippled Children's Guide, 936 Delaware; and they have cooperated for the last five years with the Clean-Up, Paint-Up Week doing one major project each year.

In this connection they painted the Wilcox Mansion, scheduled to be a National Historical Shrine; all the Police Athletic League centers; and last year the old Warner Brothers Bldg. on Franklin St., now the head office for the Assn. for Retarded Children.

For the last three years they have sponsored and contributed prizes to an annual Christmas Lighting Contest for the best decorated homes.

For the last two years they have spearheaded a project of Christmas gifts for servicemen in Vietnam, sending more than 2,000 each year.

"We always hope we will never have to do it again," Carlucci said.

Immediately after the *Pueblo* crisis, the council bought 1,000 automobile bumper stickers from Cmdr. Bucher's wife and distributed the reminder, "Remember the *Pueblo*," among its membership.

Each Christmas they have a party in honor of the Buffalo Bills and their families at Leisure Land in Hamburg. To this they add their own families, plus a guest list of 200 orphans or retarded children. The evening is replete with gaiety, autographs from the Bills, games and gifts for every child. This now is agreed on as an "annual affair."

For the last five years they have bought a block of 25 seats at every Bills home game and each Sunday they have escorted a different group of retarded children to the stadium. Two summers ago they bought out the entire stadium for a special Bisons game and gave the tickets to Neighborhood Houses, boys clubs, and other such activities in the inner-city.

They have fun doing this too! They have taken groups of 50 senior citizens to the circus, realizing that the Big Top is not just

for kids. Several weeks ago they took 19 nuns (the Felician Sisters from Villa Maria College) to the Hamburg Raceway for dinner and a night at the races. Carlucci regrets that the painters escort didn't profit from prayerful guidance. The sisters "collected" on every race and all were winners on the "natural," a filly named "Sister Blue."

For the last two years they also have awarded two scholarships of $1,000 annually to children of union contractors and painters in the name of the James H. Wolford Scholarship Fund.

Both Wolford and Carlucci were cochairmen with Msgr. Franklin Kelleher of the Golden Gloves tournaments in recent years and the council has painted the old kitchen and auditorium of the Working Boys Home in Vermont St.

There are many more "bits" among the "pieces."

The council sponsored many bowling teams both for adults and youth; double A and midget baseball teams; midget football and touch football for adults, and dozens of other recreational programs.

One of their own personal projects also has vast community impact. This is the Painters District Council No. 4 complex at Virginia and Elmwood. One building is for the retraining of journeymen and apprenticeship training. One being completed will be a headquarters office building.

Long an "eyesore" corner featuring a dilapidated gas station and cleaners store with the upstairs rooms constantly raided by police as a bookie joint, the council wanted to buy the whole block bordered by Elmwood, Virginia, Mariner and Allen, tear down all of the houses which are in various stages of disrepair and erect a modern housing project for low and modern income tenants. The city blocked the endeavor with a ruling that it violated some sort of code endorsement.

However, it is still a council "dream" ardently backed by Allentown Village members.

After a recapitulation such as this one wonders where the man at the helm finds time to do all these things. But the adage "ask a busy man" applies particularly to Carlucci because "in addition" he is chairman of the Allocations Committee of the United Fund; on the state Joint Legislative Commission's Social Studies and Civil Service Committee; on the Regional Planning Committee of the State Legislative Commission; on the Executive Board of the AFL Central Body and also on its Port Council; vice president of the New York State Painters Conference; former executive secretary of the Town of Tonawanda Heart Drive and a director of the town's March of Dimes; past commander of Amvet Post 59; member of the Disabled Vets and the Loyal Order of the Purple Heart; life member of the Crippled Children's Guild, etc.

The "etc." means that he also is active in church work and, like Wolford who is noted for singing The Star Spangled Banner at local functions, he studied music with Miss Julia Mahoney at the Community Music School.

And, yes, I couldn't resist the cliche! I asked him what he does in his spare time!

NATIONAL GALLERY OF ART CALENDAR OF EVENTS FOR AUGUST 1969

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a real pleasure for me to place in the CONGRESSIONAL RECORD the Calendar of Events of the National Gallery of Art for the month of August 1969.

We in Washington are fortunate to have this excellent gallery in our Nation's Capital and I urge my colleagues, as well as visitors and citizens of Washington to visit the gallery and see their fine exhibits. The calendar follows:

NATIONAL GALLERY OF ART, AUGUST 1969

LABOR DAY FILM

Moulin Rouge, the award-winning film based on the life of the nineteenth-century French artist Henri de Toulouse-Lautrec and starring José Ferrer. Lecture Hall at 4:00 p.m. and 7:00 p.m. on Sunday and at 2:00 p.m. on Monday of Labor Day weekend. Running time is two hours.

SUMMER FILM LECTURES

A series of eight lectures combined with films and dealing with the history of art from ancient times to the present day. All programs presented by National Gallery staff lecturers on Sundays at 4:00 p.m. in the Lecture Hall. Continues through August 24.

AMERICAN NAIVE PAINTING

111 Masterpieces of American Naive Painting from the Collection of Edgar William and Bernice Chrysler Garbisch continues on exhibition in the ground floor galleries. Selection includes *Flax Scutching Bee, General Washington on White Charger (Jack),* and one of the famous scenes of the *Peaceable Kingdom* by Edward Hicks. Fully illustrated catalogue with foreword by John Walker and preface by Lloyd Goodrich, 9½" x 8½", 160 pages, 55 color plates, 56 black-and-white illustrations, $3.50 postpaid.

JOHN CONSTABLE

An exhibition of 66 paintings by Britain's foremost landscape artist, selected from the collection of Mr. and Mrs. Paul Mellon. Studies of sky and clouds, portraits, and a group of landscapes including the incomparable *Hadleigh Castle.* Fully illustrated catalogue with introduction by John Walker and notes by Ross Watson, 10" x 7½", 64 pages, 66 black-and-white illustrations, $2.50 postpaid.

RECORDED TOURS

The Director's Tour. A 45-minute tour of 20 National Gallery masterpieces selected and described by John Walker, Director Emeritus. Portable tape units rent for 25¢ for one person, 35¢ for two. Available in English, French, Spanish, and German.

Tour of Selected Galleries. A discussion of works of art in 28 galleries. Talks in each room, which may be taken in any order, last approximately 15 minutes. The small radio receivers rent for 25¢.

GALLERY HOURS

Weekdays 10 a.m. to 5 p.m. Sundays 12 noon to 10 p.m. Admission is free to the building and to all scheduled programs.

CAFETERIA HOURS

Weekdays, 10 a.m. to 4 p.m., luncheon service 11 a.m. to 2:30 p.m. Sundays, dinner service 2 p.m. to 7 p.m.

MONDAY, JULY 28, THROUGH SUNDAY, AUGUST 3

Painting of the week: Giovanni Bellini. *The Feast of the Gods* (Widener Collection) Galley 22 Tues. through Sat. 12:00 and 2:00; Sun. 3:30 & 6:00.

Tour: *Introduction to the Collection.* Rotunda; Mon. through Sat. 11:00, 1:00 & 3:00, Sun. 2:30 & 5:00.

Sunday film lecture: *Art of the Seventeenth Century; Speaker:* Carleen Keating, Staff Lecturer, National Gallery of Art, Lecture Hall 4:00.

Sunday film: *The American Vision,* 1:00.

Weekday films: *The National Gallery of Art,* 2:00; *The American Vision,* 4:00.

11" x 14" reproductions with texts for sale this week—15¢ each. (If mailed, 25¢ each.)

MONDAY, AUGUST 4, THROUGH SUNDAY, AUGUST 10

Print of the week: John James Audubon. *Columbia Jay* (Gift of Mrs. Walter B. James) Ground Floor; Smoking Lounge, Tues. through Sat. 12:00 and 2:00; Sun. 3:30 and 6:00.

Tour: *Introduction to the Collection.* Rotunda. Mon. through Sat. 11:00, 1:00 and 3:00; Sun. 2:50 and 5:00.

Sunday film lecture: *Art of the Eighteenth Century; Speaker:* William J. Williams, Staff Lecturer, National Gallery of Art, Lecture Hall 4:00.

Sunday film: *The American Vision,* 1:00.

Weekday films: *The National Gallery of Art,* 2:00; *The American Vision,* 4:00.

Inquiries concerning the Gallery's educational services should be addressed to the Educational Office or telephoned to 737–4215, ext. 272.

MONDAY, AUGUST 11, THROUGH SUNDAY, AUGUST 17

Painting of the week: Hals. *Balthasar Coymans* (Andrew Mellon Collection) Gallery 47; Tues. through Sat. 12:00 and 2:00; Sun. 3:30 and 6:00.

Tour: *Introduction to the Collection.* Rotunda, Mon. through Sat. 11:00, 1:00 and 3:00; Sun. 2:30 and 5:00.

Sunday film lecture: *Art of the Nineteenth Century; Speaker:* Ann W. Kaiser, Staff Lecturer, National Gallery of Art, Lecture Hall 4:00.

Sunday film: *The American Vision,* 1:00.

Weekday films: *The National Gallery of Art,* 2:00; *The American Vision,* 4:00.

For reproductions and slides of the collection, books, and other related publications, self-service rooms are open daily near the Constitution Avenue Entrance.

MONDAY, AUGUST 18, THROUGH SUNDAY, AUGUST 24

Painting of the week: W. H. Brown. *Bareback Riders* (Collection of Edgar William and Bernice Chrysler Garbisch) Gallery G–10. Tues. through Sat. 12:00 and 2:00; Sun. 3:30 and 6:00.

Tour: *Introduction to the Collection.* Rotunda. Mon. through Sat. 11:00, 1:00 and 3:00; Sun. 2:30 and 5:00

Sunday film lecture: *Art of the Twentieth Century; Speaker;* Ann W. Kaiser, Staff Lecturer, National Gallery of Art, Lecture Hall 4:00.

Sunday film: *The American Vision,* 1:00.

Weekday films: *The National Gallery of Art,* 2:00. *The American Vision,* 4:00.

MONDAY, AUGUST 25, THROUGH SUNDAY, AUGUST 31

Painting of the week: Giorgione and Titian. *Portrait of a Venetian Gentleman* (Samuel H. Kress Collection), Gallery 21, Tues. through Sat. 12:00 and 2:00; Sun. 3:30 and 6:00.

Tour: *Introduction to the Collection.* Rotunda, Mon. through Sat. 11:00, 1:00 and 3:00; Sun. 2:30 and 5:00.

Sunday films: *The American Vision,* Lecture Hall 1:00; *Moulin Rouge,* Lecture Hall 4:00 and 7:00.

Weekday films: *The National Gallery of Art,* 2:00, *The American Vision,* 4:00.

FAIR LABOR STANDARDS ACT

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. ROSENTHAL. Mr. Speaker, I am introducing today legislation which would repeal section 7(i) of the Fair La-

bor Standards Act. This section provides a special exemption from the overtime requirements of this act for certain, but not for all, commission salesmen employed typically in our larger retail stores. My bill would place all such salesmen on the same footing as other retail salesmen, including many commission salesmen, with respect to receiving overtime compensation.

The present exemption was included in the act in 1961 when Congress first extended the act's coverage to a substantial number of retail trade employees. Its inclusion at that time was considered desirable to avoid upsetting accepted practices in retailing when the industry was being required, for the first time, to adapt its pay practices to the provisions of the Federal law.

Certain safeguards were incorporated into the exemption such as a requirement that only highly paid commission salesmen could qualify for the exemption. In 1966, we amended the exemption in an attempt to clarify how it should be applied.

Since that time I have been in receipt of numerous communications from many of my constituents, as I imagine have other Members of the Congress, about the exemption. The complaints are first, that some employees are taking advantage of this exemption at the expense of commission salesmen; second, the exemption discriminates against the more productive salesmen; and third, that precise interpretations of the terms of the exemption are impossible, so that many employers are led, unintentionally, to violate the law. The 1966 amendment did not help to solve these problems.

In short, this exemption has proven, in practice, to be not only unfair, but unworkable. It should be repealed. That is what my bill would accomplish.

TIME FOR URBAN MASS TRANSIT

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mrs. DWYER. Mr. Speaker, it is a general rule of almost unexceptional validity that the longer public bodies delay in undertaking needed public action the higher the cost will be—not only in a financial sense but in social, economic, and political terms as well.

In the case of the Nation's neglected needs in the area of urban mass transportation, we have clearly reached the point where we can no longer afford further delay in committing ourselves to a meaningful effort.

This morning's New York Times describes the existing situation in the Metropolitan New York-New Jersey-Connecticut area, along with an article contrasting service in the Chicago area, and I include the articles in the hope that they will bring home more immediately to our colleagues the truly urgent character of the need.

The articles follow:

COMMUTER LINES AT CRISIS POINT—NEGLECTED FOR YEARS, RAILROADS SERVING CITY ARE FALTERING

No American city is as dependent on railroad commuter service as New York. But after decades of neglect, the state of the commuter lines has reached a point of acute crisis.

Last-minute cancellations of Long Island Rail Road trains are delaying and embittering more and more commuters every day. New Haven riders are finding their trains crowded, littered and late. The Penn Central is arguing with New York State's Public Service Commission over how to get badly needed cars for its Hudson and Harlem Divisions. And commuters throughout New York City's suburbs are wondering if they will be forced to pay higher fares for poorer service.

Perhaps the only plus in the metropolitan commuter rail situation is to be found in New Jersey, where two of the three commuter lines serving New York City are showing signs of improvement, in part through an infusion of state operating subsidies. But these gains have been made in a situation regarded as so unsatisfactory as not to afford much gratification to riders.

This picture has been drawn by The New York Times from interviews with rail officials, commuters and representatives of government and civic agencies concerned with the plight of the six railroads that bring a quarter of a million commuters into the city each working day.

Experts and observers say the inefficiency of metropolitan rail service spring from a variety of factors, including the need to turn from the railroads' long-term origins to rapid-service systems, an increase in vandalism over which the lines have little control, public indifference and a history of controversial management practices.

But increasingly the commuter who daily faces the threat of cancellations, breakdowns, overcrowding and long delays has been showing a lack of patience with such explanations.

"It's amazing what a stoic lot commuters have been," a New Haven rider remarked recently. However, this stoicism has been yielding to rage and activism.

T. David Reznik, a marketing analyst, doesn't ride the railroad to work these days—he walks the railroad to work. Instead of taking his regular Penn Central trains to and from Larchmont each day, he takes a variety of trains so he can go through the aisles distributing complaint sheets to his fellow passengers.

The printed sheets have blank spaces in which passengers can write in the number of "bulbs not working" and "fans not working" or the "minutes late" in arriving.

"I start in back and work my way forward, car by car," Mr. Reznik said. "The conductors keep threatening to arrest me." He said he had handed out 4,000 forms in the last three weeks, and the Federal Department of Transportation has been receiving the completed forms from passengers.

On Long Island, a drive is being organized to obtain 10,000 signatures on petitions asking for the removal of the top management of the state-owned Long Island Rail Road, and reports are current that Governor Rockefeller will seek the dismissal of the line's president.

Conductors are hearing more and more from angry passengers, and at least a few of them are growling back. Asked what the trouble was in a delay, one conductor told a fuming commuter recently: "I'll write you a letter."

Passengers are expressing a rising anxiety over railroad safety, especially on overcrowded trains. They suffer and swelter in cars with sealed windows when air-conditioning fails. With cinder blocks dropped on trains from overpasses and sharp rocks flung at windows by vandals, some riders feel like moving objects in a shooting gallery. Executives do not know at what hour they will get to work and their wives do not know what time they will reach home at night.

Frederick A. Menes of Old Westbury, L. I., has been getting up at 5:30 A.M. every weekday, half an hour earlier than usual, to be certain of getting a train that will bring him in on time to his job as general personned supervisor for the New York Telephone Company.

Mr. Menes begins his morning anxiously listening to radio reports of rail delays on the Long Island Rail Road. What has been canceled today? Until recently he counted on catching a 7:26 train out of East Williston that was due at Pennsylvania Station at 8:12.

If the 7:26 has been scratched. Mr. Menes dashes for the 7:02, changing at Jamaica for a packed train that is scheduled to arrive in Manhattan at 7:55.

But even if the 7:26 is running, it is not at all certain that it will arrive on time. If another train has been canceled, the 7:26—normally an express after Jamaica—may add some local stops in Queens, and may lumber into Penn Station at 8:30 or 8:35.

Such frustrations have important implications for New York City.

Late arrivals to work mean costly lost time and scrapped schedules for the city's businesses. Suburbanites who turn to their automobiles add to the city's traffic, parking and pollution problems and swell demands for new expressways or increased subway facilities. State officials confront demands for subsidies or even railroad takeovers that would shift costs to all taxpayers, including city residents who never ride the commuter lines.

"It's getting to the point at which something's about to blow," said Barrie Vreeland, director of the transportation department of the Commerce and Industry Association. Mr. Vreeland's office has been receiving a stream of complaints from corporate personnel officers worried about late arrivals at work.

Ralph C. Gross, president of the association, described the rail problems as "detrimental to business expansion and economic growth" here because "most of the top and middle-level executives who work in New York live outside the city."

Urban planners are generally agreed that there is no more efficient, or potentially faster, way of moving large numbers of people from suburban or urban business centers than by rail. Yet in much of the nation, railroad passenger service largely has disappeared.

The Federal Urban Mass Transportation Administration says only five American cities still have regular commuter rail service: New York, Chicago, Philadelphia, San Francisco and Boston. Most cities now have auto-oriented transportation systems.

As a result, experts say that billions of dollars of public money have been pouring into expressway systems while only a few millions have trickled into capital improvements for commuter railroads.

As urbanization chews up fields and meadows near the city, executives are moving farther out into the suburbs, sometimes well beyond the 50-mile range, and that makes high-speed rail transit more necessary for them. But suburbanites who turn from trains to autos put pressure on for the building of more highways.

The Regional Plan Association, the nongovernmental research organization, notes that "the autos required to transport the equivalent of one trainload of commuters is about four acres of parking space—eight times the area of the main concourse at Grand Central Terminal."

Fundamental to the railroads' problem is the fact that they were not designed to do the job they are now doing. According to Robert W. Minor, senior vice president of the Penn Central, the lines were originally long-haul carriers and were not engineered for the short-haul, high-speed service required today.

Commuter railroads here do not have the equipment needed for rapid acceleration and deceleration in the short distances between suburban stations. And the stations themselves generally lack the high-level platforms needed for fast loading and unloading of passengers.

Efforts are beginning to be made to change all this through the introduction of new equipment, financing and major reconstruction, but the overhaul is going to take years, according to railroad experts. And they note that the transition itself is contributing to delays and breakdowns.

Those who nourish a hope that things will soon get better have little to go on but optimism, in the opinion of most rail specialists.

The Regional Plan Association pointed out that the commuter lines are largely based on "the investments made in capital rail equipment prior to 1929." The Depression discouraged investments, then World War II came along, and then the postwar automobile boom, with its corresponding decline in riders using the rails.

According to records of the Amercan Railway Car Institute, the trade association of railway car manufacturers, there is no continuing industry in the manufacture of self-propelled "inter-urban or commuter cars."

In 1969, said Walter A. Renz, the association's president, only 25 cars have been ordered for all the commuter lines in the nation.

"The cars cost so much because there are so few orders," he said. "It's no secret that the railroads detest these passenger runs, and I haven't seen any real commuter car business for a long, long time."

Added to these problems are difficulties and prospects peculiar to each of the commuter railroads in this area. Some of these aspects are discussed on this page.

LONG ISLAND RAIL ROAD

In the barnlike Dunton Electric Repair Shop in Jamaica, Queens, a score or more cars awaited repairs recently. There are commuters who believe that the true symbol of the Long Island line should not be Dashing Dan (which the railroad is phasing out), but these disabled cars.

Anthony F. D'Avanzo, general chairman of the Brotherhood of Railway Carmen, Lodge 886, says the members of his union have been working an average 24 hours overtime to catch up on a servicing backlog that has restricted railroad efficiency for many months.

Moreover, Mr. D'Avanzo says, the work strain accounts for high absenteeism and this compounds the problem of how to find enough cars to take 90,000 regular commuters and 40,000 others into and out of the city each day.

On June 26, its worst day, as many as 223 of the Long Island's 774 electric cars—both old and new—were out of service for inspection and repairs. Thirty-five of 363 diesel and other cars also were not in use. As a result 19 of the line's 631 trains for that day had to be canceled, and each cancellation affected about 1,000 riders.

This was not an isolated situation on the nation's biggest commuter railroad. On a recent Friday, nine morning and nine evening rush-hour trains were scratched from the schedule.

Such cancellations cause more than just inconvenience.

"The other day I was not just uncomfortable, I was physically frightened," a young rider said. "With passengers from one of the canceled trains, my train, normally crowded, was dangerously crowded.

"At Jamaica an elderly woman was pushed into the car and her arm got caught and she cried, 'My arm, my arm!'

"You know that small area up at the front of the train, where the door is open and all they have is a chain across the front? Well, in that little space about four feet wide there were, as far as I could count, 23 people wedged in. I had my hand up, holding the edge of the door and I could not get my arm down. I couldn't turn my body either way and I could move my feet about an inch in either direction.

I WAS SCARED

"There wasn't any question of taking tickets. Impossible. So the conductors rode outside on the catwalk of the engine. I felt trapped and smothered and helpless. Usually I am just so angry I could choke somebody, but this time I am scared."

The line says its last major report of on-time performance was 97.1 per cent for the 10-year period ending Dec. 31, 1967. For 1968, it says record was 89.9 per cent; for the first six months of this year, 89.3 per cent. These are over-all figures, however, and do not indicate the performance of individual trains.

Another major problem for the line, which originated from older railroads, is that its routes are now often well away from areas of population growth. The Long Island's more modern electric service, for example, ends its eastward thrust at Babylon on the south, Mineola and East Williston in mid-island, Port Washington on the north.

Since 1966, the line has been operated by the Metropolitan Transportation Authority, which was created by the Legislature. When the authority took over, the line was in bankruptcy. The following year it obtained a $30-million Federal grant for improvement and extension of its electric system. The authority is now extending electric lines, rebuilding roadbeds and building high-level station platforms.

ELECTRIC CARS ORDERED

The authority has also sought to replace most of its antiquated electric stock. A fleet of 620 electric cars was ordered from the Budd Company of Philadelphia for delivery by October, 1970.

The first cars arrived Dec. 23. Dr. William J. Ronan, chairman of the M.T.A., says this was 25 weeks later than he anticipated.

So far, 108 have been delivered. They have not performed well. There have been repeated electric malfunctions. Brakes have locked. Air-conditioning has failed. Trains have broken down at rush hours.

The M.T.A. stopped formal acceptance after the first 94 cars arrived. By July 1, 52 were out of service on one day. This has since been reduced to about 30 in a day.

Setbacks such as these have led at least one of Long Island's militant commuter organizations to demand the ouster of Dr. Ronan. But the beleaguered chairman has his defenders, including Governor Rockefeller, whom Dr. Ronan formerly served as a key aide.

"Those new Budd cars, if they had all worked, would have meant progress," Ralph Gross of the Commerce and Industry Association said. "As we understand it, Dr. Ronan had a choice of two courses; Either to go on pouring money into keeping old and worn-out rolling stock going or to stop doing that and to put the money into getting badly needed new cars.

"We think the planning was logical and had the time-table been adhered to, things would already have been better on the line. All those breakdowns were not Dr. Ronan's fault."

The Long Island Rail Road deals with 17 labor unions representing 6,500 of its 7,000 employes. The dates on which contracts expire vary among the unions. The line says they have higher wages and more favorable work rules than the national average. Nevertheless, labor friction has been frequent, including strikes and work slowdowns that at times have made commuting a nightmare.

Dr. Ronan says labor-management relations have been improving. This is his hope for restoring the rate of inspection and repair to the level at which it stood before a dispute last August with the carmen that led to a three-week labor slowdown.

As a result of the slow-down, inspections and repairs were delayed on 288 cars on a single day.

NEW JERSEY CARRIERS

Anyone wishing to indulge a bout of nostalgia for the old days of railroading need not go to a railroad museum. He has only to go to Hoboken and board almost any Erie-Lackawanna commuter train.

Getting to Hoboken from New York City is the easiest part of the journey. On one of the hottest days of the year, at the height of the evening rush with the trains fully crowded, the Port of New York Authority's PATH cars were fully air-conditioned and completely comfortable. Next, however, the commuter boards an Erie-Lackawanna train.

"Well, I see they've got the heat on," a commuter grumbled as he boarded the 5:38 Boonton Branch train to Dover and sat in a car of great age that creaked as the train began its trip.

The 10 globe lights in the car—three of them out—afforded a very dim light and the blue paint on the ceiling and sides of the car was cracked and chipped, leaving large patches of rust.

The slow-motion fan in the center of the car could not have stirred tissue at eight feet, but the windows were wide open and a good breeze came in.

As the train got close to the end of its run, a conductor looked at a passenger and said, "Well, it won't be long now, thank heaven."

On summer days the sun can heat temperatures inside the line's old cars to extreme highs, but the railroad that calls itself "The Friendly Route" says its dependability is also lofty—98 and 99 per cent on time. Passengers, many of whom object to the line's old and dirty equipment, give it full credit for that.

SEVENTY THOUSAND JERSEY COMMUTERS

More than 70,000 commuters use the three major New Jersey railroads—the Erie-Lackawanna, the Jersey Central and the Penn Central. But as recently as 1967 both the Erie-Lackawanna and the Jersey Central were formally seeking to abandon passenger operations. It was then that they were put under the control of the State Department of Transportation.

David J. Goldberg, New Jersey's Commissioner of Transportation, said commuter traffic had increased on the three New Jersey railroads about 10 per cent since his department began operations in January, 1967.

The state pays operating subsidies to the Jersey Central and the Erie-Lackawanna, which is owned by Dereco, Inc., a holding company of the Norfolk & Western Railway. These subsidies are negotiated annually, $4.9-million and $4.5-million respectively for the year ended June 30. The Pennsylvania, together with others, gets state aid for equipment.

Mr. Goldberg said New Jersey had "purchased virtually all the coaches available around the country worth investing funds in to rehabilitate." Of 53 it bought from the Santa Fe Railway, 27 have been assigned to the Penn Central and 26 to the Erie-Lackawanna, some to start service in October.

But the outlook seems bleak for any large-scale modernizing of the lines.

William B. Hurd, assistant administrator of the Federal Urban Mass Transportation Administration, was asked: "With so few cars being built, isn't it probable that 5 and 10 years from now, commuters on the Erie-Lackawanna will be riding the same outdated cars they're riding now?"

His answer was, "I think so, yes."

For the Jersey Central, in receivership since April, 1967, the state has obtained an

agreement that the Norfolk & Western and Chesapeake & Ohio railroads would acquire the line as part of their merger plan and include it in Dereco. But the merger is still awaiting Interstate Commerce Commission approval.

STATE LEASES LOCOMOTIVES

Mr. Goldberg says that 13 new locomotives the state has leased to the Jersey Central have helped improve on-time performance, which had been "very poor."

Long-range plans call for electrifying the Jersey Central lines. But for interim service, the N. & W. and C. & O. are to provide 50 air-conditioned and rehabilitated coaches acquired from other railroads.

The state is also rehabilitating 60 Jersey Central coaches and beginning to buy new equipment, including 35 speedy Jersey Arrow self-propelled electric cars for the Penn Central.

But Spencer Scheffling, the Penn Central passenger statistician, said the 26 Jersey Arrows now in service had encountered "most persistent problems" in power transmission, couplers and doors. On a typical day, 8 to 10 are out of service for part of the day, he said.

HARLEM AND HUDSON

Not all commuters are uniformly incensed by their experience. Arthur Feldman, who was born and reared in the Bronx and who recently moved to Croton-on-Hudson, has a different perspective:

"It's a lot better than the subways," he said. "I take the 6:30 a.m. train from the Croton-Harmon station. It never leaves at 6:30 and it runs 5 or 10 minutes late, but to me that's nothing.

"The windows are so dirty you can hardly see out of them, but when I was on the subways could I see out of the windows? To me, it's a dream. I get a seat. In the subways, if I got a seat, it was a miracle."

Other commuters, who have the choice of subway or train, agree with his view, and are willing to pay for the difference.

At 5:38 p.m. a local train leaves Grand Central Terminal for Yonkers and Glenwood by way of 125th Street and several intermediate stops in the Bronx. A single fare of $1.10 is charged everyone boarding the train, whether they go one stop or to the end of the run.

VANDALISM A PROBLEM

The other night, the train was nearly filled but there were only five riders left in it by Yonkers. The others had got off at earlier stops; all rode in preference to the subway.

But many of the 24,000 daily commuters of Penn Central's Harlem Division and the 12,000 commuters of its Hudson Division are hardly enthusiastic about the service they get.

Between April 1 and June 16, the Harlem and Hudson Divisions had 18 fires that delayed a total of 300 trains, according to the Public Service Commission. Fourteen of the fires were caused by vandalism.

Vandalism is but one problem confronting these lines and their growing number of riders.

In 1967, the Public Service Commission found a "noticeable deterioration" in service, including "deficiencies in track maintenance" and worn shock absorbers that made passengers feel they were "riding on a washboard."

In June, 1968, the commission ordered the upgrading of track and equipment and it limited electric engines to 50 miles an hour speed, instead of 60, while this was being done.

One consequence was that on-time performance for the 120 rush-hour trains declined from 81 per cent to 60 per cent, according to George E. McHugh, chief of the railroad bureau of the State Public Service Commission.

In June, the railroad said, its over-all on-time record was 87 per cent for its 340 daily suburban trains. The divisions are under orders of the Public Service Commission to maintain 80 per cent on-time performances for each of its trains every month.

The state commission also has ordered the Penn Central to buy or lease 80 new self-propelled, multiple-unit cars to replace its Harlem and Hudson electric fleet within two years. The Penn Central is strongly resisting this as requiring an uneconomic investment in "1918-type" service.

TELLS OF IMPROVEMENTS

According to Leonard W. Maglione, Penn Central's suburban service manager, the railroad has made a number of major improvements in Hudson and Harlem service.

In the last five years, he said, 79 more trains have been added each weekday. Since 1965, 34 new multiple-unit electric cars have been received, and 40 mainline passenger coaches have been refurbished and placed in commuter service for non-electrified areas, with 12 more due by Oct. 1. In addition, 22 locomotives with both diesel and electric power have replaced antiquated equipment on the Harlem Division.

Since fares were restructured, service on the divisions is "operating on approximately a break-even basis," as opposed to "large and increasing deficits" before 1962, the railroad said. This gain has been cited by the Penn Central in its hotly contested bid to restructure fares on the New Haven.

THE NEW HAVEN

Frederick Gilbert, vice president and general manager of Time-Life Broadcasting, takes the crowded 8:04 A.M. New Haven train from New Canaan, Conn. It arrived at Grand Central at 9:10 one recent day.

"My goodness," Mr. Gilbert said. "We're in right on time. What'll we do with the rest of the morning? It's too early for a martini."

There was a touch of hyperbole in his observation, but the New Haven's report on operations for the Monday-to-Friday train for a full month ended June 26 showed that not one run was completed on schedule. Only three of the 23 trains met the New York standard of on-time performance—arrival within 5 minutes of timetable.

Woodlawn, in the Bronx, is a frequent slowdown point on the line. The New Haven, alone of the commuter railroads, runs the same train on two different electrical systems. In Connecticut it draws power from an overhead line carrying 11,000 volts of alternating current. At Woodlawn it changes over to pick up power from a third rail. When the connection goes even slightly awry, it takes tinkering—and time.

Delays, breakdowns and overcrowding have angered New Haven commuters at a time when the railroad, to help with its basic financial problem, is bidding for a restructuring of fares on a portion of its suburban service.

Last Tuesday, the Public Service Commission barred the Penn Central, which operates the New Haven, from imposing the new fare structure on 14,000 of its 23,000 commuters until the agency could investigate the request. The following day officials of Westchester communities served by the line assailed what they said was unsafe and unsanitary equipment.

New Haven officials say no other railroad except the Long Island has had a higher percentage of its total revenue coming from passengers—42 per cent, as against about 6 per cent on most lines.

BANKRUPT IN 1961

Lacking enough freight income to offset passenger deficits, the New Haven went bankrupt in 1961. Plant and equipment deteriorated.

The Penn Central took over the line last Dec. 31 and says it found the overhead electric system "grossly deficient," with some wires that draw the power worn to one-fifth their original size.

Nearly 10 per cent—about 24 of 264—of the New Haven's cars were soon scrapped. Almost half of the locomotive fleet was found to be long overdue for overhaul.

The railroad reports that it is overhauling 50 of its 60 passenger locomotives this year. Six stainless steel coaches are being refurbished each month out of a fleet of 100; other coaches will be run until scrapping time. This and other refurbishing are causing shortening of trains.

Penn Central officials say they believe that in the immediate future the line's lateness record will get worse and may remain so for some time. In its first four months as a Penn Central division, the New Haven experienced a 5 per cent reduction in number of trains—and an 82 per cent rise in number of trains late.

The Penn Central attributes these delays to the deteriorized equipment it inherited and to its efforts to modernize it. Track upgrading and round-the-clock restoration of the overhead electrical supply have delayed trains.

Vandalism also plagues the New Haven. Twenty-seven hundred broken windows have had to be replaced since Jan. 1 at $100 a window. Some riders pull down window shades as a shield against shattering glass when riding through the city.

$20.4-MILLION GRANT

In 1967, the Federal Government made a grant of $20.4-million to cover the cost of 144 new cars and modernizing other New Haven line facilities. The grant, made through the Urban Mass Transportation Act, was made jointly to the Connecticut Transportation Authority and to the M.T.A. for these purposes.

But the grant depended upon certain agreements between the two states and the railroad that have still to be fulfilled, so the money has not yet been pumped into the ailing line.

The expectation is that the M.T.A. will buy the New Haven's right of way, stations, shops and power installations in New York State. The Connecticut authority would lease most such facilities in its state.

The two authorities would then contract with the Penn Central for the operation of the commuter service and, with the help of the Federal grant, would pay for the new cars and other improvements.

"This seems to be close to settlement," a Federal official said. But then he added:

"Of course, it will take some years to procure the cars and do the other fixing up."

CUBS ARE TOPIC A ON CHICAGO TRAINS—COMMUTERS, UNLIKE THOSE HERE, GET GOOD SERVICE

(By John Kifner)

CHICAGO, July 27.—The major topic of conversation among commuters on the Chicago & North Western Railway is not the Chicago & North Western Railway. The railroad's officials think that is fine.

While passengers in New York fume over service and rickety equipment, C. & N.W. commuters sit placidly in clean vinyl seats reading under fluorescent lights about the Chicago Cubs on smooth-running double-decker coaches that whisk them back and forth—on time.

Further, the company's three commuter lines—which carry 90,000 passengers between here and the city's affluent northern and western suburbs—are reporting profits of nearly $2.5-million a year.

It was not always so. Thirteen years ago, the lines—the second largest commuter service in the country behind the Long Island Rail Road—were losing $2.5-million a year and service was terrible.

UMBRELLAS NECESSARY

Some of the commuter cars in use then dated to the turn of the century. Windows were broken, doors came off, the cracked sheet-metal roofs leaked and passengers sat under their umbrellas in the rain.

Schedules were all but fictional and there were often unexplained stops. The cars were drawn by coal-burning steam engines that frequently broke down, and the cab once fell off an engine during a run. The employes were surly.

The turnabout began on April 1, 1956, when a group of disgruntled stockholders pressed for control of the company and succeeded in installing Ben W. Heineman, a 42-year-old lawyer, as chairman of the board.

Mr. Heineman and his new managers found the road a shambles. Repair facilities were outmoded, the management structure was confused, and the company was $212-million in debt and selling its rails for scrap in order to meet the payroll.

Within 40 days the old steam engines were replaced by diesels, not by buying new ones, but by the simple expedient of reassigning diesels (some were being used as switch engines) and running them more efficiently.

GAMBLE WITH LONG ODDS

Then Mr. Heineman decided to gamble that a commuter system could be run efficiently and could make money—a bet that no other railroad had won.

The Chicago & North Western began to invest $50-million, much of it borrowed, in an ambitious modernization program.

The most noticeable feature of the program is the line's fleet of specially designed stainless steel cars. Each coach seats a little over 160 passengers on two decks. The vinyl used inside makes keeping them clean an easy task.

Mr. Heineman discharged about a sixth of the line's employes and eliminated 22 passenger stops in the city that duplicated the municipal transit service.

Then, in 1958, the Chicago's & North Western adopted a new schedule of fares that instituted an increase and a new commutation concept.

UNLIMITED RIDES

Instead of weekly or monthly cards good for a set number of rides, with the prices varying widely, the new basic unit for the railroad became a monthly pass good for an unlimited number of rides.

About 30 per cent of the riders also use a plan under which the pass is automatically sent out to them before the beginning of the month and they are billed for it.

The innovations began to take hold, and by 1959, the line showed a small but satisfying profit of $30,000. Then the automobile expressways into the city were completed and the Chicago & North Western lost $2-million in 1961 and 1962.

But the railroad picked up the passengers from three other commuter lines that folded because of the expressways and then began to win passengers back from the automobiles.

ATTRACTION IS SERVICE

The railroad's main attraction is its efficient service, but it also promotes it with effective ballyhoo.

One of the promotions is Rainstick Junction, a cart filled with unclaimed umbrellas from the lost and found department that is put out in the terminal on rainy days. The theory is that commuters will borrow the umbrellas when they need them and then put them back, but 90 per cent are never returned.

"They're robbing us blind," chuckled one railroad official. "But actually they're just stealing their own umbrellas back."

PRIDE AND PRAYERS OF THANKSGIVING AFTER ANOTHER TRIUMPH OF HUMAN INITIATIVE AND RESOURCEFULNESS

HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. LOWENSTEIN. Mr. Speaker, the world pauses now in wonder and admiration to salute three men whose valor and stamina brought mankind to the moon, and to offer prayers of thanksgiving for their safe return. We salute, too, at this time, the memory of President John F. Kennedy, whose vision and determination made this moment possible, and we pledge to apply ourselves with equal vigor and determination to some of the problems that still afflict this planet.

Finally, we join in tribute to the thousands of unheralded individuals throughout this Nation whose devotion, whose skills, and whose imagination made it possible to do the impossible in even less than the decade allotted by President Kennedy. As a personification of these anonymous men and women, our gratitude and admiration go out particularly to Mr. Thomas J. Kelly of Merrick, N.Y., the father of the lunar module *Eagle*. Mr. Kelly is responsible, more than any other person, for the development and construction of the extraordinary vehicle that carried men on that hazardous last step to the surface of the moon. The American people will want to remember Mr. Kelly and his dedicated fellow craftsmen as they celebrate another triumph of human initiative and resourcefulness over the unknown.

I include in the RECORD at this point the following article from the New York Times:

[From the New York Times, July 22, 1969]

FATHER OF THE LM: THOMAS JOSEPH KELLY

(By Sylvan Fox)

Among the millions who saw the Apollo 11 moon landing on television was one man for whom the experience was akin to a father's watching his son accomplish a formidable feat.

The man was Thomas Joseph Kelly, a slim, boyish 40-year-old with wiry brown hair, who designed the ungainly but efficient vehicle that carried Neil A. Armstrong and Col. Edwin E. Aldrin Jr. to the surface of the moon and off again.

Mr. Kelly was at Houston's Apollo Mission Control Sunday night watching the moon landing.

"It felt great," he said in a telephone interview yesterday. "Wonderful. A real culmination for a lot of people."

For Mr. Kelly, who was born in Brooklyn and grew up in Merrick, L. I., it was the culmination of a dream that began when he was attending the Mepham High School in Bellmore, L. I.

"I had always been interested in airplanes," he said. "The space field is sort of a logical extension. It's just higher, farther and faster, which is what the airplane business has been doing for years."

"And anyway," he said with a laugh, "I'm fascinated with the idea of being able to explore the moon and the planets."

DEGREE AT CORNELL

Mr. Kelly shows no defensiveness when the ugliness of his lunar module is pointed out.

"There was no need to streamline it," he says. "It operates only in space. There are no aerodynamics to contend with. It's designed functionally. Everything is there for some particular reason, not just for looks."

Mr. Kelly's career has been deeply committed to the space program almost from its beginning.

After graduating from Mepham High School, where he met the girl he was to marry, he got a Bachelor of Mechanical Engineering degree from Cornell University in 1951 and went to work for what is now the Grumman Aerospace Corporation in Bethpage, L. I.

"My remaining schooling," he said, "was all at night."

While working at Grumman, Mr. Kelly gained a Master of Science degree in mechanical engineering at Columbia University in 1956. He then went into the Air Force as a lieutenant, working in performance engineering. At the same time, he took courses at Ohio State University in aeronautical engineering.

When he left the Air Force in 1958, Mr. Kelly decided what he wanted to do with his future. "I wanted to get into space at that point," he said.

He worked for a year at the Lockheed Missiles and Space Company in Sunnyvale, Calif., then returned to Grumman.

"And I've been there ever since," he said.

In 1960, Mr. Kelly became the project engineer on a manned space study instituted by Grumman.

"This gradually grew in scope and ultimately led to our winning the LM contract as a result of an industrywide competition which was held in the summer of 1962," he recalled.

The contract was awarded to Grumman by the National Aeronautics and Space Administration in January of 1963, and Mr. Kelly became the lunar module project engineer, which he describes as "equivalent to being the No. 2 engineer."

Two years later, he became the No. 1 man or engineering manager. His titles have changed a couple of times since then as work on the lunar module progressed (manager of assembly and tests "when we were getting into the final assembly and checkout of our first lunar spacecraft" and for the last two years assistant program director for engineering), but his function has always been to get the lunar module from the drawing board to the moon.

With the LM's mission completed, Mr. Kelly's interests have already begun to turn elsewhere. Three weeks ago he began a one-year course at the Massachusetts Institute of Technology in industrial management. The course is expected to move Mr. Kelly into the management of Grumman Aerospace.

Mr. Kelly's associates describe him as "friendly and warm" but extraordinarily serious about his work.

"It seems almost ridiculous," one said, "that you can be on a program for six years and never have anything funny happen—but nothing ever has, really."

"He's an extremely knowledgeable type when it comes to the LM," said another. "I've never seen him stumped for an answer."

THE MOON AND GREEN CHEESE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. DERWINSKI. Mr. Speaker, there has been considerable press coverage across the country over possible reappraisals of our national space age targets.

One of the more succinct and practical commentaries was carried in the Calumet Index, a biweekly publication

serving the far South Side and adjacent areas, in the Wednesday, July 23 edition.

THE MOON AND GREEN CHEESE

In discussing the "miracle" of the moon landing, invariably the question is asked—"Should we spend all that money on space exploration when so many things on earth need doing?"

Our answer is, "Yes—so long as we continue to give it the same careful, thorough thought and planning as we have given it until now."

Billions upon billions have been spent over the years to solve the problems of poverty and pollution but the thought and planning given these solutions have been infinitesimal.

In all to many instances, our efforts in these fields have been under the direction of half-baked bureaucrats whose only qualifications for the job have been an affinity for politics and an ability to get out the votes for the "right" candidate.

The argument that all we need to eliminate poverty, pollution and slums is more money is one of the great and tragic falsehoods of our day.

What we need is thought and effort and planning and dedication—the money will take care of itself.

DRIVING COURSE FOR THE AGED

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. KEITH. Mr. Speaker, it is a common misconception that with retirement comes inactivity and a life of leisure for our older citizens. Nowadays, this is no longer true. The retired are filling their extra free hours with numerous projects which reflect not only a broad range of interests but also a realization of the importance of these projects in the community. All over the country members of Foster Grandparents, Inc., are volunteering to take care of children in family emergencies or welfare cases. And VISTA reports that an increasingly large number of older people are contributing their services to its program. In short, our older citizens are closing the generation gap and, one might say, becoming younger and younger.

Mr. Victor Lindstrom, associate area vice president for the American Association of Retired Persons in my district, recently informed me of the efforts of the AARP to provide safe driving instruction for its members. Mr. Lindstrom has himself taken the course and is now teaching it to others in the area.

Knowing the interest of my fellow members in the achievements of our senior citizens, I would like to include in the RECORD an article by Wendell Coltin about this course that appeared in the Boston Herald Traveler of March 16, 1969:

OLDER DRIVERS WIN POINT IN SURVEY

(By Wendell Coltin)

(NOTE.—Raise the question of highway safety and the older driver—or the older driver and highway safety—to David Jeffreys and you'll get strong arguments in behalf of the older drivers. Jeffreys is director of national affairs for the National Retired Teachers' Association and American Association of Retired Persons.)

The NRTA has 230,000 members, with an affiliate in every state and nearly 1000 local units. The AARP now serves 1,300,000 members and has 571 local chapters across the nation.

Back in 1967, when Jeffreys was in Boston, we were brought together in a telephone conversation by Victor Lindstrom of Harwich Port, who is the AARP's area representative, and at that time Jeffreys expounded on a driver improvement course underway for AARP members. In nearly two years, "just over 15,000 persons" have been given the course by about 400 volunteer instructors.

A few days ago, he appeared on the biennial conference program of the National Council on Aging in Washington and was flattered that 1500 of his members had figured prominently in a study conducted by the National Safety Council.

A council research report, delivered at the conference, pointed out that "chronological age—contrary to a widely held belief—is not the best indicator of a driver's continuing fitness, or lack of it, behind the steering wheel."

Dr. Thomas W. Planek, the Safety Council's research director and senior author, said the level of a driver's health would be much more meaningful for ruling a driver off the road than his health. Safety proposals that would rule some older drivers off the road based on their declining abilities generally are geared to some specific age, Dr. Planek said, largely because the information is easy to get and usually beyond dispute.

Jeffreys said the interest of AARP members in driver safety was re-emphasized by the fact that 1500 members in selected AARP chapters made better than a 52 per cent response to the questionnaire, the highest response rate in the study."

He recalled that a "good number" of AARP members were made available for participation in the national drivers' test a few years ago and they "racked up a better score than the younger test group."

He said, "Our members are not only interested in driver-improvement, we feel they are better and safer drivers and becoming even more so as a result of our special program—the Driver Improvement Program."

This, he said, is the Defensive Driving Course developed by the National Safety Council in 1965, which "proved its effectiveness in the training of professional drivers in commercial vehicle fleets; and is designed to make better and safer drivers of already-licensed drivers.

Jeffreys said the AARP Driver Improvement Program came into being because of a need expressed by the association's members.

Over a period of years, members in growing numbers had revealed their concern for highway safety and driving on today's freeways at today's speeds.

"They told us," he said, "of their concern over the sometimes traumatic experience of taking a driving test when their license was due for renewal, or when they moved to a different state. They told us of their concern over cancellation of their auto insurance, or skyrocketing premiums.

"All of this was related to their need to drive to maintain their mobility and, consequently, their independence. Many of our members were aware of the existence of driver-improvement courses, offered under a variety of auspices, but they were reluctant to take classes, sometimes held at night, with youngsters or truck drivers or traffic violators.

"When we decided to do something to help both our members and other concerned older persons, we turned to the National Safety Council, which had a definite interest in safety of older persons and also had a tried and tested Defensive Driving Course."

"The course," he pointed out, "is designed to make better and safer drivers of already-licensed drivers. It emphasizes the techniques of driving defensively in today's traffic, recognizing that nine out of 10 accidents involve improper driving and are preventable."

The course has proved popular with the more than 15,000 members who have taken it; and a feature is that the volunteer instructors are older persons—also AARP members, who have been trained to teach it. Jeffreys reported, "We are committed to a major expansion of the Driver Improvement Program in 1968."

Each student who completes the course receives a certificate and wallet card. He is also eligible for a 10 per cent discount on Driver Plan 55 Plus, a special auto insurance plan developed for AARP members by the American Maturity Insurance Co.

"There is a continuing need to train additional instructors, to make the course available in many more communities and to serve the many thousands of older persons who do not know of our association, or of this program."

NOTE.—The Massachusetts Safety Council, which has been offering Driver Improvement Courses in many communities, will give the subject attention at the annual Massachusetts Safety Conference in the Statler Hilton March 31 and April 1.

EULOGY FOR THE LATE TOM MBOYA

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. CONYERS. Mr. Speaker, a tragedy took place in Africa on July 5, a day that all of America was thinking about its independence. It was an act of an assassin that struck down a very important African, Mr. Tom Mboya, who had given all of his efforts in the service of his country for the betterment of his people and to the strengthening of ties between his country, Africa in general, and the United States.

I cannot add more to what his Ambassador, the Honorable Leonard Kibinge, stated in the eulogy that the Ambassador gave at a memorial mass for Mr. Mboya which was held in New York City on Tuesday, July 15. The mass which was offered by the Vicar of Harlem, Father Harry Salmon, was accompanied by a great American jazz musician Miss Mary Lou Williams, whose composition called a "Mass of Peace" attempted to convey to those present through music and the essence of the service the remarkable vitality of young Mr. Mboya who, at 38, gave his life for his country. Mr. Speaker, I would now like to include in the RECORD the eulogy that was presented at the service:

EULOGY FOR THE LATE TOM MBOYA

It was just a little over a year ago in this church that a mass was offered for another man who was taken from his family, his people, and his country by the act of an assassin. Today we are here because, like Senator Robert Kennedy, Tom Mboya was senselessly and suddenly shot down and he, too, taken from his loved ones, Kenya, Africa and the World.

It is difficult for me to express what a great tragedy the death of Tom Mboya is to Kenya and to Africa. Tom, who gave himself completely to his country, was described by our President, Mzee Jomo Kenyatta in the statement that Mzee made upon learning of Tom's death:

"Mr. Mboya was adamantly, ceaselessly and courageously reinforcing the efforts of those who had started the struggle for the emancipation of his people in Kenya as well as our

brothers throughout the continent of Africa. Had it not been for his efforts and personal sacrifice, Kenya's independence could have been hampered or seriously compromised. Mr. Mboya was an undiluted African nationalist who always viewed issues on their national as well as international repercussions. The part he played in welding the Kenya nation is invaluable and will remain an inspiration to all of us. Rarely in my life have I come across a man who was prepared to devote so much of his time and energy to the service of his nation and to the welfare of mankind."

Tom Mboya was a Kenyan.

He belonged to *no one group.*

He represented *all of us.* His continued efforts to serve and promote national unity was but one of his constant goals and one that he himself personally achieved through his success in elections. His was a constituency that represented more than 60% of Kenya citizens whose origin was different from that of his own tribe.

He felt quite strongly about this particular issue, namely the unity of the nation. He spoke out, and I quote: "That we are born of different tribes we cannot change, but I refuse to believe that because our tribes have different backgrounds and customs and cultures we cannot create an African community or a nation."

It was with this profound belief that he personified our concept of one nation.

Tom's devotion and dedication to Kenyan unity and development was a mark of his courage to address himself to the most complex of national and African problems. He, as Minister of Economic Planning and Development and Secretary-General of the Kenya African National Union, always grappled without hesitation with issues that some men, if possible, would have avoided or preferred not to recognize; but his gifts, talents and self-assuredness made him speak out when necessary, act when called upon, and not hesitate when fundamental questions were raised about the advancement of human dignity and freedom.

When one thinks about Tom Mboya, we think about the Tom of the present: the articulate, intelligent, courageous, able politician and statesman. But we have also to understand that the Tom we knew came from a simple family whose parents were illiterate, whose father worked as an ordinary laborer on a sisal estate, who was the first born of five brothers and three sisters and who, out of his father's small earnings, was able to begin his elementary education. As he grew and at the end of 1947 he could have continued his education for his Cambridge School Certificate, but he was unable to; why? because his family could not afford it.

This was an important development in his life.

He then trained as a sanitary inspector and joined the Nairobi City Council and was elected secretary of the African Staff Association. At this time he began to interest himself in active politics and became a full-time trade union organizer, converting the African Staff Association of which he was president, into the Kenya Local Government Workers Union and he soon emerged as the Secretary General of the Kenya Federation of Labor. It is from this position that he emerged as the voice of the Kenyan people in the absence of any other African organization to speak for them. Tom, *the worker,* the *trade unionist,* never lost his sense of social justice.

Tom Mboya's concern about Kenyan nationalism and Kenyan independence was highlighted in a speech that he gave in New York on the occasion of African Freedom Day in April, 1961: "Let me speak for a while about the father of my own country, Kenya, the man who perhaps more than any other represents the African personality, Jomo Kenyatta . . . the denial of freedom to Jomo Kenyatta and other detained peoples of Kenya is a mockery of justice . . . the present crisis in Kenya cannot be resolved until Jomo Kenyatta is given his unconditional freedom. Our people love him and are determined to make this undisputed leader of the African people the head of our first independent government. Our people respect him not only for himself but for his character, his integrity and judgment and iron will".

Tom's statement about Mzee was coupled with his actions in refusing to join an interim government in 1961 until Mzee was given the freedom to return to Kenya. But his acknowledged nationalism and pan-Africanism goes back to 1958 when he was elected chairman of the All-African People's Conference meeting in Accra, a distinction that he acknowledged as "the proudest moment of my life." His role on the African freedom movement as chairman of the All-African People's Conference . . . His stimulation of the pan-African freedom movement of East and Central Africa; . . . His dedication and strong support of the Organization for African Unity and the Economic Commission for Africa were all important aspects of his commitment to Africa.

He spoke to the 8th Session of the United Nations Economic Commission for Africa in 1967 "African development is at stake. Nothing less than a major effort both within Africa, and by our friends overseas can produce the progress we seek and make our continent a material contributor to the World economy.

The initiative and decision to cooperate must come from Africa itself." His concern with the economic development of his country and his continent was but one more example of his preoccupation with the needs of his people.

Approximately 10 years ago Tom showed another of his many qualities—his great respect for the education and training of Kenyans and other Africans. His desire to see young people of Kenya educated took the form of his pushing forward what we now know as the airlift of African students from Kenya and other African countries to the United States. From having about 60 students in the U.S. in 1956 by January, 1963, Kenya had over 1,000. In the development of the Kenyan airlift to educate Africans Tom justified what took place as "the need for educated people is so great that I often marvel at those persons who suggest expansion will produce too many educated people and there will be nothing for them to do and so a worse problem will have been created. My view is that no field in Africa today is saturated and to try to slow down the African desire for education or for specialization in various fields would mean strong resentment."

He also dealt with local education problems in a vocational secondary school, Starehe, in Nairobi to train ghetto children in Nairobi.

He himself well utilized his formal academic training at Ruskin College; but it was only one year of his life toward all that he gave in different ways to the education and training of others.

Tom Mboya was well-known in the United States. It was just 9 years ago that Tom appeared on an American national television network show called "Meet the Press". His brilliance coupled with his youth astounded Americans. His relationships with this country from the pre-independence period through the Kenya student airlift along with his visits made him conscious of a need for an informed American awareness about African development and real independence. He had an understanding of the assets and weaknesses of the United States towards Africa. In an article as far back as 1957, Tom stated "In the field of foreign policy, America's position in the eyes of Africa is rather disappointingly hazy. She has not lived up to their expectations, and internally the segregation problems have affected American prestige and moral standing. Her people are however, still regarded with friendship and expectancy, although it has become generally recognized that there exists a great deficiency of informed opinion on Africa."

The advent of independent African states and his own visits have contributed to the greater education and understanding between Africa and the United States. Kenya owes her very favourable image in the United States to Tom. The relations between our two countries could not be better.

Tom, however, never wanted to be known other than as a Kenyan involved in world affairs and as he ended his book "Freedom And After" he said, "Through our international policy of preserving positive neutralism, to the conclusion of friendship with all nations, we will be showing the rest of the world what freedom really means."

In the lives of all public men, it is often the close, warm family relationships that suffer. The dedication to national issues, public demands and international forums take the man of leadership away from his family. But most of all, in thinking about Tom, one has to think about his love for his wife, Pamela, and his three children. He and Pamela married in January, 1962 and with their three children attempted to keep together the little time they had among themselves. When time and work permitted they would go to Rusinga Island and he would give to his family the full but few hours that he carefully put aside.

It is Pamela Mboya and her three children who above all miss Tom the most, and it is to her and the children we can only say that their loss is greater than that of all other Kenyans. In this difficult hour, we offer Pamela and the children our heartfelt condolences and pray that God will give them strength and courage to face the future.

Tom's death cannot be meaningful no matter how one wants to interpret it. But, *if out* of this comes a renewed commitment on the part of all Kenyans to achieve what he wanted to uphold, and if we can but reflect in our commitments his dedication and efforts to the unity and the development of our country; to the contribution of Kenya in the evolution of a greater East Africa; to the strengthening of ties within Africa; and to the emphasized role of Africa in the World Community in its efforts towards peace and development, then we will have contributed in our own way toward an everlasting memorial to a great Kenyan, African and world leader, Thomas Joseph Mboya.

THE INNER REACHES

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. WOLFF. Mr. Speaker, the incredible journey of three brave men and the success of technology in a challenge are now a part of history. Yet, even before our three astronauts had safely returned to earth, there was considerable projection regarding the expeditions to come.

As Representative of the Third District, which contains Grumman Aircraft Engineering Corp., and many constituents dedicated to scientific advancement, I am certainly proud and enthusiastic about this feat. Nevertheless, I am still left with a nagging question: While we strive for the outer reaches of man's capabilities, what are we doing to preserve and encourage the inner reaches of man's concern for man? Surely our domestic problems cannot be ignorant to us for in height they measure far taller than the Saturn 5 rocket which thrust us into a new age.

My concern in this matter was recently presented in a most appropriate editorial in the Community Newspapers, Inc., within my district. Continually attuned to the most important issues of our time, it was not surprising to find such a thoughtful editorial in this chain of weeklies. I would, therefore, like to extend my remarks and include it in the RECORD:

LET'S MAKE IT AT HOME

The Eagle has landed, and it was the most courageous, daring, imaginative, mind-boggling, impressive, efficient adventure in our history. All of us on the North Shore, those who worked on vital parts of the Apollo 11 project at Grumman and at other plants and those whose taxes helped foot the bill, should take pride in the achievement.

Now we must use that same American courage, daring and imagination to tackle those problems which torment us here on earth: poverty, racism, the Vietnam war, alienation of our young, city renewal projects which dawdle along for years, drug addiction, foul air and fouler water, commuter trains which don't run and airplanes which stack up on the runways, leftists who burn up libraries and rightists who stockpile shotguns and grenades.

We've made it to the moon. Let's make it at home.

CALIFORNIA LEGISLATOR OFFERS PENETRATING ANALYSIS OF CAMPUS TURMOIL

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. BROWN of California. Mr. Speaker, response from the political community to the severe traumas which have so thoroughly shaken the American educational establishment generally has been that of extreme platitude. Rarely over the past months have I come across reaction from political leaders to campus unrest which indicates anything more than a surface knowledge of the factors which are causing turmoil to arise.

Recently, however, I was tremendously impressed by the scope and depth of analysis of the problem which has been made by California State Assemblyman John Vasconcellos. One of the youngest members of the California Assembly—and one of its most promising, he was named as "best freshman Assemblyman" in 1967 by the Sacramento press corps—Mr. Vasconcellos has made a major effort to really understand the campus revolution.

In June, Assemblyman Vasconcellos presented three statements which cut directly to the core of those elements which have led to unrest and confusion within the educational system. I believe his analysis and related 18-point program are easily the best I have yet seen from anyone in political office, and I insert them here in the RECORD with the hope that all my colleagues will also benefit from them:

CAMPUS UNREST—I

The people of California are sick and tired of campus unrest, disruption and violence—and so am I!

But it's time each Californian engaged in some cool and sober reflection—because the approach we've been using is a failure; it has failed; it is failing.

Even apart from moral questions, that approach—more laws, tougher penalties, namecalling, sloganeering, more police, sheriffs, highway patrol, national guard, guns, shotguns, buckshot, bayonets, tear gas, helicopters, mass arrests, jail farm atrocities, the killing of a young human being—is a failure.

Whether or not I like the approach—whether or not I like the conclusion—cool and sober reflection dictates my judgment—and I can't escape it, I won't run from it—that our approach to date is a failure.

If anyone doubts the failure, he need only ask himself two questions—without even seeking to place blame anywhere:

1. What kind of a society has to club and gas and shoot its own young?

2. Why has the Governor said: "But the way things are going now, I could start a riot just by showing up (to meet with students)"?

Even more thought provoking: To approach has had contrary results. In the past two weeks I've talked with or heard from students from the University of California at Davis, Berkeley, Santa Cruz, San Diego and Irvine, from the State Colleges at San Jose, Sacramento and San Bernardino, from Santa Clara University and the University of Southern California and Stanford University, from West Valley College and San Jose City College, from Bellarmine Preparatory, Del Mar, Camden and Willow Glen High Schools in San Jose. Anyone who's listening—with ears and minds open—knows the approach we've been using is having only one measurable result: it's turning conservative students into liberals, turning liberal students into radicals, and turning radical students into revolutionaries.

I'm not willing to live with failure, so I'm not satisfied with exclusively using an approach that is failing. I believe we can and must do better. The people of California have a right to something better.

Tho we needn't *abandon* the failing approach, we at least ought to try concurrently a new approach. It's long past time we explored alternatives.

It's time we turn the tide of fear and despair and polarization, into a tide of reconciliation and peace. It's time each Californian—I, each other legislator, the governor, each university regent, each college trustee, each educator, each student, each tax payer, each of the "street people"—turned our attention to a new approach—to seeking understanding of our problems, to searching out their causes, and to exploring positive and creative and human alternatives—that will lessen our fears, and restore our hopes.

We must ask ourselves why our approach to date has failed; we must ask ourselves why we experience the campus unrest, disruption and violence in the first place; we must explode the myths, and misconceptions and deal with the facts and the foundations, and then discover a realistic alternative approach.

I believe such an alternative approach is available, and I invite each and every Californian to join me in discovering it.

Shortly I will present my analysis of our failure, and the foundations for an alternative approach; thereafter I will present an 18-point program for an alternative approach, that I believe will turn us from failure towards success, from fear towards hope, from polarization towards reconciliation.

CAMPUS UNREST—II

Last week I indicated the failure of our current approach to resolving campus unrest, disruption and violence.

In analyzing our failure, I appeal to every persons who believes in our system, who believes in our democratic process, who believes in peaceful change, who believes in dealing with the truth.

A University of California at Berkeley student taught me best about our failure: "You're trying to solve internal problems with external pressures; instead of making necessary changes, you're only willing to use force."

While our approach may (and should be used to contain the problem), it fails to solve it. Our failure results because our current approach rests on four sets of myths and misconceptions:

1. Myths and misconceptions about students (and others) involved in campus unrest:

a. That students are children—to be seen and not heard.

(1) Untrue. More than any society in mankind's history, we've generously invested our resources in providing educational opportunity for our young; we have over 6,000,000 young persons in our California public educational system, including nearly 1,000,000 in higher education; we've educated them to be independent, critical, idealistic; they're bound to question us; we have much to learn from them, if we only listen.

b. That there are many outside agitators, and a large plot or conspiracy.

(1) Not true. While they exist, the number of outside agitators and conspirators is small; and they succeed only because we create conditions under which they thrive—our failure to respond to legitimate demands, our overreaction to illegitimate demands, provokes the many students who want to believe in peaceful means.

United States Commissioner of Education James Allen, appointed by President Nixon, recently denied the conspiracy theory, and pointed out that most of the campus militants are good students from typic: American families.

c. That these young persons—especially the most radical and militant—are foreigners and/or monsters.

(1) They aren't. They aren't Martians, not even Europeans; despite their sometimes outlandish appearance, their sometimes outlandish language, and their sometimes outlandish demands, they are in fact not outlanders; they are *our* very own, *our* own children, *our* heirs.

d. That there is a silent majority of students happy with the way things are.

(1) Untrue. It is true (as it should be) that the vast majority of students condemn methods used by radicals. However, a recent survey showed 80% of students agree with the goals and criticisms and demands for change that are being made; at University of California Berkeley, 85% of 15,000 students voting favored the people's park; "Fortune" magazine in January indicated that upwards of 15% of our students are solidly aligned with the demands for radical change; Republican Congressmen just completing a campus tour found much more dissatisfaction than expected.

e. That these students are a passing fad, that we can snuff out.

(1) They're not. Thruout the world—from Egypt to Japan to Czechoslovakia to Greece to France, young persons everywhere are questioning the way we have been doing things, demanding new answers, demanding a new and more human system and society.

f. That these students are unpatriotic, unAmerican.

(1) They aren't. In fact, they are radically conservative, in demanding individual freedom, equality of opportunity, liberty and justice for all, Christian brotherhood, local control, decentralization, freedom from government oppression, active participation in public policy decision making—they believed what we taught them about "liberty and justice for all," American ideals, democratic institutions.

g. That young persons today are the same

as we were at their age, the same as young persons have always been.

(1) They aren't (and like never again will be), for the American genius and free enterprise, technology, automation, cybernetics, have freed them from the stresses of the great depression; these young persons sense the freedom that each of us would like to have, and they sense it so strongly, they will not surrender it, even to force and fear.

h. Students are there to get an education. If they don't like it, they should get out.

(1) Sure, they're there to get an education—but that doesn't all come out of books and classrooms; and hopefully we're educating them to question, evaluate and improve—and if they didn't tell us taxpayers what's wrong in our educational institutions, who would?

i. That those who agree with the ideals of students, agree with their tactics, with disruption, with violence.

(1) Not *generally* true. Many persons, including myself, agree with many of their ideals, but neither defend nor condone nor encourage disruption or violence.

2. Myths and misconceptions about the University of California, the State Colleges, and our community colleges:

a. That our institutions of higher education are providing good, adequate education.

(1) They aren't. They are too big, too impersonal, too rigid, too dehumanizing, too stifling.

b. That the governing boards of our higher education institutions are representative and responsive and relevant to the persons they are governing.

(1) They aren't. The recent Harris survey demonstrated that the typical regent-trustee in the nation is nearly sixty years old, white, Anglo-Saxon, Protestant, a businessman or industrialist, who reads little outside his own specialty field—a far cry from the age, color, nationality, religion, and scope of interest of our nearly 1,000,000 students in higher education.

c. That campus administrators are doing a perfect job.

(1) Untrue. Too many campus administrators are inflexible, unresponsive to the need for changes, too concerned with their own power, unwilling to listen to students.

d. That faculty members are doing a perfect job.

(1) Untrue. Too many faculty members are inflexible, unresponsive to the need for changes, too concerned with research and writing, too uninvolved with their students, unwilling to listen to students, treat their students too impersonally, are too jealous of their own prerogatives.

e. That decisions can be made without consulting those persons most affected by them.

(1) They can't be. The premise of our society is consent of the governed; the ideal of a free man is one who has some say in decisions that dramatically affect him, his life, his future. Our students are listened to almost not at all.

f. That channels of communication, and of participation, are adequate.

(1) They aren't. Even Governor Reagan recently stated that the "channels of communication are clogged"—and they're clogged much, much worse than he indicated.

g. That a university's purpose is simply to train persons to fit into society, to get jobs, to be socialized.

(1) Only partly true. The broader purpose of a university, a college, higher education, is to learn how to become a better human being; to turn a person on to himself or herself, to lifelong learning, to building a better life for himself and for his fellow man; to develop his ability, and his judgment to serve his fellow man.

h. That a university shouldn't be involved with community problems.

(1) Wrong, it should be. Every human being, every human institution, has a constant and heavy responsibility to benefit mankind, to involve himself, herself, itself, in people-problem-solving.

i. That a university should be a quiet place.

(1) Nice-sounding, but not true. The purpose of education is to improve the lot of man; to move mankind forward, to learn from the errors of the past, to correct the errors of the present, to point the way to a better future. A person who is stagnant, an institution that is dormant, fails in responsibility—to fellow man, to all of mankind. And unless we're satisfied with things as they are (and who can be?) we should welcome the questioning, criticism and boat-rocking (so long as peaceful and non-disruptive) that comes from a university, and from its students, and from our young persons.

3. Myths and misconceptions about the causes of campus unrest:

a. That campus unrest is unrelated to the unrest and to the problems in our society.

(1) Untrue. Campus unrest is directly related to the problems of war and peace, the bomb, the draft, poverty and hunger, race and prejudice, even conservation. Until these problems are resolved, all persons should be, and certainly young persons—more idealistic—will be, unrestful.

b. That unrest needn't exist, that disruption and violence needn't be expected.

(1) Untrue. We have real tensions in our society—and whether we like it or not (and most of us don't), we have to expose and explore, even sometimes experience, those tensions—if we are to relieve and resolve them.

c. That peaceful dissent and protest are available and adequate.

(1) Unfortunately, channels of communication are clogged; unfortunately, we in power, in "the establishment" too often haven't listened to peaceful protest and dissent; even when students march peacefully we most often fail to respond. And if peaceful expressions, peaceful protest, go unheeded, then frustration grows, and violence ensues. It's like the farmer who had to hit the mule with a 2 x 4 to get its attention. When we give our attention to the peaceful dissent, only then can we prevent violent dissent.

d. That the minorities in our society, in our educational institutions, have equality of opportunity, etc.

(1) Untrue. Just walk into any ghetto, or barrio, and look around. And while black Americans comprise 10% of our population, and brown Americans 12% of our population, they comprise only approximately .09% and .08% respectively, of our student population in the University of California.

e. That no changes are needed in our higher education.

(1) Many changes are needed; and, as President Kennedy said: "Those who make peaceful evolution impossible, make violent revolution inevitable."

f. That our system is perfect.

(1) Wrong. With all its successes, much needs improvement, correction, change in our society.

4. Myths and misconceptions about our approach:

a. That there are simple answers to our problem.

(1) There aren't any; the problem is the most complex facing us.

b. That force and fear will solve the problem.

(1) They won't; they haven't; at best, they contain the problem, but they don't resolve it. These aren't ideal methods and motivations in a free society, and somehow, we've raised a generation that doesn't readily submit to force and fear, but instead is only further provoked thereby.

c. That name-calling and scape-goating help the situation.

(1) They don't—instead, they provoke it; too often, it's only an excuse for not observing and admitting our own shortcomings, our own lack of involvement, our own refusal to listen and to respond to needs for change.

d. That getting tough—suspension or expulsion or other forms of banishment will get rid of those causing trouble.

(1) It doesn't; those persons, as non-students, will still be around, and as long as the problems and root causes exist, there will be ample opportunity for them to promote destruction and violence (history demonstrates this).

e. That jail or prison or concentration camps will bring peace and quiet.

(1) They won't; we simply cannot jail an entire generation.

f. That we needn't wonder "why" young persons are restless.

(1) Untrue. There is always a "why" behind the behavior of each human being and, as human beings, we ought always to wonder "why"—for only then can we cope with the problems of human behavior.

Students and other young persons labor under myths and misconceptions also, and they should be dispelled:

1. That older persons, persons in power, persons in "the establishment" don't care.

a. Untrue. Most older persons were raised in totally different times; were taught to think and feel and perceive and judge, in a way that was appropriate to different times, particularly to the depression. But they are human beings also, and they do care.

2. That our system of government won't work.

a. Wrong. With all its failings, our system has produced this young generation and this level of awareness of its failings.

3. That the faults in the system justify disruption and violence.

a. Untrue. Disruption and violence primarily breed fear, and reaction, and repression—and close up the very persons who need to be opened up, for a free society to function as it should.

4. That there is no hope *within* the system.

a. Untrue. While our system, and the persons within it, have many shortcomings, it also has great strengths and resources on which we can draw. I witness great changes in persons in the system, changes in concern, in responsiveness, in attention, in values, in decisions, in understanding. And despite its shortcomings, no system has liberated so many so much: the amount of freedom and opportunity within our system is greater than in any other in the world, and the awareness of our weaknesses becomes possible only because we have achieved so much.

In summary, all of us lack faith and trust in each other, have forgotten that each of us—regardless of age, color, race, position, sex, wealth, or religion—is a human being with a desire to find understanding, to improve the society in which we all must live, to find the avenues to justice that are the only way that law and order will come ultimately, to achieve peace. We're too quick to jump to conclusions, to call names, to label each other—and too slow to recognize, and reached for, and touch the humanness that exists within each human being.

Because of this breakdown in trust, because of this reliance on myths and misconceptions—we have campus unrest, and we have failed in our approach to resolving it.

Tomorrow I will present an 18-point proposal to deal directly and positively, humanly and effectively, with campus unrest, disruption and violence.

CAMPUS UNREST—III

Recently I indicated the failure of our current approach to campus unrest, disruption and violence, and presented my analysis

of why our approach has failed, and why we experience unrest, disruption and violence on our campuses.

Today I propose a new approach—an alternative approach—to greatly increase our ability to prevent campus unrest, disruption and violence.

1. To every citizen: Seek to understand the facts and truths that underlie campus unrest; most important realize *you* can, *you* must, involve yourself in resolving it. Don't settle for myths, misconceptions, name-calling and sloganeering.

2. Change the composition of the University Board of Regents and the State College Board of Trustees—to include at least two student members and two faculty members as voting participants on each, and to include a broad cross-section of our population.

3. Reform the structure and governance of higher education, particularly towards decentralization and local control, for greater flexibility, responsiveness and participation by persons right on the scene and most affected by the decisions.

4. Include students on all decisions-making bodies on each campus of higher education—as recommended by the Assembly Select Committee on Campus Disturbances; responsibility is best learned by participating in making decisions that affect a person's own life.

5. Create permanent Student Affairs Advisory Committees—composed one-half of students—for the University Board of Regents, the State College Board of Trustees, and the Community College Boards of Trustees.

6. Extend the voting franchise (and civil and criminal responsibilities) to persons 18 years of age and older, to give to our young persons the sense they have power *within* the system, thru the ballot box, to affect the decisions that affect their lives, and to relieve the sense of powerlessness that leads to frustration, and too often explodes in violence.

7. Greatly broaden (financing, admissions, tutoring) our Educational Opportunity Programs, to give hope and opportunity for those minority persons who will become leaders in their communities.

8. Create ethnic studies departments where requested and appropriate—so that Third World persons may design education relevant to ghetto life and solving problems of persons living in ghettos.

9. Re-vamp curriculum. Too often the who, what, where, when, how and why of our educational system are hopelessly inadequate, even irrelevant, for our students today. Learning must become relevant to students as human beings, in our time, and for their future.

10. Broadly expand fieldwork in higher educational curriculum, particularly in the humanities and social sciences, so young persons may learn more relevantly, and so their idealism may, thru involvement, help improve society *now*, and give them a sense of helping *now*.

11. To Regents and Trustees: Recognize and relate to the human beings who are students—whose lives you dramatically affect; read broadly about education and the generation gap; individually meet with administrators, and with students (separately) in small groups; don't take your credibility and confidence for granted.

12. To administrators: Open up the lines of communication; treat students as intelligent, concerned human beings; get to know student leaders personally, and consult them frequently.

13. To faculty members: Get out of the shadows, and into the action. Relate personally to your students, to their ability, intelligence, idealism; treat students as human beings; relate to the community at large: go into the community and discuss with citizens and taxpayers the meaning and purpose and value and problems of higher education.

14. To leaders of "the establishment" (especially holding public office, and business and industry leaders): Get onto the campuses—participate in programs like "Interact" operating at University of California at Davis and pending at University of California at San Diego, and "Project Dialogue" at the University of California at Berkeley.

15. To "adults": Don't be part of the silent, apathetic majority: involve yourself personally in searching out positive alternatives; visit the campuses; invite students into your homes, service clubs, chambers of commerce, unions, bridge clubs, parents' groups; don't talk *at* students, don't talk *to* students—talk *with* students; don't just listen passively, but listen actively, to them and to what they are trying to tell us.
